No. 12.

TURKS AND CAICOS.

[In continuation of Colonial Report No. 98, Old Series.]

Governor Sir H. A. BLAKE to LORD KNUTSFORD.

King's House, Jamaica,
April 18, 1891.

MY LORD,

I HAVE the honour to transmit to your Lordship two copies of the Turks and Caicos Islands Blue Book for the year 1890, together with the Commissioner's Report thereon.

I have, &c.
(Signed) HENRY A. BLAKE,
Governor.

The Right Hon. Lord Knutsford, G.C.M.G.
&c. &c. &c.

REPORT ON THE BLUE BOOK OF THE TURKS AND CAICOS ISLANDS FOR THE YEAR 1890.

1. *Revenue and Expenditure.*

The receipts for 1890 were 528*l.* 1*s.* 4*d.* in excess of those for 1889, and amounted to 8,901*l.* 7*s.* 5*d.*, which, added to the balance from the previous year of 2,538*l.* 11*s.* 4*d.*, gave a gross revenue of 11,439*l.* 18*s.* 9*d.*, the largest on record since the year 1872. The increase is due to unusually large imports, the import duties being 661*l.* 12*s.* 10*d.* more than in 1889.

The expenditure amounted to 8,262*l.* 13*s.*, or 1,183*l.* 8*s.* 9*d.* more than in 1889. The increase is caused chiefly by the large amount expended from the surplus revenue, the expenditure from ordinary revenue being 7,067*l.* 4*s.* 10*d.* against 6,946*l.* 12*s.* 3*d.* in the previous year.

After defraying the liabilities for 1890, there remains a balance to the credit of the Colony of 3,177*l.* 5*s.* 9*d.*, besides the amount invested (1,000*l.*) to meet any sudden emergency. The financial condition of these Islands is therefore more satisfactory than it has been for several years.

TURKS AND CAICOS

2. *Public Works.*

Several new works were undertaken during the year. The principal ones were the building of a new public tank and the completion of the sea wall in front of the town, at Grand Turk, and the erection of a landing wharf and of a harbour light, at Cockburn Harbour. The tank is not yet finished, but the other works have been completed in a satisfactory manner. The construction of some new drains at Cockburn Harbour was also commenced, and some small works were carried out at Salt Cay.

3. *Legislation.*

There were only four Ordinances passed during the year, two of which were the usual supply ordinances. The others were No. 3, "To provide for the establishment of a Public Library and "Free Reading Room," and No. 4, "To provide for the incor-"poration, regulation, and winding up of Trading Companies."

Under the provisions of the Library Ordinance, the former Ordinances relating to the Public Library were repealed, and the Library was established in the Jubilee Memorial Building, and reconstituted under the name of the "Victoria Public Library and Free Reading Room," the general public having the right to use the library building at all times when open to subscribers, and to have free access to the books and papers. This measure has added greatly to the usefulness and popularity of the library, it being now in a flourishing condition.

The fibre industry having been introduced into these islands, it became necessary to pass a law to allow of the formation of joint stock companies, and the Companies Ordinance is to the effect that the Jamaica Laws (27 Vict. s. 2, cap. 4, and 28 Vict. cap. 42) relating to joint stock companies shall, so far as the provisions thereof are applicable, be in force in this dependency.

4. *Civil Establishment.*

Mr. C. P. Stamers, Assistant Commissioner at Cockburn Harbour, was appointed Assistant Commissioner at Salt Cay, in the place of Mr. J. W. Baker, who retired from the service on the 1st May. Mr. L. S. Leslie was, on the same date, appointed Assistant Commissioner at Cockburn Harbour, and Mr. W. A. Astwood, Revenue and Boarding Officer, the office of Resident Magistrate at North Caicos having been abolished, and the office

of Revenue and Boarding Officer at Cockburn Harbour revived by Order in Council of 6th February, which also fixed the salary of the Assistant Commissioner at Cockburn Harbour at 250*l.* with a travelling allowance of 30*l.*, and the salary of the Revenue and Boarding Officer at 120*l.*

The Government Medical Officer was absent on sick leave from the 29th September to the end of the year, and his duties were performed by Dr. L. M. Clark, of Jamaica, from the 23rd December to the end of the year, as the services of a qualified medical man could not be obtained during the first two months of Dr. Andrew's leave.

The Commissioner was absent on vacation leave for the last three months of the year, his duties being performed by the Judge of the Supreme Court.

5. *Pensions.*

Miss Eliza Jones, late matron of the poor-house, who drew a pension of 15*l.* per annum, died in August, and one pension was added, viz., 160*l.* per annum, to Mr. J. W. Baker, late Assistant Commissioner at Salt Cay.

6. *Education.*

The general inspection showed little change in the state of the schools, the average attendance being somewhat better than in the previous year, and the standard of efficiency about the same. There was no change of teachers, and the schools were all in operation throughout the year.

7. *Imports and Exports.*

The imports were very much heavier than in the previous year, owing to the number of vessels wrecked with valuable cargoes The exports were also very heavy, as the greater part of the wrecked cargoes was transhipped. The export of salt was not so large as that of 1889, which was the largest on record, but was considerably over the average. There was on hand at the beginning of 1890, about 370,000 bushels, and the crop raked during the year was a very good one, being about 2,250,000 bushels. The stock remaining on hand at the end of the year was about 600,000 bushels.

T ables are attached as usual showing the trade, as compared wth former years, and also the rainfall.

8. *Agriculture.*

On account of the small rainfall, the corn crop failed entirely at the Caicos Islands, and the other crops also felt the effect of the dry weather. There would have been much suffering among the inhabitants had it not been for the fibre industry, which furnished work for many, as the land occupied by the companies engaged in this cultivation is being rapidly cleared and planted. The grants for the lands surveyed in 1889 at North Caicos were issued during the year, and the persons to whom the lands were granted appear to take pride in having become landowners. The Assistant Commissioner at Cockburn Harbour writes in his annual report that they are planting more cassava than they did at first, and that there is a material improvement in their condition.

9. *General Remarks.*

The fibre companies above referred to were formed during the year, but have not yet been registered, as the Companies' Ordinance has but recently come into operation. One of these companies is located at the Island of West Caicos, having obtained a lease of the land there, which is suitable for the cultivation of fibre plants, with conditions for obtaining a grant in fee simple at any time

after two thirds of the land shall have been planted out. This land was surveyed by Captain Jackson, the late Commissioner, in July last, and the work of clearing it was begun in August, and is going on rapidly, being of great benefit to the labourers from the neighbouring settlement of Blue Hills, who are employed there. Up to the present date about 500 acres have been cleared. The plants set out are growing well, and some of the larger ones, planted in October, are already putting out suckers.

A Government Savings Bank was opened on the 13th January, at Grand Turk, with branches at Salt Cay and Cockburn Harbour. It is an institution which has long been needed, and it has proved fairly successful, the deposits during the year amounting to 544*l.* 8*s.* Of this amount 39*l.* 2*s.* was withdrawn, leaving a balance due to the depositors, on the 31st December, of 505*l.* 6*s.* besides the accruing interest, which is at the rate of 2 per cent. The revenue of the bank, for the year, was 9*l.* 11*s.* 9*d.*, and the expenditure 29*l.* 10*s.* This excess is caused by the outlay of 23*l.* 7*s.* for books and forms, and is not likely to occur again, as the difference between the interest on the invested funds and the interest paid to the depositors will cover the working expenses of the bank.

E. H. JOHNSON,
Acting Commissioner.

Sir H. A. BLAKE to LORD KNUTSFORD.

King's House, Jamaica,
December 28, 1891.

MY LORD,

I HAVE the honour to forward to your Lordship the accompanying Report on the Blue Book of Jamaica for the period from 1st October 1889 to 31st March 1891.

I have, &c.
(Signed) HENRY A. BLAKE,
Governor.

The Right Hon.
Lord Knutsford, G.C.M.G.
&c. &c. &c.

REPORT ON THE JAMAICA BLUE BOOK, 1889-91.

Legislation.

During the 18 months from October 1889 to March 1891, 58 Laws were passed by the Legislative Council—viz.: Laws 17 to 40 of 1889, 1 to 32 of 1890, and 1 to 2 of 1891. (Laws 3 to 25 of 1891 were passed after the close of the new financial year.) Of these the following are the most important:—

Law 19 of 1889, which reduces the age at which children are to be received into a reformatory or industrial school from 16 to 14 years.

Law 25 of 1889, which makes provision for cases where the reformation of persons convicted of first offences may be brought about without imprisonment.

Law 28 of 1889—"The Public Water Supply Law." The objects of this Law are to consolidate the existing Laws on the subject of the public water supply, and to enable parochial boards, with the Governor's approval in Privy Council, to fix a sliding scale in regulating the rates and charges payable for water supply.

Law 32 of 1889—"The Agricultural Produce Buyers Law." This Law was framed for the purpose of preventing the system of roadside buying and selling, which gives rise to a vast amount of prædial larceny. The terms of the Law are very stringent, but the evil of prædial larceny had reached such dimensions that severe

JAMAICA.

legislation was considered necessary. The Law is to continue in force for only three years, it being hoped that this will be sufficient to stamp out the evil.

Law 33 of 1889, the objects of which are to enable an exhibition of the products of industry, agriculture, &c., to be held in Kingston, and to make provision for its management and conduct, and for guaranteeing against any financial loss arising therefrom.

Law 38 of 1889—"The General Markets Law Amendment Law." This Law was passed in order to restrain the exposition for sale of poultry, game, fresh meat, &c., elsewhere than in a market. The markets have been erected by loans, and the market fees are pledged for payment of the interest and principal of the amounts advanced.

Law 40 of 1889—"The Conveyancing Law." This Law is nearly a transcript of the Imperial Conveyancing Acts (44 & 45 Vict. c. 41. and 45 and 46 Vict. c. 39.). It deals with unqualified persons who act as conveyancers.

Law 3 of 1890.—This Law was passed in order to remove all doubts as to the validity of marriages on board H.M.S. "Urgent" since the Marriage Law of 1879, the chaplain of that ship through a misunderstanding not having applied to be appointed a marriage officer under the Law.

Law 4 of 1890—"The Prison Service Law." The institution of a prison service apart from the constabulary, but in the first instance largely drawn from it, has been found to work admirably in other Colonies, and this Law has been drafted from the Prison Laws and rules of other countries, assisted by the local experience of the Inspector-General of Police.

Law 8 of 1890.—This Law increases the duty on rum to 6*s.* a gallon.

Law 9 of 1890 provides for the taking of the census of the Island. It is a copy (*mutatis mutandis*) of the Census Law of 1880.

Law 11 of 1890—A Law to legalise Art Unions. This Law is adapted from the English Act, 9 & 10 Vict. c. 48., with such alterations as were necessary to meet local requirements. It was passed principally to enable the disposal of several of the articles which it was expected would be sent to the Colony for display at the Exhibition of 1891.

Law 13 of 1890, which gives the Governor power to appoint a managing commissioner of the Kingston and Liguanea waterworks, Kingston gasworks, markets and slaughter-house, instead of the Custos of Kingston being such managing commissioner as heretofore.

Law 17 of 1890 makes provision for improving the condition of the parochial roads by placing the more important of them on the schedule of main roads. Some such measure had for a long time been urged on the Government, for, owing to the limited amounts at the disposal of the parochial road commissioners, the condition of several of the roads was a source of great inconvenience and dissatisfaction to the public. The Law also gives power to the Governor to raise money by loan for the reconstruction of

these roads, special taxes being imposed to provide for the payment of the interest and principal of the loan, and after that for the maintenance and repair of the roads.

Law 19 of 1890 was passed to relieve the Governor from payment of import duty, rates, and taxes.

Law 23 of 1890 gives power in certain cases to the trustees to sell portions of the Titchfield Trust Lands. These lands have of late years become very valuable, and as they were of no use to the trust, the trustees desired to dispose of some of them and apply the money in increasing the advantages of the trust.

Law 24 of 1890—"A Law to prevent the Importation of Cattle "and other Animals suffering from contagious or infectious Diseases." It was feared that the importation of cattle from South America, which had recently assumed considerable proportions, might, if not properly regulated, result in disease being brought to the Island by these foreign cattle. The Law is extracted from the English Act, 41 & 42 Vict. c. 74., so far as it relates to the importation of foreign cattle, with such alterations as are necessary to bring it into conformity with local usages.

Law 26 of 1890 provides for the admission free of import duty of apparatus and appliances for generating, storing, or conducting electricity, and machinery or mechanical contrivances for developing the resources of the Island. It was thought that as gas piping, machinery, and plant for the Jamaica Railway were admitted free of duty, the same advantage might be extended to other apparatus for the application of mechanical contrivances and electric energy to industrial enterprises.

Law 27 of 1890 gives power to the Government to contract with companies for building, extending, or completing hotels. The want of hotel accommodation was much felt, and, in view of the expected large influx of visitors to the Exhibition, it was thought that something should be done to encourage capitalists to speculate in hotels.

Law 29 of 1890 is really an amendment of Law 32 of 1889, but to prevent confusion, it was thought better to repeal that Law and to introduce a new enactment. Its object is to further regulate the purchase and sale of certain articles of agricultural produce, and to provide for the licensing of agricultural produce dealers.

Law 31 of 1890 makes provision for a system of sewerage for Kingston, for disposing of the sewage and for the reconstruction of the streets.

The question of the drainage and reconstruction of the streets of Kingston has for a long time attracted much attention, and no pains have been spared to obtain the best professional advice on the important subject of sub-soil drainage. This Law is the outcome of the information obtained. It makes provision for the appointment of nine Commissioners, three of whom must be resident in Kingston. These Commissioners have power to appoint one of their number a Managing Commissioner and to pay him 200*l.* a year, but no other Commissioner may receive any remuneration for his services.

The Commissioners are to collect and discharge the sewage into the sea beyond the Palisadoes, or to use it for fertilizing a sewage

JAMAICA.

farm if it should be thought desirable to dispose of all or any part of it in that manner.

Law 32 of 1890—"The Electric Lighting Law." This Law was passed to control an electric lighting company so as to prevent injury to life and property. It is an adaptation to local circumstances of the English Acts, 45 & 46 Vict. c. 56. and 51 & 52 Vict. c. 12.

Finance.

In accordance with the decision of the Legislative Council, a change has been effected in the date of the financial year. The year under review commenced on the 1st of April (from which period the financial year will date in future), when a surplus was brought over of 190,287*l.* The revenue realised was 628,950*l.*, not including the revenue collected for main road purposes under Law 17 of 1890, namely, 30,815*l.*, making a total sum of 819,237*l.* The expenditure, on the other hand, including the sum of 29,018*l.* 15*s.* for sinking funds and 3,500*l.* for the redemption of debt, and excluding 34,141*l.*—the expenditure from loans raised or authorised—amounted to 575,250*l.* The year therefore closed with the large surplus of 243,987*l.*

The appropriated parochial revenues, which are devoted to parochial roads, poor relief, sanitary, and other local services, and are administered by the several parochial boards, produced in this year 124,619*l.*, being an increase of 17,347*l.* over the receipts in 1888–89.

The revenue appropriated to immigration services, including the proceeds of employers' notes for cost of introduction of immigrants, amounted to 4,405*l.*, and the expenditure to 8,411*l.* The decrease of revenue is due to the reduction of export duties on sugar and rum under Law 9 of 1889, and the discontinuance of immigration under the old law.

The usual comparative table of the whole of the Treasury receipts in the year under report with those of the previous year is given below:—

—	1890–91.	1888–89.	Increase.	Decrease.
General Revenue.	£	£	£	£
Import duties - - -	366,662	284,377	82,285	—
Export duties - - -	6,687	9,398	—	2,711
Light dues - - -	2,377	2,300	77	—
Harbour master's fees - -	2,816	2,162	654	—
Rum duties - - -	136,160	95,502	40,658	—
Licenses - - - -	2,915	19,933	—	17,018
Stamps - - - -	19,286	16,666	2,620	—
Tax on stock - - -	4,753	4,501	252	—
Main Road Revenues.				
Holdings tax - - -	15,743	—	15,743	—
Spirit licenses - - -	15,071	—	15,071	—
	—	—	157,360	19,729
	572,470	434,839	137,631	—

——	1890–91.	1888–89.	Increase.	Decrease.
Main Road Revenues—cont.	£	£	£	£
Postal revenue - - -	17,685	18,295	—	610
Telegraph revenue - -	6,392	4,795	1,597	—
Court fees - - -	7,578	7,187	391	—
Fines and forfeitures - -	4,639	3,622	1,017	—
Interest on securities for sinking funds - - - -	9,365	8,903	462	—
Interest on savings bank investments after paying depositors -	3,896	4,755	—	859
Interest other than above - -	7,927	4,402	3,525	—
Jamaica railway receipts - -	436	60,859	—	60,423
Reimbursements for expenditure -	2,205	24,178	—	1,773
Miscellaneous - - -	6,972	7,710	—	738
	—	—	6,992	64,403
	87,295	144,706	—	—
	659,765	579,545	—	57,411
Revenues specially appropriated.				
Parochial road revenues - -	50,317	42,146	8,171	—
Kingston streets tax - -	6,639	3,381	3,258	—
Parochial municipal revenues -	10,693	9,781	912	—
Parochial general purposes -	2,016	757	1,259	—
Poor rates - - - -	40,531	38,263	2,268	—
Sanitary rates - - -	8,238	8,119	119	—
Fire rates - - - -	1,345	1,239	106	—
Gas rates - - - -	2,598	2,641	—	43
Miscellaneous - - -	2,242	945	1,297	—
	—	—	17,390	43
	124,619	107,272	17,347	—
Immigration Revenues.				
Export duties - - -	2,598	3,675	—	1,077
Proceeds of planters' notes -	1,427	4,078	—	2,651
Miscellaneous - - -	46	61	—	15
Interest - - - -	334	324	10	—
	—	—	10	3,743
	4,405	8,138	—	3,733
Totals.				
General revenue - - -	659,765	579,545	80,220	—
Immigration revenue - -	4,405	8,138	—	3,733
Appropriated revenue - -	124,619	107,272	17,347	—
	—	—	97,567	3,733
Total - -	788,789	694,955	93,834	—

The yield of the general revenue shows a net increase of 80,220*l.* over the previous year. The chief items of increase are import duties, 82,285*l.*, attributable to general increased prosperity, owing to the development of the fruit trade, and an improvement

JAMAICA.

in the coffee market; and rum duties 40,658*l.*, caused by extra duty imposed by Law 17 of 1890. The chief items of decrease are export duties, 2,711*l.* the result of a reduction of the tariff; licenses, 17,018*l.*, caused by the appropriation of the receipts from spirit licenses for main road purposes under Law 17 of 1890; railway, 60,423*l.*, loss of the traffic receipts on its sale; and reimbursements for expenditure, 1,773*l.*, due to the abolition of the cadastral survey tax.

The receipts from appropriated revenues show an aggregate increase of 17,347*l.* over those of the preceding year. The larger increases are in respect of parochial road revenues, 8,171*l.*, due to the tax under the Agricultural Produce Buyers Law 29 of 1890; Kingston Street Tax, 3,258*l.*, chiefly due to the appropriation of the receipts from spirit licenses under Law 17 of 1890. The remaining items of increase being mainly due to increased rates.

The following is a similar comparative statement of the Treasury disbursements compared with 1888–89:—

——	1890–91.	1888–89.	Increase.	Decrease.
General Expenditure.	£	£	£	£
Charges of debt	76,569	83,128	—	6,559

Immigration expenditure - -	8,411	8,973	—	562
Total general expenditure - -	531,721	524,599	7,122	—

The general expenditure of the Colony shows an increase of 7,122*l.* The following are the chief items of increase:—Administrative departments 2,491*l.*, chiefly for increments to salaries, and postages on the discontinuance of the franking system; Revenue departments 1,838*l.*, for increments to salaries and increase of staff; Telegraphs 1,116*l.*, for the establishment of new stations and extra operators and travelling charges; Judicial 2,516*l.*, for increase of the staff of the Resident Magistrates' Courts; Constabulary 2,306*l.*, due to an increase in strength of the force; Education 2,734*l.*, due to an improvement in the schools and consequent increase in the grants; Jamaica Institute 2,644*l.*, for grant to Imperial Institute, Exhibition expenses, and the purchase of new books and furniture; public gardens and plantations 1,862*l.*, chiefly for meeting cost of display at the Exhibition. There is also a large increase of 35,428*l.*, under Public Works, due to the purchase of wharf premises at the foot of East Street, Kingston, and increase of works generally. The large items of decrease will be found under charges of debt 6,559*l.*, and railway 32,782*l.*, saving of working expenses and maintenance after its sale in January 1890.

The expenditure from appropriated revenues shows an increase of 13,656*l.*, the principal heads of increase are parochial roads 8,509*l.*, parochial municipal objects 2,423*l.*, and poor relief 4,655*l.*; the only important decrease being 2,717*l.* under "Sanitary Appropriation."

Pensions.

During the 18 months under review pensions, amounting in all to 1,593*l.* 19*s.* 6*d.*, were granted under the provisions of the Jamaica Pension Law 34 of 1885, and the resolution of the Legislative Council of the 23rd October 1885, while the pension list was reduced to the extent of 3,216*l.* 4*s.*, by deaths, &c.

JAMAICA.

Debt.

There has not been any fresh debt incurred during the year under review; but a sum of 1,500*l.* was raised in the preceding half-year, under Law 20 of 1888—"The Rio Cobre Canal Debenture Conversion Law"—to meet the amount of debentures issued under Law 27 of 1872, which became redeemable during that period.

3,500*l.* of debentures was paid off from general revenue during the year, 2,900*l.* under Law 37 of 1887, and 600*l.* under Law 8 of 1871, while 3,900*l.* were redeemed from the sinking funds provided for the purpose, as follows:—1,300*l.* under 28 Vict. c. 26.; 200*l.* under Law 12 of 1879; 800*l.* under Laws 8 and 17 of 1880; 1,200*l.* under Law 19 of 1880, and 400*l.* under Law 17 of 1884.

The public debt directly secured on the general revenue stood as follows on the 31st March 1891, and on the close of each of the preceding financial years noted below, after making allowance in each year for the sinking funds actually invested for the eventual redemption of debt:—

	£	s.	d.
1881 - - -	920,924	19	4
1882 - - -	1,238,750	0	0
1883 - - -	1,257,916	2	1
1884 - - -	1,243,899	18	9
1885 - - -	1,427,458	14	2
1886 - - -	1,478,790	3	8
1887 - - -	1,491,993	3	9
1888 - - -	1,502,684	9	8
1889 - - -	1,506,883	6	0
1891 - - -	1,458,221	12	7

Of the above amount of debt on 31st March last, 822,622*l.* was on account of the railway purchase, reconstruction, and extension, and 82,500*l.* on account of the Rio Cobre Canal.

The following are the amounts due for debentures guaranteed by the general revenue, raised on account of the several undertakings specified:—

	£
Kingston and Liguanea waterworks - -	128,200
Kingston markets - - - -	20,000
Kingston gasworks - - - -	30,000
Kingston slaughter-house - - -	10,000

Legislative Council.

During the period under review—viz., the 18 months from the 1st of October 1889 to the 31st March 1891—there were three sessions of the Council, namely :—

1. A session, after adjournment, which met for business on 23 days, its first meeting being on 1st of October and the last on the 1st of November 1889.
2. A session, after prorogation, which met on 39 days, its first meeting being on the 25th February and the last on the 1st of May 1890; and
3. A session, after prorogation, which met on 37 days, its first meeting being on the 24th February and the last on the 29th of April 1891.

On the 10th of October 1889, consequent on the illness of the Hon. Henry Hicks Hocking, Attorney General, the Hon. Thomas Bancroft Oughton, LL.B., appointed temporarily as acting Attorney General, took his seat as an ex-officio member of the Council.

On the 25th of February 1890 the Hon. Henry Kirke, who had been appointed acting Attorney General by Her Majesty the Queen, took the seat vacated by Mr. Oughton as an ex-officio member of the Council.

On the 14th of April 1890, consequent on the absence from the Island of the Hon. Colonel William Clive Justice, C.M.G., the Hon. Frederick Benjamin Price White, the Senior Military Officer, took his seat as an ex-officio member of the Council.

The Hon. Neale Porter, Colonial Secretary, being on leave of absence, the Hon. James Allwood, the Acting Colonial Secretary, took his seat on the 5th of February 1891 as an ex-officio member of the Council.

The Hon. Henry Hicks Hocking, Attorney General having returned from leave of absence, resumed his seat on the above date vacated by Mr. Kirke.

Major-General Wilsone Black, C.B., the Senior Military Officer, took the oath and his seat as an ex-officio member of the Council on the 6th April 1891.

Civil Establishment.

The Hon. H. H. Hocking, Attorney General, was granted leave of absence from the 10th October 1889, and Mr. T. B. Oughton, Barrister-at-Law, appointed to act provisionally in that office until the arrival of the Hon. H. Kirke in January 1890.

On the 6th November 1889 Mr. W. Fawcett, Director of Public Gardens and Plantations, left the Island on leave of absence, and Mr. James Allwood, Assistant Colonial Secretary, was appointed to act for Mr. Fawcett during his absence.

Mr. L. R. Fyfe, first-class clerk in the Colonial Secretary's Office, was appointed Colonial Secretary of Grenada in the early part of 1890.

Mr. W. Baggett-Gray was appointed Crown Solicitor in the room of Mr. S. C. Burke, retired.

JAMAICA.

Mr. Thomas Harrison was appointed Surveyor-General in the newly-formed Lands Department.

The Hon. Neale Porter, Colonial Secretary, was granted leave of absence from the 10th February 1891, and Mr. James Allwood, the Assistant Colonial Secretary, was appointed to act as Colonial Secretary during Mr. Porter's absence.

Mr. R. G. Marsden, Resident Magistrate for Portland, was granted leave of absence from 1st January 1891.

Public Works.

The total expenditure under all heads has been 208,125*l.* 4*s.* 7*d.*, of which 69,482*l.* 2*s.* 9*d.* was expended on main roads and bridges and parochial roads taken over as main roads, and 138,643*l.* 1*s.* 10*d.* in salaries and services, maintenance, &c., of public buildings, lighthouses, Rio Cobre canal works, acquiring lands for railway extension, &c.

The cost of maintenance of main roads and bridges, exclusive of those taken over under Law 17 of 1890, was 59,732*l.* 12*s.* 11*d.* This large expenditure was due to heavy rains, which damaged the roads in some of the parishes, to a considerable increase of traffic, and to the cost of building bridges, culverts, parapet and retaining walls, widening and generally improving the roads, which are in excellent order throughout the Island.

The average cost of main roads per mile for the 18 months was 57*l.* 15*s.* 4*d.*, being equal to 38*l.* 10*s.* 3*d.* per mile per annum, against 38*l.* 19*s.* 6*d.* in 1888–89.

Upwards of 407 miles of parochial roads were taken over as main roads, and work to the amount of 9,749*l.* 9*s.* 10*d.* was done on them.

Many of the bridges, constructed under the St. Thomas and Portland Bridges Loan Law, were completed and thrown open to the public.

The expenditure for maintenance and repairs of public buildings amounted to 10,346*l.* 18*s.* 9*d.*, and wa , as usual, for the maintenance of churches and rectories, court houses, prisons, constabulary stations, public offices, hospitals and asylums, &c.

On new works and public buildings the sum of 40,119*l.* 16*s.* 2*d.* was expended mainly in providing increased accommodation for the courts, police, prisons, hospitals, &c., erecting a new ward at the Lepers' Home and building industrial schools for boys and for girls.

The telegraph lines throughout the Island, 595 miles in extent, were maintained in good order at an average cost of 2*l.* 12*s.* 10*d.* per mile per annum, being 12*s.* 4*d.* less per mile per annum than in the previous year, and several new lines were erected.

The lighthouses at Plumb Point, Morant Point, and Folly Point were maintained in good order, and a new holophotal light was erected at Morant Point in place of the former light.

The officers of the Public Works Department, at the request of the parochial authorities, undertook many road works for which

money had been granted from the parochial road reserve fund, and also reported and advised on various parochial works.

The public works stores were removed from the railway premises to the East Street wharf premises, which were purchased and fitted up for the purpose at a cost of 8,009*l.* 14*s.* 3*d.* The store department continues to be a source of great convenience as well as economy to the Government.

Lands.

During the 18 months 26 ¾ acres of land, besides a town lot, were taken possession of under Law 43 of 1887, and proceedings were commenced for the forfeiture of 27,941½ acres for non-payment of the quit rent and land tax.

The amount realised by the sale and lease of Government lands was 1,535*l.*, and the amount received for rent of lands and buildings was 1,488*l.* 16*s.* 8*d.*

Surveys were made for various purposes, and plans of lands purchased, leased, or sold were prepared, as well as other plans and maps, including a cadastral map of the parish of Westmoreland. Many investigations respecting lands liable to forfeiture were also made.

Rio Cobre Canal.

The expenditure for management and maintenance of the works for the 18 months was 2,346*l.* 3*s.* 1*d.*, or an average of 1,564*l.* 2*s.* 0½*d.* per annum. The average cost for the previous seven years was 1,516*l.* per annum.

312*l.* 9*s.* was spent on new works and on extending subsidiary channels.

The amount collected was 3,765*l.* 8*s.* 6½*d.*, or an average of 2,510*l.* 5*s.* 8*d.* per annum; the average for the previous seven years was 2,277*l.*

The works were maintained in good order during the period under review.

Telegraphs.

The gross receipts during the period of 18 months under review were 8,933*l.* 5*s.* 6*d.*, being but 309*l.* 11*s.* less than the collections for the two preceding years; the expenditure was 8,121*l.* 8*s.* 8*d.*

The number of messages sent and received amounted to 159,499.

Nine new telegraph stations have been opened, and a new line constructed between Kingston and Annotto Bay, which has proved of great service in providing an additional means of communication in cases of interruption.

2,085 foreign telegrams were sent from inland offices, the cost of transmission being 4,079*l.* 16*s.* 2*d.*, which amount was collected and has been paid over to the West India and Panama Telegraph Company.

JAMAICA.

The railway telegraph lines have been made available for the use of the public under the regulations which govern the inland telegraph service, and special arrangements have also been made by which telegraph stations may be opened and used out of office hours, a privilege which was granted at the instance of those interested in the shipment of fruit.

Railway.

The Jamaica Government Railway was handed over to the Jamaica Railway Company on the 1st January 1890 under the provisions of Law 12 of 1890. It is reported by the Government Director of the Company that the gross revenue from that date was 92,610*l.* 9*s.* 10*d.* and the expenditure 61,095*l.* 8*s.* 4*d.*, leaving a net revenue of 31,515*l.* 1*s.* 6*d.* In the 15 months from 1st January 1888 to 31st March 1889, when the railway was the property of the Government, the gross revenue was 72,924*l.* 19*s.* 6*d.* as against an expenditure of 41,398*l.* 10*s.* 8*d.*, leaving a net revenue of 31,526*l.* 8*s.* 10*d.*

The following is a comparison of the revenue for the two periods :—

—	1st January 1890 to 31st March 1891.			1st January 1888 to 31st March 1889.		
	£	s.	d.	£	s.	d.
Goods and cattle - - -	49,648	14	2	39,682	10	9
Passengers - - - -	30,556	7	3	26,818	2	2
Princes Wharf - - -	9,486	19	0	5,788	16	7
Miscellaneous - - -	2,918	9	5	635	10	0
	92,610	9	10	72,924	19	6

There was an increase of 35,196 in the number of train miles run. The earnings per train mile for the 15 months under review were 6*s.* 2·18*d.* and the expenditure 4*s.* 0·94*d.* as against 5*s.* 6·18*d.* and 3*s.* 1·57*d.* in the previous period.

The number of passengers carried was 374,690, 33,145 of whom were first class, and the remainder third, there being no second class carriages in use on the line ; 17,002 passengers travelled with season tickets.

The first 12½ miles of the extension to Montego Bay were completed and opened during the period under review.

Botanical Department.

The department continued to perform during the 18 months under review most useful work in connexion with the propagation, sale, and distribution of plants and seeds.

The Hill Garden at Cinchona has been much improved, new walks have been formed and numerous flowering and other shrubs have been planted out.

Great attention has been paid to the native hill ferns, and several additions to the collection have been made.

A plantation of tree tomatoes ("Cyphomandra betacea") has been formed, and some of the fruit was sent to England, and, when eaten a month after being gathered, was pronounced to be very good and in excellent condition.

Cinchona Plantation.—No cultivation of cinchona has been carried on during the year.

The forest and ornamental trees planted at this station in 1883 were all thriving well.

Hope Gardens.—No great amount of work has been carried on at these gardens during the year.

Thirty acres of sisal hemp, imported from Turks' Islands, has been established and the plants are doing well. Half-an-acre of onions was established from seeds imported from the Canary Islands. The seeds germinated freely, and the plants have done well, many of them forming good large-size bulbs.

A valuable consignment of plants was received from the Royal Gardens, Kew.

The number of plants distributed free was 15,899, and the number sold 13,351. The amount received from the sales amounted to 387*l.* 9*s.* 11*d.*

Castleton Gardens.—These beautiful gardens continued in full operation, and attracted a large number of visitors during the period under review.

The Government of Lagos sent out, during this year, two apprentices to be trained in practical work at the Botanical Gardens in this Colony, with a view of hereafter appointing them as working superintendents of the district branches or out-stations in their own country.

An industrial school has been established in the grounds of the Hope Gardens, and a certain number of the boys are engaged in daily labour in the gardens. During the period under review seven Bulletins have been published containing 25 separate articles, giving information on new and important agricultural industries, as well as notes on other cultures, lists of plants growing in the gardens, and descriptions of native plants. These Bulletins have done much valuable work, and have come to be regarded as an essential feature of the Botanical Department.

Education.

The following statistics show the progress which has been made in the work of education during the 12 months ended 31st March

JAMAICA.

1891, the period which the Inspector of Schools has taken in his Annual Report for purposes of comparison :—

Year.	Schools on Government List.	Schools inspected.	Scholars on Books.	Scholars in average Attendance.	Per-centage in average Attendance of Number on Books.	Class of Schools. I.	II.	III.	F.	E.	Not inspected.	Fees.	Grants in aid, including Building Grants.
												£	£
1890-91	831	822	80,041	44,422	55·4	115	339	357	6	5	9	8,863	29,310
1888-89	826	788	75,480	43,488	57·6	104	288	386	9	1	38	7,944	27,690
Incrse.	5	34	4,561	934	—	11	51	—	—	—	—	419	—

This comparative table shows an increase of 4,561 in the number of scholars enrolled, this being somewhat larger than the increase in 1888–89, and about thrice as great as the estimated increase in the number of children between 5 and 15 during the 18 months ended 31st March.

The comparative falling off in the average attendances is, in the opinion of the Inspector of Schools, to be largely accounted for by the epidemics of whooping cough which had been prevalent, and the unusually wet weather, especially in the west of the Island.

It is gratifying to see that there is a great increase in the amount of fees paid, as it is no doubt an evidence of the general prosperity of the Island. The number, too, of first-class schools has increased from 104 to 115, or 10 per cent., and the number of second-class schools from 288 to 339, or 17 per cent., whilst the number of third-class schools has fallen from 386 to 357. "More "striking evidence of improvement in the quality of the work "in our schools," as Mr. Capper observes, "could hardly be "looked for, and the inference is clear that the work done by "the training colleges during the past few years is now beginning "to tell."

In the period under review two of the annual examinations of teachers and students in training colleges have taken place. The following table will show the principal results at a glance for the three years 1888–90 :—

Year.	Students Presented.	Honours with Bonus.	Full Passes.	Partial Passes.	Failures.
			Per Cent.	Per Cent.	Per Cent.
1888	134	7	62	15	23
1889	142	6	62	14	24
1890	149	3	66	13·4	20·6

It will be observed that the number of candidates has continually increased; that the number of third year prizewinners has decreased, but that the per-centage of full passes had increased, whilst that of partial passes and of failures has decreased, from which it may be inferred that the quality of the work has improved.

In December 1890 the Government Training College for Male Teachers at Spanish Town was finally closed, as it was found that teachers could be trained at Fairfield and the Mico Institutions at less cost, and previous to its close all the second and third year students from the institution were removed to Fairfield and the Mico respectively. St. Mary's Female Training College was also closed in December 1890. This college was started some 10 or 12 years ago by the Rev. E. Bassett Key, and has, Mr. Capper reports, done some excellent work, as is evidenced by the number of its students who are and have been in charge of first-class schools, having raised them in several instances from a much lower position.

Only one pupil-teachers' examination was held during the period under review. A far larger number of candidates presented themselves than in any previous year, there being 205 pupil-teachers and 234 volunteers, as against 180 and 92 in 1889. The proportion of failures is still, as might be expected, greater under the system requiring a pass in each subject than it was when the total number of marks was considered; but Mr. Capper is of opinion that there are indications that teachers are working with a view to meeting this requirement, and that the per-centage of passes will improve annually.

In the month of February 1891 the Board of Directors of the Mico were able to arrange for the holding in Jamaica of a "Teachers' Institute" for the discussion of educational principles and methods, and two of the most prominent educators in America, Dr. T. W. Dickenson, Secretary to the Massachusetts Board of Education, and Professor A. C. Boyden, from one of the principal Normal Colleges of the State, came to superintend. Every facility was afforded to teachers all over the Island to attend the Institute, and allowance was made by the Education Department for the necessary closing of the schools, and a small sum granted to every teacher coming up from the country for board and lodging during the meetings. In addition every teacher attending the Institute was, by arrangement with the Exhibition Commissioners, granted a ticket of admission available for the whole of the two weeks during which the Institute was held.

The result surpassed the most sanguine expectations. There is no doubt that the visit of Dr. Dickenson and Mr. Boyden has given a powerful stimulus to the work of elementary education in the Island.

Immigration.

There were no immigrants serving under indenture in the Colony on the 31st December 1890, but the number, including

JAMAICA.

Chinese who had not completed a residence of 10 years, was 2,191, and the number who had completed their residence, and who are locally termed free coolies, was 10,263, thus making a total of 12,454 East Indians in the Colony on the 31st December 1890.

During the year there were no immigrants introduced into the Colony, but applications were received for 1,842 labourers, and orders were telegraphed to India to send 1,000.

The immigrants ex "Hereford," 1885 completed their indentured period of five years in the Colony, and were granted certificates of exemption from further service.

The ship "Foyle" sailed for Calcutta on the 25th May of this year with 567 time-expired immigrants; of this number only 29 were placed on the list of invalids. The amount of 4,297*l.* 9*s.* was taken away by 109 of the passengers in Treasury Bills payable in India; as usual, a large quantity of silver jewellery and gold coins was also taken away by the coolies.

A report of the Select Committee of the Legislative Council, which was appointed to consider the question of the renewal of immigration, was presented to Council on the 15th of April of this year, and, after amendment on a financial point, was adopted.

The report was in favour of the resumption of immigration, on the basis of the payment by the employer in respect of each immigrant, in his option, of

(*a.*) 15*l.* 10*s.* in cash on allotment or
(*b.*) 2*l.* in cash on allotment,
1*l.* 10*s.* at the end of one year,
3*l.* 10*s.* „ „ two years,
3*l.* 10*s.* „ „ three years,
3*l.* 10*s.* „ „ four years,
3*l.* 10*s.* „ „ five years,

making 17*l.* 10*s.* in all in regard to the second.

The report was also in favour of making the immigration department available for the protection of native labourers who enter into contracts for work on plantations, and extending to them the same rights and privileges as are enjoyed by indentured immigrants. As the result of this report the 1,000 coolies previously referred to were ordered.

There were no murders among the East Indian population during the year.

Emigration.

During the 18 months ended 31st March 1891, 1,088 persons left this Island for the Isthmus of Panama and Port Limon, and 2,726 returned therefrom—these figures show a great decrease on the year previous—the numbers then being 3,184 and 11,671 respectively; this is to be accounted for by the total cessation of work on the Panama Canal.

Government Savings Bank.

The number of depositors and the amount of deposits in the bank have been as follows for the last 10 years :—

Year.	Number of Depositors.	Amount of Deposits.
		£
1880–81	7,970	342,339
1881–82	9,543	324,847
1882–83	11,925	325,705
1883–84	13,601	350,546
1884–85	15,511	360,190
1885–86	16,320	363,292
1886–87	17,047	363,481
1887–88	18,311	393,250
1888–89	18,496	408,213
1890–91	19,872	423,011

showing an increase of 14,798*l.* in the amount of the deposits and of 1,376 in the number of depositors.

In the above amount of deposits are included five deposit accounts for the following public funds :—

	£	s.	d.
Immigration Return Passage Fund -	4,738	16	5
Constabulary Reward Fund - -	522	1	4
Sinking Funds - - - -	1,672	0	5
Constabulary Pension Fund - -	1	19	7
Smith and Beckford's Charity - -	248	18	5

There were also 220 accounts for trusts, charities, Chancery suits, Administrator General, and bankrupt estates, amounting to a total deposit of 24,461*l.* 14*s.* 9*d.*

The remaining 21,520*l.* accounts, representing 399,377*l.* 1*s.* 8*d.*, are all ordinary savings bank deposits. Of the total number of accounts open at the end of the year, 14,840 were for 5*l.* and under, and 6,907 were for over 100*l.*

JAMAICA.

The assets of the bank at 31st March last were distributed as follows:—

	£	s.	d.	£	s.	d.
Consols, 2¾ per cent. -	-		-	20,404	17	3
Inscribed Stock :—						
Canada, 3 per cent. -	27,908	0	8			
" 3½ " - Cape of Good Hope, 4 per cent. - -	47,766	6	8			
Ceylon, 4 per cent. -	14,400	0	0			
New South Wales, 3½ per cent. - -	31,558	11	3			
Victoria, 4 per cent. -	12,015	0	0			
				133,647	18	7
Debentures :—

South Australia, 4 per cent. - - Victoria, 4½ per cent. -	53,531	2	6			
" 4 " -	47,308	12	6			
Jamaica, 5 per cent. - " 4½ " - " 4 " -	35,830	5	8			
				251,658	3	2
				405,710	19	0
Cash on deposit in Colonial Bank -				25,311	13	7
Total - - -				431,022	12	7

During the year 4,112 accounts were opened and 2,973 closed, showing an increase of 28 in the number of accounts open.

The number of deposits amounted to 31,727, and withdrawals to 30,997, representing respectively 215,441*l.* and 220,703*l.*

The expenses of management and the interest credited to depositors amounted to 14,308*l.*, while the revenue realised was 15,829*l.*, thus showing a net profit of 1,521*l.* on the year's transactions.

Trade.

The value of the imports in each of the last 10 years has been as follows:—

	£
1880–81	1,392,699
1881–82	1,321,962
1882–83	1,625,411
1883–84	1,568,639
1884–85	1,487,833
1885–86	1,325,603
1886–87	1,322,336
1887–88	1,695,605
1888–89	1,597,600
1890–91	2,188,937

showing an increase in the year under review of 591,337*l.*, or 37 per cent. on comparison with the value of imports in the year 1888–89. This increase is not confined to any particular class of imports, but is manifest in a greater or lesser degree in nearly all descriptions of articles received.

The value of goods entered for home consumption amounted to 2,153,180*l.*, an increase of 590,257*l.*, and is classed thus:—

——	1890–91.	1888–89.
	£	£
Ad valorem goods	1,001,691	680,743
Rated goods	865,104	693,152
Free goods	286,385	189,027

The following items are those which have principally contributed to this increase of 590,257*l.*, the proportion of which, for each as compared with last year, is shown in each case:—Foodstuffs, 7·3 per cent.; liquors, 39 per cent.; tobacco, 63 per cent. household furniture, 62 per cent.; clothing fabrics, 35 per cent.; hardware and ironmongery, 63 per cent.; building materials, 49 per cent.; machinery other than estates' machinery, 164 per cent.; books and printed matter, 53 per cent.; and on other imports, 102 per cent.

The imports were drawn from the several countries in the following proportions:—

——	1890–91.	1888–89.
United Kingdom	56·0	55·0
Canada	7·0	9·2
United States	34·0	33·9
Other countries	3·0	1·9

showing very little change in the sources of supply.

JAMAICA.

The following table shows the value of imported articles which were freed from duty in the tariff under Law 11 of 1867, and is given in continuation of similar tables in previous Reports:—

—	1880-81.	1881-82.	1882-83.	1883-84.	1884-85.
	£	£	£	£	£
Steam engines - - -	20,709	10,380	14,199	12,604	9,268
Mills - - - -	1,702	2,203	1,563	2,516	862
Other machinery - - -	5,075	3,260	5,324	6,618	2,509

Staves - - - -	3,375	3,822	4,952	983	150
Wood hoops - - -	855	978	1,841	797	159
ron, galvanized - - -	3,132	3,036	3,147	5,582	8,238
„ other manufactures -	—	—	683	659	1,271
Miscellaneous - - -	4,339	2,608	4,443	4,961	70,249
	42,872	36,291	54,476	46,893	119,702

In the large sum of 20,761*l.* for other machinery is included 10,633*l.*, the value of electric light materials freed from duty under Law 26 of 1890; also 3,104*l.* for copying and printing; 2,854*l.* for sewing machines; 1,333*l.* for estates' machinery, and 1,068*l.* for other labour-saving machinery. The large increase under "Miscellaneous" is due to importations for the Jamaica Railway Company's extensions. In this item is also included

1,687*l.* 17*s.*, the amount for goods imported free for the army and navy.

The following table gives the value of the exports in each of the last 10 years:—

Year.	Of Produce and Manufactures of the Colony.	Of British, Foreign, and other Colonial Produce and Manufactures.	Total.
	£	£	£
1880–81 - -	1,104,407	74,187	1,178,594
1881–82 - -	1,471,917	77,141	1,549,058
1882–83 - -	1,365,868	103,578	1,469,446
1883–84 - -	1,350,900	33,089	1,483,989
1884–85 - -	1,181,203	227,645	1,408,848
1885–86 - -	1,078,315	201,803	1,280,118
1886–87 - -	1,334,465	174,542	1,509,010
1887–88 - -	1,661,601	166,989	1,828,590
1888–89 - -	1,501,660	113,164	1,614,824
1890–91 - -	1,807,084	95,730	1,902,814

This shows an increase of 287,990*l.* over that of the preceding year, and the following are the items which principally contributed thereto:—Cocoa, 3,858*l.*; cocoanuts, 12,583*l.*; bananas, 192,254*l.*; oranges, 5,694*l.*; ginger, 5,877*l.*; pimento, 33,484*l.*; rum, 61,705*l.*; logwood, 7,166*l.* Coffee and sugar are the only important items which show a falling off.

These figures exhibit a marked improvement in the fruit industry of the Island, and, judging from the activity manifested in this direction in various parts of the Island, there is every prospect of its further development.

The value of the several articles of Island produce bear the following per-centage proportion to the total export value:—

—	1884–85.	1885–86.	1886–87.	1887–88.	1888–89.	1890–91.
Sugar - - -	26·1	18·8	19·8	17·3	16·3	13·1
Rum - - -	19·8	17·1	22·6	12·2	9·1	11·0
Coffee - - -	13·3	11·1	15·6	19·3	19·4	15·7
Dyewoods - -	13·2	18·1	14·4	21·2	25·0	21·3
Fruit - - -	15·4	22·5	16·2	21·6	20·3	29·4
Pimento - -	4·5	4·3	3·4	2·7	3·2	4·5
Other produce - -	7·7	9·1	8·0	5·7	6·7	5·0

JAMAICA.

The exports of the principal staples in each of the last 10 years is shown in the following table :—

—	1880-81.	1881-82.	1882-83.	1883-84.	1884-85.
Sugar - - hhds.	21,056	38,392	30,783	29,427	24,986

Fruit, value - £	231,522	215,583	337,403	303,910	531,726

The exports from the Colony during the past nine years were distributed among the different countries in the following proportions :—

—	1881-82.	1882-83.	1883-84.	1884-85.	1885-86.	1886-87.	1887-88.	1888-89.	1890-91.
United Kingdom -	62·5	54·46	43·4	37·2	39·7	38·6	40·2	37·3	32·4
Dominion of Canada -	12·9	16·66	13·4	5·4	3·5	1·3	1·6	2·3	2·1
United States -	17·8	10·07	31·1	42·2	44·0	43·9	43·2	50·2	55·3
Other Countries -	6·8	6·81	12·1	15·2	12·8	16·2	15·0	10·2	10·2

showing a progressive increase in our trade with the United States, owing in great measure to the continued development of the fruit industry already referred to.

Agriculture.

Under this head may first be noticed as most striking the extraordinary strides made during the 18 months ended 31st

March 1891 in the extension of the fruit trade, the output of bananas having improved by 68 per cent., cocoanuts by 77, and oranges by 12 per cent.

The cane cultivation has continued to decrease, but there has been an increase in the cultivation of coffee, tobacco, cocoa, and ground provisions; and it may be interesting to note that the area under banana cultivation represents a little more than the area of the canefields that have gone out of cultivation during the past 10 years.

The increase in the area of land in coffee cultivation is to be attributed to the steady prices which have ruled for this commodity for some time past.

The cultivation of tobacco has shown a decided spurt, but the only parishes in which it appears to be grown to any extent are St. Andrew and St. Catherine, the increase of area in the former parish being 74 acres and in the latter 10. There is no doubt great scope for the extension of this plant, but it is believed that the want of continuous labour has been a drawback in the past to the development of this industry.

During the period under review there has been a large increase in cocoa cultivation, and it is hoped that the steps which the Government have taken in providing instructors to teach the peasantry the proper methods of growing and curing this commodity will tend largely to further increase its cultivation, for which a steady market is always obtainable at remunerative prices.

The pimento crop was a good one—the best for the past five years.

The following table shows the relative value in 1890–91 and in 1888–89 of the principal and minor products exported:—

	1890–91.	1888–89.
Sugar - - - - -	13·1	16·3
Rum - - - - - -	11·0	9·1
Coffee - - - - -	15·7	19·4
Dyewoods - - - - -	21·3	25·0
Fruit - - - - -	29·4	20·3
Pimento - - - - -	4·5	3·2
Minor products - - - -	5·0	6·7

Police.

The police force on the 31st of March 1891 consisted of one inspector-general, 14 inspectors, four sub-inspectors, 117 sub-officers, and 568 constables, being a total of 704 of all ranks, or only one man below the allowed strength for the period under

JAMAICA.

review. The strength of the rural police was 928, giving an effective police establishment of 1,632 on the 31st of March. 171 men were enrolled and 152 discharged or dismissed from the force. Gratuities and pensions amounting to 712*l.* odd were granted to 50 of the men discharged.

The regular police were distributed as follows during the 18 months :—178 in Kingston, 436 in the 13 other parishes, and 71 under training at the depôt at Spanish Town.

The services rendered by the police as compared with the four preceding years are as follow :—

——	1885–86.	1886–87.	1887–88.	1888–89.	1889–91.
Number of persons arrested on view and on information -	5,148	4,849	5,334	4,218	9,624
Number of persons apprehended on warrants	1,753	1,729	1,674	1,873	2,499
Number of search warrants executed -	85	82	75	102	153
Number of persons summoned - -	—	12,956	14,297	14,018	25,427
Number of persons subpœnaed - -	11,707	17,832	22,472	21,702	27,540
Number of seizures under revenue laws - -	[illegible]	393	465	225	665
Number of post-mortems ordered - -	337	338	319	388	627
Number of prisoners escorted - -	9,798	9,081	8,050	8,796	15,312

The criminal returns show nine cases of murder, including child murder, the cases in 1888–89 having been only four. Three of these were discharged for want of evidence or prosecution, and six were convicted in the Superior Courts. There were 20 cases of manslaughter; in the previous year there was the same number. Of these six were discharged, eight were acquitted, and six convicted.

Of other offences against the person the returns show six cases of concealment of birth, the same number as in 1888–89 and the previous year.

There were 683 cases of cutting and wounding, or 318 in excess of the number in the year preceding the period under review. Of these 397 were convicted and the remainder acquitted or abandoned for want of evidence or prosecution. Of the eight cases of shooting with intent, two were discharged, five acquitted, and one abandoned. Rape and assault with intent to commit rape numbered 55 and 43 respectively, 15 of the former and 18 of the latter were convicted.

Of the 25 persons apprehended for unnatural offences, 11 were convicted, seven acquitted, five discharged or the cases abandoned for want of evidence or prosecution, and 2 remained undisposed of on 31st March.

Of the more serious offences against property committed with violence, breaking into dwelling-houses and stealing, and breaking

into shops, warehouses, counting-houses and stealing, were the most serious, the figures for the 18 months being 228, or 60 more than in the year ended on 30th September 1889.

206 places were found by the police left open at night. In many cases where the fact of shops having been found open was brought to the notice of the owners they appeared indifferent to what might have resulted from their own negligence.

Offences against property committed without violence, such as larceny of small stock, larceny from dwelling-houses, shops, warehouses and counting-houses, larceny of dyewoods, ground provisions, money, prædial larceny, &c., all show an increase, especially prædial larceny, for which 1,692 persons were apprehended; of this number 1,027 persons were convicted.

The returns show an increase in the crime of arson, but feloniously wounding stock and wilful damage to property show a decrease.

There were 33 cases of forgery and offences against the currency, of which 20 were convicted.

The police rendered the usual service in connexion with the Main Road, Sugar Mills, Birds and Fish Protection, and Agricultural Produce Dealers Laws. Satisfactory work was done in respect to cruelty to animals, 972 cases having been brought up during the 18 months ended on 31st March 1891. Little assistance was, however, given to the police by the public in carrying out this work.

Prisons.

The number of prisoners in custody in all the prisons and gaols in the Island on the 31st of March 1891 was 910. The number in each of the last five years on the 30th of September was as follows:—

1885 - - - - -	782
1886 - - - - -	803
1887 - - - - -	795
1888 - - - - -	749
1889 - - - - -	890

The number in the year under review was thus the highest in the series.

There were 5,570 commitments to all the prisons during the 18 months; during the previous 12 months there were 3,808. The re-convictions were 1,846; during the previous 12 months there were 1,242.

There were 31 deaths in the General Penitentiary during the 18 months. Of this number 16 were cases of prisoners in an impaired state of health when admitted to prison. There were 57 deaths in all the other prisons, and one sentence of capital punishment was carried out.

The net cost of the prisons amounted to 13,362*l.* 17*s.* 0½*d.*, or 15*l.* 4*s.* 0½*d.* per prisoner per annum, the figures for the previous 12 months being 13,149*l.* 7*s.* 0¼*d.* and 17*l.* 0*s.* 2½*d.* respectively. The gross earnings in cash were 5,372*l.* 12*s.* 1*d.*

JAMAICA.

The estimated value of labour yielding no return in money was 5,458*l.* 16*s.* 8*d.*, in the preceding 12 months it was 4,028*l.* 11*s.* 6*d.*,

The prisoners were, as usual, employed in making bricks and tiles, burning lime, quarrying stone, and in washing and repairing clothing for the prison and for other public institutions, as well as for private parties.

The value of the washing and repairing done was 1,073*l.* 10*s.* 7*d.*, or 388*l.* 9*s.* 8*d.* more than the previous 12 months.

School was regularly held in the General Penitentiary and in the Saint Catherine, Falmouth, and Hanover District Prisons.

Religious services were conducted regularly at the General Penitentiary by the chaplains of the different denominations attached to the institution, as well as in the St. Catherine, Hanover, and Falmouth District Prisons and the Middlesex and Surrey County Gaol. No regular provision exists for the religious instruction of the prisoners in the Short Term Prisons at Black River and Port Antonio, but they are visited occasionally by the local clergy.

Discipline was well maintained in all the prisons, very little corporal punishment was required, and was only inflicted in cases of violent assaults on officers. The "mark system" introduced into the General Penitentiary in October 1888 worked satisfactorily.

Vital Statistics.

The total estimated population on 31st March 1891 was 645,377, but by the census taken five days later it was found to be actually 639,491.

The natural increase by excess of births over deaths was for the half-year to 31st March 1890, 2,403, or 7·5 per 1,000 persons living, and for the year to 31st March 1891 was 8,467, or 13·2 per 1,000 of population, which is about the mean rate of increase, and may be considered satisfactory, as an epidemic of whooping cough caused 3,621 deaths during the period.

The births registered amounted to 11,275 to 31st March 1890, giving a rate of 35·6 per 1,000 of population, and during the year to 31st March 1891 to 24,507, being 38·4 per 1,000 of population; the proportions of illegitimate births being 61·6 and 60·7 respectively which, I regret to say, are the heaviest rates on record.

The marriages registered were 1,860 to 31st March 1890, and 3,560 to 31st March 1891; the number of marriages in the year has thus increased since 1881–2 when it was 2,026, the rate per 1,000 of population being in that year 3·4, whereas it now is 5·5.

The per-centage of illiterate persons among those married is 56·3.

The deaths registered were 8,872 to 31st March 1890, or 28·0 per 1,000 of population, and 16,040 to 31st March 1891, or 25·0 per 1,000.

The death rates for these periods are higher than any since 1880–81, and the records of causes of deaths show that then as now the excessive mortality was due to an epidemic of whooping cough

In the Cayman Islands the total number of births was 283 and of deaths 73, while 44 marriages were registered ; the proportions to 1,000 of population being of births 45·6, of deaths 10·0, and of marriages 6·6.

General.

The period under review has been one of unusual interest and importance in the history of the Island. In the report on the Blue Book for 1888–89 it was stated that a period of depression closed with the year 1887–88, and that it was anticipated that the then new-born prosperity would be maintained and would increase. These anticipations have been fully realised, as the preceding summary of the reports of the several public departments show. The revenue of the Colony has largely increased, the expenditure having been kept within reasonable limits, while both the imports and exports are larger than in any year of the past decade.

The cultivation of the sugar cane continues to diminish, but not so fast as the fruit trade increases, and there is a growing desire to devote more attention than has hitherto been given to the cultivation of the minor products and to the introduction of new economic plants. The immigration system has been placed on a new and satisfactory basis, and it may therefore fairly be hoped that the want of steady labour, which has for so long proven a serious obstacle in the way of the larger cultivators of the soil, will gradually but certainly cease to be felt.

But perhaps the most satisfactory feature of the past year is the attention which has been drawn to the Island in other parts of the world. This has been due to a great extent to the Exhibition opened at Kingston on the 27th of January last by H.R.H. Prince George of Wales.

The opening ceremony itself was attended by many strangers and by some distinguished persons, and throughout the period of three months during which it remained opened the Exhibition was visited by many from across the seas.

Convinced as I am that Jamaica needs only to be better known to become a favourite resort of the tourist in search of scenes of interest and beauty, of the invalid fleeing from the rigours of a northern winter, and of the settler in search of good land, a healthy climate, and perfect protection of property, the presence of so many visitors during the period referred to cannot fail to be of the greatest advantage to the Colony.

In order to encourage the influx of visitors as much as possible, the Jamaica Hotels Law of 1890 was passed, by which the Government guarantees the debentures of companies formed under its provisions. As a result five new hotels conducted on proper principles have been erected.

An important step in the direction of improving the means of communication throughout the Island was taken during the year by the passing of Law 17 of 1890, which provides for the transfer

JAMAICA.

to the Public Works Department of a considerable proportion of the parochial roads in each parish, hitherto under the management of the local boards. This will not only ensure the principal roads being kept in a condition of perfect repair, but, by relieving the parochial boards of the burden of their maintenance, while in no way reducing the revenue available for road purposes, will enable them to improve those roads which still remain under their care, and to construct new roads in districts where the want of means of communication has been much felt.

The extension of the railway, which, in accordance with the terms of the agreement of the 29th March 1889, was transferred to an American syndicate on the 1st January 1890, is being pushed in the direction of Montego Bay in the north-west of the Island; when the line in that direction is completed the railway will be extended to Port Antonio in the north-east.

During the year a Lands Department was created with the Surveyor-General at its head; it is hoped that this will ensure more attention being given to Crown lands, forest preservation, and the protection of river sources than has hitherto been possible while the Crown Surveyor's Department was merely a branch of the Public Works Department.

Ths loyalty of the inhabitants of Jamaica has long been a striking feature in their character. It has, I am pleased to say, suffered no abatement. The enthusiastic reception given to H.R.H. Prince George of Wales by all classes of the community on the occasion of his visit to the Colony to open the Exhibition afforded ample proof of the devotion of Jamaica to the Government and person of Her Majesty the Queen.

Sir H. A. BLAKE to LORD KNUTSFORD.

King's House, Jamaica,
April 16, 1892.

MY LORD,

I HAVE the honour to transmit to your Lordship two copies of the Turks and Caicos Islands Blue Book for the year 1891, together with the Commissioner's Report thereon.

I have, &c.
(Signed) HENRY A. BLAKE,
Governor.

The Right Hon. Lord Knutsford, G.C.M.G.
&c. &c. &c.

REPORT ON THE BLUE BOOK OF THE TURKS AND CAICOS ISLANDS FOR THE YEAR 1891.

Revenue and Expenditure.

The revenue for 1891 was 7,354*l.*, as compared with 8,901*l.* in 1890, being an excess of 242*l.* in the estimate. The balance brought forward from 1890 was 3,177*l.*, which, added to the receipts collected within the year, made up a total revenue of 10,531*l.*

The decrease inthe revenue from that for 1890 was principally due to a falling off of 581*l.* under import duties, which may be attributed to the absence of wrecks, with one exception, with valuable cargoes, and of 569*l.* under exports, on account of 404,555 bushels of salt less being shipped than in the preceding year.

The ordinary expenditure was 6,983*l.*, as against 7,067*l.* in 1890, being 53*l.* under the estimate. The expenditure from surplus funds on special works was 1,012*l.*, making a total expenditure of 7,995*l.* The ordinary expenditure was 370*l.* under the receipts,

JAMAICA (TURKS AND CAICOS ISLANDS).

but the latter fell short of the total expenditure by 641*l.* and reduced the balance to 2,535*l.* to carry forward at the close of the year. There is also a reserve sum of 1,000*l.* invested to the credit of the Dependency.

Public Works.

The opening of a channel for boats at the South Creek, Salt Cay, and the construction of the North Tank at Grand Turk, were carried to completion within the year. The road to the North Wells, Grand Turk, which is much used by the poorer classes to cart water along, was put in a state of good repair, and Saunders Pond Alley, which had become well nigh impassable, made into an excellent road, and several of the streets in the towns of Grand Turk and Salt Cay, which were in a very bad state of repair, were made up. A contract was accepted to remake a portion of the road to the lighthouse, and the work was begun, but had not been completed at the close of the year. This long-needed work, when finished, will be a great boon to the owners of plantations of corn, &c. most of which are located in the part of the Island through which this road runs. Many minor repairs to abutments at Grand Turk and Salt Cay, the sea wall at Grand Turk, and Government property generally in the Dependency, were executed during the year.

Legislation.

The undermentioned Ordinances were passed by the Legislative Board during the year :—

No. 1—The Annual Appropriation Ordinance.
No. 2—The Companies Amendment Ordinance.
No. 3—The Supplementary Appropriation Ordinance.
No. 4—The Superannuation Amendment Ordinance.
No. 5—The Fibrous Plants Ordinance.
No. 6—The Cable Company's Ordinance.

COUNCILS AND ASSEMBLIES.

Legislative Board.

Mr. H. Higgins, on appointment as Commissioner, became a member and was nominated President of the Board. Dr. A. W. Thompson, Government Medical Officer, was appointed an official member of the Board, *vice* Dr. Andrews, who resigned his appointment in the Government Service.

Board of Education.

Mr. H Higgins, as Commissioner, became a member and Chairman of the Board. There was no change among the other members.

Civil Establishment.

Mr. H. Higgins, Colonial Secretary of Sierra Leone, was appointed Commissioner for the Turks and Caicos Islands *vice* Captain Jackson, transferred to the Bahamas, and arrived in the Dependency on the 30th March. Dr. A. W. Thompson was appointed Government Medical Officer in April *vice* Dr. Andrews, resigned. Captain Jackson was absent on leave during January, and the Judge acted as Commissioner from the beginning of the year until the arrival of the Commissioner in March. Dr. Clark, a Jamaica practitioner, was employed as Government Medical Officer, in place of Dr. Andrews, on sick leave, from 1st January until the arrival of Dr. Thompson in April.

Messrs. Harriott and Stamers, Assistant Commissioners at Grand Turk and Salt Cay respectively, were each absent on vacation leave for three months in the year.

Mr. J. C. Crisson acted for the former in the capacity of Police Magistrate, and Mr. E. C. Harriott acted for him as Registrar of the Supreme Court and of Deeds; Mr. G. D. Jones, of Salt Cay, acted for Mr. Stamers, during his absence.

Foreign Consuls.

The undermentioned gentlemen represent in the Dependency the Governments of the countries named:—

United States of America.—J. L. Hance, Consul; J. D. Murphy, Vice and Deputy Consul.
Sweden and Norway.—C. R. Hinson, Consul.
Dominican Republic.—C. R. Hinson, Consul.
Haytian Republic.—J. W. Darrell, Consul.
Denmark.—J. D. Murphy, Consul.
France.—W. S. Jones, Consular Agent.
Spain.—G. J. Gibbs, Vice-Consul.

Education.

There are seven free elementary schools, viz., five mixed, and one for boys only, and one for girls only, in the Dependency, which are maintained out of a Government Grant of 600*l.* per annum.

At the annual inspection the number of scholars on the books was found to be larger than in 1890, and the attendance showed a considerable improvement. All the schools, with the exception of those at Kew and Blue Hills, were in operation throughout the year. The school at Kew was closed for the first five months of the year, on account of the illness and absence, on leave, of the master, whose state of health eventually compelled him to resign his appointment in December. Arrangements were made to have the vacancy thus caused filled by a teacher from Jamaica, early in the ensuing year. The school at Blue Hills was closed on the

1st July, the acting teacher, who had not given satisfaction, being permitted to resign, and was reopened on the 5th of October, under a new teacher procured from Jamaica, and whose wife was appointed sewing mistress.

The following table gives a summary of the school returns for 1891 :—

Summary of School Returns for 1891.

School.	Teacher.	Average Number on Books.	Average Attendance.	Number of Days in operation.	Cost of School.
					£ s. d.
Grand Turk - - -	R. G. Wint - -	217	80	216	153 11 3
Salt Cay - - -	N. W. Astwood - -	65	37	205	71 12 3

Total - -	—	594	303	—	524 13 2

Population.

The census was taken throughout the Dependency on the 6th April, with the following results :—

The total population numbered 4,785 souls, of whom 41 were on board vessels not belonging to the Dependency, making the actual population of the Islands 4,744, being an increase of 12 on the census taken in 1881, and of 21 on that taken in 1871. The increase was in the female population. Both the white and black population have decreased since the previous census was taken, the former over 25 per cent., and the latter about 3 per cent., while the coloured population has increased by 243 souls, or about 18 per cent. The decrease in the white population may be attributed to emigration to the United States of America. The census returns showed the average annual birth-rate to be 35 per 1000 and the death-rate 24 per 1000 of the population, viz. :—

Average annual number of births, 166.
„ „ „ „ deaths, 115.

This is a decrease of one per thousand in the birth-rate and an increase of three per thousand in the death-rate on the returns from the census of 1881. The returns showed a total of 29 persons suffering from infirmities in the Dependency.

Imports, Exports, &c.

The following tables compare the Receipts and Expenditure of Public Revenue for 1890–1, and give trade and other statistics.

SCHEDULE of RECEIPTS and EXPENDITURE of the PUBLIC REVENUE for the Year 1891, in comparison with the preceding Year 1890.

Agriculture.

Owing to a drought followed by floods, the crops of corn, yams, potatoes, &c., failed in the Caicos Islands in the spring, and occasioned considerable distress amongst the people, who had to be assisted with food by the Government, to tide over the famine.

The cultivation of the Pita (Sisal) plant has made fair progress, especially in the Caicos Islands, and the reports from the plantations, towards the close of the year, were satisfactory. Two companies, the "West Caicos Fibre Company, Limited," at West Caicos, and the "East Caicos Company, Limited," at Breezy Point, formed for the purpose of raising pita plants and extracting the fibre, registered under the companies ordinance, and there are several private plantations. A small shipment of fibre was made to New York within the year from one of the latter, and the first quality fetched a cent a pound more than the second quality—an equal price to the best from Yucatan. This speaks well for the quality of the fibre which can be produced in these islands, and promises a bright future for the local fibre industry.

Banks.

The Government Savings Bank was established in January 1890, and the following table gives the number of depositors, and the amount due to them, on the 31st December in each of the two years which it has been open:—

—	No. of Depositors.	Amount due to Depositors.
		£
1890 - - - -	89	505
1891 - - - -	82	523

General Remarks.

The industries and products of the Dependency were well represented in the Turks and Caicos Islands court at the Jamaica Exhibition, and received awards of two diplomas of honour, one gold medal, four silver medals, one bronze medal and three honourable mentions in all.

In August, a hurricane passed the Islands, but the centre of the disturbance, being evidently considerably to the north of them, its full violence was not felt locally; and no serious damage to property, or loss of life on land, was caused. The local shipping, however, suffered considerably, and several small vessels and boats were driven ashore and either damaged or totally wrecked.

The Halifax and Bermuda Cable Company, Limited, having decided to extend the cable from Bermuda to the West Indies, and to establish a station at Grand Turk, made application to the Legislative Board to afford certain facilities to the company for carrying out the project, and the necessary ordinance was passed by the Board in December.

It should undoubtedly benefit these islands generally, to be brought more in touch than they are at present with other parts, and the cable should not only greatly facilitate business transactions, but should also cause an increase in the shipping, and it is to be hoped, therefore, that a station of the company will be established and in working order at no distant date.

Grand Turk, March 21, 1892.

H. HIGGINS,
Commissioner.

JAMAICA 1891-2.

JAMAICA.

(For Report for 1889-91 *see* Colonial Report [Annual] No. 35.)

Sir H. A. BLAKE to the MARQUESS OF RIPON.

King's House, Jamaica,
November 21, 1892.

MY LORD,

I HAVE the honour to forward to your Lordship the accompanying Report on the Blue Book of this Colony for the year ending 31st March 1892.

I have, &c.
(Signed) HENRY A. BLAKE,
Governor.

The Most Hon. the Marquess of Ripon, K.G., &c. &c. &c.

REPORT ON THE JAMAICA BLUE BOOK FOR 1891-92.

King's House,
November 21, 1892.

MY LORD,

I HAVE the honour to forward to your Lordship the Blue Book for the year ending 31st March 1892, with précis of the Departmental Reports.

Since the closing of the Jamaica Exhibition on the 2nd May 1891, many applications have been made for information about the Island of Jamaica and its possibilities, and it may not be amiss to lay before your Lordship some general information that may be useful to inquiring capitalists.

The Island of Jamaica contains about 2,683,000 acres, of which about 413,000 are flat, and the remainder hilly. There are 640,000 acres under cultivation, or about one-fourth of the whole; but if we deduct from this the 372,000 acres in common pasture, the amount of actual cultivation is reduced to about 268,000 acres or one-tenth of the total. Along the centre of the Island run ranges of hills attaining an elevation in the west of 1,800 feet and in the east of 7,500.

There is a great variety of soil and climate, and every tropical product, save, possibly, those requiring the steamy swamps of tropical

JAMAICA. 1891–2.

South America, can be grown, while many of the products of the temperate zone can also be successfully cultivated. Lying, as the Island does, with its longer axis from east to west, the north side, exposed as it is to the constant north-east trade wind, is several degrees cooler than in the south; but all round the Island a strong sea breeze blows during the day, which is replaced at night by a cool land breeze blowing down from the hills. The climate is extremely healthy. The average death-rate of 22·4 per thousand hardly conveys a true impression, the mortality among negro children here, as elsewhere, being very high as compared with the children of the Caucasian races. The climate is particularly suitable for lung complaints and nervous affections. There are several mineral springs of great medicinal value. The temperature of the spring at Bath in St. Thomas-in-the-East, is 126° F., and that of Milk River Bath in Clarendon 92°F. These springs are efficacious for gout, rheumatism, paralysis, &c.

The Jamaica Exhibition of 1891 was conceived and carried out as an advertisement, a stimulus, and an object lesson. It was carried through without any interference on the part of the Government, the proposal being secured by private guarantees which were given to the amount of 27,000*l.* It was opened on the 27th January and closed on the 2nd May; during that time it was visited by 302,831 persons. The full result of the exhibition has not yet been shown and it will afford a measure of the capacity of the people for improvement, but already there are gratifying evidences that the efforts of those who brought about the exhibition have not been in vain. There has been a considerable sale of improved sugar mills for small cultivators Dairy farming has been started, and machinery imported similar to that exhibited, the beginning of what may be an important industry, as we import annually over 720,000 pounds of butter. Pottery works have been begun, as it was discovered that we have in Jamaica as good clays for the purpose as can be procured in England, and there has been generally excited an inquiring interest in possible additions to the products of the Island that must bear fruit in the near future. While Great Britain, the United States, and Austria, France, Germany, and Italy were represented, the principal exhibitor was Canada, and the Dominion has laid the foundations of increased trade with Jamaica that already begins to show signs of expansion.

The exhibition closed with a net deficit of 28,465*l.* to meet which 19,000*l.* has already been paid up by the guarantors.

The year shows a falling off of 55,653*l.* in the income of the Colony as compared with the previous year, but it must be remembered that the imports of the year 1890–91 were the largest on record. The Collector-General in his report compares the imports with those of the year 1889–90 with a result of 25,600*l.* in favour of the year 1891–92.

Of this diminution of revenue 7,100*l.* was due to the remission of duty demanded by the United States Government under

threat of the imposition of discriminating duties on our sugar and coffee.

It was not expected that the free importation of the low-grade sugar into the United States would benefit the West Indies, and the result has proved that our estimate of the effect was well founded. Probably we shall not feel the full effects of the McKinley Tariff Act for a few years, when the bounty offered for home-grown sugar, almost equal to the cost of production, has increased the area of cultivation of cane and beet in the United States; but the prices of Muscovado and centrifugal sugars have receded rather than advanced in the New York market. Happily it has not been necessary to replace the 30,000*l.* abandoned by the imposition of other duties, and I hope that, with economy, the necessity for doing so may be avoided.

The exports during the year fell off to the extent of 180,718*l.* in respect of Island produce, fruit contracting in value to the extent of 235,375*l.* in consequence of an abundant crop in America, while sugar and rum show an increased value of 75,828*l.*

I hope to see the cultivation of fibre plants extended. The Sisal plants procured from Florida by my direction in 1889, and planted at Hope Gardens, have done so well that there is no doubt of the suitability of soil and climate, and already at least two lantations have been started.

During the year the means of communication have been largely extended. Eight hundred and ninety-seven miles have been added to the main road system, and the money set free has been used for the purpose of improving and extending the parochial roads. Several of the dangerous rivers on the Northside have been bridged, and power has been given by Law 20 of 1892 to raise money for the construction of additional bridges, so that within three years I hope that every river in the Island will be bridged, a boon that can only be appreciated by those who have experienced the perils of travelling in the rainy season, when the rivers are liable to sudden and dangerous floods, from which many lives are annually lost.

It is expected that the extension of the railway to Montego Bay, on the Northside, will be completed within two years. The effect will probably be to largely increase the business of that port.

Legislation.

During the Session of 1892 the Legislative Council passed 32 Laws. The following are the most important:—

Law 1 of 1892—"The Customs Tariff Amendment Law, 1892." This Law was passed to give effect to an arrangement entered into with the United States Government with reference to the McKinley Tariff Act, under which certain articles are admitted free, and the duties on others reduced from 25 to 50 per cent.

JAMAICA. 1891-2.

Law 6 of 1892 abolishes the Poll Tax on horsekind and horned stock, it being felt that the proceeds of this tax, which had been imposed to meet a special financial emergency, could now be dispensed with.

Law 7 of 1892 provides for the appointment of an Assistant Resident Magistrate for Kingston. On the reduction by the council of the salary of the Police Magistrate nobody could be found to accept the office at the reduced salary allowed. The duties were performed for some time by the lay justices, but their attendance was necessarily irregular, and as this state of things was productive of considerable inconvenience to the public, it was considered best to appoint a lawyer, who, in addition to the work of the police court should assist the Resident Magistrate generally in his work, which is frequently heavier than one magistrate can well get through.

Law 10 of 1892 enlarges the powers of the visiting officer by providing under certain circumstances for the quarantine of ships after their arrival in port, and after they have been allowed to communicate with the shore, and also for the quarantine of vessels with mud ballast.

Law 12 of 1892 empowers the authorities of a reformatory or industrial school to board out some of the children, and to pay for their board out of the funds applicable to the maintenance of the institution.

Law 13 of 1892 exempts from payment of harbour fees vessels entering any harbour for the purpose of calling for orders only—thus re-enacting an exemption which had been allowed by Law 36 of 1873, but apparently accidentally omitted from Law 24 of 1889.

Law 14 of 1892—"The Cattle Trespass Law, 1888, Amendment Law, 1892"—exonerates the owner of trespassing stock from any action for damages, provided he has adopted all reasonable and proper precautions for the confinement of his stock.

Law 17 of 1892 empowers the Governor to raise a force of coast defence volunteers for special services in connexion with submarine mines, &c., and provides for their being paid when out for training or on active service.

Law 20 of 1892 makes provisions for raising by loan money for the construction of certain bridges in different parts of the Island, the cost of which could not be met from the ordinary general returns of the year.

Law 22 of 1892 amends the Mountain and Rivers Reserves Laws of 1889 and 1890, and enables the Governor in Privy Council from time to time to declare by Proclamation any mountain ridge a mountain reserve, and to revoke any such Proclamation should it be found that its operation seriously affects any man's land

Law 23 of 1892 gives the Government power to acquire land for the purpose of erecting a lighthouse in the vicinity of Negril Point.

Law 24 of 1892, "The Bankruptcy Laws Further Amendment Law, 1892," is in the main an adaptation of the English Bankruptcy Act, 1883 (46 & 47 Vict. cap. 52).

Law 26 of 1892 makes provision for the granting of pensions or gratuities, under certain conditions, to officers who joined the public service after the passing of Law 34 of 1885, and who do not therefore come under the provisions of that Law. The Law provides that the officers shall contribute at the rate of 2 per cent. on their salaries to a pension fund.

Law 31 of 1892—"The Elementary Education Law, 1892," this Law provides for the further development and improvement of the existing system of giving assistance out of public funds to elementary schools, to meet the cost of which a tax on houses estimated to yield 10,000*l.* a year is imposed. The Law also provides for the establishment of a Board of Education to advise and assist in the general administration of the Law.

Law 32 of 1892—"The Secondary Education Law, 1892," which enables the Governor in Privy Council, on the recommendation of the Board of Education (established by the Elementary Education Law), to establish a school for higher education at the public expense in any district where one may seem to be required, thus affording facilities for such *higher* education which did not exist prior to the passing of this Law.

Finance.

The year commenced with a surplus of 243,987*l.* and the revenue realized was 590,611*l.*, making together a sum of 834,598*l.* The expenditure, including 28,998*l.* for sinking funds and 600*l.* for redemption of debt, amounted to 639,864*l.*, thus leaving at the close of the year a surplus of 194,734*l.*

The appropriated parochial revenues, which are devoted to parochial roads, poor relief, sanitary, and other similar local services, and are administered by the several parochial boards, produced in this year 124,154*l.*, being a decrease of 465*l.* on the receipts in 1890–91.

The revenue appropriated to immigration services, including the proceeds of employers' notes for cost of introduction of immigrants, amounted to 31,838*l.*, an increase of 27,433*l.* on the collections in the previous year, which is due to the amount received from planters' notes on the resumption of immigration under Law 14 of 1891. Export duties on sugar and rum having been abolished, a decrease of 2,150*l.* occurs under this head.

JAMAICA. 1891–2.

The usual comparative table, showing the whole of the Treasury receipts in the year under report and those of the previous year, is given below :—

Revenue.	1891–92.	1890–91.	Increase.	Decrease.
General Revenue.	£	£	£	£
Import duties - - -	319,810	366,662	—	46,852

Immigration Revenue.				
Export duties - - -	448	2,598	—	2,150
Proceeds of planters' notes :—				
Law 7 of 1878 - -	701	1,427	—	726
Law 14 of 1891 - -	29,673	—	29,673	—
Miscellaneous - - -	52	46	6	—
Interest - - - -	964	334	630	—
	—	—	30,309	2,876
	31,838	4,405	27,433	—
Totals.				
General revenue - - -	590,610	628,951	—	38,340
Specially appropriated revenue -	32,013	30,814	1,199	—
Parochial revenue - -	124,154	124,619	—	465
Immigration revenue - -	31,838	4,405	27,433	—
	—	—	28,632	38,806
Grand total - -	778,615	788,789	—	10,174

The yield of the general revenue shows a net decrease of 38,341*l.* The falling off occurs chiefly in import duties, 46,852*l.*, the effect of the McKinley Act and a smaller importation of British ad valorem goods; in rum duties, 12,742*l.*, owing to a lesser consumption, which is attributed to the falling off in the trade in fruit and logwood having caused less money to circulate among the labouring classes in certain districts; in export duties, 6,033*l.*, caused by the repeal of the Laws under which these duties were collected. The chief items of increase are interest on railway bonds, 23,545*l.*, which is a new item since the sale of the railway; reimbursements for expenditure, 2,063*l.*; and miscellaneous, 3,470*l.*

The revenues specially appropriated towards the main roads, recently undertaken under Law 17 of 1890, yielded 32,013*l.*, against 30,814*l.* in the previous year. This small increase is not attributed to any special cause.

JAMAICA. 1891–2.

Parochial revenues show a falling off of 5,472*l.* in road revenues, caused by the reduction of the land tax and quit rent to the extent of the collections made for the Cadastral Survey tax, which were refunded from this item under Law 8 of 1891; and in poor rates, 1,783*l.*, and sanitary rates 1,617*l.*, due to ordinary fluctuation and the reduction of the rates. The only item which shows any very appreciable increase is miscellaneous, 6,935*l.*

The following is a similar comparative statement of the Treasury disbursements compared with 1890–91:—

Expenditure.	1891–92.	1890–91.	Increase.	Decrease.
General Expenditure.	£	£	£	£

The general expenditure of the Colony shews an increase of 78,526*l.* The following are the chief items of increase:—Administrative departments, 49,396*l.*, for public works and immigration, the latter now being charged as public expenditure under Law 14 of 1891; postal services, 2,322*l.*, for the manufacture of stamps, post cards, and increased payments to the railway company for conveying mails; judicial, 1,100*l.*, for expenses of the Resident Magistrates' Court; medical, 5,566*l.* for the maintenance of coolies, equipment of hospitals, and larger importation of drugs; constabulary, 1,257*l.*, for the importation of valise equipment, handcuff cases, and great coats; prisons, 1,231*l.*, due to the increase of prisoners; printing office, 2,852*l.*, an addition to the staff, and importation of a stereotype machine, and a general reorganization of the office; census, 6,148*l.*, the amount expended during the year for taking the census.

The expenditure of 4,476*l.*, on the main roads recently taken over under Law 17 of 1890, appears for the first time in the accounts for this year: as the work of reconstruction and taking over these roads progresses the expenditure will of course increase.

JAMAICA. 1891-2.

The expenditure from parochial revenues shows an increase of 5,231*l.*, chiefly for expenditure from the surplus fund for parochial municipal objects, 2,586*l.*, and for sanitary purposes, 1,267*l.*

Pensions.

During the year pensions, amounting in all to 1,425*l.* 15*s.* 1*d.*, were granted under the provisions of the Jamaica Pension Law 34 of 1885, and the resolution of the Legislative Council of the 23rd October 1885, while the pension list was reduced to the extent of 1,591*l.* 17*s.* 0*d.*, by deaths, &c.

Debt.

There were no loans raised during this year; but 2,526*l.* 19*s.* 4*d.* of Savings Bank moneys was appropriated for the construction of new telegraph lines under Law 1 of 1879.

600*l.* of debentures under Law 8 of 1871 was paid off from general revenue during the year, and the following amounts were redeemed from the sinking fund provided for the purpose, 5,800*l.* in all, namely: 3,000*l.* under 27 Vict. c. 24.; 1,100*l.* under Law 19 of 1880; 800*l.* under Law 8 and 17 of 1880; 500*l.* under Law 17 of 1884; 300*l.* under Law 12 of 1879; and 100*l.* under 28 Vict., c. 26.

The public debt directly secured on the general revenue stood as follows on the 30th September in each of the last 10 years, after making allowance in each year for the sinking funds actually invested for the eventual redemption of debt:—

	£	*s.*	*d.*
1882 - - -	1,238,750	0	0
1883 - - -	1,257,916	2	1
1884 - - -	1,243,899	18	9
1885 - - -	1,427,458	14	2
1886 - - -	1,478,790	3	8
1887 - - -	1,491,993	3	9
1888 - - -	1,502,684	9	8
1889 - - -	1,506,883	6	0
1891 - - -	1,458,221	12	7
1892 - - -	1,520,088	4	3

Of the above amount of debt on 31st March last, 821,005*l.* was on account of the railway purchase, reconstruction and extension, and 82,500*l.* on account of the Rio Cobre Canal.

The following are the amounts due for debentures guaranteed by the general revenue, raised on account of the several undertakings specified :—

	£
Kingston and Liguanea waterworks - -	128,200
Kingston markets - - - -	20,000
Kingston gasworks - - - -	30,000
Kingston slaughter-house - - -	10,000

Legislative Council.

After the close of the Session, which had opened on the 24th February, 1891, and ended on the 29th of April, the Legislative Council did not meet again until the 5th November 1891, when a Special Session was convened to consider the modifications necessary in the tariff of the colony in view of the reciprocity clauses of the McKinley Act of the United States.

This Session lasted only two days, and the Council adjourned until the holding of its Annual Session, which took place on the 12th January, 1892, somewhat earlier than usual, in order that the aterations in the tariff consequent on the McKinley Act might be authorized by law before the 1st February, as required by the United States Government.

The Session continued beyond the close of the year under review, and the Council finally adjourned *sine die* on the 8th April 1892, after having met on 32 days.

As I was absent from the island on leave, Major-General Wilson Black, C.B., presided, as senior member, at the Special Session of the Council in November 1891.

Mr. Neale Porter, C.M.G., Colonial Secretary, having returned from leave of absence, resumed his seat at the Council at this Session; and Mr. Richmond, Acting Director of Public Works, took his seat as an ex-officio member of the Council in the place of Mr. Bell, Director Public Works, who had been granted leave of absence.

Mr. W. B. Espeut, member for the electoral district of Portland and St. Thomas, was granted leave of absence from the Annual Session of the Council.

Public Works.

The total expenditure under all heads was 236,753*l.* 18*s.* 5*d.*, of which 152,117*l.* 11*s.* 7*d.* was expended on main roads and bridges and parochial roads taken over as main roads, under Law 17 of 1890, and 84,636*l.* 6*s.* 10*d.* for salaries, maintenance, &c., of public buildings, lighthouses, irrigation works, waterworks, telegraph construction and maintenance, &c.

The expenditure, excluding that under Law 17 of 1890, and on the bridges in Portland, St. Thomas and St. Mary, was

117,516*l.* 13*s.* 9*d.*, and the cost of administration and supervision 13,067*l.* 0*s.* 7*d.*, or about 12 per cent. on the net cost of the work executed.

The cost of maintenance of main roads and bridges, and of new works thereon, exclusive of the cost of the roads taken over under Law 17 of 1890, was 48,935*l.* 17*s.* 9*d.* This expenditure was due to the cost of constructing bridges, culverts, drains, retaining walls, purchasing lands for sites of bridges, and widening the roads, &c.

The average cost of the main roads was 41*l.* per mile, an increase of 2*l.* 10*s.* 0*d.* over the cost of the previous year, when the average cost was 38*l.* 10*s.* 0*d.* This increase was however justified by the more perfect condition in which the roads were put.

The length of parochial roads taken over under Law 17 of 1890 as main roads, up to the end of the year, was 896¾ miles, but the reconstruction of these was only to a small extent completed during the year.

The expenditure for maintenance and repairs of public buildings amounted to 7,949*l.* 16*s.* 2*d.*, and was, as usual, for the maintenance and repairs of churches and rectories, courthouses, public offices, prisons, police stations, hospitals and asylums, &c.

The sum of 28,855*l.* 16*s.* 7*d.* was expended on new works on public buildings such as courthouses, public offices, prisons, reformatories, and on various other public buildings.

The telegraph lines throughout the Island, 618 miles in extent, were maintained in good order at an average cost of 2*l.* 14*s.* 2*d.* per mile per annum, being 1*s.* 4*d.* per mile per annum more than in the previous year. The substitution of iron poles for old wooden ones where necessary is gradually being carried out. Several new lines were also erected.

The lighthouses at Plumb Point, Morant Point, and Folly Point were maintained in good and efficient order.

The Public Works Department, at the request of the parochial authorities, and for the information of the Government, advised and reported on various parochial works.

Lands.

During the year 2,224 acres of land, all in the parish of Portland, were taken possession of under Law 32 of 1888, and proceedings for the forfeiture of 23,100 acres for non-payment of quit rent.

The amount realised by the sale of Government lands was 181*l.* 16*s.* 4*d.*

Surveys were made for various purposes, and 127 parcels of land for the railway track from Porus to Montego Bay were acquired. The acquisition of this land was attended with much difficulty, and demanded great care and knowledge of the value of land in the districts through which the railway passes.

No land was escheated to the Crown, nor any recovered from squatters during the year.

Rio Cobre Canal.

The cost of management and maintenance of the works for the year was 1,265*l.* 5*s.* 2*d.* The average cost for the previous seven years was 1,498*l.* per annum.

The sum of 130*l.* 4*s.* 8*d.* was spent on new works and on extending subsidiary channels.

The amount collected during the year was 2,963*l.* 12*s.* 9¾*d.*; the average for the previous seven years was 2,304*l.*, which shows a considerable increase in favour of the collections for the year under review.

The works were maintained in good order, and are being improved by the substitution of concrete for wooden bridges, and in other ways.

Telegraphs.

The gross receipts during the year were 5,767*l.* 19*s.* 3*d.*, being 639*l.* 18*s.* less than the collections for 1890–91. This falling off is attributable to the depression in the fruit trade and business generally. The expenditure was 6,382*l.* 5*s.* 7*d.*, or 828*l.* 2*s.* 4*d.* more than in the previous year, and is due to increased remuneration to telegraph clerks, the establishment of new stations, and the purchase of stores, etc.

The number of messages sent and received amounted to 102,925, or 9,884 less than in the preceding year.

Nine new stations were established during the year, making a total of 64 stations in operation at the close of the year.

Railway.

The Government Director of the Jamaica Railway Company reports that the gross revenue for the 12 months ended on 31st March 1892, was 71,486*l.* 8*s.* 4*d.*, and the expenditure 59,963*l.* 16*s.* 8*d.*, leaving a net revenue of 11,522*l.* 11*s.* 8*d.*

The expenditure includes 4,940*l.* 14*s.* 10*d.*, the value of stores purchased but remaining unissued at the close of the year.

The receipts were made up as follows:—

	£	s.	d.
Goods and cattle - - -	38,551	9	11
Passengers - - - -	25,787	6	6
Prince's wharf - - -	6,656	3	9
Miscellaneous - - -	491	8	2
	£71,486	8	4

The number of train miles run amounted to 280,767, and the expenditure and revenue per train mile to 4*s.* 3·25*d.* and 5*s.* 1·11*d.*, respectively.

The number of passengers carried was 314,945, 22,138 of whom were 1st class and the remainder 3rd class. 12,390 passengers travelled with season tickets.

18 miles of the line on the Montego Bay section were completed and opened during the year, thus making 88 miles now actually open to traffic.

Interest was paid out of revenue on First Mortgage Bonds in December 1891, to the extent of 7,050*l.* 0*s.* 2*d.*

Botanical.

During the year the Department continued its work in connection with the propagation, sale and distribution of seeds and plants, and the diffusion of information, chiefly by means of printed "Bulletins," which are supplied free of cost to residents in the Island, as to the proper soil, climate, cutivation, &c., for useful plants.

The following figures show the sale and distribution of plants:—

Castleton—sold - - - -	4,266
Hill Garden—sold - - - -	786
Hope Gardens—sold - - -	33,319
Sugar cane tops - - - -	150
Total sold - - -	38,522
Sent to Hope Gardens for distribution -	12,495
Distributed free or in exchange - -	1,583
Total distributed - - -	14,078

A supply of cocoa pods was forwarded to the Hope Industrial School for the purpose of training the boys at that institution in the curing of cocoa: the services of an instructor were engaged to train the boys in the process, and the Director reports the result to have been satisfactory.

Besides the usual work in the up-keep of the gardens, many improvements were effected. At Castleton a walk was formed beside the river, and the former jungle cleared away. At the Hill Garden, a grass from Northern India (*pennisetum trifforum*) which grows to a height of from 3½ to 4 feet, and sends its roots deep into the soil, is being tried as a substitute for guinea grass (which is not so successful in the hills as in the lowlands) and the experiment is said to promise well. Onion seed is also being tried, but only a few varieties show signs of bulbing. The Jamaica plum, a fruit of great promise for export, as it keeps sound for a month, is also cultivated.

The *Hope Garden* is being gradually formed, as means allow, into a geographical garden, with patches of economic plants here and there, and the intervening spaces covered with Bahama grass. The total area is 212 acres, 38 of which have been left in wood. Besides the sugar-canes and other economic plants which have been established for several years, 47 acres, comprising 28,000

plants, have been planted with Sisal hemp. These plants are in good condition, growing freely and suckering.

The *Bhel* fruit which belongs to the orange family, has produced fruit during the year. It is stated to possess valuable medicinal properties.

Several hundreds of ferns have been planted out at the fernery, many improvements have been made at the orchid house, and the stock of ornamental plants in pots has been increased by over 2,000.

King's House.—The care and charge of the roads has been transferred to the Public Works Department.

Special attention is paid at this garden to the cultivation of the grape vine, and arrangements are on foot for demonstrations by the superintendent once a week on the care of this plant, which the Director states to be admirably adapted to the circumstances of many classes of people and the climatic conditions of several parts of the Island.

Kingston Public Garden.—A large number of plants from the exhibition grounds were transferred to this garden, and have added much to the appearance of the borders. Besides, 1,000 ornamental plants were received from the other gardens.

By arrangements with the City Council the garden has been kept open every night until 9 p.m. It is lit with the electric light, and the bands of the West India Regiment and Kingston Militia give regular weekly performances, which are much appreciated by the public.

Herbarium.—The services of Mr. C. Nicholls, who had spent some time in the Herbarium at Kew, were secured for the Department for five months and the specimens of plants arranged classified, and added to, to the entire satisfaction of Mr. Fawcett. Besides this work, Mr. Nicholls made investigations into the microscopic anatomy of the leaf of Sisal hemp, a work which the Director states to be of special importance in estimating the value of machinery for the extraction of the fibre.

The *Library* received several valuable additions during the year.

In March 1892 the authorities of the Botanic Gardens of Harvard University in the United States sent two representatives to make collections and to study at the Botanic Gardens of the Colony.

Education.

The following summary gives the results of the year as compared with the twelve months preceding:—

Year.	Schools on Government List.	Schools Inspected.	Scholars on Books.	Scholars in Average Attendance.	Percentage in Average Attendance of Number on Books.	Class of Schools.						Fees.	Grants in aid, including Building Grants.
						I.	II.	III.	E.	F.	Not examined.		
1891–92 - -	877	817	83,731	45,927	54·85	128	329	350	3	7	51	8,803	30,736
1890–91 - - -	836	822	80,199	44,410	55·4	115	339	357	6	5	9	8,363	29,379
Increase on 12 months, 1st April 1891 to 31st March 1892 - - -	41	*5	3,532	1,517	*·55	13	*10	*7	—	—	—	440	—
Calculated increase on 12 months, 1st April 1890 to 31st March 1891, being two-thirds of increase in 18 months	7	22	3,146	615	*·45	7	34	*20	—	—	—	279	—

* Decreases.

The Superintending Inspector of Schools, in comparing the results of the two years, points out that the increases in the number of scholars on books, of first class schools, and in average attendance, are greater in proportion than they were in the preceding year, while in the first two items they are greater, even in proportion to the population, than the average for the past 10 years.

The increase in average attendance of scholars was about 200 less than in the previous decade, the ratio of average attendance to the number on the books having again decreased, though to a less degree than in the year 1890–91. Mr. Capper considers that the fee system has been to some extent the cause of irregular attendance heretofore, for the reason that whenever Monday happened to be a wet day many schools have been compelled to close for the whole of the week, as parents would not pay a week's fees for three days' schooling (four being the ordinary number of school days in the week). When fees have been gradually abolished, under the Elementary Education Law, 31 of 1892, this motive for keeping children at home will be done away with.

Mr. Capper points out that as regards irregularity in attendance at school there is very little difference between any of the West Indian Colonies, that the increase in such irregularity during the year in Jamaica was only one-half per cent., and that in the Southern States of the American Union an apparently more regular attendance is considerably discounted by the fact that there are a far less number of school days in the year there, and by the fact that in proportion to population the number of attendances is also generally less. In making these comparisons, however, the Inspector of Schools points to the irregularity of attendance at our schools as one of the greatest evils we have to contend with.

The decrease in the number of schools inspected is attributed mainly to requests for postponement by managers, and to the difficulty, increasing with the number of schools, of adjusting the Inspectors' arrangements so as to provide for the inspection of postponed schools later on in the year. The appointment of an additional inspector of schools, who assumed his duties in July last, will, it is hoped, greatly remove this difficulty.

It is satisfactory to find that 13 schools of the second class were promoted during the year to the first class, and that the number of schools in these classes continues steadily to increase.

It is interesting to observe that by special efforts a considerable number of Coolie children were brought together at one of the schools in Westmoreland. Very few of the children of immigrants now attend the schools, and the example thus set is worthy of imitation, and would doubtless be successful in other instances.

The following table shows the results of the examinations of teachers and students in training colleges for the year 1891, as

compared with the three preceding years, and evidences steady improvement :—

Year.	Students Passed.	Third year Honours with Bonus.	Full Passes.	Partial Passes.	Failures.
			Per Cent.	Per Cent.	Per Cent.
1888	134	7	62	15	23
1889	142	6	62	14	24
1890	149	3	66	13·4	20·6
1891	143	6	73·4	13·3	13·3

The work of the training colleges is stated by Mr. Hicks, the Senior Inspector, to be carefully and faithfully done. Special pains are taken to secure intelligent reading, a defective point in the elementary schools generally.

At the Female Training College, Shortwood, there was a very marked advance in the results of the December examination of students as compared with those of previous years; there were but four failures, two of second year and two of third year students, among 21 students sent up. Of 30 candidates at the preliminary examination only 13 passed, and of these but three came up to the required standard at the entrance examination, which is the one set for second year pupil teachers of elementary schools. Four candidates were admitted below the pass standard.

An industrial schools for girls, worked in connexion with this training college, was opened in April 1892.

Examinations of pupil teachers, and of pupils at elementary schools who voluntarily presented themselves for examination, were held in July and December, in which latter month these examinations will in future be held, so as to provide for the final examination being taken just before the new students are admitted to the training colleges. The numbers who presented themselves in 1891, as compared with 1890, show an increasing appreciation of the examination among the volunteers. Of a total of 358 pupil teachers examined 282 passed, a percentage of 78; and of 404 volunteers examined 136 passed, a percentage of 36.

Mr. Capper was appointed during the year to be Inspector of Industrial Schools under Law 13 of 1891, and the following institutions were placed under his charge:—(1) the Boys Industrial School at Hope. (2) The Girls Industrial School at Shortwood (not opened until April 1st, 1892). These institutions are maintained by the Government. Lastly (3) the Industrial School at Alpha Cottage, maintained by the Roman Catholic body.

Thirty boys, as many as could be accommodated, received instructions at the Hope School at the close of the year,

the boys, besides being taught in the school, practise gardening at the Hope Gardens, and carpentering, and some of the best boys have had plots of land allotted to them.

The industrial school at Alpha Cottage fully maintained its position during the year as one of the best managed institutions in the Island. A boys' school has recently been started, and the girls' school much enlarged. The elementary school is remarkably successful, especially when the mental condition of nearly all the children on admission is considered, whilst needle-work, &c. and the cultivation of flowers and vegetables, receives due attention. Mr. Capper considers that this institution should be visited by everyone who desires to see what may be done with the most unpromising material.

Immigration.

During the year ended on 31st December 1891, two Laws were passed by the Legislative Council of the Colony, with the object of promoting the steady supply of labour for estates, by (a), under Law 20 of 1891, instituting a system under which native labourers could enter into yearly contracts with employers, subject to the supervision of the Immigration Department, the labourers, on completing their term of contract satisfactorily to receive each a bonus of 2*l.*, and (b), under that Law and Law 14 of 1891, supplementing such employment of native labour by the introduction of East Indian immigrants, but on more favourable terms for employers than heretofore. These terms are in accordance with the recommendations of the Select Committee of the Council, mentioned in the report on the Blue Book for 1889–91, under "Immigration." It may be mentioned here that all employers of immigrants under the new system, with one exception, have chosen the method of paying 17*l.* 10*s.* 0*d.* per immigrant, by instalments spreading over a period of 5 years, instead of the alternative one of a cash payment of 15*l.*

No native labourers avail themselves of the provisions of Law 20 of 1891. The terms on which East Indian immigrants could be obtained under the new system were advertised in July 1890, and applications for 1,842 immigrants were received, but this demand could be satisfied to the extent of only 1,000 immigrants, the Secretary of State's Despatch of the 24th June 1890 having limited the number to be introduced, in the first instance, to that number. In response to a second advertisement in April 1891, 1,112 were applied for, making 2,112 statute adults. Three vessels, the "Erne," "Moy" and "Belgravia," were chartered by the Crown Agents for the Colonies to bring the immigrants, and landed in April, June, and October respectively, 2,135 souls in all, equal to 1,907 adults. Of these 2,135 persons, 32 died during the year, while no births occurred among the immigrants introduced, leaving 2,099 alive on the 31st December 1891. On the same date, the number of East Indians who had served their indentures as immigrants, but had not completed a residence of

10 years in the Colony, was 2,191, while 10,263 had completed such residence, making in all 14,553 East Indians in the Colony on that date.

Of the 2,135 persons landed, 31 had to be sent to the hospital forthwith. Of the 1,055 landed from the "Belgravia," four died shortly after admission to hospital and five persons were rejected as labourers by the examining surgeons, who found them to be suffering from incipient phthisis. The other Coolies were allotted to estates in various parishes, and all the employers have expressed themselves as highly satisfied with them.

The three ships referred to brought to the Colony, in addition to the 2,135 immigrants, 49 repatriated immigrants; 18 of these were from Jamaica, and 15 from St. Lucia.

During the year only 106 Coolies claimed return passages to India, and as it was not found feasible to make arrangements with sister Colonies for the repatriation of so small a number during the year, their repatriation was postponed till 1892, when, by effect of time, a larger number would be able to claim return passages.

It was found that under the new scheme of immigration, the services of the Junior Assistant Inspector could be dispensed with, and that officer was accordingly retired on a pension. The Protector and the one Inspector remaining on the staff now divide the duty of inspection between them, making quarterly visits to the properties employing Coolies, instead of monthly visits as heretofore.

Dr. Comins, the Protector of Emigrants at Calcutta, made a tour of inspection, during the latter part of the year, of the estates in the Island employing immigrants, as part of a mission to ascertain the working of the immigration system in the West Indies.

There were no murders committed during the year by immigrants under the protection of the Department, but three time-expired immigrants, with a Jamaican, were executed on the 15th September 1891, for the murder of four East Indians.

Emigration.

During the year 549 Jamaicans emigrated to, and 1,389 returned from, the places shown below:—

Emigrated to Carthagena - -	1
" Colon - - -	525
" Port Limon - -	24
	550
Returned from Colon - - -	1,365
" " Port Limon - -	24
	1,389

The corresponding numbers during the previous 18 months were 1,088 and 2,726, and during 1889, when work ceased on the Panama Canal, 11,671, and 3,184. The tendency to return rather than emigrate still continues therefore, but in a lessened degree.

Government Savings Bank.

The number of depositors and the amount of deposits in the bank have been as follows for the last 10 years :—

Year.	Number of Depositors.	Amount of Deposits.
		£
1881-82	9,543	324,847
1882-83	11,925	325,705
1883-84	13,601	350,546
1884-85	15,511	360,190
1885-86	16,320	363,292
1886-87	17,047	363,481
1887-88	18,510	393,250
1888-89	19,444	408,213
1890-91	21,747	423,011
1891-92	22,824	428,348

showing an increase of 5,337*l.* in the amount of the deposits and of 1,077 in the number of depositors.

In the above amount of deposits are included five deposit accounts for the following public funds :—

	£	s.	d.
Immigration return passage fund -	470	12	0
Constabulary reward fund - -	534	1	4
Sinking funds - - - -	2,536	8	2
Constabulary pension fund - -	2	0	2
Smith and Beckford's Charity - -	98	4	0

There were also 254 accounts for trusts, charities, Chancery suits, Administrator General and bankrupt estates, amounting to a total deposit of 30,940*l.* 3*s.* 1*d.* The remaining 22,565 accounts, representing 392,344*l.* 14*s.* 3*d.*, are all ordinary and legitimate savings bank deposits.

JAMAICA. 1891-2.

Of the total number of accounts open at the end of the year, 15,216 were for 5*l.* and under, and 1,142 were for over 100*l.*

The assets of the bank at 31st March last were distributed as follows:—

	£	s.	d.	£	s.	d.
Consols, $2\frac{3}{4}$ per cent.				20,404	17	3
Inscribed Stock:—						
Canada, 3 per cent.				27,908	0	8
" $3\frac{1}{2}$ "						
Cape of Good Hope, 4 per cent.				47,766	6	8
Ceylon, 4 per cent.				14,400	0	0
New South Wales, $3\frac{1}{2}$ per cent.				31,558	11	3
Victoria, 4 per cent.				12,015	0	0
Jamaica, 4 per cent.				9,900	0	0
				163,952	15	10
Debentures:—

New South Wales, 4 per cent.						
South Australia, 4 per cent.	53,531	2	6			
South Australia, 4 per cent.						
Victoria, 4 per cent.	47,308	12	6			
" $4\frac{1}{2}$ "						
Jamaica, 5 per cent.	28,357	5	0			
" $4\frac{1}{2}$ "						
				244,185	2	6
				408,137	18	4
Cash on deposit in Colonial Bank				20,210	10	3
Total				£428,348	8	7

During the year 3,703 accounts were opened and 2,647 closed, resulting in an increase of 1,077 in the number of accounts open at the end of the year, as compared with the number in the year before.

The number of deposits amounted to 27,321, and withdrawals to 33,785, representing respectively 211,175*l.* and 225,730*l.*

The expenses of management and the interest credited to depositors amounted to 14,529*l.*, while the revenue realised was 15,929*l.*, thus showing a net profit of 1,400*l.* on the year's transactions.

Trade.

The value of the imports in each of the last 10 years has been as follows:—

	£
1881–82 - - - -	1,321,962
1882–83 - - - -	1,625,411
1883–84 - - - -	1,568,639
1884–85 - - - -	1,487,833
1885–86 - - - -	1,325,603
1886–87 - - - -	1,322,336
1887–88 - - - -	1,695,605
1888–89 - - - -	1,597,600
1890–91 - - - -	2,188,937
1891–92 - - - -	1,759,890

showing a decrease in the year of 429,047*l.*, on comparison with the value of imports in the year 1890–91.

This decrease is of a general character, and although the falling off is large when compared with the previous year, which owing to various influences was much above the average, the result is satisfactory when a comparison is drawn with the results of the preceding years.

The value of goods entered for home consumption amounted to 1,762,999*l.*, a decrease of 390,181*l.*, and is classed thus:—

——	1891–92.	1890–91.
	£	£
Ad valorem goods - - -	716,379	1,001,691
Rated goods - - -	826,462	865,104
Free goods - - - -	220,158	286,385

The larger decreases occur in the following articles, namely:—ale, beer and porter, beef wet salted, bread and corn, butter, cattle neat, clothing, building materials, articles of household furniture, spirits, tobacco, corn; while only rice, fishstuffs, soaps, salt, gunpowder, and horses and mules show an increase.

JAMAICA. 1891-2.

The operations of the McKinley Tariff are responsible for a falling off in some items; but, as has already been indicated, the comparison of the results of the year with a period in which abnormally large collections were received has the effect of making these returns appear unsatisfactory, while in reality they are in many instances a decided improvement on preceding years.

The imports were drawn from the several countries in the following proportions:—

——	1891-92.	1890-91.
United Kingdom - - -	49·0	56·0
United States - - -	37·2	34·0
Canada - - - -	10·4	7·0
Other countries - - -	3·4	3·0

Showing a decrease in the trade with the United Kingdom, and an increase with that of the United States and Canada. The importations from the latter country have been gradually increasing and this no doubt is to some extent due to the representation of that country at the Jamaica Exhibition.

The following table shows the value of imported articles which were freed from duty in the tariff under Law 11 of 1867, and is given in continuation of similar tables in previous Reports:—

——	1881-82.	1882-83.	1883-84.	1884-85.	1885-86.
	£	£	£	£	£

	36,291	54,476	46,893	58,490	63,937

showing not much change as compared with last year.

The following table gives the value of the exports in each of the last 10 years :—

Year.	Of Produce and Manufactures of the Colony.	Of British, Foreign, and other Colonial Produce and Manufactures.	Total.
	£	£	£
1880-81 - -	1,104,407	74,187	1,178,594
1881-82 - -	1,471,917	77,141	1,549,058
1882-83 - -	1,365,868	103,578	1,469,446
1883-84 - -	1,350,900	33,089	1,483,989
1884-85 - -	1,181,203	227,645	1,408,848
1885-86 - -	1,078,315	201,803	1,280,118
1886-87 - -	1,334,465	174,542	1,509,010
1887-88 - -	1,661,601	166,989	1,828,590
1888-89 - -	1,501,660	113,164	1,614,824
1890-91 - -	1,807,084	95,730	1,902,814
1891-92 - -	1,628,777	93,319	1,722,096

JAMAICA. 1891–2.

This shows a decrease of 178,307*l.* in Island produce, and 2,411*l.* in British, Foreign, and other Colonial produce, on comparison with the previous year.

The falling off occurred chiefly in the banana and orange trade and is attributable to a lack of demand from America owing to a large yield of home fruit there. Other articles, such as cocoa, cocoanuts, pimento, lancewood spars, and logwood have also produced unsatisfactory returns, from lack of demand and unsuitable weather. There has, however, been a decidedly satisfactory result from sugar and rum during the year, the former having exceeded the exports of the previous year by 47,891 cwt. or 19,288*l.* in value, and the latter by 111,335 gallons or 56,640*l.* Coffee, ginger, lime juice, cigars, and beeswax, also exhibit an increase.

The value of the several articles of produce bear the following percentage proportion to the total export value :—

—	1886–87.	1887–88.	1888–89.	1890–91.	1891–92.
Sugar - - -	19·8	17·3	16·3	13·1	15·6
Rum - - -	22·6	12·2	9·1	11·0	15·7
Coffee - - -	15·4	19·3	19·4	15·7	20·7
Dyewoods - ..	14·4	21·2	25·0	21·3	18·7
Fruit - - -	16·2	21·6	20·3	29·4	17·7
Pimento - -	3·4	2·7	3·2	4·5	3·1
Other produce - -	8·0	5·7	6·7	5·0	8·5

The export of the principal staples in each of the last 10 years is shown in the following table :—

—	1881–82.	1882–83.	1883–84.	1884–85.	1885–86.
Sugar - - hhds.	38,392	30,783	29,427	24,986	16,460

Fruit, value - £	215,583	337,403	303,910	531,726	288,159

The exports from the Colony during the past ten years were distributed among the different countries in the following proportion :—

—	1881-82.	1882-83.	1883-84.	1884-85.	1885-86.	1886-87.	1887-88.	1888-89.	1890-91.	1891-92.
United Kingdom	62·5	54·46	43·4	37·2	39·7	38·6	40·2	37·3	32·4	32·7
United States -	17·8	10·07	31·1	42·2	44·0	43·9	43·2	50·2	55·3	50·9
Dominion of Canada	12·9	16·66	13·4	5·4	3·5	1·3	1·6	2·3	2·1	3·5
Other Countries	6·8	6·81	12·1	15·2	12·8	16·2	15·0	10·2	10·2	12·9

The decrease in the amount of our trade to the United States of America is due to the decrease in the export of fruit already referred to, and may, it is hoped, be only temporary.

Agriculture.

The most noticeable agricultural features of the year 1891–92, were the serious check experienced in the hitherto steady development of the fruit trade, and the decided increased in the crops of sugar and output of rum.

The decrease in exportations of fruit is attributable chiefly to the abundant yield of home fruit in America, which circumstance both checked exportation and brought down prices. The cause of the decrease, being an exceptional one, affords no ground for apprehension.

JAMAICA. 1891-2.

The most serious decrease in export of fruit occurred on oranges, the export of which was less than one-half of that in 1890-91, with a loss in value of 33,751*l.* There were also heavy decreases in the output of bananas, 1,344,384 bunches less that in 1890-91, with a loss in value of 181,623*l*; of pimento, 26,633 cwt. less, at a comparative loss in value of 30,342*l.* Of cocoanuts, 698,962 less were exported, and of cocoa, 932 cwt.

The falling of in the output of pimento was due to a want of suitable rains at the proper juncture, and it may be remarked also that there was an exceptionally heavy yield in the previous year. Cocoa also suffered from a want of proper seasons.

Sugar and rum showed a decided advance. Compared with the previous year, the export of sugar was 47,891 cwt. greater, with an enhanced value of 19,288*l.*; while 111,355 more gallons of rum were shipped, at a gain in price of 56,540*l.* This promising state of things still continues, and the stocks held in the several warehouses at and since the close of the year are reported by the Collector General to have been unprecedented.

The steady prices obtained for coffee in the previous year still continued in 1891-92; the increase in quantity exported being 11,246 cwt., and in value obtained 53,040*l.* The acreage was 1,100 over that of 1889-90, and 2,792 over the average of the five preceding years; during which period there has been a decided increase of the cultivation in every parish except St. James.

The exports of ginger during the year went up by 5,387 cwt., and the value by 16,188*l.*, results attributable to better prices and greater demand. The same causes led to an improvement in lime juice exported. An increase on cigars exported of 7,966 lbs. quantity and 3,983*l.* value appears to indicate the development of a taste for Jamaica-made cigars, most of which were, it seems, shipped to order.

The following table shows the relative value in 1891-92 and in 1890-91 of products exported:—

	1891-92.	1890-91.
Sugar	15·6	13·1
Rum	15·7	11·0
Coffee	20·7	15·7
Dyewoods	18·7	21·3
Fruit	17·7	29·4
Pimento	3·1	4·5
Minor products	8·5	5·0

Police.

The police force on the 31st of March 1892 consisted of one inspector-general, 14 inspectors, four sub-inspectors, 123 non-commissioned officers, and 573 men, being a total of 715 of all ranks, or 16 below the allowed strength for the year. The strength of the rural police was 927, giving an effective police establishment of 1,642 at the close of the year. 137 men were enlisted during the year, and 119 discharged or dismissed from the force, and 10 died. Pensions and gratuities, amounting to 793*l.* 11*s.* 4*d.*, were granted to 45 of the men discharged.

The regular police were distributed during the year as follows: —181 in Kingston, 452 in the 13 other parishes and 63 at the depôt at Spanish Town.

The services rendered by the police as compared with the four preceding years are as follows:—

——	1886-87.	1887-88.	1888-89.	1889-91.	1891-92.
Number of persons arrested on view and on information - -	4,849	5,334	4,218	9,624	6,558
Number of persons apprehended on warrants	1,729	1,674	1,873	2,499	1,645
Number of search warrants executed -	82	75	102	153	116
Number of persons summoned - -	12,956	14,297	14,018	25,427	17,588
Number of persons subpœnaed - -	17,832	22,472	21,702	27,540	28,267
Number of seizures under revenue laws - -	393	465	225	665	325
Number of post-mortems ordered - -	338	319	388	627	460
Number of prisoners escorted - -	9,081	8,050	8,796	15,312	9,638

The criminal returns show 13 cases of murder, including three cases of child murder. Of this number six were convicted, one was reduced to manslaughter, five were discharged for want of evidence or prosecution, and one was acquitted. There were 14 cases of manslaughter, of which two were acquitted, four convicted, seven discharged, and the remaining case was undisposed of at the close of the year.

Of other offences against the person the returns show six cases of concealment of birth, the same number as in the two previous years.

There were 541 cases of cutting and wounding, or 93 more than in 1890-91; 317 of these were convicted. Of the five cases of shooting with intent, three were acquitted, one was discharged

for want of evidence and one remained undisposed of at the close of the year. Assaults occasioning grievous bodily harm and common assaults numbered 25 and 5,379 respectively, 18 of the former and 2,413 of the latter were convicted.

Of offences against property committed with violence, burglary, breaking into dwelling-houses and stealing, and breaking into shops, warehouses, counting-houses, and stealing, were the most serious, the figures for the year for these offences being 305, or 77 more than in the period which ended on 31st March 1891.

Ten persons were arrested for highway robbery during the year; of this number nine were discharged and one was convicted.

Greater attention was paid by occupiers of houses, &c. to the duty of securing their places at night, but there is still room for improvement; 44 places were found by the police left open at night, or 162 less than during the preceding period of 18 months.

Offences against property committed without violence show an increase as compared with last year; larceny in dwelling-houses, shops, and warehouses, larceny of ground provisions, simple and prædial larceny being the most prominent.

The crimes of arson, feloniously wounding stock, and wilful damage to property also show an increase.

The returns show 18 cases of forgery and offences against the currency, of which 16 were convicted.

Of the 44 persons arrested for practising obeah, 36 were convicted. This is a most serious offence, and a large number of undiscovered crimes are no doubt due to its practice.

The constabulary rendered the usual service in connexion with the Birds and Fish Protection Sugar Mills, Agricultural Produce Dealers, Spirit License, and Weights and Measures Laws, &c. 829 cases of cruelty to animals were brought up during the year, of which 644 were convicted. 172 owners and drivers of hackney carriages were summoned for infringing the regulations.

Prisons.

The number of prisoners in custody in all the prisons and gaols of the Island on the 31st of March 1892 was 988. A comparison of the numbers in custody on the undernoted dates shows a gradual decrease until 30th September 1888, and a considerable increase thereafter:—

30th September	1886	803
"	1887	795
"	1888	749
"	1889	890
31st March	1891	893
"	1892	988

Comparing the results in other respects for the year 1891–92 with that of the previous 12 months we find :—

—	Year ended 31st March, 1892.	Year ended 31st March, 1891.
Commitments :—		
To prison - - - -	4,259	3,942
To lock-ups - - -	265	—
Total - - -	4,524	—
Re-convictions - - - -	1,572	1,536
Deaths :—		
General Penitentiary - - -	14	22
Other prisons - - -	30	34
Total - - - -	44	56
Executions - - - -	5	1
Daily average number of prisoners in custody - - - -	940	879
FINANCIAL.	£ s. d.	£ s. d.
Gross expenditure - - -	18,623 2 11¾	17,292 9 10
„ earnings - - -	5,058 15 4	3,930 2 9½
Leaving a net cost of - - -	13,564 7 7¾	13,362 7 0½
Or, per prisoner - - -	14 8 7	15 4 0½
Estimated value of labour yielding no return - - - -	4,510 3 2	5,458 16 8
Estimated value of bricklaying work and stone quarried - -	4,164 16 8	2,796 19 0½
Washing and repairing (General Penitentiary) - - -	895 11 1	723 13 7

In regard to the commitments the Inspector-General points out that their increase is becoming very marked, and that the prison accommodation throughout the Island for 1,083 prisoners would probably be severely tested, should this increase continue. It may be remarked that 200 extra cells will be provided at the St. Catherine's District Prison, of which 100 have been erected, and that additional cells for females are being provided at the General Penitentiary.

Of the fourteen deaths in the General Penitentiary, three were of persons in an impaired state of health on admission, and two of infants (the offspring of female prisoners). The death-rate at the institution, based on a daily average number of 512 prisoners, was 27·34 per 1,000.

The male prisoners throughout the Colony were, as usual, employed in making bricks, tiles, &c. burning lime and quarrying stone, and the female in washing and repairing clothing for the prisons and other public institutions, as well as for private parties.

Religious services were conducted regularly at the General Penitentiary by the chaplains of the different denominations attached to the institution, as well as in the St. Catherine, Hanover, and Falmouth District Prisons, and the Middlesex and Surrey County Gaol. No regular provision exists for the religious instruction of the prisoners in the short term prisons at Black River and Port Antonio, but they are visited occasionally by the local clergy.

School was regularly held in the General Penitentiary, and in the St. Catherine, Falmouth, and Hanover District Prisons.

Discipline was well maintained in all the prisons, and the prison staff have performed their duties efficiently, although, owing to the disagreeable nature of those duties, there has been considerable difficulty in procuring suitable men, and a great number of resignations and dismissals have occurred.

The mark system continues to work satisfactorily.

Vital Statistics.

The total estimated population on the 31st March 1892 was 649,524, and the mean population for the year under report is estimated at 645,829. It is on these latter figures that the marriage, birth, and death rates are calculated.

The natural increase by excess of births over deaths for the year was 10,033, or 15·6 per 1,000 persons living.

The number of marriages recorded during the year was 3,405, being 5·2 per 1,000 of the population, showing a decrease of 155 marriages as compared with the previous year.

The percentage of illiterate persons among those married was 53·6, being a lower rate than in any previous year.

The births registered numbered 24,744, showing an increase on the preceding year of 237, and giving a rate of 38·3 per 1,000 of the population.

The percentage of illegitimate births was 60·6, a slight increase as compared with the year 1890–91.

The deaths registered were 14,711, or 22·7 per 1,000 of the population, a result slightly below the average for the past 10 years—11,388 or 77·4 per cent. of the deaths were recorded without medical certificate or cause of death being shown.

The total number of births in the Cayman Islands was 166, of deaths 57, and of marriages 21, the proportion to 1,000 of the population being of births 39·4, of deaths 13·6 and of marriages 5·3.

No. 74.

JAMAICA
(TURKS AND CAICOS ISLANDS).

(For Report for 1891, *see* Colonial Report [Annual], No. 43.)

Sir H. A. BLAKE to the MARQUESS OF RIPON.

King's House, Jamaica,
April 19, 1893.

MY LORD,

I HAVE the honour to transmit to your Lordship a copy of the Blue Book of the Turks and Caicos Islands for the year 1892, together with the Commissioner's Report thereon.

I have, &c.
(Signed) HENRY A. BLAKE,
Governor.

The Most Hon. the Marquess of Ripon, K.G.,
&c. &c. &c.

REPORT ON THE BLUE BOOK OF THE TURKS AND CAICOS ISLANDS FOR THE YEAR 1892.

1.—*Revenue and Expenditure.*

The Revenue collected in 1892 was 7,836*l.*, as compared with 7,354*l.* in 1891, and exceeded the estimate by 785*l.* The balance carried forward from the previous year was 2,536*l.*, giving a gross revenue of 10,372*l.* The increase was chiefly due to the larger export of salt.

The total expenditure amounted to 7,596*l.*, being less by 400*l.* than the sum expended in 1891. Of this amount, 6,926*l.* was ordinary expenditure, against 6 84*l.* in 1891, and 670*l.* was for special works, the sum so spent in 1891 having been 1,012*l.*

The revenue collected within the year was in excess of the total expenditure within the same period, and left a sum of 240*l.* to be added to the balance to carry forward to 1893. The sum so carried forward was 2,776*l.* and the Dependency has also to its credit the sum of 1,000*l.* invested, making a total credit balance of 3,776*l.*

Statements showing the details of revenue and expenditure for the last two years are attached :—

2.—*Public Works.*

The only new work of importance undertaken during the year was the construction of a tank and catch at Cockburn Harbour, in the Caicos Islands, estimated to cost 450*l.* Good progress was made on this work, which it is hoped may be completed within the current year and confer a substantial benefit on the community at that port.

The North Tank and catch at Grand Turk was finished, the total expenditure on it from commencement in 1890, inclusive of surrounding wall, being 833*l.*

The extension of the wharf at Grand Turk, commenced in the middle of 1891, was completed, the full sum laid out being 535*l.*, as was also a new wharf at Salt Cay at a total cost of 149*l.*

3.—*Legislation.*

The following Ordinances were passed by the Legislative Board during the year :—

No. 1—The Annual Appropriation Ordinance.
No. 2—The Supplementary Appropriation Ordinance.
No. 3—The Superannuation Amendment Ordinance.
No. 4—The Wreck and Salvage Amendment Ordinance.
No. 5—The Retail Liquor and the Sale of Wine and Retail Beer and Cider Amendment Ordinance.
No. 6—To explain the Superannuation Amendment Ordinance.

4.—*Legislative Board.*

Mr. H. Higgins, the Commissioner and President of the Board, went on leave of absence in June, and his place as President was taken by the Acting Commissioner, Mr. E. H. Johnson, Judge of the Supreme Court, the vacancy on the official side thus created being filled up by the appointment of Mr. J. C. Crisson, Postmaster and Treasury Accountant.

5.—*Civil Establishment.*

Mr. H. Higgins left the Dependency on leave of absence on the 19th of June, and did not return during the year, his post as Commissioner being filled by Mr. E. H. Johnson, Judge of the Supreme Court and Auditor, the duties of the latter office being performed by the Assistant Commissioner, Mr. A. W. Harriott.

Dr. A. W. Thompson, Government Medical Officer, was absent on leave from 20th October to 23rd December, his place being taken during that period by Dr. W. O. F. Bascome, of Bermuda.

JAMAICA (TURKS AND CAICOS ISLANDS). 1892.

Mr. E. C. Harriott, Commissioner's Clerk, and Mr. C. P. Stamers, Assistant Commissioner at Salt Cay, were each absent on vacation leave during the year, their respective posts being filled by Messrs. H. F. Harriott and G. D. Jones.

6.—*Foreign Consuls.*

The following countries are represented in the Dependency:—

United States of America.
Sweden and Norway.
Denmark.
France.
Spain.
Dominican Republic.
Haytian Republic.

7.—*Pensions.*

There is no change to report under this head. The total sum paid in pensions was 942*l.*

8.—*Education.*

The following remarks and table are taken from the report of the Chairman of the Board of Education :—

Both the number of scholars on the books and the average attendance have increased, and are much larger than they have been for several years. The former shows an increase of over 20 per cent. on that shown by the last report, and the latter has increased over 25 per cent. All the schools have been in operation throughout the year, and there have been no changes among the teachers.

Summary of School Returns for 1892.

School.	Teacher.	Average Number on Books.	Average Attendance.	Number of Days in operation.	Cost of School. £ s. d.

Total	—	729	383	—	562 17 5

9.—*Imports and Exports.*

The import duties are about the average, being within a few pounds of last year's figure.

The export of salt was large, being 1,788,334 bushels, or about 200,000 above the average.

The dry season was favourable for the salt industry. In addition to the 350,000 bushels remaining on hand at the commencement of the year a very large crop was reaped, and an ample stock, 640,000 bushels, was left on hand to meet the present year's demand. At the time of writing nearly half of this has been exhausted, and the raking of the new crop is about to commence.

Comparative tables, showing the trade and other statistics of the Dependency, are attached.

COLLECTION of IMPORT DUTY for the Year 1892, in comparison with the preceding Year, 1891.

No visit was paid to the Dependency by Her Majesty's ships.

Agriculture.

The distress among the inhabitants of the Caicos Islands, mentioned in the previous year's Blue Book Report, was heightened in 1892 by the long spell of dry weather, and relief had again to be given.

The Government further undertook to purchase as much lime and wood from the people as they should bring, by which means material assistance was afforded to the working population at a comparatively trifling cost, the lime being stored for use on public works and the wood resold at a small profit. The two fibre companies at the Caicos also gave employment to a large number of hands during the distress.

The cultivation of the Pita (Sisal) plant continues to make progress, and the report of the Assistant Commissioner at Cockburn Harbour on the subject is encouraging. A large extent of fresh

ground has been planted out during the year, and several new buildings have been erected in connexion with the industry.

Both companies, it is expected, will be in a position to make small shipments of fibre during 1893.

A plantation of Sea Island cotton has also been started on one of the adjacent Cays.

12.—*Gaols and Prisoners.*

The total number of prisoners committed during 1892 was 29, of whom three were for safe keeping and 26 for purposes of penal imprisonment.

The daily average in the gaol was six.

13.—*Criminal Statistics.*

The total number of offences reported to the police or to the magistrates in 1892 was 169, against 129 in 1891.

Of the offences reported in 1892 :—

49 were for offences against the person.
2 „ „ prædial larceny.
28 „ „ offences against property other than prædial larceny.
90 „ „ other offences.

The total number of convictions in the inferior courts in 1892 was 112, against 85 in 1891.

These convictions are classified as follows :—

33 for offences against the person.
1 „ prædial larceny.
18 „ offences against property other than prædial larceny.
60 „ other offences.

The convictions in the Supreme Court were as follows :—

5 for offences against the person.
4 „ „ „ property.
2 „ other offences.

The acquittals were as follows :—

In the inferior courts - - - - - -	43
In the Supreme Court - - - - - -	2

In 1892 each prisoner dealt with is treated as a separate case. In the previous years, where more than one prisoner was dealt with for the same offence, they were taken as constituting only one case. The apparent increase is thus accounted for.

14.—*Hospitals and Asylums.*

There is no hospital or asylum. Cases of lunacy are very rare, but when occurring, the patient is placed in the gaol and ultimately sent to the asylum at Jamaica.

JAMAICA (TURKS AND CAICOS ISLANDS). 1892.

15.—*Meteorological Observations.*

17.—*Postal Statistics.*

The mail service was performed throughout the year by the contract s.s. "Alpha," of Messrs. Pickford and Black's line, plying

JAMAICA (TURKS AND CAICOS ISLANDS). 1892.

monthly between Halifax and Jamaica, calling at Bermuda and Grand Turk.

The steamers of the Clyde line, from New York monthly to Hayti and San Domingo, also make Grand Turk a port of call on both the outward and inward voyage, and carry a mail.

A direct parcel post with the United States and Canada is much desired by the community, and it is hoped that this want may be supplied during the current year.

General Remarks.

A visit was paid to the Dependency in June last by his Excellency the Governor-in-Chief, Sir Henry Blake, accompanied by Lady Blake and suite, who remained a day at Grand Turk and subsequently visited the outlying settlements of Salt Cay and Cockburn Harbour in the Caicos.

The visit was greatly appreciated by the inhabitants.

The extension of the cable by the Halifax and Bermuda Cable Company, from Bermuda to the West Indies viâ Grand Turk, has not yet been undertaken, but is still hoped for.

There are no other matters of importance that call for remark.

The general condition of the Islands appears to be satisfactory, and to give fair promise for the future, so far as my short residence of two weeks has enabled me to observe.

EDWARD J. CAMERON,
Acting Commissioner.

Sir H. A. BLAKE to the MARQUESS OF RIPON.

King's House, Jamaica,
December 23, 1893.

MY LORD,

I HAVE the honour to forward to your Lordship the accompanying Report on the Blue Book of this Colony for the year which ended on the 31st March last.

I have, &c.
(Signed) HENRY A. BLAKE,
Governor.

REPORT ON THE JAMAICA BLUE BOOK FOR 1892-93.

Legislation.

During the Session of 1893 the Legislative Council passed 40 laws, of which the following are the most important:—

Law 2 of 1893—"A Law to amend a Law entitled a Law to provide a sound and uniform system for the giving of security by Officers of the Crown." Law 45 of 1872 provided that every person in the employment of the Government who was required to give pecuniary security might do so by personal bond, and the guarantee of any public company or association accustomed, as part of their regular business, to guarantee the fidelity of any person, which company or association was generally approved by the Lords Commissioners of Her Majesty's Treasury. That provision, however, became inoperative by reason of the Lords Commissioners of Her Majesty's Treasury refusing to continue the practice of approving any company or association for the purpose, and it became necessary to enact this law, under which certain societies may be approved of by the Governor in Privy Council.

JAMAICA. 1892-3.

Law 3 of 1893—"A Law to empower inspectors of the poor to oppose the making of certain Orders charging Parochial Funds." The office of inspector of the poor in a parish was created by Law 6 of 1886. It is the duty of this officer, under the parochial board, and subject to the control of the board of supervision, to protect the paupers on the one hand, and the parochial board on the other. In the matter of sending waifs and strays to the industrial school, or lunatics found at large and in destitute circumstances to the asylum, the parochial board, though chargeable with the maintenance of the children or the lunatics, had no locus standi before the magistrate or any means of protecting the funds of which they are the legal custodians and administrators. This law entitles the inspector of the poor of any parish to have notice given to him that a case is coming on, the possible result of which may be to impose a serious charge on the pauper fund of the parish, and to accord to him a locus standi to appear in protection of that fund.

Law 4 of 1893—"The Attorneys Admission Law, 1869 Amendment Law 1893." Under this law no solicitor of less than seven years' standing is permitted to take articled clerks.

Law 5 of 1893—"The Sureties of the Peace Law, 1893,"—was introduced by a private member, and is taken from the Summary Jurisdiction Act, 1879 (42 & 43 Vict. c. 49).

Law 6 of 1893—"A law to authorize a Loan for the construction of certain Public Buildings."—This law provides for the erection of new prisons at Port Antonio and Montego Bay, for a new lunatic asylum, and for the enlargemeut of the Kingston Public Hospital at a cost of 100,000*l*.

Law 7 of 1893—"A Law to amend a Law entitled, a Law for regulating Hawking and Peddling." Law 41 of 1867 made the municipal (now the parochial) boards the licensing authority and the license extended solely within the limits of the parish in which it was issued. The present law empowers the collector of taxes, or the assistant collector, to issue licenses on production of a certificate, signed by the inspector of police, to the effect that the applicant is a proper person to be licensed. It also enables the hawker to carry on his business beyond the limits of the parish in which it is granted.

Law 10 of 1893—"The Telephone Law 1893"—which gives facilities for the establishment of telephonic communication in various districts of the Islands, under licenses to be granted by the Governor in Privy Council, with proper restrictions to provide for the safety of the public. Provision is also made for the supply of telephonic facilities by the Postmaster for Jamaica on arrangements for payment.

Law 11 of 1893 provides for the payment of taxes in half-yearly moieties, thus affording great convenience and relief to the poorer classes of taxpayers.

Law 12 of 1893 has for its object the more speedy acquisition of lands for the railway track.

Law 13 of 1893 exempts certain articles imported for Foreign Consulates from payment of Customs Duty, provided that the similar concession is allowed to British Consulates in that country.

Law 14 of 1893 repeals the Mountain and River Reserves Laws of 1889 and 1892, which it was found would entail very great expense if strictly carried out, from which not much may be derived.

Law 20 of 1893 empowers the Governor to raise a special force of coast defence volunteers for service in connection with submarine mines or the management of steamers, &c., which may be required for the purpose of the defence of the Island.

Law 23 of 1893—"The Hotels Law, 1893." This Law empowers the Governor to enter into a contract with Mr. A. W. Farquharson to carry into effect a scheme for the purpose of acquiring, on behalf of a company, the interest of the Government and of the American Hotels Company and the Kingston Hotels Company in the Constant Spring Hotel and the Myrtle Bank Hotel. The issue by the latter Company of further debentures to the extent of 1,900*l.* to meet certain expenses of construction is also authorized.

Law 26 of 1893—"The Public Tanks Law, 1893," authorizes the construction of tanks in certain parishes of the Island, if the funds raised under Law 17 of 1890 for the re-construction of parochial roads are in excess of the amounts required for that purpose.

Law 30 of 1893 provides for payment of any expenses attendant on the holding of the Jamaica Exhibition which may not be recovered from the amounts paid by the guarantors.

Law 31 of 1893 enables the Mayor and Council of Kingston to take over, in certain cases, streets and roads which have been laid out and left for, and dedicated to, the use of the public, and to make and complete such streets and roads by means of advances from the Treasury, to be repaid by instalments from their regular road revenues.

Law 32 of 1893—"The Bills of Exchange Law, 1893," is an adaptation of the Bills of Exchange Act (45 & 46 Vict. c. 61).

Law 34 of 1893—"The School Tax Law, 1893" substitutes a rating which was considered more equitable than that imposed by the Law of 1892, especially in regard to the higher classes of houses.

Law 36 of 1893 provides for the establishment of certain public holidays in the Island. The operation of the law is limited to two years.

Law 37 of 1893—"The Cayman Islands Government Law, 1893." This law is the outcome of a visit paid by me to the

Cayman Island in 1892, and of a report made on the laws of those Islands by Mr. Brandford Griffith, Resident Magistrate, who accompanied me.

Since the passing of the Imperial Act relating to the Cayman Islands (26 & 27 Vict. c. 31), great slackness had prevailed in the conduct of legislation, and the justices and vestry passed laws and acts which were assented to by successive Governors, but which were in excess of the powers conferred by the Act. A most important law, 3 of 1889, for regulating the courts of the Islands was recently held void as *ultra vires* by the Supreme Court of Jamaica.

As the laws, though made without legal authority, appeared to be judicious and suitable to the circumstances of the Islands, it was thought best to enumerate them and to declare them valid.

The Governor is also authorized by this law to appoint a person qualified as a Resident Magistrate in Jamaica to be Judge of the Grand Court, to visit the Islands twice a year.

Law 38 of 1893 consolidates the several laws relating to quarantine with some minor additions which experience has shown to be desirable for the more efficient carrying out of quarantine arrangements.

Law 39 of 1893—"The Franchise Regulation Law, 1893." This law is a return to the provisions of Law 9 of 1886, and of Her Majesty's Order in Council.

The right of a person now on the register to have his name retained is saved; but for the future no fresh voter shall be able to vote unless he can, with his own hand, subscribe his name to a notice of claim to be registered, and write the date thereon. It was Law 22 of 1886 that first departed from the rule laid down in the Order in Council that at least this small modicum of education should be required.

Law 40 of 1893—"The Elections Law, 1884, Amendment Law, 1893." This Law was passed in pursuance of a Resolution of the Legislative Council to the effect that the facilities afforded to illiterate voters did away with the secrecy of the ballot, and reduced secret voting to a mere sham. It was considered by the Council that a man, even if unable to read and write, who could not master the simple rules laid down in the Elections Law for recording his vote was hardly fit to be entrusted with the franchise.

Finance.

The year commenced with a surplus of 194,733*l.*, and the revenue realized was 559,163*l.*, making together a sum of 753,896*l.* The expenditure, including 32,905*l.* for Sinking Funds, and 50,200*l.* for Redemption of Debt, amounted to 662,865*l.*, thus leaving at the close of the year a surplus of 91,031*l.*

The parochial revenues, which are devoted to parochial roads, poor relief, sanitary, and other local services, and are administered

by the several parochial boards, produced 123,610*l.*, a decrease of 514*l.* on the receipts in 1891–92, while the revenue specially appropriated for the reconstruction and maintenance of main roads under Law 17 of 1890 gave 30,986*l.*, or 1,027*l.* less than in 1891–92.

The revenue for immigration only realized 675*l.* against 31,838*l.* in 1891–92, there not being now any export duties. This sum represents the interest received on the balance at credit of the immigration fund. There were not any receipts from the proceeds of notes, as there was no immigration during the year.

The usual comparative table, showing the whole of the Treasury receipts in the year under report, and those of the previous year, is given below :—

Revenue.	1892–93.	1891–92.	Increase.	Decrease.
General Revenue.	£	£	£	£
Import duties - - -	298,718	319,810	—	21,092

Law 14 of 1891 - -	—	29,673	—	29,673
Miscellaneous - - -	36	52	—	16
Interest - - - -	633	964	—	331
	—	—	—	31,163
	675	31,838	—	31,163
Totals.				
General revenue - - -	559,163	590,610	—	31,447
Specially appropriated revenue -	30,986	32,013	—	1,027
Parochial revenue - -	123,610	124,154	—	544
Immigration revenue - -	675	31,838	—	31,163
	—	—	—	64,181
Grand total - -	714,434	778,615	—	64,181

The yield of the general revenue shows a net decrease of 31,447*l.* This decrease is almost entirely accounted for by the falling off in import duties, the effect of the operation of the McKinley Tariff Law; a smaller yield under rum duties; the abolition of the tax on stock, and the small amount of interest on the Jamaica Railway Second Mortgage Bonds received during the year. A sum of 10,270*l.* was realized from the new tax in lieu of education fees imposed by Law 31 of 1892 "The Elementary Education Law."

The receipts from revenues specially appropriated show a small decrease of 544*l.* Parochial Road Taxes shows an increase of 3,675*l.* due to the expiry of the law under which the quit rent was reduced for one year as a means of refunding the payments made for the Cadastral Survey Tax, which was repealed. Poor Relief shows an increase of 2,008*l.* On the other hand, the suspension of the Kingston Streets Improvement Tax caused a falling off of 3,091*l.*, and Miscellaneous shows a decrease of 5,067*l.* the receipts in the previous year having been exceptionally large. The following is a similar comparative statement of the Treasury disbursements compared with 1891–92.

Expenditure.	1892–93.	1891–92.	Increase.	Decrease.

Immigration expenditure - -	5,103	35,640	—	30,537
	—	—	17,766	65,124
Grand total - -	734,525	781,883	—	47,358

The general expenditure of the Colony shows a decrease of 30,486*l.*, of which the following are the chief items, namely, Administrative departments 33,109*l.*, Ecclesiastical 1,160*l.* due to the death of state-paid clergymen, census 6,232*l.* which was fully paid for in the previous year; Public Works 7,812*l.*, and Miscellaneous 3,649*l.* The following are items of increase: Education 15,243, due to additional grants in aid; Medical 2,094*l.*, for increase of the Staff and payments of fees to District Medical Officers who were appointed Visiting Officers during the threatened approach of the cholera epidemic.

Parochial expenditure shows a small decrease of 4,101*l.* c' under Parochial Roads, the result of the passing of La 1890, and Parochial Municipal Objects 11 [illegible] the being for Sanitary services 2,169*l.*, Poor [illegible] Parochial General Purposes 1,126*l.*

Pensions.

During the year, pensions amounting to 976*l.* 14*s.* 5*d.*, were granted under the provisions of the Jamaica Pension Law 34 of 1885, and the resolution of the Legislative Council of the 23rd October 1885, while the pension list was reduced to the extent of 649*l.* 4*s.* 10*d.*, by deaths, &c.

Debt.

Loans to the extent of 97,871*l.* 19*s.* 7*d.* were raised during the year, including a sum of 1,698*l.* 14*s.* 3*d.* of Savings Bank moneys borrowed for the construction of new telegraph lines under Law 1 of 1879, namely, 61,400*l.* under Law 7 of 1881, "The St. Thomas and Portland Bridges Loan Law"; the premiums ranging from 2*s.* 6*d.* per cent. to 3*s.* per cent.; 3,913*l.* 5*s.* 4*d.* under Law 13 of 1885, the Inscribed Stock Law, to cover expenses of converting Debentures; 30,860*l.* under the Local Inscribed Stock Law for Bridges the rates paid being from 95 to 97½.

Debentures representing 50,200*l.* under Law 37 of 1887, "A "Law to grant temporary aid to the revenue," were paid off, and 5,700*l.* was redeemed from the sinking funds provided for the purpose under the following laws, namely, Law 12 of 1879, 200*l.*; Laws 8 and 17 of 1880, 900*l.*; Law 17 of 1884, 900*l.*; Law 14 of 1886, 800*l.*; and Law 19 of 1880, 2,900*l.*

The public debt directly secured on the general revenue stood as follows at the close of each of the last 10 financial years, after making allowance in each year for the sinking funds actually invested for the eventual redemption of debt:—

		£	s.	d.
September 30,	1883	1,257,916	2	1
"	1884	1,243,899	18	9
"	1885	1,427,458	14	2
"	1886	1,478,790	3	8
"	1887	1,491,993	3	9
"	1888	1,502,684	9	8
"	1889	1,506,883	6	0
March 31,	1891	1,458,221	12	7
"	1892	1,520,088	4	3
"	1893	1,523,944	2	11

Of the above amount of debt on the 31st March last, 821,005*l.* was on account of the railway purchase, reconstruction, and extension, and 82,500*l.* on account of the Rio Cobre Canal.

The following are the amounts due for debentures guaranteed by the general revenue raised on account of the several undertakings specified :—

	£
Kingston and Liguanea waterworks - -	128,200
Kingston markets - - - -	20,000
Kingston gasworks - - - -	30,000
Kingston slaughter-house - - -	10,000

Legislative Council.

After adjournment on the 8th April the Council met again on the 2nd August 1892, when the Honourable Joseph Henry Levy was sworn in as member for the electoral district of St. Mary and St. Ann in succession to the late Honourable Michael Solomon, C.M.G.

The session of 1892, which opened on the 12th January, closed on the 4th August 1892, and the Council was prorogued on the 28th December of that year.

Under proclamation of date the 10th of February 1893, the Council was summoned to meet on the 28th of that month, on which occasion an Order in Council, issued by Her Majesty the Queen, was read, under the provisions of which the Governor ceased to preside over the meetings of the Council and the following members were added thereto, that is to say :—

(1.) A President, to be appointed from time to time, either by Her Majesty by warrant under Her sign manual and signet or by the Governor by an instrument under the broad seal of the Island of Jamaica under instructions from Her Majesty through one of Her Principal Secretaries of State.

(2.) The person for the time being lawfully exercising the functions of the Office of Collector General.

The Order in Council also provides that the Council elect one of its members as Vice-President.

The Honourable James Cecil Phillippo, M.D., was appointed by Her Majesty as President of the Council, and sworn in as such accordingly.

Robert Batten, Esq., Collector General, was sworn in as an ex-officio member of the Council.

The Honourable William Andrews was sworn in as member for the electoral district of St. Thomas and Portland in succession to the late Honourable W. B. Espeut.

The Honourable John Pringle, M.B., Acting Superintending Medical Officer, was sworn in on the 6th March 1893, as a nominated member of the Council to fill the vacancy caused by the resignation of the Honourable Dr. C. B. Mosse, C.B.

On the 14th of March 1893, the Honourable George Solomon was sworn in as a member for the Parish of Clarendon in the room of the Honourable Robert Craig, resigned.

The Session continued beyond the close of the year under review, and the Council finally adjourned *sine die* on the 26th April 1893, having sat on 27 days.

Public Works.

The total expenditure under all heads was 170,854*l.* 15*s.* 8*d.*, of which 38,207*l.* 9*s.* 7*d.* was expended on main roads and bridges, 62,475*l.* 12*s.* 4*d.* on parochial roads taken over as main roads, under Law 17 of 1890, 18,351*l.* 9*s.* 11*d.* for salaries, travelling allowances, printing, stationery, postage and office expenses, and 21,806*l.* 18*s.* 2*d.* for maintenance, &c., of public buildings, and for new works, while the balance of 29,993*l.* 16s. 8*d.* was for lighthouses, irrigation works, waterworks, telegraph maintenance, and construction, &c.

The average cost per mile for maintenance of the 840 miles of main roads was 40*l.* 7*s.* 7*d.*, a decrease of 12*s.* 8*d.* per mile on the rate for the previous year. This rate includes not only the maintenance of the roads proper, but also the repair and rebuilding of bridges and culverts, regulating gully courses, and many other special and minor works of improvement on the roads. The average cost per mile for maintenance proper was 34*l.* 11*s.*

No flood damage of any extent occurred during the year, and the roads throughout the Island were generally in good order. Attention was paid to the important matter of drainage, and a considerable portion of the maintenance money was expended in cutting water-tables in rock where none had previously existed.

The total length of parochial roads taken over under Law 17 of 1890 as main roads up to the end of the year was 955 miles, and the total cost of reconstruction and maintenance amounted to 181,183*l.* 8*s.*

The expenditure for maintenance and repairs of public buildings amounted to 8,165*l.* 0*s.* 8*d.*, and was for the usual maintenance and repairs of churches, court-houses, prisons, police stations, reformatories, industrial schools, &c.

A sum of 13,641*l.* 17*s.* 6*d.* was spent on new works and alterations to public buildings during the year.

The telegraph lines throughout the Island, 651 miles in extent, were maintained in a fair state of efficiency at a cost of 1,657*l.* 9*s.* 10*d.*

The three lighthouses at Plumb Point, Morant Point, and Folly Point were maintained with regularity and efficiency throughout the year.

The work on the St. Thomas, Portland, and St. Mary bridges was completed during the year, the last and greatest of them, the Rio Grande Bridge, a structure of six spans of 76 feet clear water-way each, having been opened by me in May 1892. With the completion of this bridge the road from Kingston to Port Antonio is now in all weather uninterrupted by floods, the only possible source of interruption being landslips on the Annotto Bay Junction Road.

The important work of constructing the interior main road in St. Thomas was commenced, and a sum of 9,135*l.* 8*s.* 6*d.* was expended on it during the year.

A considerable number of parochial works, such as the construction and reconstruction of roads and bridges, the preparation of plans, specifications and estimates, and the making of surveys, &c., were carried out by the Public Works Department.

Lands.

The acreage of Crown lands at the end of the year was 98,513. In 1890 the West India Improvement Company selected 64,000 acres under Article 35 of the Agreement embodied in Law 12 of 1889. Of this reserve 8,000 acres had been conveyed, and 8,692 acres were in course of conveyance, to the Company, besides 2,640 acres not of the original selection.

Much of the Crown land is good, but generally inaccessible owing to the want of roads.

206,425 acres of land are now forfeitable to the Crown for non-payment of quit-rent, but final judgment was given during the year with respect to only one property. Proceedings for the acquisition of such land are necessarily slow, and the delay prevents terms being arranged with would-be purchasers, of whom there are many.

The greater portion of the forfeitable land is in the heart of the Island, and badly served by roads, but thousands of acres are of good and accessible land.

One property was recovered from a squatter during the year. 19½ acres of land, besides the premises of the Old Short Term Prison at St. Anns Bay, were sold or conveyed during the year, and 1,234¾ acres leased.

The income derived from the sale and rental of Crown lands during the year was 1,339*l.* 1*s.* 5*d.*, while that for the past twenty years averaged 2,400*l.*, the income diminishing with the gradual sale of the lands.

A detailed survey was made at Appleton of lands adjoining the railway, and another at Negril Point, where a lighthouse will be erected, of four square miles of country.

On the recommendation of the Surveyor-General, and of a Commission of Inquiry, the laws establishing mountain and river reserves were repealed as impracticable.

Lands for Railway Track.

Out of 344 owners of land acquired for the railway extension to Montego Bay, terms were arranged in 1891-92 with 197, and in 1892-93 with 128, leaving 19 cases still under dispute, most of them with large landowners.

So far as the promoters are concerned, however, they received possession of all lands on this extension last February with a single exception.

The number of acres taken for this extension is 723, an average of 11 per mile; 475 of these have been paid for at an average cost per acre of 36*l.* 11*s.* or of 400*l.* per mile. It is anticipated, however, that when the larger and more valuable properties remaining to be acquired are settled for, this figure will be exceeded by 25 or 30 per cent., and that 60,000*l.* at least will have to be expended on the lands along both extensions of the railway.

Rio Cobre Canal.

The cost of management and maintenance of the works for the year was 1,177*l.* 17*s.* 5*d.*, whilst 161*l.* 16*s.* 6*d.* was spent in extending subsidiary channels and on other new works, making a total expenditure of 1,339*l.* 13*s.* 11*d.*

The revenue earned was 3,425*l.* 5*s.*, or 1,173*l.* greater than the average 2,250*l.*, of the past six years; 3,304*l.* 16*s.* 10½*d.* was actually collected of the 3,425*l.* 5*s.* earned, against 2,963*l.* 12*s.* 9¾*d.* collected in the previous year. The decided increase in earnings is attributed to Law 39 of 1889, which imposes a small irrigation rate on all lands within the area controlled by the canals.

During the past two years a large land owner has grown bananas on two pens under irrigation with, it is understood, very satisfactory results, and he has therefore taken steps along with several others to extend the area under this cultivation.

The Director of Public Works reports that there are thousands of acres of suitable land within reach of the canals the extension of cultivation on which, under irrigation might, in a few years, double the revenue of the works without appreciably increasing the cost of maintenance.

Post Office and Telegraphs.

The collections under these heads show an increase of 865*l.* 15*s.* 1¼*d.* on the previous year's figures, as detailed in the following comparative table :—

Period.	Postages.	Commission on Money Orders.	Commission on Postal Orders.	Telegraphs.	Miscellaneous.	Total.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1890-91 -	16,833 10 11¼	344 10 8	207 17 6	6,407 17 3	253 3 6	24,046 19 10¼
1891-92 -	17,437 6 1¼	335 9 8	335 18 9	5,767 19 3	224 5 11	24,100 19 8¼
1892-93 -	18,260 5 8¼	307 6 6	401 13 3	5,813 11 0	183 18 4	24,968 14 9¼

The Postmaster for Jamaica regards the continued increase under postages as highly satisfactory, looking to the substantial reductions of 50 per cent. and 37 per cent. which were made in the Inland and Packet Letter Rates of Postage from the 1st January and 1st June 1890 respectively. The actual loss consequent on these reductions for the year under review amounts

to only 1,429*l.* 0*s.* 5½*d.*, or 8 per cent., as against 2,252*l.*, or 12¾ per cent., the ascertained loss for the previous year, and 5,000*l.* the estimated probable loss, when the change was about to be brought into operation, results which are considered as satisfactory evidence of the resiliency of the Postal Revenue, and justify the hope that in the near future there will not be any loss resulting from these reductions.

The slight decrease under "Commissions on Money Orders" is attributed to the existence of greater banking facilities for the remittance of funds; and the steady increase of "Commission on Postal Orders" to the growing appreciation by the public of the system, which is assuming large proportions.

The receipts on account of telegraphs, it will be seen, show an increase of 43*l.* 11*s.* 9*d.* over the amount received for the previous year, the number of messages sent and received being 103,803, as against 102,925 in the previous year, or an increase of 878.

The expenditure of the Postal Department, which amounts to 20,398*l.* 14*s.* 2½*d.*, is a decrease of 659*l.* 17*s.* 7¼*d.* on that of 1891-92, principally under the heads of salaries (due to changes in the staff consequent on the retirement of the late Postmaster) and inland mail conveyance. On the other hand, telegraph expenditure has increased by the sum of 252*l.* 2*s.* 2½*d.*, the result of the establishment of new stations in the previous year, and of an increase in the wages of the assistant telegraph operators in accordance with the wishes of the Legislative Council.

Another telegraph station was opened during the year, and the lines generally have been efficiently maintained by the Public Works Department without anything like a serious or prolonged interruption.

The Ocean Mail Service has continued to be satisfactorily performed by the Royal Mail Steam Packet Company under contract, while mails have also been exchanged with places abroad by means of the various steamship lines communicating with the Island, and similar testimony is borne as to the manner in which the conveyance of the inland mails has been carried out.

The total estimated number of letters and post cards, inland and foreign, which were circulated during the year, exceeds the circulation of the previous year by 115,016, an increase which may be regarded as continued evidence of the appreciation by the public of the facilities afforded them by the Department.

Railway.

The gross receipts of the Jamaica Railway Company for the year ended 31st March 1893, amounted to 70,891*l.* 0*s.* 9*d.*, and the expenditure to 52,600*l.* 7*s.* 9*d.*, leaving a net revenue of 18,290*l.* 13*s.* 0*d.*

Coal and stores to the value of 2,355*l.* 5*s.* have been used out of the stock remaining on hand at the close of the year 1891-92, and the expenditure for the period under review has been credited with that sum.

The receipts were made up as follows:—

	£	s.	d.
Goods and cattle - - -	39,126	13	1
Passengers - - - -	25,749	6	4
Prince's wharf - - -	5,593	16	0
Miscellaneous - - -	421	5	4
	£70,891	0	9

The number of train miles run amounted to 269,709, and the expenditure and revenue per mile to 3*s.* 10·81*d.* and 5*s.* 3·08*d.* respectively, leaving a net revenue of 1*s.* 4·27*d.* per mile.

The number of passengers carried was 290,415, 20,437 of whom were 1st class and the remainder 3rd class. 9,218 passengers travelled with season tickets.

Seven miles of the line on the Montego Bay section were completed during the year, although not actually opened to traffic. The mileage actually open to traffic is now 95.

Interest was paid out of Revenue on First Mortgage bonds in June 1892, to the extent of 5,434*l.* 16*s.* 7*d.*, and in December 1892, to the extent of 6,871*l.* 12*s.*, making a total payment of 12,306*l.* 8*s.* 7*d.*

Agriculture.

The fruit trade, which was referred to in last year's report as being in a depressed state, has somewhat recovered its former healthy condition, and the increase there spoken of in the crops of sugar and output of rum has been fairly maintained during the year under review.

The export of cocoa shows an increase of 3,010 cwt. in quantity and 8,896*l.* in value, coffee an increase of 10,378 cwt. in quantity and 3,726*l.* in value, bananas 676,280 bunches and 76,843*l.* in value, oranges 3,806,526 in number and 11,526*l.* in value.

The following table shows the relative value in 1892–93, 1891–92 and 1890–91 of products of the Island exported:—

—	1892–93.	1891–92.	1890–91.
Sugar - - -	14·3	15·6	13·1
Rum - - -	11·3	15·7	11·
Coffee - - -	20·1	20·7	15·7
Dyewoods - -	21·1	18·7	21·3
Fruit - - -	23·1	17·7	29·4
Pimento - - -	3·5	3·1	4·5
Minor products - -	6·6	8·5	5·

The area of land in the island, under cane and coffee cultivation, has varied very little in recent years. There were during the year under review 32,466 acres in cane and 21,450 in coffee.

The cultivation of bananas has increased to 14,860 acres from 9,959 in the year 1890–91.

The total area under cultivation in the Island was 666,741 acres, of which 499,053 was in guinea grass, pimento, and common pasture against a total area of 1,958,678 acres of the whole Island on which the property tax was collected.

Botanical.

The useful work annually performed by this Department has continued during the year under review, and it will be seen from the following figures, showing the sale and distribution of plants at the different gardens, that the advantages offered by the Department to the general public are availed of to a considerable extent:—

Hope Gardens, plants sold - - -	20,356
Castleton - - - - -	3,868
Hill Garden - - - -	760
Total sold - - -	26,984
Distributed free or in exchange - -	6,693
Sent to Hope Gardens for distribution -	7,494
	37
Total distributed - - -	14,224

The issue of the usual monthly Bulletins, which are supplied free of cost to residents in the Island, and form a most useful means for the dissemination of information relating to plants, has been regularly carried out by the Department, the number distributed in the Island being 675, while the circulation abroad amounts to 178.

The work of maintaining the gardens generally has been carried out in a satisfactory manner.

At the *Hope Gardens* it was not found possible to continue the work of extension during the year owing to want of funds, but the area under cultivation has been considerably improved. Trees have been planted in the different sections according to the geographical arrangement on which the plan of the garden has been laid down, and in the tropical African section a commencement has been made towards putting the whole place under Bahama grass, while the fern house, the rosery, the sugar cane plantation, and the economic section have all received careful attention at the hands of the superintendent.

Experiments are being carried out with potatoes, onions, and fodder plants, and the budding of oranges on a small scale has been partially successful.

The sisal hemp plantation is flourishing.

The *Hill Garden* (*Cinchona*).—Experiments in the cultivation of Peas have been carried on with generally satisfactory results, and the important question of suitable fodder plants for the higher elevations has been engaging the attention of the Department for some time, and it is to be hoped that the experiments now being carried out will have successful results.

The garden at *Castleton* has been maintained in its customary satisfactory condition, and, as usual, has been much frequented by visitors. Most of the plants in the rosery having become worn out by continuous cutting, a new bed has been prepared and planted. The stock of plants in the fern house and on the rockeries has also been considerably increased.

The *Kingston Public Garden* has continued to afford a means of pleasant recreation to the people of the city, who appreciate the weekly performances by the excellent band of the West India Regiment. Gates have been erected on the east and west sides of the garden, as was intended in its original design.

The plants from the exhibition grounds have done well, and more have been brought from the Hope Gardens, still further improving the appearance of the grounds.

At *King's House* several improvements have been effected during the year, of which the formation of a vinery may be mentioned as the principal feature.

A large number of cuttings of the best English vines were obtained, through the kind offices of the Director of Kew Gardens, from the Royal Horticultural Society's gardens at Chiswick, and from these 34,350 cuttings were produced and planted out for distribution later. Vines were also obtained by myself, and from Madeira by Dr. Grabham, who kindly presented them to the Department.

The plan proposed last year for instruction in the cultivation of the vine has been carried out, and demonstrations have been frequently given by the Superintendent.

The *Library* has been added to during the year, and work in the Herbarium has been continued.

Education.

The results of the year under review, as compared with the preceding period of 12 months, are shown in the following summary :—

Year.	Schools on Government List.	Schools Inspected.	Scholars on Books.	Scholars in Average Attendance.	Percentage in Average Attendance of Number on Books.	Class of Schools.						Fees.	Grants in aid, including Building Grants.
						I.	II.	III.	E.	F.	Not examined.		
												£	£ s. d.
1892–93 - - -	912	867	92,135	52,983	57·50	143	389	379	—	1	44	6,649	34,724 11 0

Increase - - - -	40	50	8,404	7,056	2·65	15	60	29	*3	*6	*9	*2,154	5,345 11 0

* Decrease.

The superintending inspector of schools attributes the large increase in the number of scholars on books and in average attendance, as well as (to a less degree), in the number of schools on the list, to the abolition of fees under the Elementary Education Law (31 of 1892), which took effect from the 1st of July, although the attendance was not appreciably affected by the change for some time, and a further increase may, therefore, be expected in the future.

A satisfactory increase of nearly 3 per cent. is also shown in the "Percentage in average attendance of number on books," which Mr. Capper regards as justifying the hope expressed by him last year, that improvement in regularity of attendance would follow the abolition of fees.

The superintending inspector also considers the increase in the number of first and second class schools very satisfactory, considering the great mass of raw material thrown on the hands of teachers by the large influx of new scholars into the schools, and he is of opinion that it will be still more creditable to the teachers if anything like the same general level of efficiency is maintained next year.

Mr. F. E. Reed, B.A., London, was appointed to the staff of inspectors during the year, but so rapid has been the increase in the number of schools and the average number of children that the work of the inspectors has been in no way lessened by this addition to the staff.

The annual examination of teachers and students in training colleges took place in December, with result showing a steadily continued improvement, there being a slight increase in the number obtaining honours and a bonus, and a transfer of 3 per cent. from the partial passes to the full passes, while the proportion of failures remained the same.

Mr. Capper attributes the small number of teachers, who present themselves at these examinations to a want of confidence on the part of would-be candidates who dread the supposed discredit and reproach attaching to failure at the examination.

The high standard of work which has been reached by the training colleges of late years has been fully maintained during the period under review, with one exception, due to the inadequacy of the staff of the college, a defect which has since been rectified, and the inspector states that there is no reason to doubt that the college in question will soon recover its old position.

It was unfortunately found necessary, owing to an outbreak of fever, to close the Bethlehem Moravian Female Training College during a considerable period of the year, but under the circumstances the usual bonuses were allowed to the college, and concessions made with regard to the students' examinations.

At the Government Female Training College, Shortwood, the work again shows an improvement on the previous year; and altogether the training colleges are doing good work in turning

JAMAICA. 1892–3.

out teachers for the elementary schools, the demand for which still considerably exceeds the supply.

The usual examination of pupil teachers and pupils at elementary schools who voluntary present themselves for examination was held in December with a total number of 672 candidates as against 520 in July 1891, the largest number ever previously examined.

Of the 261 teachers examined, 135 passed, or a percentage of about 50, which is not equal to the standard of last year, but, on the other hand, 148 volunteers succeeded in passing out of 411 examined, giving a percentage of over 36, an improvement on former results. Candidates for the training colleges are included under second year pupil teachers and volunteers, of whom, out of a total of 182 at the examination, 69 successfully passed, or a percentage of about 37.

In reviewing the work of the schools for the year, most of the inspectors coincide in the opinion that intelligent reading on the part of pupils is still a marked defect in their tuition, and it is to be hoped that the constant attention which is directed to this deficiency may result in some improvement in the future.

One result of the abolition of school fees by Law 31 of 1892 is shown in the inadequacy of the present accommodation for the increased number of pupils entering the schools, in some cases classes having to be taken outside the buildings, and the provision of enlarged accommodation will have to be considered in the immediate future, but in this direction the people will have to take action on their own behalf, as the already overburdened general revenue will be unable to bear any addition to the large amount now provided for building grants, and in view of the relief to their pockets by the abolition of fees, this should not prove any cause for complaint by parents who have benefited so considerably by the change.

The Board of Education established by the Elementary Education Law of 1892 was appointed in May, and held the first of its meetings in the following July, performing useful work during the year in a very necessary revision of the Code for Teachers, an amending law being passed to carry out several of its recommendations.

To the number of industrial schools placed under the charge of the Superintending Inspector by Law 13 of 1891, has been added during the year an orphanage for girls, which was opened at Belmont, Stony Hill, in October last, under the auspices of the Bishop of Jamaica, and although the institution has been too short a time in existence to show much in the way of results, these will no doubt correspond in the near future with the excellent arrangements made for the training of the children.

At the Hope Industrial School for Boys, between 20 and 30 inmates have been provided for during the year, receiving the usual instruction in carpentry and gardening, as well as instructions in the school, but the system of management has not been regarded as altogether satisfactory, and a proposal is receiving

consideration by which the school will be placed under the charge of the Director of Public Gardens and Plantations, with a view to imparting a thorough agricultural training to all the pupils.

The schools at Alpha Cottage, under the management of the Roman Catholic Clergy, have continued to be conducted as admirably as heretofore, an excellent feature of the boys' school (a comparatively recent addition) being the drum and fife band, which is very popular with the boys.

The girls Industrial School at Shortwood was opened on the first day of the year under review, and has been in successful operation ever since, an interesting change in the employment of the girls being the successful experiments in hat and basket making.

Altogether the work of the industrial schools promises to become an important factor in the training of the juvenile population of the Island.

Immigration.

During the calendar year 1892, no immigrants were introduced, the number applied for—263—being too small to warrant the chartering of a vessel for their conveyance.

The ship "Jumna" was despatched for Calcutta on the 7th September 1892, with return coolies from Jamaica and St. Lucia, the number from Jamaica being 375, equal to 327 statute adults. They took with them Government bills to the amount of 1,748*l.* 5*s.*, besides gold and a considerable quantity of jewellery. Three time-expired coolies, with their families, numbering together 13 persons, also returned to India viâ England and at their own cost. They took 933*l.* in Government bills alone.

The number of passports issued to time-expired immigrants leaving the Island was 33.

The birth rate for the year was 1·62, and the death rate 2·49 per cent., among indentured coolies a high per-centage, that for the previous year being 1·50. The deaths were chiefly due to bowel and chest affections and fever, and are attributed by the protector, in a great measure, to chills contracted by the people uncovering their bodies after working hours and reverting to the native wrapper round the loins, and turban.

The number of coolie depositors in the Savings Bank during 1891–92 was 667, with a total at credit of 14,054*l.* 8*s.* 5*d.*, against 745 with 16,758*l.* 3*s.* 6*d.* in the previous year.

The percentage of the East Indian population in prison was 0·14 per cent., while 0·28 per cent. were in the lunatic asylum.

The protector represents the indentured coolies now in the island to be, generally speaking, of a much superior class to many of the batches introduced in former years, good labourers and an acquisition to the Colony. He instances, however, two cases of women specially unfitted for immigration; one, a person of

comparatively refined appearance, and with delicate hands, stated herself to be the daughter of an Indian Prince, and refused to do any work. On inquiry it was found that her statement was false.

Emigration.

During the year under review 563 labourers left Jamaica for the Isthmus of Panama, 16 for Port Limon, and the remainder for Colon; and 953 returned from the Isthmus by way of those ports, only 21 being from Port Limon.

Government Savings Bank.

The number of depositors and the amounts of deposits in the bank have been as follows in the last 10 years :—

Year.	Number of Depositors.	Amount of Deposits.
		£
1882–83	11,925	825,705
1883–84	13,601	850,546
1884–85	15,511	860,190
1885–86	16,820	363,292
1886–87	17,047	363,481
1887–88	18,510	393,250
1888–89	19,444	408,913
1890–91	21,747	423,011
1891–92	22,824	428,348
1892–93	23,902	417,978

showing a decrease of 10,370*l.* in the amount of deposits, but an increase of 78 in the number of depositors.

In the above amount of deposits are included five deposit amounts for the following public funds :—

	£	s.	d.
Immigration return passage fund -	586	14	0
Constabulary reward fund - -	546	1	4
Sinking funds - - - -	1,108	5	6
Constabulary pension fund - -	2	1	4
Smith and Beckford's Charity - -	101	2	9

There were also 271 accounts for trusts, charities, Chancery suits, Administrator General and bankrupt estates, amounting to

a total deposit of 30,519*l.* 3*s.* 4*d.* The remaining 22,642 accounts, representing 383,653*l.* 16*s.* 5*d.*, are all ordinary and legitimate savings bank deposits.

Of the total number of accounts open at the end of the year, 16,075 were for 5*l.* and under, and 1,159 were for over 100*l.*

The assets of the bank on 31st March last were distributed as follows:—

	£	s.	d.	£	s.	d.
Consols, 2¾ per cent.				20,404	17	3
Inscribed Stock:—						
Canada, 3 per cent.				27,908	0	8
" 3½ "						
Cape of Good Hope, 4 per cent.				47,766	6	8
Ceylon, 4 per cent.				14,400	0	0
New South Wales, 3½ per cent.				31,558	11	3
Victoria, 4 per cent.				12,015	0	0
Jamaica, 4 per cent.				9,900	0	0
				163,952	15	10
Debentures:—						
Canada, 4 per cent.	53,990	12	6			
New South Wales, 5 per cent. / New South Wales, 4 per cent.	60,997	10	0			
South Australia, 4 per cent. / South Australia, 6 per cent.	53,531	2	6			
Victoria, 4 per cent. / " 4½ "	47,308	12	6			
Jamaica, 5 per cent.	5,055	19	3			
				220,883	16	9
				384,836	12	7
Cash on deposit in Colonial Bank				33,141	8	3
Total				£417,978	0	10

During the year 3,416 accounts were opened and 2,345 closed, resulting in an increase of 1,062 in the number of accounts open

JAMAICA. 1892-3.

at the end of the year, as compared with the number in the year before.

The number of deposits amounted to 26,037, and withdrawals to 29,481, representing respectively 197,613*l.* and 219,682*l.*

The expenses of management and the interest credited to depositors amounted to 14,359*l.*, while the revenue realised was 16,065*l.*, thus showing a net profit of 1,706*l.* on the year's transactions

Trade.

The following table shows the value of the imports in each of the last 10 years :—

	£
1882-83	1,625,411
1883-84	1,568,639
1884-85	1,487,833
1885-86	1,325,603
1886-87	1,322,336
1887-88	1,695,605
1888-89	1,597,600
1890-91	2,188,937
1891-92	1,759,890
1892-93	1,941,481

There has thus been an increase during the year under review of 181,591*l.* compared with the year before, and the value is higher than in any year of the decade, with the exception of 1890-91, which was exceptional, owing to the impetus to trade given by the Jamaica Exhibition.

The value of goods entered for home consumption was 1,928,556*l.*, an increase over 1891-92 of 165,557*l.*

The principal items in which the returns show a marked increase are cattle 13,106*l.* as against 7,154*l.*, refined sugar 524,898 lbs. valued at 6,561*l.* as against 98,874 lbs. valued at 1,186*l.*; bread and biscuit 14,128*l.* as against 13,104*l.*; corn 29,766 as against 26,735*l.* The value of beef and pork imported as compared with 1891-92 has increased by 1,343*l.*; of condensed milk by 3,753*l.*; of oils for food by 6,490*l.*; of tea by 307*l.*; and of tobacco by 3,025*l.*

The increase in the value of tobacco is very remarkable, being 20,207*l.* as against 16,764*l.* last year. It occurs principally under the head of cigarettes, which show an increase in the number imported of 50 per cent.

Taking 400 cigarettes to the lb., the increase represents 7,000,000 cigarettes, and this notwithstanding the fact that there has been no diminution in the imports of either manufactured or leaf tobacco, but an increase in both.

There have been decreases in the value of butter, cheese, lard, provisions, rice, and salt.

In manufactured articles other than those included under the head of food and drink, increases are shown in the following:—Apparel and slops, 9,199*l.*; cottons of all kinds, 62,651*l.*; hats, 7,185*l.*; silks, 6,047*l.*; woollens, 7,801*l.*; and medicines and medicinal preparations, 5,382*l.* Among those which show a decrease are, haberdashery and millinery, 4,317*l.*, and pitch pine lumber, 2,820*l.*

The imports into the Colony during the year were drawn from the sources named in the following proportion:—

United Kingdom, 1,001,769*l.*, or 52 per cent. of the whole.
United States, 671,376*l.*, or 34 per cent.
British Colonies, 228,418*l.*, or 11·8 per cent.
Other countries, 26,994*l.*, or 1·4 per cent.

Last year's corresponding figures were:—

United Kingdom, 875,045*l.*, or 49·6 per cent.
United States, 653,279*l.*, or 37·2 per cent.
British Colonies, 217,781*l.*, or 12·3 per cent.
Other countries, 16,894*l.*, or 1 per cent.

The following return of goods relieved from duty under the tariff is given in continuation of similar information in former years:—

——	1882-83.	1883-84.	1884-85.	1885-86.	1886-87.

The following table gives the value of the exports in each of the last 10 years :—

Year.	Of Produce and Manufactures of the Colony.	Of British, Foreign, and other Colonial Produce and Manufactures.	Total.
	£	£	£
1882-83 - -	1,365,868	103,578	1,469,446
1883-84 - -	1,350,900	33,089	1,483,989
1884-85 - -	1,181,203	227,645	1,408,848
1885-86 - -	1,078,315	201,803	1,280,118
1886-87 - -	1,334,465	174,542	1,509,010
1887-88 - -	1,661,601	166,989	1,828,590
1888-89 - -	1,501,660	113,164	1,614,824
1890-91 - -	1,807,084	95,730	1,902,814
1891-92 - -	1,628,777	93,319	1,722,096
1892-93 - -	1,690,637	69,170	1,759,807

This shows an increase on the total value for the year of 37,711*l.* Of Island produce the increase was 61,860*l.*, but the value of other exports fell off to the extent of 24,149*l.*

The increase in the value of Island produce exported is due to the recovery of the fruit trade, which during the previous 12 months had suffered from the large yield of fruit in America. Cocoa, coffee, honey, pimento, fustic, and logwood spars were also

exported this year in larger quantities, but there has been a smaller output of cocoanuts, ginger, rum, sugar, and cigars. With regard to exports other than Island produce, it may be explained that they are practically confined to such imports as are reshipped, and there is but little scope for this class of trade.

The following table shows for five years the percentage proportion which each of the several articles mentioned bears to the total export value :—

—	1887–88.	1888–89.	1890–91.	1891–92.	1892–93.
Sugar - - -	17·3	16·3	13·1	15·6	14·3
Rum - - -	12·2	9·1	11·0	15·7	11·3
Coffee - - -	19·3	19·4	15·7	20·7	20·1
Dyewoods - ..	21·2	25·0	21·3	18·7	21·1
Fruit - - -	21·6	20·3	29·4	17·7	23·1
Pimento - -	2·7	3·2	4·5	3·1	3·5
Other produce - -	5·7	6·7	5·0	8·5	6·6

The export of the principal staples in each of the last 10 years is shown in the following table :—

—	1882-83.	1883-84.	1884-85.	1885-86.	1886-87.

JAMAICA. 1892-3.

The exports from the Colony during the past 10 years were distributed among the different countries in the following proportion:

——	1882-83.	1883-84.	1884-85.	1885-86.	1886-87.	1887-88.	1888-89.	1890-91.	1891-92.	1892-93.
United Kingdom	54·46	43·4	37·2	39·7	38·6	40·2	37·3	32·4	32·7	29·1
United States -	10·07	31·1	42·2	44·0	43·9	43·2	50·2	55·3	50·9	54·2
Dominion of Canada	16·66	13·4	5·4	3·5	1·3	1·6	2·3	2·1	3·5	2·6
Other Countries	6·81	12·1	15·2	12·8	16·2	15·0	10·2	10·2	12·9	14·1

From this it will be seen that exports to the United States have resumed the position temporarily lost last year, and the fact is due to the revival of the fruit trade already referred to. The large exports of logwood to Germany, France, and Russia, account for the improved position of the exports to "other countries."

Police.

The strength of the regular police force on the 31st of March 1893, was 735 officers and men, including one inspector-general, 13 inspectors, four sub-inspectors, 119 non-commissioned officers, and 598 men, being 27 below the allowed strength for the year.

The rural headmen and police at the same date numbered 923, thus giving a total effective police establishment of 1,658 of all ranks.

The enlistments during the year were 100, while 74 men were discharged or dismissed, and five died. Pensions were awarded during the year to 16 of the men discharged, and gratuities granted to 12—the amounts reaching in the case of the former to 303*l.* 13*s.* 8*d.*, and in the case of the latter to 227*l.* 5*s.* 11*d.*

Two new stations have been established—one at Clarke's Town, in Trelawny, the other at Darliston, in Westmoreland, and an increase of the Kingston division by 26 men was sanctioned.

The following table shows the services rendered by the police, as compared with the preceding four years:—

——	1887-88.	1888-89.	1889-90.	1891-92.	1892-93.
Number of persons arrested on view and on information - -	5,354	4,218	9,624	6,558	6,923
Number of persons apprehended on warrants	1,674	1,873	2,499	1,645	1,802
Number of search warrants executed -	75	102	153	116	102
Number of persons summoned - -	14,297	14,018	25,427	17,588	18,896
Number of persons subpœnaed - -	22,472	21,702	27,540	28,267	28,766
Number of seizures under revenue laws - -	465	225	665	325	440
Number of post-mortems ordered - -	319	388	627	460	432
Number of prisoners escorted - -	8,050	8,796	15,812	9,638	10,570

The Criminal Returns show eight cases of murder as against 13 last year. Of the eight cases two were convicted, two discharged for want of evidence, and the remaining four remained undisposed of at the close of the year under review.

There were 16 cases of manslaughter, seven of which resulted in convictions, four being acquitted, and the rest either abandoned for want of evidence or undisposed of at the close of the year.

Cutting and wounding show the large total of 652 cases, of which 383 were convicted. The cases of concealment of birth have gone up from 6 in 1892 to 10 in 1893. Six convictions were obtained, three were discharged by the magistrates, one was acquitted, and one remained undisposed of.

Of offences against property committed with violence, breaking into dwelling-houses, and breaking into shops, furnish the greatest numbers, being 166 and 109 respectively. The total number of offences under this head is 306.

Offences against property without violence have risen from 4,352 in 1891–92 to 4,416 in 1892–93; this increase is attributable rather to the increased facilities afforded by the Resident Magistrates' Courts for bringing offenders to justice than to any actual increase of crime.

The offences which principally contribute to the total are, larceny of small stock, 264 cases; larceny in dwelling-houses, 278; simple larceny, 1,612; prædial larceny, 1,357.

Under the head of malicious injury to property there has been a regrettable increase of arson cases, which are 49 as against 34 last year. In 20 cases the prisoners arrested were discharged for want of evidence. Of the 28 cases that went for trial 16 were convicted.

The Police have rendered the usual services in connection with Municipal Laws and Regulations, Revenue and Sanitary Laws, and the general preservation of order.

Prisons.

The prisoners in all the prisons and gaols of the Island on the 31st of March 1893 numbered 964, a decrease of 24 compared with the numbers on the same date in the previous year. The number in custody in each of the last six years has been :—

On 30th September	1887	795
"	1888	749
"	1889	890
31st March	1891	893
"	1892	988
"	1893	964

JAMAICA. 1892-3.

Estimated value of labour yielding no return - - - -	5,098 14 2	4,510 3 2
Estimated value of bricklaying work and stone quarried - - -	3,340 14 1¾	4,164 16 8
Washing and repairing (General Penitentiary) - - -	1,375 8 7	895 11 1

The new works in progress during the year under convict labour supervised by master tradesmen, were 20 additional cells to be provided for female prisoners at the General Penitentiary, and 200 additional cells at the St. Catherine District Prison, the bricks and lime being supplied by the General Penitentiary. These works are still progressing.

Sixteen prisoners died in the General Penitentiary; of these two were prisoners who were in ill health when they were admitted, and one an infant, the offspring of a female prisoner. The death rate at this institution, based on a daily average population of 542 prisoners, was 29·52 per 1,000.

The male prisoners in each of the prisons pursued their usual occupations, which include brickmaking, lime burning, and quarrying, and the female prisoners of washing and repairing clothing for the prisons and other public institutions and private individuals.

Religious services have been conducted regularly at the General Penitentiary by the chaplains of the various denominations

attached to the institution, and in the St. Catherine, Hanover, and Falmouth District Prisons, and the Middlesex and Surrey County Gaol. Provision is not made at the short term prisons at Port Antonio, and Black River for regular religious ministration, but prayers are read by the prison officers.

School was held regularly at the General Penitentiary, the St. Catherine, and the Falmouth, District Prisons.

The discipline at all the prisons has been well maintained.

The mark system in force at the General Penitentiary continues to work satisfactorily.

Vital Statistics.

The total estimated population on the 31st March 1893 was 660,282, and the mean population for the year under notice is estimated at 655,595. It is on this estimate that the marriage, birth, and death rates are calculated.

The increase by excess of births over deaths for the year was 10,758, or 16·8 per 1,000 persons living, against a rate of 15·6 for the preceding year.

The number of marriages recorded during the year was 3,349, being 5·1 per 1,000 of the population, and a decrease of 56 marriages compared with the year 1891–92, when the rate was 5·2 per 1,000.

The percentage of illiterate persons married was 52·6, being a slight decrease when compared with previous years.

The births registered numbered 24,475, showing a decrease of 269, when compared with the figures of the preceding year, and a rate of 37·3 per 1,000 of the population.

Of the 24,475 births registered 14,724 were illegitimate, the proportion per each 100 births being 60·1.

13,717 deaths were recorded during the year, the rate per 1,000 of the population being 20·9.

The total number of births in the Cayman Islands was 198, of deaths 51, and of marriages 39.

General.

The general prosperity of the Colony during the year under review has been fully maintained, as is shown by the Trade and Stamp returns; and important steps have been taken towards insuring its future progress; the large rivers of Portland, whose sudden floods after heavy rain made travelling in that parish so dangerous, have all been bridged. Several bridges have been constructed in the parishes of St. Mary and St. Thomas, and of the 89 bridges authorised to be built by Law 20 of 1892 one has been finished, 10 begun, and the plans completed and iron work ordered for two important bridges, one of 250 feet span, and one of 100 feet.

955 miles have been taken over from the parochial roads, and added to the main road system at the cost of 181,183*l.*, thus increasing the mileage of driving roads under the Public Works

Department to 1,782 miles. When we add to this number 2,322 miles of driving roads still maintained by the parochial boards and 1,963 miles of bridle roads, with the rapid extension of the railway from the port of Kingston on the south-east coast to Montego Bay, on the north-west, a weekly coastal steamer service from port to port round the island, and a complete system of mail coaches, it will be seen that for internal means of communication Jamaica compares favourably with any island of its size in the world.

I emphasize these matters because abundant means of communication and cheap and ready access to the ports are of the first importance to small capitalists who may be induced to try their fortune in the Island, or to wealthy investors whose attention may be turned to a Colony whose soil, climate, and social condition offer many inducements for secure investment of capital.

The post office and telegraph systems are being steadily extended, there being now 107 post offices and 69 telegraph stations. The postal order system established in 1890 has rapidly developed, orders to the amount of 20,393*l.* have been issued during the year under review. These postal orders are payable at all parochial treasuries, and at the offices of assistant collectors of taxes as well as by district post-masters. They are found to be most convenient.

The consolidation of the quarantine laws, and the importation of the most approved form of disinfecting chamber, which has been erected at the excellent lazaretto at Green Bay, places the Government in a favourable position to combat the possible introduction of disease from outside, so far as efficient resistance may be hoped for from quarantine regulations. The question of internal sanitation has not been forgotten, and several parochial boards have made praiseworthy efforts to improve the sanitation of their districts. The Medical Department have made timely arrangements to meet the possible introduction of cholera by laying in a large supply of necessary drugs and disinfectants and arranging for the immediate forwarding of any further supply that might become necessary.

On the general question of sanitation, the drainage of Kingston, and removal of the sewage to the sea, where it can no longer pollute any portion of the fine harbour, with the general reconstruction of the streets, are of great importance. For this work Mr. Chadwick, C.M.G., whose successful drainage works in various parts of the world are so well known in the Colonial Office, has been chosen. He has visited Kingston and completed his plans, and within a few years Kingston will, I hope, rejoice in a perfect system of drainage.

The Victoria Jubilee Hospital, built as a memorial of Her Majesty's Jubilee, partly by subscription partly by grant from public funds, was opened in April, 1892. Besides the benefits of the institution as a maternity hospital, it is being used as a training hospital for midwives, of which the various parishes

stand in sore need. It is hoped that as the numbers of qualified midwives increase the serious infant mortality may be checked.

The passing of elementary and secondary education laws, and placing the management of elementary education under a board of 13 members, with the abolition of school fees, has given a great impetus to education. The details of the report show a large increase in the number of schools and scholars, and a corresponding increase of 15,843*l.* spent upon education. The board of education have framed a code under which exceptional advantages are promised to teachers whose pupils can pass an examination in elementary practical agriculture. This proviso may be productive of most excellent results.

Having recapitulated the steps taken by the Government during the year under review to pave the way for the moral and material progress of the people, it remains to be seen what the people have endeavoured to do for themselves, either individually or through their local representatives in the parochial boards; and no unprejudiced man can withhold a full meed of acknowledgment of the practical energy shown throughout the Island. Of the 13 chief towns of the parishes nine have already established water works, imposing upon themselves local rates for the purpose. In one the works are in progress, and of the remaining three, one has all but completed the necessary arrangements, and two are prevented by exceptional engineering difficulties. Excellent markets with every necessary accommodation have been, and are still being, erected in the various parishes.

Among the people the valuable lessons taught by the Jamaica Exhibition of 1891 have begun to bear fruit. The value of co-operation has been demonstrated, and local capitalists have invested large sums in two companies formed to push more vigorously the fruit trade of the Island. A new building society has been added to those existing before, and are all doing prosperous business. An agricultural society has been formed in one of the parishes, and a proposal is under consideration for the formation of a local agricultural loan bank. All this points to a beginning of activity and effort.

Nor have the people individually been backward. A request has been received for the services of a trained instructor to teach the cultivators of one of the central districts how to improve the preparation of their cocoa, and arrangements have been made by the Botanic Department to meet their wishes. Dairy farming has begun, and promises to become a large and paying industry that will materially increase the value of grazing pens. A large number of cheap and effective labour-saving, steel sugar-mills, of a kind exhibited at the exhibition, have been imported and purchased by small sugar-growers, replacing the old and wasteful wooden "John Crow" Mills, reducing to a vanishing point the accidents to incautious attendants hitherto common, and enabling the owners to grow remunerative corps for local consumption.

Several inquiries have been made by small owners for the sisal plants imported by my direction, as reported in my last Blue Book

Report. To these inquiries I have discouraged the undertaking of sisal cultivation until it was demonstrated that the soil and climate were suitable. Colonel Ward, C.M.G., a wealthy gentleman, ever ready to venture any experiment that may assist the progress of the Island, has made a large plantation on the plains of Vere, and I am informed that these plants, as well as those planted in the Botanic Gardens, have grown extremely well.

These plants are of the same kind as those planted, by my advice, in the Bahamas in 1885–86, the cultivation of which has since grown to such large proportions in that Colony. My observation shows me that we have in Jamaica a far larger area of suitable land than exists in the Bahamas, while the expense of getting the fibre to the port of export will be much less. I am of opinion that the cultivation will be largely extended in the near future, and will be a most valuable addition to the products of Jamaica. These facts justify the financial instinct of the London money-market, in which Jamaica 4 per cent. stock holds a position inferior only to that of Canada and the Cape.

I have received many letters asking for information as to the climate, soil and possibilities of Jamaica from intending settlers with moderate capital. These inquiries have been answered by the Secretary of the Jamaica Institute, who had a list of several owners of sugar and other estates who have stated their readiness to employ for a time intending settlers with capital, on conditions to be settled between the parties. This is for the purpose of enabling such people to learn something practically of the country before they proceed to invest their capital. I understand that the system is being tried in one or two cases.

With the exception of an epidemic of influenza of a mild type, the health of the community has been good. The climate is excellent for such Europeans as realize that in the tropics alcohol is not a cooling drink. The vital statistics speak for themselves, and in considering them it must always be remembered that in a black population the mortality of young children is always abnormally high.

The beauty of the island and its value as a health resort is now becoming widely known on both sides of the Atlantic; and as an instance of the law-abiding character of the people, the police reports show that in the parish of St. Catherine, containing a population of 65,000, and including the old capital, Spanish Town, with 5,000 inhabitants, there was not, during the Christmas week of 1892, a single person in custody for disorderly conduct or common assault. In this resumé of the general condition of the Island I hope I have demonstrated to those who may take an interest in the Colony the solid progress made in the immediate past and the great possibilities in store for the future.

TURKS AND CAICOS ISLANDS.

(For Report for 1892, *see* Colonial Report [Annual] No. 74.)

Acting Governor BENGOUGH to the MARQUESS OF RIPON.

King's House, Jamaica,
May 25, 1894.

MY LORD,

I HAVE the honour to forward to your Lordship a copy of the Blue Book of the Turks and Caicos Islands for the year 1893, with the Commissioner's Report thereon.

I have, &c.
(Signed) H. BENGOUGH,
Administering the Government.

REPORT ON THE BLUE BOOK OF THE TURKS AND CAICOS ISLANDS FOR THE YEAR 1893.

1.—*Revenue and Expenditure.*

The Revenue collected in 1893 was 7,434*l.*, as compared with 7,836*l.* in 1892, and exceeded the estimate by 372*l.* The balance carried forward from the previous year was 2,776*l.*, giving a gross revenue of 10,210*l.* The export of salt, though slightly above the average, was less than in 1892, with a corresponding decrease in the revenue total.

The total expenditure amounted to 7,817*l.*, being more by 221*l.* than the sum expended in 1892. Of this amount, 7,095*l.* was ordinary expenditure, against 6,926*l.* in 1892, and 722*l.* was for special works and services, the sum so spent in 1892 having been 670*l.*

The revenue collected within the year was less by 383*l.* than the total expenditure within the same period, and the balance to carry forward to 1894 was consequently reduced. The sum so carried forward was 2,393*l.* and the Dependency has to its credit a further sum of 1,000*l.* invested, making a total credit balance of 3,393*l.*

Statements showing the details of revenue and expenditure for the last two years are attached :—

2.—*Public Works.*

Much useful work was accomplished in this Department, a larger sum than usual having been wisely voted by the Legislative Board to meet the cost of very necessary repair and general upkeep and improvement of Public buildings and other Government property. The more important works under this head were a substantial wall enclosing the catch of Matthew Tank (76*l.*), general repairs and painting of the Public offices (54*l.*), re-roofing, ceiling, and painting the Court House (158*l.*)

There was also considerable expenditure on special works, of which the chief items were a new tank at Salt Cay (141*l.*) and 146*l.* paid for the purchase and conveyance to Grand Turk of a small yacht obtained by my predecessor, Mr. Higgins, at New York, for use principally at the Caicos Islands. The new tank and catch at Cockburn Harbour, the construction of which was commenced in 1892, was also nearly completed.

A brief memorandum of the expenditure at the three ports of the Dependency is attached:—

—	Grand Turk.	Salt Cay.	Cockburn Harbour.
	£ s. d.	£ s. d.	£ s. d.
Public roads and abutments.	42 5 0	34 5 10	66 7 6

	£721 18 9

3.—*Legislation.*

The following Ordinances were passed by the Legislative Board during the year :—

No. 1—The Annual Appropriation Ordinance.
No. 2—The Supplementary Appropriation Ordinance.
No. 3—The Parcels Post Collection of Duties Ordinance.
No. 4—The Dog License Ordinance.

A general revision, amendment, and simplification of the laws of the Dependency is much needed, and is now being gradually proceeded with.

4.—*Legislative Board.*

Mr. H. Higgins, the Commissioner and President of the Board, went on leave of absence in 1892, and remaining absent, the post of President continued to be filled by the Acting Commissioner, Mr. E. H. Johnson, until the arrival in the Dependency on the 2nd March of Mr. E. J. Cameron, who was appointed to take Mr. Higgins's place.

Mr. Johnson, who was, as Judge of the Supreme Court, an *ex officio* member of the Board, died on the 4th May, the vacancy thus created remaining unfilled until the arrival in December of the newly appointed Judge, Mr. W. E. Cleaver.

5.—*Civil Establishment.*

Mr. H. Higgins obtained an extension of his leave of absence to the 12th December, on the ground of ill-health, at the expiration of which time he resigned. Mr. E. J. Cameron, Commissioner of the Virgin Islands, arrived in the Dependency on the 2nd March, having been appointed to act as Commissioner, and he was subsequently confirmed in that office.

Mr. Cameron also acted from May to November as Judge of the Supreme Court, which office became vacant by the death of Mr. E. H. Johnson.

Mr. W. E. Cleaver, a District Commissioner of the Gold Coast Colony, who was appointed to fill Mr. Johnson's place, arrived and took up his duties as Judge on the 1st December.

Mr. L. S. Leslie, Assistant Commissioner at Cockburn Harbour, died on the 6th October, at New York, where he had proceeded on leave of absence, his place being filled temporarily by Mr. W. A. Astwood, the boarding and Revenue officer of that settlement.

Mr. J. A. Gardiner, Corporal of Police and Foreman of Works, died on the 26th September, and was succeeded by Mr. F. E. Todd.

6.—*Foreign Consuls.*

The following countries are represented:—

United States of America.
Sweden and Norway.

Denmark.
France.
Spain.
Dominican Republic.
Haytian Republic.

7.—*Pensions.*

Mr. T. Graham, late Crown Commissioner, who was in receipt of a pension of 48*l.*, died at Belize on the 10th May. There were no other changes. The total sum paid in pensions was 910*l.*

8.—*Education.*

The following remarks and table are taken from the Report of the Chairman of the Board of Education :—

The average number of scholars on the books at the usual six schools, excluding the one at Bottle Creek, which has only been recently opened, is lower than that of the previous year, though the figures are in excess of those for 1890 and 1891. The average attendance has also fallen considerably, being nearly 25 per cent. smaller than in 1892, the chief falling off being at Grand Turk and Blue Hills, where the figures are 75 and 32 respectively as against 103 and 61.

I cannot regard this as a satisfactory state of things, and in view of the comparatively large sum which the Dependency annually sets aside for educational purposes, I think better results should be obtained. The matter is one to which I hope to be able to devote some attention at a later date, when the state of public business permits of my doing so.

Summary of School Returns for the year ended 31*st December,* 1893.

School.	Teacher.	Average Number on Books.	Average Attendance.	Number of Days in operation.	Cost of Schools. £	s.	d.
Grand Turk	R. G. Wint	238	75	226	140	8	2
Salt Cay	N. W. Astwood	49	26	221	69	1	6

Total	—	769	364	—	†513	8	8

* Sic.
† Exclusive of 23*l.* 17*s.* 0*d.* expended for inspection and 13*l.* 3*s.* 2*d.* for school books, &c.

The existing condition of things is far from satisfactory. A comparatively large sum of money is being spent, with, I fear, very little to show for it. In Grand Turk and Cockburn Harbour especially, parents seem to be entirely indifferent as to their children going to school, and make no effort to enforce attendance or punctuality, but rather the reverse; the result is an average attendance of 75 and 56 respectively, whereas the figures should, at a low estimate, be about 200 and 100.

In view of the sparse attendance at Grand Turk, the Assistant Teacher there was removed by me and sent to Bottle Creek in the Caicos, where the people had petitioned for a school, and given proof of being in earnest by building a teachers' dwelling; he has, I am glad to say, succeeded in getting together a school of some 80 odd children, who were previously running wild, without any kind of discipline or training.

This is, however, the only encouraging feature that I can report, and the subject is one which will require to be taken up and dealt with as a whole, as soon as circumstances permit.

With this end in view, the Superintending Inspector of schools from Jamaica is, at the time of writing, making an inspection of the schools throughout the Dependency.

9.—*Imports and Exports.*

The import duties are slightly below the average, being 153*l.* less than the last year's figures. Two-thirds of this falling off are in the item of lumber, of which there was a comparatively large stock in hand from wrecks in the two previous years.

The export of salt was fair, being 1,651,000 bushels, of which more than one quarter was ground fishery salt for British North America.

The season was a favourable one for the salt industry, especially at Cockburn Harbour, and a large crop was reaped; the stock on hand at the three ports, at the commencement of 1894, was unusually large—700,000 bushels

Unfortunately the price of salt throughout the year was down to a very low figure, and up to the time of writing there has been no improvement in this respect, while the demand has not been brisk.

It is hoped that the "Wilson Bill" in the United States, by which salt is placed on the free list, may become law, as it would benefit the trade by causing an increased demand, even if it did not directly influence prices.

Comparative tables, showing the trade and other statistics of the Dependency, are attached.

COLLECTION of IMPORT DUTY for the Year 1893, in comparison with the preceding Years, 1891 and 1892.

H.M.S. "Partridge" passed by Grand Turk in the month of March, en route to Nassau, but was prevented from communicating with the shore by bad weather. The only other visits from men-of-war were from gun-boats belonging to the neighbouring Republics of Hayti and Santo Domingo.

11.—*Agriculture.*

The year was a dry one in the Caicos Islands, and there was the usual recurrence of distress among the inhabitants, which, however, was tided over with but a trifling expenditure on actual relief, assistance being chiefly given by the purchase of lime for public works.

publishing company inc

The two fibre companies at the Caicos continued to extend their operations, and the money laid out by them in the employment of labour is a material aid to the people in the hard times consequent on failure of crops by drought.

No shipment of fibre was made during 1893, but machinery was imported and set up, and since the commencement of the present year the work of extraction has been actually proceeding.

12.—*Gaols and Prisoners.*

The total number of prisoners committed during 1893 was 24, of whom five were for safe keeping and 19 for purposes of penal imprisonment.

The daily average in the gaol was four.

13.—*Criminal Statistics.*

The total number of offences reported to the police or to the magistrates in 1893 was 121, against 169 in 1892.

Of the offences reported in 1893:—

39 were for offences against the person.
10 „ „ prædial larceny.
10 „ „ offences against property other than prædial larceny.
62 „ „ other offences.

The total number of convictions in the inferior courts in 1893 was 68 against 112 in 1892.

These convictions are classified as follows:—

23 for offences against the person.
2 for prædial larceny.
5 for offences against property other than prædial larceny.
38 for other offences.

The convictions in the Supreme Court were as follows:—

1 for offences against the person.
1 „ „ „ property.
1 „ other offences.

The acquittals were as follows:—

In the inferior courts - - - - - -	40
In the Supreme Court - - - - - -	8

14.—*Hospitals and Asylums.*

There is no hospital or asylum. Cases of lunacy are very rare, but when occurring, the patient is placed in gaol, and if necessary, ultimately sent to the asylum at Jamaica.

15.—*Meteorological Observations.*

Table showing maximum, minimum, and mean temperature taken at 10 a.m. during each month of the year:—

17.—*Postal Statistics.*

The mail service was performed throughout the year by the contract s.s. "Alpha," of Messrs. Pickford and Black's line, plying monthly between Halifax and Jamaica, calling at Bermuda and Grand Turk.

The steamers of the Clyde line, from New York monthly to Hayti and San Domingo, also make Grand Turk a port of call on both the outward and inward voyage, and carry a mail, but owing to the uncertainty of their sailing dates, no regular communication with England by this route can be arranged for.

Direct parcel post communication with the United States and Canada was obtained and came into operation on 1st January of the current year.

18.—*General Remarks.*

There are no events of importance to chronicle for the period covered by this report.

So far as is known, the position of affairs as regards the extension of the telegraph cable from Bermuda to Jamaica, viâ Grand Turk, is the same as reported last year.

The general outlook in the Dependency is not perhaps as bright as could be wished, owing to the continued low price of salt, but better times in this respect are looked for.

The fibre industry has been, so far, in its infancy, from which it will now shortly emerge, and the result will be awaited with much interest. The ground taken up by the two companies in the Caicos Islands represents only a very small portion of the area available for such cultivation, and the land is apparently eminently suited to the growth of the plant. It is hoped that the results obtained from these first ventures may be of such a nature as to attract more capital and lead to a further development.

EDWARD J. CAMERON,
Commissioner.

Grand Turk, May 18, 1894.

Acting-Governor BENGOUGH to the MARQUESS OF RIPON.

King's House, Jamaica,
October 29, 1894.

MY LORD,

I HAVE the honour to forward to your Lordship the accompanying Report on the Blue Book of this Colony for the year which ended on the 31st March last.

I have, &c.
H. BENGOUGH,
Administering the Government.

REPORT ON THE JAMAICA BLUE BOOK, 1893–4.

Legislation.

During the Session of 1894, the Legislative Council passed 41 laws, of which the following are the most important:—

Law 1 of 1894—"A Law to amend the Rum Duty Laws, 1878—1890." This Law, which was passed through all its stages in one day (6th March) was given duration until the 1st of April, 1894, so as to enable the Legislature to fully consider the question involved before making the change permanent. Its objects were to alter the mode of computing the duty on Rum by levying it on the proof, instead of the liquid, gallon, and to increase the Revenue derived from the Duty. Law 12 of 1894 re-enacts Law 1 of 1894 without any limitation of time.

Law 2 of 1894—"The Customs Tariff Amendment Law, 1894." This was also a temporary measure and was passed on the first day of the Session of the Council to raise the Customs

JAMAICA. 1893-4.

Duty on Ale, Beer, Porter, Wine, Spirits and Tobacco. Law 13 of 1894 re-enacts this Law, with certain amendments, without limitation of time.

Law 5 of 1894—" The Bankruptcy Unclaimed Estates Law, 1894," repeals Law 11 of 1871, and makes it the duty of the Treasurer to report to the Governor when any moneys of an Insolvent or Bankrupt Estate have remained in the Treasury for 20 years or upwards, without claim having been made thereto. Under this Law any unclaimed moneys in the Treasury are to become part of the general assets of the Island after being duly advertised as directed.

Law 14 of 1894 —Confers on a purchaser of land the right of requiring a vendor to grant him a title under the provisions of the Registration of Titles Law of 1888, the corresponding right of the vendor to oblige a purchaser to accept a title under that Law having been provided for in the Registration of Titles Law, 1888.

Law 15 of 1894 amends the local Act 25 Vic. c. 10 on the subject, and enables a Magistrate to adequately deal with cases of cruelty to animals without empowering him to sentence to imprisonment, except in so far as the general Law authorizes imprisonment in default of payment of a penalty. A new feature of the Law is the provision that it shall apply to cases of cruelty to animals other than domestic animals.

Law 17 of 1894—" The United Kingdom Probates Law, 1894," provides for the recognition in Jamaica of Probates and Letters of Administration granted in the United Kingdom.

Law 18 of 1894—as regards Civil Procedure, is an adaptation of the Resident Magistrate's Law of Jamaica, as a Code of Civil Procedure to the Grand Court of the Cayman Islands.

As under Law 37 of 1893 the Judge of the Grand Court (one of the Resident Magistrates in Jamaica) only visits the Islands twice a year to hold the half-yearly sessions of the Grand Court, provision is made by this Law for the Custos carrying on the work of the Court during the intervals between the sessions.

As regards the Criminal Jurisdiction of the Grand Court, it is put on the same footing as that of the Jamaica Courts. It is a Court of unlimited jurisdiction.

Law 20 of 1894—"The Public Cemetery Management and Regulation Law, 1894," empowers the Governor in Privy Council, at the request of the parochial board of any parish, to make the provisions of such Law applicable to any place selected as a cemetery in such parish.

Law 31 of 1894—" The Land Surveyors Law " repeals a previously existing Law on the subject and re-enacts many of its

provisions. A noticeable new feature is a provision for previous examination, before indenture, in general subjects and in mathematics. The age for entering into indentures is raised to 18 and the period of servitude reduced from five to three years. The Stamp Duty is also lowered on an Indenture from 30*l.* to 1*l.* and on a Commission from 60*l.* to 30*l.* The old Law, after laying down elaborate rules as to the making of surveys in order to establish boundaries, was silent as to the legal effect of a survey made under such conditions—the present Law deals with this point and lays down the course to be pursued to settle a disputed survey.

Law 34 of 1894—"The Sale of Drugs and Poisons Law, 1894" repeals Law 10 of 1881 and 11 of 1885, which were defective, and re-enacts them with amendments.

Law 35 of 1894 enables the Governor to remit in whole or in part any sum of money imposed as a penalty on an offender, although such money may be payable to some party other than the Crown. It is a copy of the Imperial Act 22 Vict. Chap. 32.

Law 36 of 1894 restores to the illiterate voter the privilege to have the assistance of the Returning or Presiding Officer in recording his vote, a privilege which was conferred on him by Section 21 of Law 21 of 1884, but which was withdrawn by Section 1 of Law 40 of 1893.

Law 37 of 1894 repeals the Agricultural Produce Buyers Law of 1890, which, it was found, had tended to fetter trade but had failed in its object to put a stop to prædial larceny by a system of licensing buyers of produce.

Law 11 of 1894 abolishes the tax on huts which the peasantry build on their provision grounds, at a distance from their dwellings, as places of temporary shelter and occasional occupation.

Finance.

The year commenced with a surplus of 91,031*l.*, and the revenue realized was 597,129*l.*, making together a sum of 688,160*l.* The expenditure, including 33,521*l.* for Sinking Funds, and 2,400*l.* for Redemption of Debt, amounted to 628,332*l.*, thus leaving at the close of the year a surplus of 59,829*l.*

The parochial revenues, which are devoted to parochial roads, poor relief, sanitary, and other local services, and are administered by the several parochial boards, produced 128,719*l.*, an increase of 5,109*l.* on the receipts in 1892–93.

The revenue specially appropriated for the reconstruction and maintenance of main roads under Law 17 of 1890 amounted to 31,800*l.* or 814*l.* more than in 1892–93.

The revenue on account of immigration realized 1,371*l.*, an increase of 696*l.* on the previous year's receipts.

JAMAICA. 1893–4.

The usual comparative table, showing the whole of the Treasury receipts in the year under report, and those of the previous year, is given below :—

Revenue.	1893–94.	1892–93.	Increase.	Decrease.
General Revenue.	£	£	£	£
Import duties - - -	315,941	298,718	17,223	—
Light dues - - -	2,259	2,357	—	98
Harbour master's fees - -	2,776	2,582	194	—
Rum duties - - -	127,479	120,003	7,476	—
Licenses - - - -	779	785	—	6
Stamps - - - -	22,394	20,814	1,580	—
Tax on stock - - -	11	134	—	123
Tax in lieu of School Fees- -	12,478	10,270	2,208	—
Tax revenue -	484,117	455,663	28,681	227
	—	—	28,454	—
Non-Tax Revenue.				
Postal revenue - - -	20,285	19,095	1,190	—
Telegraph revenue - -	6,087	5,734	353	—
Court fees - - -	8,665	8,547	118	—
Fines and forfeitures - -	5,451	4,359	1,092	—
Interest on securities for sinking funds.	11,581	10,433	1,148	—
Interest from savings bank -	3,348	4,362	—	1,014
Interest other than above - -	6,969	6,293	676	—
Interest, Jamaica railway bonds -	6,774	4,557	2,217	—
Reimbursements -	32,078	30,508	1,570	—
Miscellaneous - - -	11,775	9,612	2,163	—
	113,013	103,500	10,527	1,014
	597,130	559,163	9,513	—
	—	—	37,967	—

Revenue.	1893–94	1892–93.	Increase.	Decrease.
Specially appropriated Revenue.				
Main Road Revenue.	£	£	£	£
Land tax, Law 17 of 1890 -	363	340	23	—
Draft Horned Stock tax of 1890 -	915	936	—	21
Holdings tax - - -	14,388	14,076	312	—
Spirit licenses - - -	16,134	15,634	500	—
	31,800	30,986	835	21
	—	—	814	—
Reimbursement of Loan Expenditure.	105,995	—	105,995	—

Expenditure.	1893–94.	1892–93.	Increase.	Decrease.
Parochial Revenue.	£	£	£	£
Parochial road tax - -	50,169	48,520	1,649	—
Kingston streets tax - -	3,054	4,346	—	1,292
Parochial municipal revenues -	12,290	11,650	640	—
Parochial general purposes -	2,948	1,977	971	—
Poor rates - - - -	42,189	40,756	1,433	—
Sanitary rates - - -	9,151	7,190	1,961	—
Fire rates - - - -	1,466	1,550	—	84
Gas rates - - - -	2,523	3,511	—	988
Miscellaneous - - -	4,929	4,110	819	—

Immigration Revenues.				
Law 7 of 1878. Amended Law 14 of 1891.	824	6	818	—
Miscellaneous - - -	158	36	122	—
Interest - - - -	389	633	—	244
	1,371	675	940	244
	—	—	696	—
Summary.				
General revenue - - -	597,130	559,163	37,967	—
Specially appropriated revenue -	31,800	30,986	814	—
Immigration revenue - -	1,371	675	696	—
Appropriated revenue - -	128,719	123,610	5,109	—
Reimbursements of Loans Expenditure.	105,995	—	105,995	—
	865,015	714,434	150,581	—

The yield of general revenue shows a net increase of 37,967*l.*, and this is due to larger returns, chiefly in import duties, rum duties, stamps, tax in lieu of education fees, under tax revenue; and postal revenue, fines and forfeitures, interest on securities held for sinking funds, interest on Jamaica railway bonds, reimbursements, and miscellaneous, under non-tax revenue. Import duties and rum duties show respectively an increase of 17,223*l.* and 7,476*l.*, which is ascribed to a general activity in commerce; tax in lieu of education fees, an increase of 2,208*l.*, due both to the alteration in the incidence of the tax made by Law 34 of 1893, and to a large number of houses having been brought under collection, while the increase of 2,217*l.* in interest on railway bonds is due to payments made during 1893–94 which properly belonged to the preceding year. The only item showing a decrease of any importance is savings bank interest, which is merely apparent, the interest on certain investments not having been brought to account during the year.

JAMAICA. 1893–4.

Main road revenues, specially appropriated under Law 17 of 1890, exhibit a net increase of 814*l.*, due to large collections in respect of the holdings tax and spirit licenses.

Parochial revenues show a decrease in the collections of the Kingston street-tax of 1,292*l.*, due to the suspension of the special tax for streets improvement, under Law 34 of 1892. Fire-rates and gas-rates of Kingston also show small decreases, but every other source of revenue under this head shows a greater or lesser increase.

Immigration revenues are increased in consequence of payments made by proprietors of estates on account of two lots of East Indian immigrants received from transport vessels "Volga" and "Jumna."

The following is a similar comparative statement of the Treasury disbursements compared with 1892–93 :—

Expenditure.	1893–94.	1892–93.	Increase.	Decrease.
General Expenditure.	£	£	£	£
Charges of debt	79,661	77,650	2,011	—

	54,398	66,162	22,372	34,136
	—	—	—	11,764
Summary.				
General expenditure - -	592,410	579,761	12,649	—
Special expenditure - -	33,274	22,242	11,032	—
Immigration expenditure - -	7,677	5,103	2,574	—
Appropriated expenditure - -	124,975	127,419	—	2,444
Loan expenditure - - -	54,398	66,162	—	11,764
	812,734	800,687	26,255	14,208
	—	—	12,047	—

The general expenditure of the Colony shows a net increase of 12,649*l.* The cause of this increase is to be found under Education, which alone is responsible for an excess of 14,296*l.*, due to the operation of Law 34 of 1893; and under Miscellaneous to the extent of 14,059*l.* caused by the payments on account of the expenses connected with the Jamaica and Chicago Exhibitions. Other items represent small increases and decreases. Public Works, however, shows a large decrease, when compared with the expenditure of the year before, of 26,465*l.* owing, in a degree, to

less actual work performed and to the purchase in the previous year of Desnoes' wharf in Kingston at a cost of 14,441*l.*

Main road expenditure under Law 17 of 1890 shows an increase of 14,608*l.* for maintenance and a saving of 3,576*l.* on account of interest on loan money the incidence of which has been transferred to charges of debt and paid from General Revenue.

Appropriated expenditure shows a decrease under Parochial Roads and Poor Relief of 2,322*l.* and 2,229*l.* respectively while all other heads show small increases from 80*l.* to 948*l.*, the result being a net decrease of 2,444*l.*

Immigration expenditure shows an increase of 2,574*l.*, due to the expenses connected with the transport of Immigrants by the "Volga" and "Jumna," but these expenses have been in great part refunded by the notes given by the planters under Law 14 of 1891.

Pensions.

During the year, pensions amounting to 1,869*l.* 17*s.* 11*d.*, were granted under the provisions of the Jamaica Pension Law 34 of 1885, and the resolution of the Legislative Council of the 23rd October 1889, while the pension list was relieved by the deaths of pensioners to the extent of 389*l.* 16*s.* 10*d.*

Debt.

During the year 180,000*l.*, raised in 1892–3 under the Inscribed Stock Law, for the reconstruction of parochial roads under Law 17 of 1890, was transferred to the General Debt of the Colony, and 50,000*l.* of the loan of 140,000*l.* authorised under the Kingston Streets Improvement Law 31 of 1890 was raised as a first instalment.

The Public Debt directly secured on the general revenue stood as follows at the close of each of the last ten years, after making allowance in each year for the sinking funds actually invested for the eventual redemption of debt:—

	£	*s.*	*d.*
1884 - - - -	1,243,899	18	9
1885 - - - -	1,427,458	14	2
1886 - - - -	1,478,790	3	8
1887 - - - -	1,491,993	3	9
1888 - - - -	1,502,684	9	8
1889 - - - -	1,506,883	6	0
1891 - - - -	1,458,221	12	7
1892 - - - -	1,520,088	4	3
1893 - - - -	1,523,944	2	11
1894 - - - -	1,672,299	14	6

Of the above amount of debt on the 31st March last, 777,002*l.* 8*s.* 4*d.* was on account of the railway purchase, reconstruction and extension, and 126,500*l.* on account of the Rio Cobre Canal.

The following are the amounts due for debentures guaranteed by the general revenue raised on account of the several undertakings specified :—

	£
Kingston and Liguanea waterworks - -	128,200
Kingston markets - - - -	20,000
Kingston gasworks - - - -	30,000
Kingston slaughter-house - - -	10,000

Legislative Council.

The meeting of the Legislative Council, convened by Proclamation of His Excellency the Governor, took place on the 28th February and closed on the 26th of April, 1893.

A new Session commenced on the 7th March, 1894, and continued beyond the end of the financial year.

Upon the death of the Honourable James Cecil Phillippo, the President of the Legislative Council, it was considered desirable that the office which he had filled should be resumed by the Governor of the Colony, and an Order of Her Majesty in Council dated 29th January, 1894, amending the constitution in this respect was issued accordingly.

As the result of the last General Election, the following gentlemen were returned as Members of the Council, and were duly sworn in on the 7th March, 1894 :—

Mr. S. C. Burke for Kingston and St. Andrew.
Mr. J. T. Palache for Manchester.
Mr. J. M. Farquharson for St. Elizabeth.
Mr. J. H. Levy for St. Mary and St. Ann.
Rev. Henry Clarke for Westmoreland and Hanover.
Mr. W. Andrews for St. Thomas and Portland.
Mr. R. H. Jackson for St. Catherine.
Mr. J. E. Kerr for St. James and Trelawny, and
Mr. T. H. Sharpe for Clarendon.

The Council met 30 times during the period from 4th April, 1893, to the end of March, 1894.

Public Works.

The total expenditure on Public Works of all kinds, including the cost of administration and supervision, was 158,720*l.* 3*s.* 10*d.*

The 870 miles of main-roads, the bridges, and the public buildings throughout the Island were maintained in good order and many improvements effected.

A new main-road in the interior of the Parish of St. Thomas was opened for traffic. This road affords an alternative route

from Kingston to Morant Bay and the East end of the Island, unobstructed by dangerous rivers, and has also opened up an important and rapidly improving district. It passes through an exceedingly picturesque country and forms an attractive drive for tourists.

Another important new road was constructed and opened during the year. It is the first carriage road opened between the fertile districts of Ulster Spring and the Black Grounds in the parish of Trelawny and the south side of the Island, and gives those districts access to the Railway at Balaclava.

The reconstruction of parochial roads taken over under Law 17 of 1890 was continued during the year, and a total of 972 miles of road have now been taken over as main roads since the coming into operation of the Law, and during next year the work of reconstruction will probably be completed throughout the Island.

The construction of bridges on the country roads, authorized by Law 20 of 1892, was actively pursued, over 20,000*l.* having been spent on these works, 17 bridges having been opened for public traffic and several others being in progress during the year. These bridges are of the greatest use in the rainy seasons.

Waterworks for the town of Montego Bay were completed and handed over to the Parochial Authorities.

The 666 miles of telegraph lines in the Island were maintained in fair order. No new lines were erected during the year. The Lighthouses at Morant Point and Plumb Point on the South side, and Folly Point on the North side of the Island were maintained with regularity and efficiency throughout the year.

Lands.

During the year under review, 175 acres of land in St. Thomas and one residence in Kingston were sold, at a total price of 112*l.*, and 9 new leases were effected, the rental realized amounting to 158*l.* 10*s.* per annum. No lands were escheated to the Crown or recovered from squatters, although interiocutory judgment was obtained in respect of 50,000 acres forfeitable for non-payment of quit-rent.

11,332 acres of land were conveyed to the West India Improvement Company under Law 12 of 1889. The total acreage of Crown Lands at the end of the year was 77,901 acres. These lands are situated in the parishes of Kingston, St. Andrew, St. Thomas, Portland, St. Mary, Trelawny, St. Catherine, and St. Ann, and a great portion are fertile and well watered. Portions are well suited to the cultivation of coffee, chocolate, bananas, ginger, cinchona, annotto, &c., and mineral indications have been discovered in some places.

Most of these lands are unfortunately not now well supplied with roads.

Rents from Government lands during the year amounted to 1,120*l.* and 90*l.* 16*s.* 8*d.* was realized from the sale of lands.

Rio Cobre Canal.

The revenue earned during the year was 3,302*l.* 13*s.* 11*d.*, 183*l.* 18*s.* 7*d.* of which sum was on account of Banana plantations. The success which has attended the irrigation of bananas has induced largely extended cultivation, and a considerable increase of revenue from this source may be expected.

The cost of management and maintenance was 1,238*l.* 13*s.* 4*d.*, leaving a balance of 2,064*l.* 0*s.* 7*d.* No new works of importance were required during the year, but an extension of one of the channels was commenced which will supply numerous small settlers with water.

Post Office.

It is satisfactory to be able to state that the receipts under this head again show an increase on those of the previous year, as will be seen on reference to the following statement:—

Period.	Postages.	Commission on Money Orders.	Commission on Postal Orders.	Miscellaneous.	Total.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1891-92 - - -	17,437 6 1¼	335 9 8	335 18 9	224 5 11	24,100 19 8¼
1892-93 - - -	18,260 5 8½	307 6 6	401 13 3	183 18 4	24,966 14 9½
1893-94 - - -	19,429 3 1	354 6 6	431 14 4½	219 1 0	26,687 10 11¼

This continued increase is further evidence that the Revenue of the Department has not been permanently affected by the material reductions in the letter-rates of Postage which were made in the year 1890, the rates on inland letters being then reduced by 50 per cent., and on packet letters by 37 per cent., and being now 1*d.* and 2½*d.* respectively. The loss of revenue from these reductions for the year under review, as compared with the similar period before the changes were made, amounts only to 260*l.* 3*s.* 0*d.* or 1·45 per cent., a result which justifies the wisdom of the reductions. These figures, it must, moreover, be pointed out, include the loss occasioned by other changes, as the revenue for the year has been also affected by the reductions which were made on the 1st of June, 1893 of the Registration Fee on Inland and Foreign Correspondence, the Re-direction and Detention Fees, and by the adoption of the minimum scale of charges fixed by the Postal Union Treaty on 2nd class mail-matter, *i.e.* post-cards, printed papers, &c.

The first-mentioned reduction has already resulted in an increase in the number of registered articles transmitted through the post, but not to a sufficient extent to satisfy the Postmaster that the

general public appreciate the safety afforded them by this system.

The value of inland postal-orders sold to the public during the year amounted to 21,623*l.* 12*s.* 0*d.*, exceeding by the sum of 1,431*l.* 4*s.* 0*d.*, the sales of the previous year, and now shows an increase of 11,130*l.* 4*s.* 6*d.* on the amount of orders sold in the year of inauguration of the system, an increase which goes to prove the usefulness of the system to the public.

The expenditure of the Postal Department amounts to 20,504*l.* 4*s.* 5*d.*, an increase of 105*l.* 10*s.* 2¾*d.* on that of 1892–93, caused by the increase in the amount of the proportion of ocean postage payable to the United Kingdom.

Two additional post-offices have been established, and measures are being taken to open a number of others in districts where the want of postal facilities is found to exist. The total number of offices throughout the Island amounted to 109 at the close of the year.

The Royal Mail Steam Packet Company have continued to carry out the mail service with the United Kingdom and the British and Foreign West Indies in a highly satisfactory manner. Postal communication with places abroad has also been maintained by means of the steamers of the different lines represented in the Island.

The Inland mail service has also been efficiently maintained, a regrettable incident in the year's record, however, being the murder of the mail courier and the robbery of the mail in a country district. The perpetrator of the deed unfortunately remains undiscovered.

The mail-coach lines and the coastal steam service have been regularly carried on during the year.

It is estimated that the total number of letters and post-cards which were circulated during the year amounted to 3,292,029, an increase of 416,396, which is no doubt attributable to the reduced rates of postage, as well as a result of extended education.

Telegraphs.

The receipts from Telegraphs in each of the last three years have been as noted below :—

	£	s.	d.
1891–92 - - - -	5,767	19	3
1892–93 - - - -	5,813	11	0
1893–94 - - - -	6,253	6	0

Thus showing a progressive increase, the number of messages having been 111,812 against 103,803 in the previous year, or an increase of 8,009.

The expenditure also exceeds that of last year by the sum of 269*l.* 17*s.* 10½*d.*, due to increases under the head of salaries of operators, travelling charges, and printing and stationery.

A new station has been opened at Green Island in the parish of Hanover; and the service generally has been carried out satisfactorily throughout the year without serious interruption.

Railway.

The gross receipts of the Jamaica Railway Company for the year ended 31st March, 1894, amounted to 74,923*l.* 18*s.* 11*d.*, and the expenditure to 56,431*l.* 6*s.* 8*d.*, leaving a net revenue of 18,492*l.* 12*s.* 3*d.*

The receipts were made up as follows:—

	£	s.	d.
Goods and Cattle - - -	39,772	3	8
Passengers - - - -	28,718	10	0
Wharf - - - -	5,902	10	0
Miscellaneous - - -	530	15	3

The number of train miles run amounted to 264,404, which gave an expenditure per mile of 4*s.* 3·22*d.* and receipts equal to 5*s.* 8*d.* per mile, leaving a net revenue of 1*s.* 4·78*d.* per mile.

The number of passengers carried amounted to 336,270.

Interest was paid out of revenue on First Mortgage Bonds to the extent of 15,814*l.* 0*s.* 11*d.*

Twenty-one and a half miles of Railway extension were completed during the year. There are at present 117 miles actually open to traffic.

Lands for Railway Track.

The track of the Montego Bay Extension comprises 724½ acres, of which 687 acres or 62½ miles have been acquired at an average cost of 38*l.* 3*s.* 4*d.*, per acre; that of the Port Antonio Extension (the acquiring of which commenced in October, 1893,) comprises 457 acres, of which 263 acres or 31 miles have been acquired at a cost of 45*l.* 13*s.* 6*d.* per acre. There remains a total of 27 miles on both tracks to be bought and paid for.

Agriculture.

The total acreage of the Island may be taken at 2,692,587, of which 1,945,635 are returned as paying taxes to the Government, which may be divided into 177,497 under tillage, 499,655 pasture, 1,268,483 wood and ruinate. The acreage under canes continues to decrease, and is now less by 911 acres than in 1893, but the quantity of sugar exported during 1893–94 was 282,244*l.*, in value, as against 241,683*l.* in 1892–93, and the proportion of sugar

to the total exports of the Colony for the year shows a very slight decline, the figures being 14·3 in 1892–93 and 14·2 in 1893–94.

The acreage under coffee, on the other hand, has advanced by 973 acres, the total under cultivation being now 21,763. It is gratifying to be able to state also that the cultivation of ginger is again extending, the acreage under cultivation of that product being nearly double that of the former year.

Cocoa has been bringing good prices lately, and the cultivation of this useful product has thus been stimulated. There is an increase of the acreage by 315 acres.

In last year's report an advance of 1,700 in the number of acres under bananas was noticed. This year there has been a further increase of 2,300 acres, the total area under that fruit being now 16,929 acres. Fruit now holds the highest percentage of any of the products exported, as the table under the head of "Trade," which affords a comparison with former years, will show.

"Ground provisions," which form the staple food of the people of the Island, and are almost entirely consumed within its borders, have been more largely cultivated during the past year than at any previous period. In 1893, 87,936 acres were under cultivation against 82,777 in 1892.

Botanical.

The following figures, showing the sale and distribution of plants at the different gardens during the year under review, give some idea of the work annually performed by this department in the way of assistance to horticulturists:—

Hope Gardens, plants sold - - -	42,981
Castleton - - - - -	4,541
Hill Garden - - - -	992
Total sold - - - -	48,514
Hope Gardens, distributed free - -	4,094
Sent to Hope Gardens for distribution (from Castleton) - - - - -	15,070
Sent to Hope Gardens for distribution (from Hill Garden) - - - -	1,249
Hill Garden, distributed free - - -	932
Total distributed - - -	21,345

These figures show a considerable increase on those of the preceding year, and must be regarded as evidence of the growing appreciation of the advantages afforded to the public by the department.

Monthly bulletins, with a circulation of 1,035, convey information of a general character, and are supplied free of cost to all who apply for them.

The work of extending the limits of Hope Gardens has progressed very favourably, a considerable extent of land having been added to the area of the gardens, which has been laid out in walks and beds of ornamental plants.

Considerable alterations have also been carried out in the other parts of the gardens. The boys of the Hope Industrial School, which is now under the care of the Director of Public Gardens, have worked in the gardens, receiving instruction from the superintendent.

At Castleton the gardens have been maintained in good order throughout the year, and have been much patronised by visitors.

The elevation of the gardens is 580 feet above sea-level, and the average annual mean temperature is 76·2° F.

The main roads at the Hill Garden (Cinchona) have been cleaned out and kept in good order, and the gardens themselves have received careful attention at the hands of the superintendent.

Experiments in fodder plants and growing potatoes have been continued during the year, and practical demonstrations in the grafting of orange trees have been given by the superintendent to the peasantry in the neighbourhood.

An attempt is being made at these gardens to propagate the Assam Indigo plant, which may prove of value, now that a chemical dye factory has been established in the Island.

The preparation of rubber from the trees at Cinchona of Assam rubber (*Ficus Elastica*) it also receiving attention, but it has not so far been attended with such success as to justify its extensive cultivation.

The gardens at King's House have been carefully attended to during the period under review, and have been maintained in good order.

Vine culture is still receiving much attention at these gardens, 1,200 vine cuttings having been sent to various parts of the Island, and 1,800 been propagated. A course of demonstration was also given by the superintendent in the vicinity.

The Kingston Public Garden is also in good condition, although the lawns suffer considerably from the trampling of visitors who frequent the garden.

A large number of seeds and plants has been imported by the Director of Public Gardens during the year, and experiments in the cultivation and propagation of various products have been carried on.

The Library has received numerous additions during the year, and work in the Herbarium has also been carried on.

Education.

The following table shows the results of the past year as compared with those of the year before :—

Year.	Schools on Government List.	Schools Inspected.	Scholars on Books.	Scholars in Average Attendance.	Percentage in Average Attendance of Number on Books.	Class of Schools.					Fees.	Grants in aid, including Building Grants.
						I.	II.	III.	F.	Not examined.		
											£ s. d.	£ s. d.
1893-94 - - -	957	918	97,456	64,695	66·38	169	367	380	28	13	45 15 0	41,378 4 6
1892-93 - -	912	867	92,135	52,983	57·50	143	389	379	1	44	6,649 0 0	34,724 11 0
Increase - - - -	45	51	5,321	11,712	8·88	26	*22	1	27	*31	*6,603 5 0	6,653 13 0

* Decrease

The increase in the number of scholars on the books, while again very considerable, is not so great as in the previous year, the first after the abolition of fees, but this cannot be a matter of surprise. The Superintending Inspector of Schools, however, regards the increase in the average attendance of scholars as both "surprising and gratifying." This is nearly double last year's increase, while the percentage in average attendance of the number on the books (which is the measure of regularity of attendance throughout the entire Island) has increased by very nearly nine, rising to 66·38 per cent., or almost exactly two-thirds of the total number of scholars enrolled, a percentage higher than in any other of the British West Indies, and only 11 below the average in England and Wales. The predictions of schoolmasters and other persons that the abolition of school fees would result in the more irregular attendance of the children have been signally falsified and, as has been pointed out, the reverse has been the result.

The increase in the number of first-class schools, only partially counterbalanced by the decrease in second-class schools, may be regarded as very satisfactory in a year of transition like that under review. It is no doubt a correct surmise that the more regular attendance of scholars has enabled the teachers to do better work.

The results of the annual examination of teachers and students in training colleges show that the colleges have not been so successful as in previous years, only three students in the third year obtaining honours, as against seven last year. The percentage of those obtaining full passes, last year called partial passes, remains the same. The number of teachers who have passed the examination has largely increased, the percentage being 47½ against 27 last year.

The Government Female Training College at Shortwood continues its promising career and it forms an important and valuable part of our educational system. On the 31st March, 1894, the end of the financial year, there were 22 pupils in residence, which is the full complement of the college period. Arrangements have been completed during the year under review for the removal at an early date of the Mico Training Institution to a more suitable site outside Kingston, where proper attention can be given to instruction in agriculture, and the present premises have been purchased by the Government for the purposes of an elementary school to be established under the auspices of the Board of Education, in which manual training will form a prominent feature and it is intended that it shall be a model school in every respect.

At the usual examination of pupil teachers and pupils at elementary schools who voluntarily presented themselves for examination, 735 candidates were examined, or an increase of 63 on the previous year, and the percentage of passes was 51, as against 42 last year.

The revised code prepared by the Board of Education took effect on the 10th August, and although a good deal of alarm was

at first felt by teachers at its probable effect on their positions and income, experience of its working has apparently convinced most of them that their apprehensions were groundless.

The Board of Education, under the Elementary Education Law of 1892, held its meetings regularly throughout the year, and in addition to the revision of the code of regulations of the Education Department already mentioned, other useful work has been the outcome of their labours.

A change in the age limit of children attending school was made by the Legislature during the period under review, and scholars under the age of 16 (of the same sex as the teacher) may now, up to the end of 1897, be admitted to, and retained in elementary schools, but they are in no way recognized by the Government. Provision was also included in the same law to enable children attaining the maximum age limit more than six months after any inspection to remain in the school till the next inspection, provided that takes place at the usual time.

The industrial schools under the charge of the Superintending Inspector have been satisfactorily carried on during the year.

The proposal, referred to in last year's Report, to place the Hope Industrial School under the care of the Botanical Department has been carried out, instruction in carpentry being abandoned, and attention wholly devoted to the training of the boys (who now number 32) in practical agriculture and gardening, in addition, of course, to ordinary school-work.

The Shortwood Industrial School for Girls, which numbered 28 children on its books at the end of the financial year, continues to do well. The training of the children is mainly devoted to useful domestic work.

The Roman Catholic Industrial Schools at "Alpha Cottage" maintain their reputation for excellent and successful management The course of instruction at the schools (which provide for 42 boys and 49 girls) embraces garden and field labour for the former, and washing, cooking, and other domestic work for the latter, while the Superintending Inspector speaks highly of the result of the schools' examination.

The Belmont Orphanage, which was opened in the year preceding that under review, providing accommodation for a dozen young children, is also doing good work in its necessarily limited sphere.

Immigration.

Applications were received for 500 immigrants, but owing to an unfavourable recruiting season in India, the full complement could not be obtained; 486 souls were, however, collected and embarked for Jamaica *viâ* St. Lucia in the ship "Volga" which also carried immigrants for that Colony. Unfortunately the vessel suffered shipwreck in entering Castries in St. Lucia, happily without loss of life, and the immigrants for Jamaica were shipped in the "Jumna," which arrived here at the end of 1893.

The number of immigrants landed here was :—

320 males,
128 females,
11 boys,
12 girls,
13 infants,

484 souls.

Of these six were rejected by the Medical Board as unfit for agricultural labour and the remainder were allotted to estates in St. Thomas, Portland, St. Mary, and Clarendon. Thirteen of the persons landed were immigrants who had returned to India from other Colonies and emigrated a second time.

One hundred and twenty-three births and 40 deaths occurred among immigrants in the Colony during the year, a percentage respectively of 5·97 and 1·94. Of the 40 deaths, two were due to suicide, the only instances known for many years, and three to accidents.

No coolies returned to India during the year, and only six passports were issued.

On the 1st January, 1893, 19 coolies were in prison, being 1·3 per 1,000 ; 3 or 2·1 per 10,000 in the Lepers' Home and 51 or 3·6 per 1,000 in the Lunatic Asylum. In regard to this large percentage of insane, the Protector of Immigrants remarks that many had been in the Asylum for a long time unable to return to India, and that, as several of their shipmates had gone back, the calculations are based on the diminished number of permanent colonists.

The deposits by East Indians in the Government Savings Bank on the 1st April, 1893, amounted to 10,705*l.* 12*s.* 7*d.*, a decrease of 3,348*l.* 15*s.* 10*d.* on the deposits for 1892. The Protector attributes this decrease to (*a*) the withdrawal of a considerable amount by the coolies who left for Calcutta in September, 1892, and (*b*) to the utilization of a good deal of capital by coolies in more profitable investments in land, stock, rice cultivation, &c. Of rice cultivation these people possess hundreds of acres, and an estate of 1,437 acres is owned by one of them.

The prejudice amongst the coolies against having their children educated in the native schools seems, the Protector states, to be gradually dying out, and a fair number of them are now being taught. The Protector adds that the children are trained to industry and are growing up generally to be expert and reliable workmen of better physique than their parents.

The average wages earned by coolies during the year have been in excess of the sums mentioned in their agreements and during the reaping of the crops good hands earn not infrequently from 12*s.* to 15*s.* per week.

The relations between employers and employes continue satisfactory.

JAMAICA.
1893-4.

Emigration.

During the year under review, 396 labourers emigrated from Jamaica to Colon and Port Limon, and 826 returned to the Island.

Government Savings Bank.

The number of depositors and the amount of deposits in the bank have been as follows in the last ten years :—

Year.	Number of Depositors.	Amount of Deposits.
		£
1883-84	13,601	350,546
1884-85	15,511	360,190
1885-86	16,320	363,292
1886-87	17,047	363,481
1887-88	18,510	393,250
1888-89	19,444	408,213
1890-91	21,747	423,011
1891-92	22,824	428,348
1892-93	23,902	417,978
1893-94	25,533	457,924

showing a very large increase both in the number of depositors and the amount of deposits, the largest, in fact, since the bank has been in existence.

In the above amount of deposits are included eleven deposit accounts for the following public funds :—

	£	s.	d.
Immigration return passage fund -	769	4	2
Constabulary reward fund - -	558	1	4
Constabulary pension fund - -	2	2	6
Sinking funds (6) - - -	965	5	4
Smith and Beckford's Charity - -	104	3	4
Turks Islands - - - -	388	19	8

There were also 275 accounts for trusts, charities, Chancery suits, Administrator-General and bankrupt estates, amounting to a total deposit of 36,578*l.* The remaining 2,247 accounts, representing 418,558*l.* are all ordinary savings bank deposits.

Of the total number of accounts open at the end of the year, 17,393 were for 5*l.* and under, and 1,206 only were for over 100*l.* The large increase, 1,318, in the number of the small accounts for whose object the bank may really be said to exist is very satisfactory, as showing that the bank is appreciated by the class by whom it is most needed.

During the year 3,734 accounts were opened and 2,098 closed, resulting in an increase of 1,636 in the number of accounts open at the end of the year, as compared with the number in the year before.

The number of deposits amounted to 29,676, and withdrawals to 30,239, representing 235,943*l.* and 208,192*l.* respectively.

The expenses of management and interest credited to depositors amounted to 15,311*l.*, while the revenue realised was 15,777*l.*, thus showing a net profit of 466*l.* on the year's transactions. The decrease of 287*l.* in the revenue this year as compared with the year before is only apparent and is due to the interest on some investments not having been received in time to be credited in this year's accounts.

Trade.

The volume of trade has been well maintained during the year under review. The total value of goods imported has risen by 216,313*l.* and now nearly reaches the figures for the Exhibition year 1890–91 when the imports were naturally exceptionally large.

The following table shows the gradual advance which is being made in the value of imports :—

	£
1883–84	1,568,639
1884–85	1,487,833
1885–86	1,325,603
1886–87	1,322,336
1887–88	1,695,605
1888–89	1,597,600
1890–91	2,188,937
1891–92	1,759,890
1892–93	1,941,481
1893–94	2,157,794

Of the sum shown for 1893–94, 2,136,113*l.* was the value of goods imported for home consumption, the corresponding figures in 1892–93 being 1,928 556*l.* or 207,557*l.* less than during the present year.

The items in which increase is most marked are as follows :—

—	Quantity.	Value.
		£
Beer and ale - - - - - -	57,059 gallons -	11,412
Bread and Biscuits - - -	446,313 lbs. - -	3,682
Butter substitutes - - - -	164,820 lbs. - -	4,120
Alewives - - - - - -	3,131 barrels -	2,770
Fish, dried - - - - - -	440,163 lbs. - -	4,401
Beef - - - - - - -	971 barrels - -	5,424
Condensed milk - - - -	223,367 lbs. - -	4,208
Refined sugar- - - - -	143,174 lbs. - -	397
Cigarettes - - - - - -	3,843 lbs. - -	800
Wines - - - - - - -	5,423 gallons -	7,262

On the other hand, there has been a decrease in the importations of the following :—

—	Quantity.	Value.
		£
Flour - -	6,022 barrels - -	22,494
Meal - -	6,939 barrels - -	7,408
Butter - -	52,594 lbs. - - -	(the value has, however increased by 4,818*l.*)
Corn - -	But the quantity is 26,565 bushels more.	1,800

The continued increase in the quantity and value of condensed milk shows that the local milk supply is not yet successfully competing with the imported article.

With regard to the decrease in the importation of meal and rice, it may be observed the fact of smaller importations of these articles gives evidence of greater plenty in the supply of local

products, such as yams and other food stuffs, while the increases shown by the Collector-General's Returns in the quantities imported of ales, wines, spirits, tobacco, refined sugar, cheese, and hams, show increased ability on the part of the community to indulge in the luxuries of life.

An increase of 5,722*l.* in the value of carriages imported for pleasure points to the same conclusion.

The following table shows the proportions in which, during the past three years, the imports have been drawn from the United Kingdom, Canada, the United States and other countries, respectively :—

—	1891-92.	1892-93.	1893-94.
United Kingdom -	49·0	51·9	55·1
Canada - - -	10·4	9·6	8·8
United States - -	37·2	34·8	33·2
Other Countries - -	3·4	3·7	2·9

The following table shows the value of certain goods relieved from duty under the Tariff of 1867, and is given in continuation of former similar statement :—

—	1883-84.	1884-85.	1885-86.	1886-87.	1887-88.
	£	£	£	£	£
Steam engines - - -	12,604	9,268	10,704	4,287	4,569
Mills - - -	2,516	862	257	564	722
Other machinery - - -	6,618	2,509	3,553	2,442	12,569
Pans for boiling sugar - -	1,067	—	201	435	203
Pipes for fluids - - -	4,358	2,365	8,205	3,472	3,028
Stills - - - -	312	72	1,102	998	345
Shooks of all sorts - -	13,520	11,588	7,149	13,649	17,974
Staves - - - -	10,590	9,052	3,375	3,822	4,952
Wood hoops - - -	1,047	1,107	855	978	1,841
Iron, galvanised - - -	8,649	4,758	3,132	3,036	3,147
„ other manufactures -	1,109	—	—	—	683
Miscellaneous - - -	5,242	4,854	4,339	2,608	4,443
	67,632	46,435	42,872	36,291	54,476

(continued.)

——	1888-89.	1890-91.	1891-92.	1892-93.	1893-94.
	£	£	£	£	£
Steam engines	13,389	13,772	10,370	12,577	15,337
Mills	1,756	1,714	2,640		
Other machinery	5,570	20,761	13,624	6,265	9,023
Pans for boiling sugar	415	254	795	342	894
Pipes for fluids	2,531	8,395	3,748	10,020	2,461
Stills	277	443	868	683	1,376
Shooks of all sorts	9,973	4,296	7,863	19,078	21,163
Staves	983	150	3,606	1,514	12
Wood hoops	797	159	385	514	616
Iron, galvanized	5,582	8,238	9,868	7,330	8,814
„ other manufactures	659	1,271	857	131	1,222
Miscellaneous	4,961	9,037	9,313	10,364	10,622
	46,893	58,490	63,937	68,822	71,540

It is matter for congratulation that, while the imports of the Colony have risen by a considerable sum, the value of exports has increased by an even larger amount, and is higher by 315,882*l.* than in 1892–93, and even surpasses the figures for 1890–91 which have hitherto held the first place.

The following table gives the value of the exports in each of the last ten years :—

Year.	Of Produce and Manufactures of the Colony.	Of British, Foreign, and other Colonial Produce and Manufactures.	Total.
	£	£	£
1883–84	1,350,900	33,089	1,483,989
1884–85	1,181,203	227,645	1,408,848
1885–86	1,078,315	201,803	1,280,118
1886–87	1,334,465	174,542	1,509,010
1887–88	1,661,601	166,989	1,828,590
1888–89	1,501,660	113,164	1,614,824
1890–91	1,807,084	95,730	1,902,814
1891–92	1,628,777	93,319	1,722,096
1892–93	1,690,637	69,170	1,759,807
1893–94	1,982,596	93,093	2,075,689

Of the increase noted above, 291,959*l.* is the increase in the value of Island produce and manufactures exported, the remainder being the increased value of British and Foreign produce and manufactures re-shipped.

The items under which increases are most marked are :—

—	Quantity.	Value.
		£
Cocoa - - - -	1,817 cwts. - -	5,832
Banana - - - -	983,243 bunches -	133,669
Cocoanuts - - - -	2,192,359 (in number)	9,966
Ginger - - - -	1,301 cwts. - -	17,533
Pimento - - - -	18,009 cwts. -	17,502
Sugar - - - -	38,716 cwts. -	40,561
Cigars - - - -	3,513 lbs. -	1,756

There has, however, been a smaller exportation of the following :—

—	Quantity.	Value.
		£
Oranges - - - -	10,788,701 - -	16,183
Lime Juice - - - -	16,653 galls. -	694
Rum - - - -	237,052 gallons -	44,933

The increased export of cocoa and ginger is peculiarly satisfactory, and may be accepted as indicating that the cultivation of the smaller products is being carried on not only to a greater extent, but with greater care, and consequently to the increased material prosperity of the grower.

The prosperity of the fruit trade still advances, although in oranges the out-put has been comparatively small.

With regard to the decrease in the export of rum, it should be observed that this does not necessarily indicate a smaller production, but may be due to an inactive market, in which case the rum is bonded in the island, awaiting improved prices, instead of being warehoused at the docks in European countries, where the dues are relatively higher.

The Island's exports were taken during the past three years by the countries named below in the following proportions :—

—	1891–92.	1892–93.	1893–94.
United Kingdom -	22·7	29·1	26·7
United States - -	50·9	54·2	57·3
Canada - - -	3·5	2·6	1·7
Other Countries - - -	12·9	14·1	14·3

JAMAICA. 1893–4.

The following table shows, for five years the percentage proportion which each of the several articles mentioned bears to the total export value :—

—	1888–89.	1890–91.	1891–92.	1892–93.	1893–94.
Sugar - - -	16·3	13·1	15·6	14·3	14·2
Rum - - -	9·1	11·0	15·7	11·3	7·4
Coffee - - -	19·4	15·7	20·7	20·1	17·3
Dyewoods - ..	25·0	21·3	18·7	21·1	24·3
Fruit - - -	20·3	29·4	17·7	23·1	26·6
Pimento - -	3·2	4·5	3·1	3·5	3·8
Other produce - -	6·7	5·0	8·5	6·6	6·4

So far as the past five years are concerned, the falling off in the percentage of sugar to the total export is not great, but at the present rate fruit and the minor products will in a few years occupy a still more prominent place in the list, while there is little present prospect that the out-put of sugar will increase to very great extent.

Police.

The actual strength of the Police Force on the 31st March, 1894, was 765 officers and men, being only five below the allowed strength. Of this number, 18 were inspectors, including the Inspector-General, 125 sub-officers, and 622 men.

The rural police at the same date numbered 811, of whom 214 were rural headmen, and 697 rural policemen.

The total strength of the regular force and rural police combined thus reached 1,676 men of all ranks.

Ninety-six men enlisted during the year, 43 were discharged, 18 were dismissed, and five died.

Pensions, amounting in the aggregate to 168*l.* 18*s.* 8*d.*, were granted to eight of the 43 men discharged, and gratuities amounting to 282*l.* 14*s.* 5*d.* to 19.

Charitable allowances were also granted to widows of deserving men, and these amounted to 35*l.*

The water police established during the year at Montego Bay to discharge similar duties to those performed by the corresponding force in Kingston, have proved of value.

A new station has been established at Cave Valley in the far interior of the Island, where a thriving populace has sprung up.

The following table shows the services rendered by the police as compared with the preceding four years :—

——	1888–89.	1889–91.	1891–92.	1892–93.	1893–94.
Number of persons arrested on view and on information.	4,218	9,624	6,558	6,923	8,237
Number of persons apprehended on warrants.	1,873	2,499	1,645	1,802	
Number of search warrants executed.	102	153	116	102	122
Number of persons summoned.	14,018	25,427	17,588	18,896	19,212
Number of persons subpœnaed.	21,702	27,540	28,267	28,766	29,808
Number of seizures under revenue laws.	225	665	325	440	399
Number of post-mortems ordered.	388	627	460	432	594
Number of prisoners escorted.	8,796	15,312	9,638	10,570	8,599

Turning to the criminal returns, it is to be regretted that the number of murder cases has gone up from eight last year to 13 this year; of this number, however, nine only of the arrests occur in this year, the remaining four being remanents from the previous year. Manslaughter has decreased from 16 to 10, but there is again a lamentable increase in the number of cases of cutting and wounding. Last year the figures were 652, this year they are 684. This offence is attributed by some of the Inspectors to jealousy, while one officer considers that the somewhat free use of the knife or other lethal weapon is the result of the visit of so many of the male population to Colon during the attempted construction of the Panama Canal. To the same fact is attributed two disturbances which took place at Old Harbour and Cumberland Pen races, respectively, in which the authority of the police was defied.

It is gratifying to note that there has been a marked decrease in the more serious forms of offences against property. Of burglary there have been 14 cases in 1893 to 1894 as against 25 in 1892–93; of breaking into dwelling houses and stealing therein, 108 cases in 1893–94 as against 141 in 1892–93, and of breaking into shops, warehouses, &c., 89 cases in 1893–94, as against 109 in 1892–93.

There is also a decrease in the number of cases of offences against property committed without violence, though in the case of larceny of dyewoods and in simple larceny the figures are somewhat higher. Last year it was necessary to call attention to the increase of arson cases, under the head of malicious injury to property. It is matter for congratulation that in 1893–94, the number is 36 against 49 last year.

The police have at present under supervision no less than 1,060 habitual criminals, and it is to the credit of the force that so

large a number of persons is carefully watched; to their vigilance in this respect no doubt may be attributed the decrease in breaches of the law with regard to property of which note is made above.

Prisons.

The number of prisoners in all the prisons and gaols of the Island on the 31st of March 1894 amounted to 943, or a decrease of 21 as compared with the number in prison on the same date in the preceding year. The following has been the number in custody in each of the last seven years :—

On 30th September	1887	795
"	1888	749
"	1889	890
31st March	1891	893
"	1892	988
"	1893	964
"	1894	943

The return given below shows the results of the year under review in comparison with those of the previous year :—

—	Year ended 31st March, 1894.	Year ended 31st March, 1893.
Commitments :—		
To prison	3,935	4,566
To lock-ups	445	361
Total	4,380	4,927
Re-convictions	1,397	1,553
Deaths :—		
General Penitentiary	21	16
Other prisons	29	21
Total	50	37
Executions	1	1
Daily average number of prisoners in custody.	1,008	1,004
FINANCIAL.	£ s. d.	£ s. d.
Gross expenditure	19,344 1 7	18,613 6 8½
Gross earnings in cash	5,264 18 2½	4,890 2 10½
Net cost of maintaining prisons	14,079 3 4½	13,723 3 10
Cost per prisoner	13 19 4	13 13 4¼
Estimated value of labour yielding no return.	5,086 7 7	5,098 14 2
Estimated value of bricklaying work and stone quarried.	4,235 7 11½	3,340 14 1¾
Washing and repairing (General Penitentiary).	1,808 17 4	1,375 8 7

The prison buildings are all in good order. During the year 20 additional cells for female prisoners have been completed at the General Penitentiary, and there is now accommodation in that prison for 98 females. The average daily number during the year was 81.

There were 21 deaths in the General Penitentiary during the year, of which eight were those of prisoners who were in ill-health when admitted to the prison, and three were the infant children of female prisoners. The death-rate was 37·84 per 1,000, based on an average daily population of 555. An epidemic of influenza prevailed in this institution during the months of July and August, but fortunately without loss of life.

There were 29 deaths in the other prisons.

The prisoners have been employed in the usual tasks, including brick-making, quarrying, lime-burning, and trade handicrafts, as well as the washing and repairing of clothes for the prisons and the outside public.

Religious services have been conducted regularly in the General Penitentiary by the chaplains of the various denominations attached to the prison, and in the St. Catherine, Falmouth, and Hanover District Prisons, and also in the Middlesex and Surrey County Gaol. In the Port Antonio and Black River Short Term Prisons no regular provision for this service exists, but prayers are read by the officers of the institutions.

School was held regularly in the General Penitentiary and the St. Catherine and Falmouth District Prisons.

Discipline has been well maintained in the Prisons, and the mark system continues to work satisfactorily at the General Penitentiary.

Vital Statistics.

The natural increase of population during the year under notice was 12,480, being a rate of increase of 19·5 per 1,000 persons living. The corresponding rate during the previous year was 16·8 per 1,000. Calculating from this basis, the estimated population at the 31st March 1894 was 672,762, while the mean population for the year is estimated at 667,554, which are the figures on which the marriage, birth, and death-rates are based.

The number of marriages recorded during the year was 3,734 or 5·5 of the population. The rate last year was 5·1, the number of marriages being 385 less.

The marriage returns show that there is a continued decrease in the number of illiterate persons signing the register. Last year the percentage was 52·6; this year it is 52.

The number of births during the year was 27,365 or 2,890 more than during last year. The percentage is 40·6 to each 1,000 of mean population. Of the 27,365 births 16,596 were illegitimate, the rate per 100 births being 60·6—figures which, it is to be regretted, show no improvement in this respect.

The deaths recorded were 14,885 in number, the rate per 1,000 of mean population being 22·1. Infant mortality continues

abnormally high. Of the number of deaths given above 6,355 were those of children under five years of age, or 42·7 per cent.

In the Cayman Islands, with a population of 3,725, the number of births was 187, of marriages, 41, and of deaths, 54.

General.

The material welfare of the people of this Colony continues to improve and the Customs returns for the year under review show evidence of this in the increase in the consumption of what may be regarded in the West Indies as the luxuries of life.

From the reports of the collectors of revenue in the several parishes it is gratifying also to learn that the houses of the peasantry seem to have more attention from their owners, and in one parish it is thought worthy of remark that "the small flower garden which "is seen before almost every house in the country tends to show "that civilization is on the increase." And the people are said to be steadily improving in the erection of a better kind of house.

A side light is thrown on the educational progress of the masses by consulting the statistics of the Public Library in Kingston, the capital of the Island. The record of the readers in the library shows in 1892–93 an increase of 36 per cent. over 1891–92, this year an increase of 44 per cent. over 1892–93 and an increase of 97 per cent. over 1891–92. In the year 1892–93 there were 16,030 readers and this year 23,101 readers, an increase of 7,071.

As the Jamaica Militia has been referred to in previous reports, it may be mentioned here that an important step towards increasing its efficiency and usefulness was taken during this year by placing the force for the purposes of training and discipline under the Senior Military Officer. The force now consists of 560 men of all ranks and the General Officer commanding the troops in his last annual report stated that he "has personally inspected the several companies "and considered that they are in a fair state of efficiency."

The general prosperity of the Colony has been fully maintained during the year, the value of property has much increased and the financial reputation of the Island is shown by the high price at which its securities are quoted in the London Money Market. That the great advantages and attractions which Jamaica offers as a winter resort are becoming year by year better known and appreciated is shown by the increasing number of visitors to the Island.

The health of the community has continued excellent during the year.

H. BENGOUGH,
Administering the Government of Jamaica.

TURKS AND CAICOS ISLANDS.

(For Report for 1893, *see* Colonial Report [Annual] No. 111.)

Sir H. A. BLAKE to the MARQUESS OF RIPON.

King's House, Jamaica,
May 28, 1895.

MY LORD,

I HAVE the honour to forward to your Lordship a copy of the Blue Book of the Turks and Caicos Islands for the year 1894, together with the Commissioner's Report thereon.

I have, &c.
HENRY A. BLAKE,
Governor.

REPORT ON THE BLUE BOOK OF THE TURKS AND CAICOS ISLANDS FOR THE YEAR 1894.

1.—*Taxes, Duties, &c.*

The inhabitants of the Dependency pay no direct taxes.

The sources of revenue are import duty, collected in accordance with a tariff prepared on very liberal lines, royalty on all salt exported, at the rate of one tenth of the statutory value, which is at present $3\frac{1}{2}d.$ per bushel, port dues paid by vessels entering, at the rate of $4d.$ per ton registered tonnage, and the usual internal and miscellaneous receipts.

There was no alteration in these sources of revenue during the year under review.

2.—*Revenue and Expenditure.*

The finances of the Dependency are in a satisfactory condition.

The Revenue collected in 1894 was 8,840*l.*, as compared with 7,434*l.* in 1893, and exceeded the estimate by 1,587*l.*

The bulk of this excess is due to the heavy export of salt with accompanying increase in dues from shipping. Import duties also brought in more than the average figure, and nearly all the minor heads of revenue show some slight rise.

The balance carried forward from the previous year was 2,394*l.*, giving a gross revenue of 11,234*l.*

The total expenditure amounted to 7,459*l.*, being less by 358*l.* than the sum expended in 1893. Of this amount, 7,127*l.* was ordinary expenditure, against 7,095*l.* in 1893, and 332*l.* was for works and services of a special nature, the sum so spent in 1893 having been 722*l.*

The revenue collected within the year exceeded by 1,381*l.* the total expenditure within the same period. Of the sum so in excess, 1,000*l.* was invested by the Crown Agents on behalf of the Government, leaving the working balance to carry forward to 1895 to be increased by 381*l.* The whole sum so carried forward was 2,775*l.*, making, with the investment of 1,000*l.* above mentioned, and a further sum of 1,000*l.* which the Dependency had already to its credit invested, a total credit balance of 4,775*l.*

A proper and usual system of account books, with a duly balanced ledger and monthly balance sheet, was instituted from the commencement of the year, which conduces to greater accuracy and facility in the keeping and rendering of the accounts of the Dependency.

3.—*Assets and Liabilities.*

There was a balance of assets over liabilities on the 31st December 1894 of 4,774*l.* 18*s.* 7*d.*

4.—*Public Debt.*

The Dependency has no Public Debt.

5.—*Municipalities.*

There are local boards, established by various legislative enactments, to deal with the following subjects, namely, Health, Quarantine, Prisons, Pilotage, Salt Ponds, Education, and Medical Relief.

6.—*Public Works.*

Good progress was made with the work of bringing into a state of proper repair and efficiency the various public buildings and other property of the Government at the three ports.

A brief memorandum of the expenditure at the three settlements is attached:—

—	Grand Turk.	Salt Cay.	Cockburn Harbour.
	£ s. d.	£ s. d.	£ s. d.
Public roads and abutments.	75 2 7	26 11 1	62 0 7

	£332 3 7

7.—*Legislation.*

The following Ordinances were passed during the year:—

No. 1—The Supplementary Appropriation Ordinance.
No. 2—The Annual Appropriation Ordinance.
No. 3—(Not assented to).
No. 4—The Interpretation Ordinance.
No. 5—(Not assented to).
No. 6—The Medical Service Ordinance.
No. 7—The Salt Pond Ordinances Short Continuance Ordinance.
No. 8—The Notary Public Ordinance.
No. 9—The Liquor License Ordinance.
No. 10—The Superannuation (Abolition of Office) Ordinance.
No. 11—The Wint Retiring Allowance Ordinance.
No. 12—The Salt Ponds Ordinances Further Continuance Ordinance.

8.—*Legislative Board.*

There was no change in the composition of the board during the past year.

9.—*Civil Establishment.*

Mr. E. J. Cameron, Commissioner, was absent on vacation leave from the 24th August to the 29th September, his duties being performed during that period by Mr. W. E. Cleaver, Judge of the Supreme Court.

Mr. A. W. Harriott, Assistant Commissioner and Police Magistrate at Grand Turk, was on vacation leave from the 7th October to the 10th November, the several duties of his office being distributed between Mr. J. C. Crisson, Accountant and Clerk, and Mr. E. C. Harriott, clerk to the Commissioner.

Mr. E. C. Harriott was absent on vacation leave from the 29th June to the 23rd September, Mr. L. Lea Smith being appointed to act for him in his absence.

10.—*Pensions.*

Mr. A. C. Lowe, late Colonial Secretary, who was in receipt of a pension of 198*l.* 6*s.* 8*d.* per annum, died at Nassau, Bahamas, on the 20th February. Mr. F. Ellis, late Queen's Advocate, who drew a pension of 175*l.* 10*s.* 0*d*, died in England on the 24th November, and Mr. H. Higgins, late Commissioner, who was granted a pension of 9*l.* 13*s.* 4*d.* from 1st February 1893, died also in England on the 19th December, making a total reduction in the pension vote of 383*l.* 10*s.* 0*d.*

The total sum paid in pensions was 708*l.* 6*s.* 10*d.*

11.—*Foreign Consuls.*

The following countries are represented:—

United States of America.
Sweden and Norway.
Denmark.
France.
Spain.
Dominican Republic.
Haytian Republic.

12.—*Population and Vital Statistics.*

The population of the Dependency at the last census in 1891 amounted to 4,744, of whom 2,211 were males and 2,533 females. Of these, 369, or about 8 per cent. were white, the remainder coloured.

Grand Turk and Salt Cay, the two Turks Islands proper, provided 1,883 and 485 of this population respectively, in all 2,368, while the Caicos Islands furnished the remainder, 2,376.

From the return* of births and deaths since 1891, it appears that the number is on the increase, but, on the other hand, it must be borne in mind that there is a steady emigration of labourers to the neighbouring Republics of Hayti and St. Domingo, of whom there is always a certain small percentage who become permanent absentees.

The death-rate for last year is noticeably high, being 135, or 28·4 per 1,000, against 94, or 19·8 per 1,000, in 1893. It is probable that the unusually heavy rainfall is accountable to some extent for this result, especially in the Caicos Islands, where malarial fever is prevalent in wet seasons.

The Medical Officer reports a good deal of infant mortality at Grand Turk. With a view to better this state of things, an arrangement has recently been made by which suitable persons from here will be sent for a course of training as midwives in the Lying-in-Hospital at Jamaica, under bond to practise for a certain term in the Dependency on their return, at a rate of remuneration within the means of the poorer class of patients.

13.—*Ecclesiastical.*

As is usually the case in these smaller and more remote West Indian possessions, by far the larger number of the people belong to the Wesleyan and Baptist persuasions. These have large chapels at Grand Turk, and have also places of worship at the other towns and in all the settlements of the Caicos.

The Church of England was disestablished and disendowed in 1873. It at present supports two clergymen and has a church in each of the townships, but does not extend its operations to the Caicos Islands beyond Cockburn Harbour.

The Dependency is for ecclesiastical purposes in the Diocese of the Bahamas, and is visited from time to time by the Bishop of Nassau. One of these visits was paid during the past year.

14.—*Education.*

The following remarks are taken from the annual Report of the Board of Education: they show briefly what the work of the year has been and that there is an improvement in the conditions since my last report.

* * * *

2. The total average attendance of children at the seven schools is 6 per cent. higher than the total of the previous years. All the schools have done better except at Grand Turk and Kew, at

* Not printed.

which there is a considerable decrease in attendance, the figures being 65 and 31 respectively, as against 75 and 45 for 1893.

3. The unsatisfactory condition of these two last-mentioned schools has been a subject of anxious consideration by the Board. They have now both been placed under new teachers, who arrived from Jamaica at the end of December last and entered upon their duties with the new year. These gentlemen have been specially selected by the Superintending Inspector of Schools at Jamaica, and will, the Board trusts, succeed in producing a material improvement at their respective stations.

4. The school at Bottle Creek, opened at the close of 1893, has been in good working order throughout the year, and is proving a distinct factor for civilization and moral progress in that district.

* * * *

15.—*Newspapers.*

There are two newspapers published weekly at Grand Turk, one of which, the "Royal Standard and Gazette," has been issued regularly from the same office, without a break or change, for a period of over 40 years. Few West Indian publications can show such a record.

16.—*Currency, Banking, &c.*

The currency of the Dependency is English gold and silver, American gold and Jamaica nickel coin.

Mexican silver passes outside at 2*s.* to the dollar, but is not received at all by the Government.

Mercantile accounts are for the most part kept in dollars and cents, at the rate of 4*s.* to the dollar.

There is no banking establishment. Remittances are made by bills of exchange drawn on firms in England and New York by merchants in payment of salt cargoes, and the public also avails itself to a considerable extent of the money-order system.

17.—*Imports and Exports.*

The Import duties are above the average, and 287*l.* more than the previous year's figures. The principal item of increase is on Spirits, which brought in close on 200*l.* more than in 1893. The receipts under the heads of Alcohol, Lumber, Salt-meats, and Sugar are also higher, while *ad valorem* duties, on the other hand, show a net falling off of 80*l.*, the deficiency being under the heads, Materials of Wrecks and Textile Fabrics.

The export of salt was the largest yet recorded, being 2,116,779 bushels, bringing in to Government a royalty of 3,087*l.* Of this quantity, 465,114 bushels were ground-fishery salt for British North America.

445

The export has previously exceeded 2,000,000 bushels on only two occasions, in the years 1876 and 1889, the figures being 2,030,258 and 2,108,506 respectively.

Except at Cockburn Harbour, the season for salt-raking was not a favourable one, owing to the unusually heavy rains, and the salt gathered scarcely amounted to as much as three-quarters of an average crop. This, however, with the large stock on hand at the commencement of the year, enabled all demands to be met, but there only remained 130,000 bushels at the three ports at its close, so that the prospects for 1895 are altogether dependent on a good season.

The price of salt continued for the greater part of the year at the same low figure, 5½ to 6 cents a bushel, but an increased demand and an immediate rise in price to 7 cents and more followed the passing into law of the new Tariff Bill in the United States, by which Turks Islands salt passes into that country free of duty.

As over three-fourths of the whole export trade is with that country, and the duty thus taken off amounts to, as nearly as possible, six cents on a bushel, the importance of the event to this community is immense.

Comparative tables showing the trade and other statistics of the Dependency are attached :—

	Sailing.	Steam.	Total.	Sailing.	Steam.	Total.
British - -	46,935	24,672	71,607	51,071	24,672	75,743
Foreign - -	40,335	111,534	151,869	58,174	117,698	175,872
Total - -	87,270	136,206	223,476	109,245	142,370	251,615

In connection with these shipping returns, I may perhaps mention that, taking the figures of the Board of Trade Statistical Abstract, the average total tonnage of sailing vessels entered and cleared in the Dependency is larger than at any port in the West Indies except Jamaica, Barbados, and Trinidad, and that the average total of the foreign tonnage is only exceeded in the Bahamas, Jamaica and Trinidad.

H.M.S. "Canada" called at Grand Turk in the month of April and remained a few hours, subsequently visiting Cockburn Harbour.

There were no other visits by men-of-war.

There were four vessels stranded at the Caicos Islands during 1894, two of which were a total loss, the remaining two being got off with the assistance of the islanders and ultimately proceeding on their respective voyages. No lives were lost. The total salvage awarded on vessels and cargoes in these four cases was 2,048*l.*

19.—*Agriculture.*

I am glad to be able to report that, for the first time for several years, there was an absence of any distress among the inhabitants of the Caicos Islands such as to call for the distribution of the usual annual dole.

This result is attributable to the abundant rain, which enabled fair crops to be reaped in most of the settlements, coupled with some remunerative wrecks and also the regular employment afforded by the two fibre companies at East and West Caicos.

The companies referred to have steadily continued their operations. The first appreciable shipments of fibre were made by the East Caicos Company during the year, the quantity shipped being about 31 tons, valued at 420*l.*

20.—*Mines, Manufactures, &c.*

The production of salt from sea-water by solar evaporation is the one occupation and dependence of three-fourths of the inhabitants of this group of Islands. This production is by no means the simple matter that the above sentence would seem to imply, but involves constant care and watchfulness on the part of the salt pond proprietor to secure the existence of such of the conditions essential for the reaping of a thoroughly good quality of the article as are within his control. For the rest Nature has to be relied on, and no efforts of the salt-raker will avail anything unless she is favourable. An unseasonable spell of rain at the critical period of the "making" will upset all calculations and work dire disaster, but an examination of the recorded shipments of a series of past years will show that a fair amount of reliance may be placed on the constancy of the weather.

A description of the process of salt-making is outside the scope of this report, but the subject is not without interest, which has a

tendency to increase as one begins to grasp the different points of it.

At the present time, only a small proportion of the "salinas" (as the tracts of ground adapted for this industry are called) in the Dependency are worked. Considerable outlay is necessary for placing new ground under "cultivation," and the price of salt of late years has been too low to justify any such expenditure. With salt, however, selling at from 7 to 8 cents a bushel, and a steady demand, the result of the present fiscal policy of the United States, there is a fair profit to be made, and it might be worth the while of practical persons, with capital at their command, to investigate the possibilities.

Turks Island is in a good and convenient position for supplying the United States and Newfoundland markets, and the quality of the article which it sends out is, owing to the specially favourable climatic conditions, undeniable.

The annual crop might easily be half again what it now is, even on the salina area at present laid out, if worked more systematically and with the appliances for economizing labour, both of man and beast, which capital would probably enable to be introduced.

There are, however, no local capitalists, and any expansion such as I have briefly shadowed can only be looked for by the introduction of new blood.

21.—*Grants of Land.*

The dealing with Crown Lands in the Dependency has been much hampered during the past few years by the absence of any qualified surveyor in the country whose services could be obtained to measure out lands for sale. The provisions of the existing law regulating the subject cannot indeed be conformed to without the presence of such a person to carry out the formal preliminaries required. The land question generally, both in regard to the above particulars and especially the important point of title, is a very tangled skein, the unravelling of which is a matter of some difficulty. A new enactment, however, having for its object the provision of more simple procedure in acquiring land and for obtaining a legal title and the regulation of the succession, has been drafted and is now under the consideration of the Executive.

22.—*Gaols and Prisoners.*

The total number of persons committed during 1894 was 23, of whom six were for safe keeping and 17 for purposes of penal imprisonment.

The daily average in the gaol was five.

23.—*Criminal Statistics.*

The total number of offences reported to the police or to the magistrates in 1894 was 188, against 121 in 1893.

Of the offences reported in 1894:—

53 were for offences against the person.
4 „ „ prædial larceny.
15 „ „ offences against property other than prædial larceny.
116 „ „ other offences.

The total number of convictions in the inferior courts in 1894 was 115, against 68 in 1893.

These convictions are classified as follows:—

27 for offences against the person.
1 for prædial larceny.
4 for offences against property other than prædial larceny.
83 for other offences.

The convictions in the Supreme Court were as follows:—

2 for offences against the person.
2 „ „ „ property.

The acquittals were as follows:—

In the inferior courts - - - - - -	40
In the Supreme Court - - - - - -	3

The increase in the number of cases dealt with is, I think, attributable to a better performance of their duty on the part of the police.

24.—*Hospitals and Asylums.*

There is no hospital or asylum. Cases of lunacy are very rare, but, when occurring, the patient is placed in gaol, under medical supervision, and, if necessary, ultimately sent to the asylum at Jamaica.

25.—*Charitable and Literary Institutions.*

There has been no Poor-house in the Dependency since 1879, but a system of outdoor relief is in force which meets all cases of actual want, at a much less cost than would suffice to maintain any such institution.

The only Literary Institution is a Public Library and Free Reading Room at Grand Turk, established in commemoration of Her Majesty's Jubilee, partly by public subscription and partly by a Government grant. The Government contributes to its upkeep by a vote of 50*l.* a year. The institution is in every way a most creditable one to the place, providing an unusually ample selection of the leading newspapers and magazines, English and American, and also a generous supply of good and wholesome book literature, which is much appreciated.

26.—*Meteorological Observations.*

The rainfall during the year 1894 was the highest recorded since 1884.

One hurricane passed in unpleasant proximity to Grand Turk during the season, causing considerable anxiety, but I am

thankful to be able to record another year's immunity from these destructive visitations.

Tables of temperature and rainfall are appended :—

——	Maximum.	Minimum.	Mean.
January	80°	75°	77°
February	79	75	76

28.—*Post Office.*

The mail service was performed throughout the year by the contract s.s. "Alpha," of Messrs. Pickford and Black's line, plying monthly between Halifax and Jamaica, calling at Bermuda and Grand Turk.

The steamers of the Clyde line, from New York twice a month to Hayti and San Domingo, also continue to make Grand Turk a port of call on both the outward and inward voyage. This connection is of much convenience and advantage to the place, and arrangements have latterly been made with the postal authorities which enable a portion of the English mail to come by this route and thus to reach quicker than it would otherwise do.

A direct parcel-post with the United States and Canada was established during the year.

The Post-office revenue for the year was 196*l.* 16*s.* 3*d.*

29.—*General Remarks.*

The year 1894 was marked by an event of special importance to this community, namely the removal of the duty levied in the United States on its one staple export, salt. There was at first some doubt as to whether the connection with Jamaica, a colony which levies an import duty on American salt, would not debar the Dependency from participating in the privileges accorded by the Wilson Bill, and much alarm was occasioned here by the news of the first official rulings by the United States authorities, that Turks Islands salt was still liable to the duty. On proper representation however being made as to the true position of the Dependency, which is financially on an entirely separate and distinct footing and governed by its own code of laws, with its own tariff, by which American salt is admitted free, these rulings were reversed.

With the exception of fibre, there would seem to be no other marketable commodity which the Turks and Caicos Islands are capable of producing in any appreciable quantity but salt, and it is hardly too much to say that their continuance as an inhabited possession of the Crown depends on the existence of a trade in salt under conditions that will leave a moderate margin of profit to the producer. This margin has been steadily decreasing of late years, owing to the growing competition with salt from the Mediterranean and elsewhere, and also in some measure to the large increase in the American domestic product. The removal of the duty should exercise a decided influence in favour of the Turks Islands article, though to what extent the trade will really be benefited can hardly be accurately judged till the present year's transactions are in full progress.

A small shipment of fibre was made during the year. No new land has been taken up for this industry, and the present low figure at which the article is quoted must naturally militate against any immediate further development.

There are no other matters calling for special remark.

EDWARD J. CAMERON,
Commissioner.

Grand Turk, April 4, 1895.

JAMAICA. 1894–5.

(For Report for 1893–4 *see* No. 134.)

SIR H. A. BLAKE to MR. CHAMBERLAIN.

King's House, Jamaica,
October 11, 1895.

SIR,

I HAVE the honour to forward to you the accompanying Report on the Blue Book of this Colony for the year ended 31st March last.

I have, &c.
HENRY A. BLAKE,
Governor.

REPORT ON THE JAMAICA BLUE BOOK, 1894–5.

Legislation.

During the session of 1895, the Legislative Council passed 27 laws, of which the following are the most important:—

Law 4 of 1895—"The Banker's Books Evidence Law, 1895," is a transcript of the English Law 42 and 43 Victoria, Chapter II., and facilitates the giving of evidence in regard to entries in banker's books.

Law 11 of 1895—"The Public General Holidays Law, 1895," provides for the establishment and observance of public general holidays.

Law 12 of 1895—"The Sale of Goods Law, 1895." This law is an adaptation of the Imperial Act, 56 and 57 Victoria, Chapter 71, codifying the law bearing on the most important class of contracts.

Law 13 of 1895—Empowers the Governor to raise 100,000*l.* for the construction of driving roads in the mountainous districts of the parishes of St. Andrew, Portland, and St. Thomas, as a means of assisting in the development of the resources of those districts.

Law 21 of 1895—"The Constabulary Pension Law, 1895." A law to relieve the Constabulary Pension Fund and to secure

to constables the payment of the pensions promised on their enlistment.

Law 24 of 1895—"A Law to regulate and restrict the wearing of Naval and Military Uniforms." This law is an adaptation of the English Uniforms Act, 1894, and was introduced by direction of the Secretary of State for the Colonies.

Law 26 of 1895—"A Law to secure a Civil List for Her Majesty and for other purposes." This law was enacted as a preliminary to an amendment of the Constitution of the Island granting extended representation in the Legislative Council.

Law 27 of 1895—"The Tramways Law, 1895." This law is founded in great measure on the Imperial Act, 33 and 34 Victoria, Chapter 78. It empowers the Governor in Privy Council to grant licenses for any tramway drawn or propelled by any motive power except steam generated by fire on the line; and provides generally the conditions under which tramways may be constructed and worked.

Finance.

The year commenced with a surplus general revenue of 59,830*l.* and yielded 624,024*l.*, making together a sum of 683,854*l.*, while the expenditure, including 36,747*l.* for sinking funds and 2,300*l.* for redemption of debt, amounted to 619,850*l.*, thus leaving at the close of the year a surplus of 64,004*l.*

The parochial revenues, which are devoted to parochial roads, poor relief, sanitary and other local services, and are administered by the several parochial boards, produced 127,551*l.*, a decrease of 1,168*l.* on the receipts in 1893-4.

The revenue specially appropriated for the reconstruction and maintenance of certain main roads under Law 17 of 1890 amounted to 32,234*l.* or 434*l.* more than in 1893-4, and the revenue on account of immigration realized 2,139*l.*, an increase of 768*l.* on the previous year's receipts.

The usual table showing the whole of the revenue receipts in the year under report compared with those of the previous year is given below:—

—	1894-5.	1893-4.	Increase.	Decrease.
	£	£	£	£
Import duties - - -	341,360	315,941	25,419	
Light dues - - -	2,330	2,259	71

	805,215	865,015	28,097	87,897
				59,800

The yield of general revenue shows a net increase of 26,895*l.*, which is due to larger returns in import duties and rum duties under tax revenue, and in postal and interest on securities held for sinking funds, and for Savings Bank, under non-tax revenue. Of these, import duties and rum duties are the most important, showing an increase of 25,419*l.* and 11,444*l.* respectively, which is the result of increased duties imposed by Laws 12 and 13 of 1894. The other items of increase are small and do not call for any remarks.

Of the decreases, the more appreciable are: in stamps 2,261*l.*; fines and forfeitures, 1,019*l.*; interest on Jamaica railway bonds, 6,774*l.*; and miscellaneous, 2,592*l.* The revenue from stamps has to bear a comparison with the exceptionally large return in the previous year. The decrease occurs chiefly in legacy and probate duties.

No interest was paid on Jamaica railway second mortgage bonds and the decrease is the amount of the interest paid in 1893–4. There is no particular cause to be ascribed to the falling off on other heads of the revenue.

Reimbursements of loan expenditure shows a large decrease of 86,729*l.*; and parochial revenue a small decrease of 1,168*l.* The latter is due to a falling off in receipts from the parochial road tax, and the sanitary and fire rates. These two latter rates are fixed annually and the receipts therefore fluctuate with the rate assessed.

The following is a similar comparative statement of the Treasury disbursements compared with 1893–4:—

—	1894–5.	1893–4.	Increase.	Decrease.
	£	£	£	£
Charges of debt - - -	80,946	79,661	1,285	
Pensions - - - -	16,259	14,438	1,821	
Administrative departments -	43,706	45,235	—	1,529

The expenditure of the Colony from general revenue shows a net decrease of 6,968*l.*

The chief cause of the decrease will be found under Miscellaneous, which shows 11,763*l.* less than in the previous year. This is due to the exceptionally large payment made to the railway company on the judgment of the Supreme Court, in the matter of stores; and the writing off of the balance of the loan made from general revenue towards the Jamaica exhibition. On the other hand, the largest increase (7,115*l.*) occurs in public works, and is due to the larger vote under this head which the state of the finances permitted; other items of increase being under 'Debt," owing to the payment of interest due on account of the previous year; "Pensions," due to additional pensions and the payment of an accumulated pension; "Postal Service," due to extension of the department "Constabulary," for increase of staff and purchase of uniforms, a boat, ammunition and articles for repairing arms; and 'Military," due to an increase of the rates of import duty allowances under Law 2 of 1895, as well as to an increase in the number of men.

Main road expenditure under Law 17 of 1890 shows a decrease of 3,713*l.* due to diminution of the operations of Law 17 of 1890.

Appropriated expenditure shows a net increase of 21,217*l.*, due especially to a transfer of 22,300*l.* to the Kingston Streets Improvement Fund.

Immigration shows an increase of 3,458*l.*, due to the expenses connected with the transport of immigrants by the "Volga" and "Jumna."

Pensions.

Pensions amounting to 1,235*l.* were granted under the provisions of Law 34 of 1885 and the resolution of the Legislative Council, dated the 23rd October 1887, while the pension list was relieved by the deaths of pensioners to the extent of 994*l.* 7*s.* 7*d.*

Debt.

42,240*l.* was raised under Laws 7 of 1881, 1 of 1891, and 7 of 1894 by the issue of local inscribed stock under Law 33 of 1894 for the construction of bridges in St. Thomas, Portland, and St. Mary. The amount realized from premiums was 2,555*l.*, the minimum rate being 106.

The public debt directly secured on the general revenue stood as follows at the close of each of the last 10 years, after making allowance in each year for the sinking funds actually invested for the eventual redemption of debt:—

	£	s.	d.
1885	1,427,458	14	2
1886	1,478,790	3	8
1887	1,491,993	3	9
1888	1,502,684	9	8
1889	1,506,883	6	0
1891	1,458,221	12	7
1892	1,520,088	4	3
1893	1,523,944	2	11
1894	1,672,299	14	6
1895	1,678,744	11	2

Of the above amount of debt on the 31st March last 765,871*l.* 15*s.* 9*d.* was on account of the railway purchase, reconstruction and extension, and 126,500*l.* on account of the Rio Cobre Canal.

The following are the amounts due for debentures guaranteed by the general revenue raised on account of the several undertakings specified:—

	£
Kingston and Liguanea Water Works	128,200
Kingston markets	20,000
Kingston gasworks	30,000
Kingston slaughter-house	10,000

Legislative Council.

The Council was in session when the year opened; that session closed on the 2nd May 1894.

A new session opened on the 12th February 1895, and continued beyond the close of the year under review.

Major-General Hallowes, Commander of the Forces, and Mr. Frederick Evans, C.M.G., Colonial Secretary, were sworn and took their seats as exofficio members of the Council on 12th February 1895.

The Council met 55 times during the period from the 3rd April 1894, to the end of the year 1894–5.

Public Works.

The total expenditure on public works of all kinds including the cost of administration and supervision, was 163,628*l.* 16*s.* 1*d.*

The main roads, the bridges, and public buildings throughout the island were maintained in good order and many works of improvement effected.

Since 1889 the length of main roads has been increased from 752½ miles to 1,839¾ miles, upwards of 100 new bridges have been built, many of them of considerable dimensions—such as the bridge over the Rio Grande in Portland with 6 spans of 80 feet each, and the bridge over the Rio Minho in Vere with a single span of 240 feet; many miles of additional telegraph lines have been erected and numerous public buildings have been built.

The average cost per mile for maintenance of main roads was 36*l.* 4*s.*, being 2*l.* 9*s.* more than last year. This is mainly due to heavy flood damages. The Public Works Department now effects an appreciable saving of expenditure by having its own carts and mules for work on the roads instead of hiring as was formerly the practice.

The reconstruction of parochial roads taken over from the parishes under Law 17 of 1890 was continued during the year, and the actual length taken over as main roads up to the close of the year under review was 982 miles, 10½ chains.

The construction of bridges authorised by Law 20 of 1892, was also continued and the expenditure on this item was 25,537*l.* 17*s.* 11*d.* At the close of the year 47 out of the 89 bridges authorised by the law were completed and 23 were in course of construction.

The extension of the St. Thomas interior main road from the Johnson river at Serge Island, in the Blue Mountain Valley, to Bath was commenced, and satisfactory progress was made with the work. When completed, this road will open up a very fertile and well populated district.

Considerable progress was made in the work of enlarging the St. Catherine District Prison.

The lighthouses at Plumb Point, Morant Point and Folly Point were maintained with regularity and efficiency, and the work of constructing the lighthouse at Negril Point was proceeded with, and was nearing completion at the end of the year under report. It is now in operation.

The telegraph lines throughout the island were maintained in fair order. The lines are generally being remodelled and provided with poles of a more durable nature than those originally used.

Crown Lands.

Two notifications of 20,772 acres of lands liable to forfeiture for non-payment of quit rent and land tax have been issued. 18,274 acres were forfeited in the same period.

There are about 200,000 acres of forfeitable land in the island, the forfeiture of which the Surveyor General estimates will occupy about 10 years, the proceedings in respect of each notification taking about two years to complete.

The total rents received from Government lands and buildings amounted to 1,242*l.* 9*s.* 3*d.*, and the total sales to 421*l.*

Railway Lands.

A great portion of the year was occupied in lawsuits with dissatisfied claimants for compensation for land being acquired along the railway extension to Port Antonio. Of 505 cases, 476 were amicably settled, five cases were settled in court, and 19 compromised, in most cases at or near the amounts previously offered by the Government. There are now only five unsettled cases on this track.

On the Montego Bay extension, 373 cases have been settled by agreement and 15 cases are still unsettled.

The cost of both tracks to date is 49,936*l.* 16*s.* 5*d.* an average of 46*l.* 6*s.* 7*d.* per acre, the Port Antonio track costing 60*l.* 12*s.* 4*d.* per acre, and the Montego Bay track 38*l.* 5*s.* 4*d.* per acre.

The Port Antonio track passed through 5 towns and numerous villages and settlements besides large properties, almost the whole being either good cultivated or building land.

The Surveyor-General estimates that the total cost of both tracks will probably not exceed 65,000*l.*

The expenditure on railway lands during the year was more than double that of any previous year, owing to the great number of claims on both tracks actually settled for.

Between the 7th October 1893, and the 28th February 1894, the West India Improvement Company were authorised to enter upon 37½ miles and by the 1st January 1895, they were actually in possession of the whole 54½ miles.

Rio Cobre Canal.

The revenue earned during the year was 3,341*l.* 3*s.* 2½*d.*, and the cost of management, including salaries, was 1,434*l.* 0*s.* 4*d.* leaving a balance of 1,906*l.* 12*s.* 10½*d.*

Extensions of channels amounting to about two miles were carried through, the total length of the canals maintained by the Public Works Department being now about 37 miles.

There was an increase in the supply of water of about 20 per cent. during the year, with a prospect of a still further large demand. The revenue from this increase will not, however, come in till next year. The increased supply was mostly for the cultivation of bananas. At the end of the year nearly 800 acres of bananas were under irrigation, and the Director of Public Works considered it probable that 400 or 500 acres more would be planted within the ensuing 12 months.

Post Office and Telegraphs.

The following statements show the revenue and expenditure of the Postal and Telegraph Department for the year 1894-5, compared with the two preceding years:—

Year.	Postal Revenue.					Telegraph Revenue.	Grand Total
	Postages.	Commission on Money Orders.	Commission on Postal Orders.	Miscellaneous.	Total Postal Revenue.		
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1892–3 - - - - -	18,260 5 8½	307 6 6	401 13 3	183 18 4	19,153 3 9½	5,813 11 0	24,966 14 9½
1893–4 - - - - -	19,429 3 1	354 6 6	431 14 4½	219 1 0	20,434 4 11½	6,253 6 0	26,687 10 11½
1894–5 - - - - -	20,974 2 9	400 10 5	450 7 6½	228 16 9	22,053 17 5½	5,908 16 6	27,962 13 11½

EXPENDITURE.

Year.	Postal Expenditure.						Telegraph. Expenditure.	Grand Total.
	Salaries.		Mail Conveyance.		Services.	Total Postal Expenditure		
	Head Office.	District Offices.	Inland.	Ocean.				
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1892–3 - - - - -	4,626 15 7	2,304 14 10	8,424 10 11	1,666 6 1½	3,376 6 8¾	20,398 14 2¾	6,634 7 10½	27,033 2 0¾
1893–4 - - - - -	4,446 5 0	2,301 4 6	8,354 1 3	1,869 12 11	3,533 0 9	20,504 4 5	6,904 15 9	27,409 0 2
1894–5 - - - - -	4,715 6 3	2,422 6 6	8,419 6 9	2,028 10 8	4,612 12 6¾	22,198 3 1¾	7,075 12 9	29,273 15 1¾

Taking the items of revenue seriatim, it is satisfactory to note that the large increase of 1,565*l.* 0*s.* 8*d.*, under postages over the previous year, has taken place notwithstanding the reduction in 1893–94 of the registration fee from 4*d.* to 2*d.* and the adoption of the minimum scale of charges fixed by the Postal Union Treaty on second class mail matter, *i.e.*, post-cards, printed papers and commercial documents.

The temporary loss of revenue which had resulted since 1890 owing to the reduction in that year of the inland letter rate from 2*d.* to 1*d.*, and of the packet letter rate from 4*d.* to 2½*d.* has not only been recovered, but there was an increase in 1894–95 of 1,284*l.* 16*s.* 8*d* over the collections of the year 1889, which preceded that in which the reduction of rates came into force.

The other items of postal revenue show increases over the preceding year.

Postal expenditure in 1894–5 exceeded that of 1893–4 by 1,693*l.* 18*s.* 8¾*d.* This increase is chiefly attributable to the establishment of 14 new district post offices, the number of which at the end of the year under review was 123 as against 109 at the end of the previous year; the extension of the mail services by train; and the extension of house delivery of letters in Kingston, and generally to an increase in postal business, the estimated number of letters and post-cards which passed through the General Post Office and district post offices having been 2,197,256 in 1893–4 and 2,527,132 in 1894–5, an increase for the year of a little over 15 per cent. in business, while the increase in expenditure was only a little over 8 per cent.; much of this increase in business is attributed, as that of the previous year, to the reduced rates of postage.

Telegraphs.

Both ocean and inland mail services were performed during the year in a satisfactory and efficient manner. There was not a single delay in the arrival or departure of the Royal Mail steamers, while the steamers of other lines afforded many opportunities for exchanging mails, chiefly with the United States of America and the mother-country. The several inland mail services were performed without any interruption.

The railway extension to Montego Bay across the island was completed in February, 1895, and daily mail service by train was established between all offices on the line.

Mail Coach Service.

The earnings, 2,616*l.* 7*s.* 0*d.*, show a decrease of 101*l.* 7*s.* 9*d.* on the receipts of the previous year, chiefly in respect of passenger fares attributed to the extension of railway facilities above referred to, and of those afforded by the coasting steamers.

JAMAICA.
1894–5.

Money Orders.

The number issued increased from 13,470 in 1893–4 to 14,294 in 1894–5 for amounts totalling 48,310*l.* 16*s.* 10*d.* in the former, and 50,445*l.* 10*s.* 4*d.* in the latter year.

Postal Orders.

The following figures evidence a continuous increase in postal order business:—

—	1892–3.	1893–4.	1894–5.
No. of orders issued -	115,340	127,465	131,825
Face value - -	£ s. d. 20,393 2 6	£ s. d. 21,567 10 0	£ s. d. 22,286 17 6

The sales of the year under review show the satisfactory increase of 11,793*l.* 10*s.* over those of 1890–1, when the system was inaugurated.

Parcels Post.

The following figures indicate a steady increase in this service:—

Number of Parcels.	1892–3.	1893–4.	1894–5.
From other countries -	9,860	9,923	10,548
To other countries -	2,439	2,651	2,764
	12,299	12,574	13,312
Declared value:	£ s. d.	£ s. d.	£ s. d.
From other countries -	12,629 8 4	14,094 8 2	14,890 17 9
To other countries -	2,355 2 9¾	2,189 17 2	2,752 15 9
Total -	14,984 11 1¾	16,284 5 4	17,643 13 6

This steady increase has obtained since the inauguration of the system, and, notwithstanding the large number of parcels handled and distributed by each mail, the postmaster for Jamaica does not recollect a single instance of loss or miscarriage occurring in this island.

Telegraphs.

The revenue under this head shows a falling off of 347*l.* 12*s.* 6*d.* and the expenditure an increase of 170*l.* 17*s.*, compared with the previous year. The falling off in revenue was due to a decrease in the number of messages sent and received during the year, viz: 105,719 as against 111,812 during 1893-4. The former number was, however, greater than that for 1892-3—103,803. The increase in expenditure was due almost entirely to an increase in the salaries of operators and of wages of messengers at the out-stations.

Railway.

The gross receipts of the Jamaica Railway Company for the year ended 31st March 1895, amounted to 80,791*l.* 6*s.* 0*d.*, and the expenditure to 58,043*l.* 5*s.* 2*d.*, leaving a net revenue of 22,748*l.* 0*s.* 10*d.*

The receipts were made up as follows:—

	£	*s.*	*d.*
Goods and cattle - - -	43,953	19	3
Passengers - - - -	30,605	4	11
Wharf - - - -	5,718	6	1
Miscellaneous - - -	513	15	9

The number of train miles run amounted to 281,655, which gave an expenditure per mile of 4*s.* 1·46*d.* and receipts equal to 5*s.* 8·84*d.* per mile, leaving a net revenue of 1*s.* 7·38*d.* per train mile.

The number of passengers carried amounted to 356,713.

Interest was paid out of revenue on First Mortgage Bonds to the extent of 21,273*l.* 18*s.* 4*d.*

The line between Kingston and Montego Bay was completed during the year and the whole line opened for traffic.

Agriculture.

Much intelligent interest in this important subject has been aroused during the last eighteen months, and especially amongst the small settlers who hold so large a proportion of the cultivated land other than grazing land, and there is reasonable ground for hope that a more skilful and profitable cultivation of the soil and curing of crops will be the result. A further decrease of the area under canes has occurred during the year to which the present reports refer. In 1893, 31,555 acres were under cultivation, while in 1894 there were 31,284—a decrease of 271 acres.

The area under coffee has increased by 1,100, and the Director of Public Gardens reports that Liberian coffee is being

extensively planted. Cocoa shows also an increased cultivation of 239 acres, while the acreage under bananas has risen by 1,231. This latter fruit now occupies an area of 18,160 acres. It should be explained that in addition to the land given in as being under cultivation in bananas, large quantities of this fruit are grown in provision grounds and other places not returned as land under bananas. The same remark applies to several of the minor products such as ginger, arrowroot, corn, &c. Without taking this fact into consideration it might be difficult to account for the now large value of the fruit exported from the Colony which was considerably over half a million in 1894–5, and the proportion it bears to the total exports, viz., 27·9 per cent. Orange growers in Jamaica have greatly benefited by the severe blizzard which made such havoc among the orange groves of Florida in the latter part of 1894. The value of this fruit exported from Jamaica in 1894–5 was 30,109*l.* more than in the preceding year Nor must the fact be overlooked that not a few orange growers of Florida, hopeless of restoring their plantations there, or dreading the recurrence of a disaster similar to that referred to above, are turning their attention to Jamaica and making enquiries with regard to the cost of land, &c., with the view of transferring their interests to the Colony.

The area under ground provisions—the principal article of food of the population—increased by only 461 acres during the year, or less than one half per cent. This is much below the average annual increase, and is attributed to the fact that a large number of the male rural population have been employed in work on railway extensions and on the sewerage works in Kingston, and have thus for the time being abandoned the tillage of provision fields.

In matters more strictly pastoral the past year has been one of some anxiety, and, in the case of some districts of the Islands, of serious loss. In July or August 1894, a disease which had hitherto been unknown broke out among cattle and did great mischief before the remedies were discovered which would control it or at least lessen its ravages.

Jamaica has hitherto been almost free from the numerous diseases which affect stock in other countries, and while the disease referred to appears to have been stamped out for the present, the possibility of its re-appearance causes some natural anxiety.

Education.

The following is a summary of the results of the inspection of elementary schools during the year compared with the two previous years :—

Year.	Schools on Government List.	Schools Inspected.	Scholars on Books.	Scholars in Average Attendance.	Per-centage in Average Attendance of Number on Books.	First.	Second.	Third.	F.	Not examined.	Fees.	Grants-in-aid, including Building Grants.

* Decrease.

JAMAICA. 1894-5.

While the number of scholars enrolled has increased by nearly 7,000 it will be observed that the average attendance has diminished by over 2,000 and the percentage of the average attendance has fallen from 66 to 60. The superintending inspector calls attention, however, to the fact that this latter figure is higher than in any year since the inauguration of the present system, only excepting the year immediately preceding the one under review. Mr. Capper says, "to fairly judge of the results of the great "change in the system effected in 1892–3," (when the abolition of fees took place), "the figures for that year must be taken into "consideration as well as those of the following year in which the "attraction of novelty contributed so much to the enormous "increase in school attendance. It will then be seen that there "has been an increase in the two years of 18 per cent. in the "number of children at school: an increase which is quite "sufficient to justify a hopeful view of the situation and a belief "that the course pursued by the legislature has been judicious." Some part of the decrease must, however, be attributed to a failure of crops during the last few months and scarcity of employment in certain parts of the island.

A falling off will be observed in the number of 1st class schools as compared with last year; this is accounted for by the influx of large numbers of children coming under school influences for the first time and to the changes in the curriculum made by the code.

The annual examination of teachers held at the close of the year 1894 resulted in the passing of two teachers out of six who presented themselves; there are now 297 certified teachers employed in the elementary schools, whilst 42 more have passed their examinations and will receive certificates after the prescribed periods of probation. At the examination of students from the training colleges held at the same time 145 students competed, of whom 127 passed, 13 in honours.

The examination of pupil teachers and volunteers for the examination in connection with the general elementary educational system of the Colony also took place in December 1894.

There were 1,118 candidates of whom 389 passed or 35 per cent.

A feature of interest in connection with the work of the Department is an educational Bulletin which was established during the year, dealing with subjects of general educational interest and serving as a medium of communication on many matters between managers and teachers.

During the year, the education code has been further revised on the recommendation of the Board of Education.

The report on the training college for girls at Shortwood shows a satisfactory measure of progress during the year. The students numbered 22 on the 1st April, 1892, and they were all presented for examination in December of that year. Of these 4 passed in the 1st class, 8 in the 2nd class, 7 in the 3rd class, and 3 failed.

The third year students passed out in December and found employment at once.

Industrial Schools.

The Hope Industrial School.

At the beginning of the year under review there were 32 boys in the institution and at the close of the year 27 boys. The main occupation of these children, especially the older ones, is working in the botanical garden at Hope, where they receive practical lectures daily. The elementary school in which the boys are educated was rated second class at its examination.

Shortwood Industrial School.

This is a school for girls. At the commencement of the year the inmates numbered 28 and at the end of the year 35, one of whom was on license. Of these, 20 were under 12 years of age. The girls are employed in washing, baking, light field labour, and house work.

Alpha Cottage.

These schools for boys and girls, are exclusively for members of the Roman Catholic faith. It is reported of them that they have fully maintained their high local reputation for efficiency and good management.

At the beginning of April 1894 there were 42 boys in the institution and 49 girls, at the end of the year the numbers were 45 and 43 respectively. In these schools great attention is paid to garden and field labour on the boys' side and to laundry and domestic work on the girls.

The boys' school on examination passed first class with 61 marks and the girls' school also passed in this class with 68 marks.

Belmont Orphanage.

This is a small school of 12 children, the number not having varied during the year, and is mainly supervised by the family of the Bishop of Jamaica. The children's school education is provided for at a school in the neighbourhood of Stony Hill which obtained at the last examination a place just short of first class. Their industrial employment includes straw-plaiting and needle-work, but they are also trained for domestic situations.

Botanical.

The Department has continued the valuable work of distributing plants and seeds throughout the Colony, sixty-four thousand five hundred and eighteen of the former having been sent out. The

principal descriptions of seeds distributed have been those of teak, kola, Liberian coffee, nutmeg, cocoa, tea, lemon and cinchona.

In the nursery at Hope there is always in stock a supply of several thousand plants. The Director of the Botanic Department reports that there is a collection of 90 varieties of sugar cane. The value of this collection is lessened by the absence of any means for testing the saccharine qualities of the various canes. I have requested the Director to take measures to procure the necessary instruments. All the plants in the economic section of the garden are doing well. The demand for plants is rapidly increasing and has been doing so for three years past.

The monthly bulletin issued by the Department serves to assist the persons who receive plants to grow them successfully. The publication is becoming yearly more popular and its usefulness is consequently extending.

The condition of all the gardens in charge of the Department has been well maintained during the year, but owing to lack of funds it has not been feasible to extend operations.

Useful work is being done by the Department in sending out instructors into the country districts to give demonstrations and lessons in planting and curing crops to the small settlers. This practical and simple method of conveying instruction to those who are unable to vist the public gardens is calculated to greatly improve the quality of our minor products.

Immigration.

The coolies who arrived in the "Volga" during the year 1893 have not proved satisfactory, being, the Protector of Immigrants reports, very deficient in stamina and inferior as labourers, while the amount of sickness and mortality amongst them has been proportionately high, compared with those who arrived by the "Erne," "Moy" and "Belgravia."

The Protector considers that an unusually large number of those shipped were not of the best class for field work.

Six hundred and seventy statute adult immigrants were applied for during the year 1894, but did not arrive till after its close.

No coolies returned to India during the year and only three passports were issued.

Fifty-six births occurred amongst immigrants and 48 deaths, being per-centages respectively of 2·67 and 1·83 as against 5·97 and 1·94 in 1893.

One death was due to murder by an indentured immigrant of his concubine; the murderer was executed.

There were four other cases of serious crime among East Indians, two of arson and two of wounding.

On the 1st January 1895, 25 East Indians were in prison, being 1·8 per 1,000 of the East Indian population, 46 in the Lunatic Asylum, or 3·3 per 1,000, and one in the Lepers' Home.

The balance at credit of the Immigration Fund on the 31st March 1894, was 12,770*l.* 13*s.* 3¾*d.*, and at credit of the Return Passage Fund, 3,486*l.* 15*s.* 2*d.*, making together 16,257*l.* 8*s.* 5¾*d.* This amount will be considerably reduced in the year 1895 by repatriating coolies.

The number of Savings Bank depositors increased from 619 in 1893 to 793 in 1894, and deposits from 10,705*l.* 12*s.* 7*d.*, to 13,958*l.* 10*s.* 10*d.*—57 remittances, aggregating 205*l.* 9*s.*, were made to relatives in India.

In addition to correspondence through the Post Office, 184 letters were despatched, and 172 received, by the Immigration Department on behalf of coolies, making together 356 letters.

Wages have been generally in excess of the amounts stipulated for in the agreements, and no serious disputes of any kind have taken place between employers and coolies.

Emigration.

574 labourers left Jamaica for the Isthmus of Panama and 752 returned therefrom.

Government Savings Bank.

The number of depositors and the amount of deposits in the bank have been as follows in the last ten years:—

Year.	Number of Depositors.	Amount of Deposits.
		£
1884–85	15,511	360,190
1885–86	16,820	363,292
1886–87	17,047	363,481
1887–88	18,510	393,250
1888–89	19,444	408,213
1890–91	21,747	423,011
1891–92	22,824	428,348
1892–93	23,902	417,978
1893–94	25,533	457,924
1894–95	27,045	453,875

The year under review shows an increase of 1,512 in the number of depositors; but a decrease of 4,049*l.* in the amount of deposits as compared with 1893–4. That year, however, having been a remarkably prosperous one in which the deposits were much larger than those of any previous year since the establishment of the bank, the amount of deposits for 1894–5 are nevertheless satisfactory, specially in view of the steady increase in the number of accounts for 50*l.* and under.

JAMAICA. 1894–5.

In the above amount of deposits are included thirteen deposit accounts for the following public funds :—

	£	s.	d.
1 Immigration Return Passage Fund -	1,005	4	11
1 Constabulary Reward Fund - -	570	1	4
1 Constabulary Pension Fund - -	2	3	8
8 Sinking Fund - - -	920	11	2
1 Smith and Beckford's Charity -	107	5	9
1 Turks Island - - -	514	19	10

There were also 299 accounts for trusts, charities, Chancery, Administrator-General and bankrupt estates, amounting to a total deposit of 32,744*l.* 18*s.* 4*d.*, the remaining 26,733 accounts, representing 416,461*l.* 6*s.* 10*d.* are all ordinary savings bank deposits.

Of the total number of accounts open at the end of the year, 18,712 were for 5*l.* and under, while only 1,207 were for over 100*l.*, the increase in the number of small accounts being 1,319.

3,801 accounts were opened and 2,343 closed, resulting in an increase of 1,458 in the number of accounts open at the end of the year as compared with the number in the year before.

The number of deposits amounted to 31,009 and withdrawals to 32,456, representing 220,983*l.* 9*s.* 6*d.* and 237,645*l.* 15*s.* 6*d.* respectively.

The expenses of management and interest credited to depositors amounted to 15,569*l.* 14*s.* 2*d.*, while the revenue realised was 16,660*l.* 14*s.* 5*d.*, thus showing a net profit of 1,091*l.* 0*s.* 3*d.* on the year's transactions. The revenue compared with the preceding year shows an increase of 884*l.*

Trade.

Notwithstanding complaints of commercial depression the statistics of the Revenue Department do not show that there has been any diminution in the volume of trade.

The difference between the value of the imports of 1894–5 and those of 1893–4 as compared with that between the value in 1893–4 and 1892–3 has certainly been considerably less, but, as the following table will show, the figures for the year under review are higher than those of any previous year—

Value of Imports.

	£
1884–5 - - - -	1,487,833
1885–6 - - - -	1,325,603
1886–7 - - - -	1,322,336
1887–8 - - - -	1,695,605
1888–9 - - - -	1,597,600
1890–1 - - - -	2,188,937
1891–2 - - - -	1,759,890
1892–3 - - - -	1,941,481
1893–4 - - - -	2,157,794
1894–5 - - - -	2,191,745

Of the sum shown for 1894–5, 2,190,712*l.* was the value of goods imported for home consumption, the corresponding figures in 1893–4 being 2,136,113*l.* or 54,599*l.* less than during the present year.

The imports are classified under the following heads :—

I. Live animals, food, drink, and narcotics.
II. Raw materials.
III. Manufactured articles.
IV. Coin and bullion.

The value of the imports under Head I. in the past year was 845,079*l.* as against 825,952*l.* in 1893–4 or about 2·3 per cent. more; under Head II. 67,432*l.* as against 49,680*l.* in 1893–94 or 35.7 per cent more; and under Head III. 1,249,676*l.* as against 1,219,405*l.* or 2·4 per cent. more, while under Head IV. there has been a decrease from 41,076*l.* to 28,525*l.*—equal to 30·8 per cent. Under the first head the principal items in which increase is most marked are :—

——	Quantity.	Value.
		£
Cattle neat	2,045	4,956
Horses	488	3,518
Mules	85	939
Bread and Biscuits	602,426 lbs.	4,970
Butter	19,323 lbs.	966
Butter substitutes	6,277 lbs.	157
Corn	36,424 bushels	5,882
Cornmeal	3,107 barrels	1,682
Pease and beans	2,910 bushels	1,091
Beef in tins	—	1,833
Hams	14,097 lbs.	528
Cotton seed oil	21,548 gallons	2,060
Rice	974,603 lbs.	2,591
Sugar (refined)	421,946 lbs.	2,124

In the case of flour, alewives, dried or salted fish, herrings, and one or two other articles the quantities imported have been greater, while the values, owing to low prices at the country of origin, have decreased.

One reason assigned for the increase in the importation of articles of food is the fact that there are large numbers of American labourers at present in the Colony brought out for the purpose of carrying on the construction of the railway extensions, and to the further fact that native labourers who are working on the line have meanwhile abandoned their provision fields and live by the wages they earn and expend largely on the purchase of imported articles of food.

JAMAICA. 1894-5.

Of articles included in the second class the increase has been chiefly in—

	£
Coal - - - - - -	13,065
Natural manures - - - -	1,941
Tallow and natural greases - - -	595
Trees and plants - - - -	483

While under Class III. increased importations have chiefly been made of the following—

	£
Steam engines, other than locomotives or agricultural - - - -	12,513
Galvanised iron for roofing - - -	3,409
Iron or steel rails - - - -	5,021
Iron or steel tubes and pipes - - -	10,969
Cement - - - - -	3,224
Boots and shoes - - - -	4,296
White pine lumber - - - -	3,216

On the other hand there has been a marked falling off in most descriptions of clothing fabrics, the importations of cotton piece goods alone being 57,512*l.* less than last year, and of haberdashery 9,748*l.* less. The Collector-General attributes the falling-off in fabrics to the existence of large stocks in hand at the commencement of the year.

The imports of the Colony have been drawn during the past three years from the various countries in the following proportions:—

—	1892-3.	1893-4.	1894-5.
United Kingdom -	51·9	55·1	40·4
Dominion of Canada -	9·6	8·8	8·5
United States - -	34·8	33·3	36·8
Other countries - -	3·7	2·9	4·3

The increase of the proportion of imports from the United States is due to the large increase in food stuffs imported of which an explanation has been given above, and the increase in the proportion drawn from other foreign countries is accounted for by the importation of cattle from the States of Colombia, and to the fact that direct trade with Germany has been established by a line of steamers from Hamburg having included Jamaica in its itinerary.

The value of the exports has been considerably less during the past year than in 1893-94, but with that exception is higher than

in any previous year. The falling-off has amounted to 154,268*l.* as will appear from the following table:

Year.	Of Produce and Manufactures of the Colony.	Of British, Foreign, and other Colonial Produce and Manufactures.	Total.
	£	£	£
1884–85 - -	1,181,203	227,645	1,408,848
1885–86 - -	1,078,315	201,803	1,280,118
1886–87 - -	1.334,465	174,542	1,509,010
1887–88 - -	1,661,601	166,989	1,828,590
1888–89 - -	1,501,660	113,164	1,614,824
1890–91 - -	1,807,084	95,730	1,902,814
1891–92 - -	1,628,777	93,319	1,722,096
1892–93 - -	1,690,637	69,170	1,759,807
1893–94 - -	1,982,596	93,093	2,075,689
1894–95 - -	1,848,877	72,544	1,921,421

The decrease has occurred principally under the head of raw material, which is 140,419*l.* less than in the previous year, and is accounted for by the diminished export of woods—of bitterwood there were 1,227 tons less and 3,774*l.* in value exported, of fustic 7,500 tons and 27,167*l.* in value, and of logwood 13,397 tons and 105,152*l.* in value. In the case of the two first of these the falling-off is attributed to bad prices and lack of demand, while in the case of logwood, lower prices have ruled and growers who have been accustomed to remarkably high prices lately seem unwilling to accept lower rates.

An interesting feature of the exports of the Colony during the year under review is the appearance for the first time of dye extracts. The value of this export during the year was 3,126*l.*, and represents the first output of chemical works which have recently been established for the purpose of extracting dyes from logwood and other dyewoods.

The following articles have also been exported in decreased quantities, viz.:—

——	Quantity.	Value.
		£
Cocoa - - - -	979 cwt.	6,535
Bananas - - - -	394,047 bunches.	44,371
Sugar - - - -	11,854 cwt.	43,034

while the export of the following has improved—

——	Quantity.	Value.
		£
Cocoanuts - - - -	972,153	2,378
Coffee - - - -	6,836 cwt.	14,598
Oranges - - - -	17,574,604	30,109
Rum - - - -	495,071 gallons.	41,355
Cigars - - - -	3,722 lbs.	1,951

The large increase in oranges is the result of the damage to many of the orange groves in Florida and the consequent increased demand for Jamaica fruit.

The following table shows the proportions in which the Island's exports have been taken by the several countries named, during this year, as compared with the two preceding years:—

—	1892–3.	1893–4.	1894–5.
United Kingdom -	29·1	26·7	27·1
United States - -	54·2	57·3	58·1
Canada - - -	2·6	1·7	1·5
Other countries - -	14·1	14·3	13·3

The following table shows, for 5 years, the percentage proportion which each of the several articles of produce mentioned bears to the total export value:—

—	1890–1.	1891–2.	1892–3.	1893–4.	1894–5.
Sugar - - -	13·1	15·6	14·3	14·2	12·9
Rum - - -	11·	15·7	11·3	7·4	10·1
Coffee - - -	15·7	20·7	20·1	17·3	19·3
Dyewoods - -	21·3	18·7	21·1	24·3	19·
Fruit - - -	29·4	17·7	23·1	26·6	27·9
Pimento - -	4·5	3·1	3·5	3·8	4·5
Other produce - -	5·	8·5	6·6	6·4	6·3

Police.

The allowed strength of the Constabulary Force at 31st March 1895, was 776, while the actual strength was 772.

The number is made up of 19 officers, 122 sub-officers, and 631 men.

In addition to the regular constabulary there were at the date mentioned 212 rural headmen of police and 742 rural policemen, the total effective strength of regular and rural police being thus 1,726 of all ranks. This is an increase of 50 on the preceding year and of 68 on the year 1892–93.

The enlistments numbered 84, while 55 men were discharged, 21 dismissed, one deserted, and one died.

Of the 55 men discharged 12 were granted pensions, and 14 received gratuities.

Musketry practice has been more general in the force during the past year, 475 trained constables and 55 recruits having fired the course, as against 321 trained men and 89 recruits in the year before.

The following table, given in continuance of similar returns in previous years, shows a portion of the services of the police :—

——	1889–1.	1891–2.	1892–3.	1893–4.	1894–5.
Number of persons arrested on view and on information.	9,624	6,558	6,923	8,237	7,781
Number of persons apprehended on warrants.	2,499	1,645	1,802		
Number of search warrants executed.	153	116	102	122	150
Number of persons summoned.	25,427	17,588	18,896	19,212	19,249
Number of persons subpœnaed.	27,540	28,267	28,766	29,808	30,673
Number of seizures under revenue laws.	665	325	440	399	437
Number of post-mortems ordered.	627	460	432	594	603
Number of prisoners escorted.	15,312	9,638	10,570	8,599	8,224

There were ten arrests for murder (including infanticide) during the year as against 13 the year before. Of these, however, three only resulted in convictions for that offence, two were discharged by the magistrates, the prosecution of two was abandoned in the upper court, and three remained undisposed of.

Of other offences against the person it is satisfactory to note that of manslaughter there were three cases only as against ten last year; of concealing birth, 5 as against 11, and of bestiality, 14 as against 27.

On the other hand the arrests effected for assaults occasioning bodily harm have risen from 21 last year to 80 during 1894–95, cutting and wounding from 684 to 694. Assaults with intent to commit rape from 27 to 36 and rape from 35 to 39.

The number of offences against the police and against their authority go far to measure the regard for law and order which the community possess.

In 1892–3 there were 288 cases of assaults on the police, 353 in 1893–94 and 349 in 1894–95. In 1892–93 there were 109 cases of obstructing the police in their duty, 132 in 1893–94 and 75 in 1894–5.

The increase last year over the year before in this class of offence has thus been checked.

Turning to offences against property, the police effected 26 arrests for the serious crime of burglary, of which number 17 resulted in conviction while eleven persons where either discharged for want of sufficient evidence or acquitted on trial. It is to be regretted that this offence has increased during the past year. In 1893–94 there were only 14 arrests and 8 convictions.

There has also been an increase of cases of breaking into dwelling-houses and shops and stealing therein, of larceny of small stock and of simple larceny.

JAMAICA. 1894–5.

The Inspector-General's report shows no marked change in the figures of malicious injury to property and of minor offences.

At the end of 1893-4 there were 1,060 habitual criminals under police surveillance. Of these, 252 were re-convicted during 1894-5, while the number under police surveillance at 31st March last had risen to 1,307.

During the year the police have regularly performed their ordinary and border patrols. They have afforded the usual aid—apart altogether from prosecutions—in the preservation of order, and the protection of the revenue, and have efficiently discharged numerous minor services which, though they cannot be shown in figures, form no inconsiderable proportion of their important duties.

Prisons and Reformatories.

At the end of the financial year under report there were 957 prisoners in custody in all the prisons of the Island as compared with

943 on 31st March 1894
964 " " 1893
988 " " 1892
893 " " 1891

The following return gives some of the main statistics of the Department for the year under review in comparison with those of the previous year:—

—	Year ended 31st March	
	1895.	1894.
Commitments:—		
To prison	3,654	3,935
To lock-ups	575	445
Total	4,229	4,380
Re-convictions	1,210	1,397
Deaths:—		
General Penitentiary	10	21
Other prisons	15	29
Total	25	50
Executions	1	1
Daily average number of prisoners in custody.	916	1,008
FINANCIAL.	£ s. d.	£ s. d.
Gross expenditure	18,531 15 1	19,344 1 7
Gross earnings in cash	5,688 8 7	5,264 18 2½
Net cost of maintaining prisons	12,843 6 5	14,079 3 4½
Cost per prisoner	14 0 5	13 19 4
Estimated value of labour yielding no return.	4,667 13 2	5,086 7 7
Estimated value of bricklaying work and stone quarried (General Penitentiary).	4,238 15 0	4,235 7 11½
Washing and repairing (General Penitentiary).	1,742 14 5	1,808 17 4

Discipline has been well maintained in the prisons, and the mark system continues to work satisfactorily at the General Penitentiary. The several prison buildings are in good order, and the extensions at the St. Catherine district prison have satisfactorily progressed. When completed the closing of the remaining district and short term prisons in the island will follow. This very desirable concentration, facilitated by recent railway extension, cannot but be productive of improved prison discipline and may be favourable, it is hoped, to economy in this branch of the public service.

The health of the prisoners generally during the year was satisfactory. The deaths per 1,000 in the General Penitentiary were 19·0, and in the other prisons 38·2 as against 37·8 and 61·8 respectively for last year.

School has been held regularly in the General Penitentiary and in the St. Catherine and Falmouth District prisons, while religious services have also been held there and in the Hanover District prison and the Middlesex and Surrey County Gaols. In the two short term prisons at Port Antonio and Black River no regular provision exists for such services, but prayers are read by the officers of the institution.

As will be seen from the foregoing statistical return the labour of the penitentiary is largely employed in brick-making and quarrying; trades are also exercised and taught to a considerable extent. In the other prisons, quarrying and breaking stones, mat making, mattress making, picking coir, &c. is carried on according to local circumstances. Penal labour in the form of work on the treadmills is in force in the General Penitentiary and in the form of shot-drill in the district prison.

Reformatories.

On the 31st March 1895, there were 200 boys in the Stony Hill Institution; of these, 115 were Reformatory boys and 85 were boys in the Industrial School. During the year there was an increase of five in the number of Industrial School boys and a decrease of a like number in the Reformatory boys. There were nine boys out on license in private employment at the end of the year.

At Stony Hill, agriculture and trades of various sorts continue to be taught, such as carpentry, tailoring, blacksmith's, mason's and bricklaying work, and boys on discharge are given a set of tools to enable them to earn a living.

The sanitary condition of this institution continues satisfactory.

On the 1st April 1894, there were 26 Reformatory children and six Industrial School children in the Girls' Reformatory, total 32. On the 31st March 1895, there were 25 children, of whom three were Industrial School children. The majority of these children were of the ages of between 12 and 16 years.

In the Girls' Reformatory employment is found for the inmates in making, mending, washing and ironing their own clothes, and in

making up clothing for the boys at Stony Hill Reformatory and for the Immigration Department, cooking, cleaning dormitories, preparing cassava starch, and washing for private customers.

Vital Statistics.

The total estimated population of the Colony on 31st March 1895 was 683,739, and the mean population, taking the natural increase to the middle of the year, is estimated at 678,786. On these latter figures the island marriage, birth, and death-rates are based. The net gain of population during the year is placed at 10,977, or 17·1 per 1,000 living persons, against a rate in last year of 19·5.

The number of marriages recorded during the year was 3,629, or a rate of 5·3 per 1,000 of the population. Last year showed 3,734 marriages with a rate of 5·5.

Of the 7,258 persons married, 50·33 per cent. were unable to sign their names in the proportions of 43·56 per cent. males to 57·09 per cent. females. These figures show an improvement over past years, especially in the case of the women, where the rate of illiteracy has fallen from 68·8 per cent. in 1883–4 to 57·0 per cent. in 1894–5.

The births registered in the island during the year numbered 25,298, or at the rate of 37·2 per 1,000 of the mean population. Compared with last year a decrease of 2,067 births is shown. Of the births 60·8 per 100 were illegitimate, or a little more than the average of the past ten years.

The deaths recorded in the year numbered 14,321, the rate per 1,000 of mean population being 21·0.

43·4 per cent. of the deaths were those of children under five years of age. There seems no ground for an assumption that this heavy mortality among children is to be attributed to the prevalence of illegitimate births; and the Registrar-General is arranging to give reliable statistics on this point in his next annual report.

DEPENDENCIES OF JAMAICA.

Grand Cayman.

There were 33 marriages during the year, an annual rate of 8·8 to each 1,000 of the inhabitants.

The total births in the year were 169, or an annual rate of 45·3 to each 1,000 of the population. Of these, 7·1 in each 100 were illegitimate.

Total deaths 16, or an annual rate of 4·2 to each 1,000 of the population.

Cayman Brac and Little Cayman.

Marriages during the year, 8. Total births, 40; 2 births illegitimate. Total deaths, 11.

General.

From May to November 1894, I was absent from the Colony on leave of absence and the Government was administered by the Senior Military Officer Commanding the Troops.

During the year severe drought was experienced in several districts, and a disease hitherto unknown broke out amongst the cattle which for a time baffled the efforts of local veterinary skill. A commission was appointed which visited the various districts affected and accumulated all the available information. On my return in November I forwarded a copy of the report of the Commission, with the evidence, to the Governor-General of Canada with a request that His Excellency would obtain for me a report and advice from the best veterinary authorities. The report has since been received and promulgated, and I have reason to believe that the disease, which appears to have arisen to a great extent from drinking polluted water from almost exhausted ponds, has now nearly disappeared.

Early in January 1895, the extension of the railway to Montego Bay was completed, since which time the passenger traffic between Kingston, Montego Bay, and other towns along the line has been considerable. The fertile country opened up by the railway is capable of great development, which will be retarded or accelerated in proportion to the inducements offered by the railway company by the cheap carriage of produce.

A satisfactory evidence of general progress is afforded by the investment of local and foreign capital—a factory for the extraction of logwood and other dyes has been established at Spanish Town, giving employment to a large number of people. Ice factories are increasing in number, and electric light and power works are established in Kingston and other towns in the Island. Nor have the parochial authorities of the island been backward in effecting improvements. With the exception of Mandeville and Brown's Town, where, from their elevation, peculiar difficulties exist, every town in the island has now a constant house-to-house supply of pure water, and wherever markets are held excellent market buildings have been erected.

Since the failure of the orange crop in Florida there have been many inquiries for suitable land from persons who have seen the results of years of labour destroyed by frost in two or three days. I have reason to hope that there will be in the near future a considerable influx of orange growers from Florida who will undertake the regular cultivation of oranges as it has never been carried out heretofore in Jamaica. I am sure that those who, with proper training, embark in the business will receive an amply remunerative return for their capital and labour, and I see no reason why, with a soil and climate so peculiarly well suited for the cultivation, the export of oranges should not rival in value that of bananas or of sugar.

HENRY A. BLAKE,
Governor.

No. 174.

TURKS AND CAICOS ISLANDS.

(For Report for 1894, *see* No. 141.)

Sir H. A. BLAKE to Mr. CHAMBERLAIN.

King's House, Jamaica,
June 18, 1896.

SIR,

I HAVE the honour to forward to you a copy of the Blue Book of the Turks and Caicos Islands for the year 1895, together with the Commissioner's Report thereon.

I have, &c.
HENRY A. BLAKE,
Governor.

REPORT ON THE BLUE BOOK OF THE TURKS AND CAICOS ISLANDS FOR THE YEAR 1895.

1. *Taxes, Duties, &c.*

There is no alteration to report under this head.

2. *Revenue and Expenditure.*

The revenue collected in 1895 was 7,312*l.*, as compared with 8,840*l.* in 1894, and fell short of the estimate by 150*l.*

The deficiency is to be explained by the small export of salt, due to unusually small shipments at Grand Turk and other contributing causes, the proceeds from royalty and light dues on vessels entering being 1,882*l.* and 548*l.* respectively, against 3,087*l.* and 950*l.* in the previous year, which was, however, an exceptional one.

The balance carried forward from 1894 was 2,775*l.*, giving a gross revenue of 10,087*l.*

The total expenditure amounted to 7,547*l.*, being larger by 88*l.* than the sum expended in 1894. Of this amount, 6,849*l.* was ordinary expenditure, against 7,127*l.* in 1894, and 698*l.* was for works and services of a special nature, the sum so spent in 1894 having been 332*l.*

The revenue collected within the year was less by 235*l.* than the total expenditure within the same period, and the balance to carry forward to 1896 was consequently reduced. The sum so

carried forward was 2,540*l.*, and the Dependency has to its credit a further sum of 2,000*l.* invested, making a total credit balance of 4,540*l.*

3. *Assets and Liabilities.*

There was a balance of assets over liabilities on the 31st of December 1895 of 4,540*l.* 7*s.* 5*d.*

4. *Public Debt.*

The Dependency has no public debt.

5. *Municipalities.*

There are local boards, established by various legislative enactments, to deal with the following subjects, namely, health, quarantine, prisons, pilotage, salt ponds, education, and medical relief.

6. *Public Works*

There was much quiet but useful general work done during 1895, at a cost of 646*l.*, which covers a stock of lumber, cement, paint, &c., remaining on hand. I am glad to report that, after the present year, the work of bringing into a state of proper repair and efficiency the various public buildings and other property of the Government will be fairly complete, when expenditure will return to its more normal level.

In addition to the above, the following works of a special nature were undertaken :—

	£	s.	d.
Clearance of bush and weeds and opening up of roads in the south-east suburbs of Grand Turk, inhabited chiefly by the labouring class.	116	18	4
Breakwater, Salt Cay - - - -	264	6	9
Enlargement of public offices, Cockburn Harbour	162	2	8
Survey of township, Cockburn Harbour -	154	10	2

7. *Legislation.*

The following Ordinances were passed during the year :—

No. 1.—The Annual Appropriation Ordinance.
No. 2.—The Supplementary Appropriation Ordinance.
No. 3.—The Library (Trustees) Ordinance.
No. 4.—The Salt Pond Ordinances, Further Continuance Ordinance.
No. 5.—The Towns and Public Health Ordinance.
No. 6.—The Annual Appropriation Ordinance, 1896.

The Towns and Public Health Ordinance is an important enactment; it makes provision for dealing with nuisances and other matters of a kindred nature which found no place in the old Health Act, and also consolidates and amends the law as to slaughter yards and public markets. The much-needed work of general revision of the existing statutes has been unfortunately greatly retarded by the untimely death of the late Judge Cleaver.

8. *Legislative Board.*

Mr. W. E. Cleaver, who was, as judge of the Supreme Court, an *ex-officio* member of the Board, died on the 15th January, the vacancy thus created remaining unfilled until the arrival in May of the newly-appointed judge, Mr. J. B. Walker.

The Board and the Dependency generally also suffered another substantial loss by the death of Mr. Jeremiah D. Murphy, who had been a member since 1879, and was much esteemed. His place was filled by the appointment of Mr. Alfred Stubbs, of Cockburn Harbour.

9. *Civil Establishment.*

Mr. E. J. Cameron, Commissioner, was absent on vacation leave from the 23rd October to the 3rd December, his duties being performed during that period by the Judge of the Supreme Court.

Mr. W. E. Cleaver, who succeded the late Mr. Johnson in the office of Judge in December 1893, died on the 15th January of fever. Mr. Cameron acted as Judge until the end of May, when Mr. John Bayldon Walker, Police Magistrate of Sierra Leone, who was appointed to fill Mr. Cleaver's place, arrived in the Dependency and took up his duties.

Dr. A. W. Thompson, Government Medical Officer, resigned that post on 1st May, and was succeeded by Dr. L. O. Crosswell.

10. *Pensions.*

There was no change in the pension list during the year.

The total sum paid in pensions was 519*l.* 5*s.*

11. *Foreign Consuls.*

The following countries are represented :—

United States of America.
Sweden and Norway.
Denmark.
France.
Spain.
Dominican Republic.
Haytian Republic.

12. *Population and Vital Statistics.*

The population of the Dependency, according to the returns sent in, continues to increase, the births being nearly 50 per cent. more than the deaths. The increase is largest in the Caicos Islands. 1895 was a healthy year, with low death rate.

13. *Education.*

There has been satisfactory progress made in educational matters during the year, and the tone of the school at Grand Turk especially has been greatly improved since the advent of a specially selected teacher from Jamaica, who assumed his duties in January.

TURKS AND CAICOS ISLANDS. 1895.

14. *Imports and Exports.*

The year's revenue from import duties is an average one, and presents no special features for remark.

The export of salt was the smallest of any year since 1888, being only 1,290,388 bushels, against 2,116,779 in 1894, the latter being the largest on record, while the average for the last 10 years is 1,653,004.

The falling off was mainly confined to Grand Turk, and is attributable almost entirely to what was practically the cessation of the fishery salt trade with Newfoundland, presumably consequent on the financial disarrangement in that Colony.

This trade has been latterly the stand-by of Grand Turk. The number of bushels shipped in the years 1893 and 1894 was 46,000 and 480,000 respectively, whereas last year it dropped to 72,000, with the result of leaving almost the whole of the year's crop on hand. I am glad to say, however, that there has been a rapid revival and that the shipments for the present year are already 120,000 bushels.

The export of sisal or Bahama hemp is gradually on the increase, the value declared for 1895 being 620*l.* With the additional and improved machinery recently put up by each of the two companies engaged in this business, the output will probably be much larger.

Comparative tables showing the trade and other statistics of the Dependency are attached.

Her Majesty's ship "Mohawk" called in for an hour in the month of October. There were no other visits from men-of-war.

16. *Grants of Land.*

A qualified surveyor from Jamaica was engaged for three months in laying out an extension of the township of Cockburn Harbour and making a complete re-survey of the old town and

neighbourhood, thus enabling a large number of house and plantation lots to be sold by the Crown and settling many vexed questions of boundaries. Owing to the somewhat strange provisions of the existing law, which allows a period of 18 months for the payment of the purchase money of Crown land, however small the sum may be, it will be some further time before grants for these lots are issued and the transactions finally settled.

Unfortunately the term of the surveyor's employment did not permit of any regular survey work in the outer Caicos. There is great need for this, and arrangements are now under consideration for meeting the want.

A new Ordinance will be passed during the present year, which I hope will render the dealing with Crown lands in the Dependency a little less difficult than it has hitherto been.

17. *Gaols and Prisoners.*

The total number of persons committed during 1895 was 21, of whom 4 were for safe keeping and 17 for purposes of penal imprisonment.

The daily average in the gaol was four.

18. *Criminal Statistics.*

The total number of offences reported to the police or to the magistrates in 1895 was 193, against 188 in 1894.

Of the offences reported in 1895 :—

61 were for offences against the person.
3 „ „ prædial larceny.
37 „ „ offences against property other than prædial larceny.
92 „ „ other offences.

The total number of convictions in the inferior courts in 1895 was 132, against 115 in 1894.

These convictions are classified as follows :—

31 for offences against the person.
1 for prædial larceny.
21 for offences against property other than prædial larceny.
79 for other offences.

The convictions in the Supreme Court were as follows :—

1 for offences against the person.
3 „ „ „ property.

The acquittals were as follows :—

In the inferior courts - - -	39
In the Supreme Court - - - -	6

and three cases in which a *nolle prosequi* was entered.

19. *Hospitals and Asylums.*

There is no hospital or asylum. Cases of lunacy are very rare, but, when occurring, the patient is placed in gaol, under medical supervision, and, if necessary, ultimately sent to the asylum at Jamaica.

20. *Meteorological Observations.*

There is nothing unusual to record under this head.

The rainfall was not above the average, though somewhat unsuitably distributed for salt interests, and there was, I am glad to say, no hurricane or threatening of one to cause anxiety.

Tables of temperature and rainfall are appended.

——	Maximum.	Minimum.	Mean.
January	79	74	76

22. *Post Office.*

The Post Office revenue for the year was 199*l.* 18*s.* 11*d.* In this sum there is included, as far as sales of stamps are concerned, only the value of stamps sold over the counter and more or less all for postal purposes.

The money derived from supplying the increasing demands of dealers and others abroad is brought to account under the head of Miscellaneous, and amounts to an appreciable sum.

A direct parcel post with Bermuda was established during the year, and negotiations entered into for the establishment of a direct money order exchange with the other West Indies, through the medium of Jamaica, instead of by the roundabout system through the General Post Office, London.

Messrs. Pickford and Black's steamer from Halifax and the Clyde line steamers from New York continued to run throughout the year.

23. *General Remarks.*

The year 1895 was an uneventful one.

The shipments of salt were small, for the reasons already given, but the price continued steady at not less than 7 cents a bushel, a great improvement on the past few years. A large stock has been brought over to 1896, and, with the revival in the Newfoundland fishery salt trade and what appears to be a moderately brisk demand otherwise, prospects are fair. It is to be regretted that, in disposing of their salt, the bulk of the producers are so entirely confined to the United States market, a market which can apparently take only so limited a quantity of the article.

The progress of the fibre industry has already been referred to.

There are no other matters calling for special remark.

EDWARD J. CAMERON,
Commissioner.

Grand Turk, May 14, 1896.

The ACTING GOVERNOR to Mr. CHAMBERLAIN.

SIR, Trafalgar, November 14, 1896.

I HAVE the honour to forward herewith the Governor's Report on the Blue Book of this Colony for the year which ended on the 31st March last.

I have, &c.
H. JARDINE HALLOWES, Major-General,
Administering the Government.

REPORT ON THE BLUE BOOK, 1895-6.

Legislation.

During the session of 1896 the Legislative Council passed 39 laws, of which the following are the more important:—

Law 4 of 1896, making members of parochial boards personally liable for unauthorised or illegal expenditure by drafts signed by them.

Law 5 of 1896—"The Trial of Lunatics Law, 1896," which is practically a copy of the Imperial Statute (46 & 47 Vict. cap. 38). The necessity for this Law was shown by the miscarriage which occurred last year, when a person charged with sedition was acquitted on the ground of insanity.

Law 8 of 1896—"The Juvenile Offenders Law, 1896," which empowers a judge to order the whipping of a boy between the age of 10 and 16 years, on conviction of certain offences, instead of sending him to prison or to a reformatory.

Law 9 of 1896—"The Prevention of Cruelty to Children Law, 1896." This law is in substance a transcript of the Imperial Statute (57 & 58 Vict. cap. 41). It provides for the punishment by fine or imprisonment of any person convicted of cruelty to a child, and for the care and maintenance of children coming under the protection of the law.

JAMAICA. 1895-6.

Law 12 of 1896—"The Jury Law Amendment Law, 1896." This Law consolidates the Laws relating to juries, provides more effectively for the preparation and settlement of jury lists, the striking of panels of jurors, and regulates the service of jurors.

Law 13 of 1896—"Quit Rents Forfeiture Law, 1896." This Law consolidates Laws 14 of 1884 and 32 of 1888, and facilitates and simplifies the proceedings for forfeiture of land.

Law 15 of 1896—"The Leper Asylum Law, 1896." This Law repeals the former Leper Asylum Law, and makes fresh provision for the constitution of leper asylums and for the admission to, discharge from, and management of, such institutions. It also prohibits the employment of lepers in the preparation or sale of any articles of food or drink, and in certain trades, when their disease might be a source of danger to other members of the community.

Law 16 of 1896—"The Lunatic Asylum Laws Amendment Law, 1896." This Law is in aid of the existing Lunatic Ayslum Laws, and provides more fully than heretofore for dealing with persons of unsound mind. It also empowers the Governor to declare the new asylum premises to be a lunatic asylum within the meaning of the Law.

Law 17 of 1896—"The Marine Board Law, 1896." This Law abolishes the Pilotage and Harbour Boards and districts established under authority of Laws 36 of 1873 and 21 of 1891, and provides for the appointment of a Marine Board in their stead for the whole island, with extended powers, including the management and control, &c., of all lights and beacons, other than lighthouses, inquiries as to shipwrecks, casualties affecting ships, and charges of incompetency or misconduct on the part of masters, mates or engineers, inquiries as to the seaworthiness of ships, providing for examination of masters, mates, or engineers of coasting ships.

Law 19 of 1896—"The Brewers License Law, 1896," which imposes a small duty on beer brewed in the Island for sale, and regulates the brewing thereof.

Law 21 of 1896—"The Medical Laws, 1872-1885, Amendment Law, 1896." This Law makes more complete provision for the examination in the Colony of persons who desire to be registered as medical practitioners and who possess a medical qualification in a country whose diploma or license does not entitle a person to be registered as a medical practitioner here, and provides for the fees to be paid.

Law 22 of 1896—"The Indian Immigrants Marriage, Divorce, and Succession Law." Several murders have been committed during the last few years among the East Indian immigrants, the motive being apparently jealousy. It is hoped that the provisions of this law, which make better provision for the marriage or for the separation of coolies already married, if proper cause is shown, may tend to prevent this crime among these people.

Law 23 of 1896—"A Law to amend the Laws relating to the Bath of St. Thomas the Apostle." It was found that the affairs of this Bath were much neglected in consequence of the failure of the directors to meet regularly. This Law creates a new board of directors and gives them increased powers.

Law 24 of 1896—"The Trustee Law, 1896," which is based on the English Trustee Acts of 1893 and 1894, which regulate the investments to be made by trustees and other matters connected therewith.

Law 25 of 1896—"The Newspaper Libel Law, 1896," which is taken from the Imperial Statutes dealing with the subject of actions brought against proprietors or editors of newspapers.

Law 27 of 1896—"The Stamp Duty Law, 1868, Amendment Law, 1896," which reduces the duty on conveyances, agreements, mortgages, &c.

Law 28 of 1896—"The Spirit License Law, 1896." The question of improving the system under which these licenses are issued has been for some time before the Government and the Legislative Council. Under the present law, considerable safeguards have been introduced for the issue of licenses only to proper persons, and on suitable and convenient premises after inquiry.

Law 30 of 1896—"The Jamaica Street Car Company's Laws, 1875–84, Amendment Law, 1896." The Street Car Company obtained its first order under Law 23 of 1875, and the period of twenty years provided by that Law expired in respect of that order in April last. But for the passing of this Law there would, therefore, have been no legal powers for trams to be run in Kingston after the 21st April. This Law enables the Governor in Privy Council to extend the time provided for in the Law of 1875 for periods not exceeding three months at a time.

Law 31 of 1896—"The Public Buildings Law, 1896." This Law authorises the construction of a block of central public buildings in Kingston, and provides for a loan of 100,000*l.* being raised for the purpose.

Law 33 of 1896. This Law authorises the appointment of a Supernumerary Resident Magistrate, who will be able to act in any parish of the Island where his services may be required, and who it is intended should also act as a Puisne Judge of the Supreme Court when necessary.

Law 34 of 1896—"The Customs Tariff Amendment Law, 1896," imposes a duty of 1*d.* on imported sugar. It also provides for payment of a drawback in the case of sugar used in preserving fruit, &c., for export.

Law 36 of 1896—"The Solicitors Law, 1896." This Law provides for the creation of a committee, consisting of the Attorney General, the Crown Solicitor, and five practising Solicitors, to be appointed by the judges of the Supreme Court. The committee will have charge of the examination of articled

clerks. It provides also for dealing with cases of complaint against a solicitor for professional misconduct.

Law 37 of 1896—"The Produce Protection Law, 1896." This Law is intended to check the larceny of such produce, and the facility with which such produce, when stolen, is at present disposed of. It restricts the sale of produce to certain hours of the day, and requires every person carrying on the business of buying and selling, or of buying and exporting, agricultural produce to take out a license. It also provides that certain produce when in transit shall be accompanied by a form of particulars, as well as of the owner and the property from which sent, &c.

* Law 38 of 1896—"The Prædial Larceny Law, 1896." This Law, which is intended to be worked with the Produce Protection Law just before referred to, gives power to any one to detain any person found in possession of any article of agricultural produce under suspicious circumstances, and enables a judge to inflict the punishment of flogging on habitual stealers of produce.

Law 39 of 1896—"The Jamaica Bar Regulation Law, 1896." The distinction between the two branches in the legal profession is maintained in this island. This Law enables solicitors of ten years' standing to be struck off the roll of solicitors and to become members of the Jamaica Bar, and thus secure a right of audience in the Supreme Court. It also provides that any member of the Jamaica Bar may become a solicitor instead of a barrister after he has been three years at the local bar.

Finance.

The surplus General Revenue brought forward at the commencement of the year was 64,005*l.*, and the revenue collected during the year amounted to 646,103*l.*, making together a sum of 710,108*l.*, while the expenditure (including 21,429*l.* for sinking funds) amounted to 626,934*l.*, thus leaving at the close of the year a surplus of 83,173*l.* Compared with the previous year, general revenue and expenditure show a net increase of 22,078*l.* and 24,703*l.* respectively.

Parochial revenues, which are devoted to parochial roads, poor relief, sanitary and other local services, and are administered by the several parochial boards, produced 129,602*l.*, an increase of 2,051*l.*, while expenditure amounted to 133,476*l.*, a decrease of 12,716*l.* on the previous year.

The revenue specially appropriated to main roads under Law 17 of 1890 amounted to 32,189*l.*, showing no appreciable change, while the expenditure was 31,201*l.*, or 1,640*l.* more than in 1894–95.

Immigration revenue was 10,793*l*, and expenditure 13,048*l.*

The whole revenue realised in the year under report compared with that in the previous year is as follows:—

* This Law has been disallowed.

	825,134	805,205	32,783	12,854
Total net increase -	—	—	19,929	

The net increase in general revenue of 22,078*l.* is due to increases in the receipts for imports (13,886*l.*), chiefly in respect of food stuffs; for stamps (3,004*l.*), certain arrears and fines on account of legacy duties having been paid during the year; for postal and telegraphs (1,783*l.*), due to the extension of business; and for reimbursements generally (1,152*l.*). The items of decrease are few and small and do not call for any remarks.

The revenue devoted to main roads under Law 17 of 1890 shows but slight variation.

The parochial revenues show a net increase of 2,051*l.* The amounts vary with the rates imposed.

Immigration revenues gave an increase of 8,654*l.*, due to payments on the arrival of coolies by the "Volga" and "Jumna."

The following is a comparative statement of the disbursements:—

General expenditure - -	605,506	580,803	24,703	—
Main road expenditure - -	31,201	29,561	1,640	—
Appropriated expenditure - -	133,476	146,192	—	12,716
Immigration expenditure - -	13,048	11,135	1,913	—
Expenditure from loan - -	66,301	54,312	11,989	—
	849,532	822,003	40,245	12,716
General net increase -	—	—	27,529	

The net increase in general expenditure of 24,703*l.* is mainly due to increases in Legislative Council and Public Works under "Administrative" (1,998*l.*); in the Revenue Department, owing to its recent re-arrangement (1,993*l.*); in inquests, Crown witnesses, and other judicial services (1,122*l.*); in constabulary, due to an increase of the force and the paying of gratuities formerly met exclusively from the Constabulary Pension Fund. There are also increases in medical (1,020*l.*); and harbours and pilotage (1,391*l.*), for new works, buoys and beacons, &c.; miscellaneous—chiefly for the Jamaica Agricultural Society—1,462*l.*; public works, increase of new works on main roads (2,515*l.*); railway, for extension track (the expenditure having previously been met from deposits) (6,624*l.*).

The most important decrease is that of 2,276*l.* under education, owing to decrease in the grants earned, consequent on the falling off in the attendance of pupils. The other items of decrease are few and do not call for special comment.

Main road expenditure under Law 17 of 1890 shows an increase of 1,640*l.*

Parochial expenditure proper (exclusive of Kingston Streets Fund) shows a net increase of 9,584*l.* The funds which show increased expenditure are parochial roads and sanitary, while the only important decrease is in expenditure from the surplus fund.

Immigration expenditure shows an increase of 1,913*l.*

Pensions

During the year pensions amounting to 1,691*l.* 2*s.* 6*d.* were granted under the provisions of Law 34 of 1885 and the

resolution of the Legislative Council dated 23rd October 1887, while the pension list was relieved by the death of pensioners to the extent of 511*l* 3*s*. 4*d*.

Debt.

The sum of 25,000*l*. was raised by loan under Law 28 of 1894, for the purpose of defraying the expense of certain works connected with the Kingston Improvements Scheme specified in section 37 of Law 31 of 1890, this arrangement having been substituted for the original one in the latter Law of paying the amount direct from the public Treasury.

8,400*l*. of the amount was raised in debentures at 4 per cent. and 16,600*l*. in 4 per cent. local inscribed stock. The premiums offered in respect of the former were at the rate of 2 per cent. and of the latter at rates varying from 6 per cent. to 10 per cent.

The public debt directly secured on the general revenue stood as follows at the close of each of the last 10 years, after making allowance in each year for the sinking funds actually invested for the eventual redemption of debt:—

	£	s.	d.
1886 - - - -	1,478,790	3	8
1887 - - - -	1,491,993	3	9
1888 - - - -	1,502,684	9	8
1889 - - - -	1,506,883	6	0
1891 - - - -	1,458,221	12	7
1892 - - - -	1,520,088	4	3
1893 - - - -	1,523,944	2	11
1894 - - - -	1,672,299	14	6
1895 - - - -	1,678,744	11	2
1896 - - - -	1,666,177	14	3

Of the above amount on the 31st March last 763,119*l*. 15*s*. 1*d*. was on account of the purchase, reconstruction, and extension of the railway to Ewarton and Porus; 126,500*l*. on account of the Rio Cobre Canal; 167,220*l*. for the erection of new bridges and 146,000*l*. for reconstruction and conversion of parochial roads into main road.

The following are the amounts due for debentures guaranteed by general revenue raised on account of the several undertakings specified:—

	£
Kingston and Liguanea Waterworks -	78,020
Kingston gasworks - - - -	14,900
Kingston slaughter-house - - -	10,000
Kingston improvement - - -	50,000

Legislative Council.

The Council as reconstituted by the Queen's Order in Council of 3rd October 1895, under which each parish of the island is separately represented by an elected member, the nominated

and official members being at the same time increased to a maximum of 10, opened on the 25th February and adjourned *sine die* on the 2nd April 1896.

During that period 27 meetings were held. Dr. C. B. Mosse, Dr. J. Pringle, Lieut. Col. C. J. Ward, Mr. P. C. Cork, and Mr. W. Fawcett were sworn in for the first time as nominated members of the new Council.

Public Works.

The total expenditure by the Public Works Department of all kinds, including the cost of administration and supervision, was 151,824*l.* 3*s.*, of which 65,400*l.* was expenditure from funds provided by loans for special purposes. The cost of administration and supervision was equal to about 14 per cent. of the cost of work executed.

The main roads, the bridges, and the public buildings throughout the island were maintained in good order, and many improvements effected. The number of separate institutions or buildings, for the upkeep of which the Public Works Department is responsible, was 276, and the cost amounted to 11,394*l.*, including maintenance of telegraph lines. The new works on public buildings executed by the Department during the year cost 8,626*l.*, and consisted mainly of additional accommodation for police stations, prisons, court houses, parochial hospitals, and public offices.

The principal new road works undertaken at the cost of general revenue were the construction of the road from Grantham to Spaldings in Clarendon; the deviation of the steep portions of the road between Williamsfield and Mandeville in Manchester and of the road at "My Lady Hill" and at Barracks Hill near Port Maria in St. Mary.

The mileage of main roads, of which the upkeep is chargeable to general revenue, was 881 miles, an increase of 12 miles over last year, and the total average cost per mile for maintenance and repair and improvement of main roads and bridges was 36*l.* 17*s.* 11*d.*, being 2*l.* 5*s.* 11*d.* less than in the previous year. The total cost for these works was 39,806*l.*

The work of reconstructing parochial roads taken over under Law 17 of 1890 was continued during the year, and the actual length taken over as main roads up to the close of the year was 989 miles 70½ chains. The average cost of maintaining these roads was 21*l.* 16*s.* 6*d.* per mile.

The maintenance of the greater portion of all the roads is directly undertaken by the Department; but at the end of the year there were 88 miles of main roads and 35 miles of parochial main roads under maintenance by contract.

The construction of bridges authorised by Law 20 of 1892 was continued, and the expenditure during the year on this work was 14,846*l.* 1*s.* 5*d.* At the close of the year 67 out of the 98 bridges authorised were constructed and 12 were in course of construction.

The construction of the interior main road in St. Thomas, from the Johnson River at Serge Island to Bath was almost completed at the end of the year. The grades of this road are easy and it has been much used ever since the track was cut.

The work of surveying and tracking out the first of the mountain roads in St. Andrew under Law 15 of 1895 was pushed forward. The survey as far as Hardware Hill Gap, 14½ miles, was completed.

The new lighthouse at Negril Point was completed, and the lighthouses at Plumb Point, Morant Point, and Folly Point were maintained with regularity and efficiency.

The telegraph lines throughout the island were maintained in fair working order.

Crown Lands.

A scheme for the benefit of small settlers was introduced during the year, under which Crown Lands can be bought in lots of from 5 to 50 acres, purchasers being permitted to pay down one-fifth of the purchase money, and given 10 years to pay up the remaining four-fifths without interest. Efforts have been made to explain the benefits of the scheme to the people, but no sales were effected during the year, though numerous applications were received. Most of the applicants did not fully understand the conditions of the scheme, and others made applications for the purchase of land not yet forfeited to the Crown.

Six notifications were issued with respect to 206 properties comprising 89,084¼ acres liable to forfeiture to the Crown for nonpayment of quit rent and land tax. It is anticipated that these lands will be finally forfeited during 1896–97 and 1897–98. 6,610 acres of land were forfeited during the year.

Law 13 of 1896 passed during the year simplifies the former procedure for the forfeiture of land and contains a provision intended to discourage squatting, by requiring that before the taxes tendered on lands five years in arrears can be received proof of ownership must be given by claimants tendering payment.

Ninety-six lots of land to the north-west of Kingston, in the possession of squatters without any title, were recovered under Law 43 of 1887, but were leased to the squatters in consideration of their having made certain improvements, at small rentals for seven years, at the end of which time the lessees will be given the preferential right to purchase.

During the year regulations were framed and published setting forth terms on which tracings from the cadastral maps of the parishes might be obtained by the public.

There has been a steady increase in the revenue of the department since its formation in 1890.

Lands for Railway Track.

5,155½ acres of land were conveyed to the West India Improvement Company under Law 12 of 1889. Up to the 31st March

1889, the Company had acquired under the Law 24,488 acres in all, situated mostly in the eastern extremity of the island. The land is generally well watered, virgin and fertile, but steep. On the completion of the railway the Company will be entitled to a further area of 52,312 acres.

All the important cases in connexion with the acquisition of land for the railway track have now been settled. The expenditure in acquiring these lands during the year was 15,312*l.*, and the total expenditure for the purpose from 1890 to the 31st March 1896 was 60,157*l.*

Rio Cobre Canal.

The revenue earned during the year was 3,700*l.*, and the cost of management, including salaries, was 1,652*l.*, leaving a balance of 2,048*l.*

The sale of water was increased by 15 per cent. during the year. The quantity supplied at the end of the year was 6,200 cubic yards per hour, and the Director of Public Works anticipates that 1,400 cubic yards per hour in addition will be taken during the year 1896–97.

At the end of the year 1895–96 about 1,200 acres of bananas were under irrigation, as compared with nearly 800 acres at the end of 1894–95. The Director of Public Works considers it probable that 500 or 600 acres more in bananas will be under irrigation within the ensuing 12 months.

Most of the new supplies of water during the year were given free for one year, and will not, therefore, show an increase of revenue till next year.

Post Office.

The total receipts under this head in 1895–96 amounted to 29,726*l.* 6*s.* 3½*d.*, as compared with 27,962*l.* 13*s.* 11½*d* in 1894–95, showing an increase of 1,763*l.* 12*s.* 4*d.*

The following statements show the revenue and expenditure for 1895–96, compared with the two preceding years :—

REVENUE.

Year.	Postal Revenue.					Telegraph Revenue.	Grand Total.
	Postages.	Commission on Money Orders.	Commission on Postal Orders.	Miscellaneous.	Total Postal Revenue.		
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.

JAMAICA. 1895–6.

From the above it will be seen that the collections under the head of "Postages" are 1,515*l.* 19*s.* 4*d.* in excess of those for 1894–95, and under the head of "Telegraphs" an excess of 247*l.* 13*s.* is shown.

This increase in the collections is chiefly attributable to the increased postal facilities consequent on the cheapening of postage some years ago, the extensions of the railway and to the opening of several new district post offices.

Money Orders.

The following figures show how the transactions for 1895–96 compare with those of the preceding year:—

Jamaica Issue.

—	No.	Amount. £ s. d.
1894–95 - -	12,472	45,489 17 6
1895–96 - -	13,116	47,242 13 0

Issue of other countries payable in Jamaica:

—	No.	Amount. £ s. d.
1894–95 - -	1,822	4,955 12 10
1895–96 - -	2,194	5,441 1 1

Postal Orders.

The value of Inland Postal Orders sold to the public during the year amounted to 26,383*l.* 3*s.*, showing an increase of 4,285*l.* 19*s.* over the sales for 1894–95.

Postal Expenditure.

The expenditure of the Postal Department amounted in 1895–96 to 22,913*l.* 4*s.* 0½*d.*, an increase of 715*l.* 0*s.* 10¾*d.* on that of 1894–95.

This increase is chiefly due to the annual increments to the salaries of the staff at the Head Office, the establishment of new district post offices, and to the increased payments to the Jamaica Railway Company for the extension of the daily mail service by train.

New Post Offices.

Seven new post offices have been opened during the year under review, bringing the total number of district post offices up to 130.

Mail Coach Service.

The earnings under this head (2,291*l.* 17*s.* 9*d.*) show a decrease of 324*l.* 9*s.* 3*d.* on the receipts for 1894–95. This decrease is largely due to the extension of the railway to Montego Bay.

Ocean Mail Service.

The ocean mail services have been performed in an efficient manner throughout the year.

Telegraphs.

The revenue under this head shows an increase of 247*l.* 13*s.* on that of the preceding year.

The number of messages sent and received was 110,715, as compared with 105,719 in 1894–95.

The expenditure for "working expenses" is in excess of the receipts by the sum of 1,462*l.* 7*s.* 2*d.*, and also exceeds the expenditure for the previous year by the sum of 543*l.* 4*s.* 8*d.*

This increase is largely due to expense consequent on the opening of telegraph stations after hours, and to the employment of assistant operators at several of the principal stations.

Railway.

The gross receipts of the Jamaica Railway Company for the year ended 31st March 1896 amounted to 93,902*l.* 6*s.* 11*d.*, and the expenditure to 64,533*l.* 16*s.* 9*d.*, leaving a net revenue of 29,368*l.* 10*s.* 2*d.*

The receipts were made up as follows:—

	£	s.	d.
Goods and cattle - - -	52,278	19	2
Passengers - - - -	34,569	6	9
Wharf - - - -	6,196	0	8
Miscellaneous - - -	858	0	4

The number of train miles run amounted to 303,059, which gave an expenditure per mile of 4*s.* 3·10*d.* and receipts equal to 6*s.* 2·36*d.* per mile, leaving a net revenue of 1*s.* 11·26*d.* per train mile

The number of passengers carried amounted to 366,936.

Interest was paid out of revenue on first mortgage bonds to the extent of 27,990*l.* 6*s.* 8*d.*

Agriculture.

The Colony seems now to be thoroughly roused to the importance of giving more attention to the intelligent cultivation of products. There is a growing desire not only to cultivate but to cultivate well and to improve the quality as well as increase the quantity of the several crops.

JAMAICA. 1895–6.

The establishment of the Jamaica Agricultural Society has done much to encourage and foster this tendency, partly by the spreading of knowledge, partly by the importation of seed, and partly, and very practically, by the establishment of model farms, as object lessons of the results which may be obtained by the application of the principles of agriculture.

As the cultivation of the sugar cane—which had been for so long the principal product—decreases, it is most important that the production of other crops should be stimulated. It will be long, doubtless, before the loss of sugar can be compensated for by the gain in other products, but the rate of increase in the output of the latter is greater than the rate of decrease of the former, an encouraging circumstance for which fruit deserves the largest share of credit.

The decrease in the acreage of land under cane cultivation during the past year has been 313 acres as compared with the preceding year, and 477 as compared with the average of the four preceding years. The decline in the cultivation of the cane has been gradual but persistent. Thus 20 years ago the acreage was 48,246, 10 years ago it was 40,515, and now it is 30,971. The decrease in the period mentioned has thus been 35 per cent.

Coffee during the year was under cultivation to the extent of 23,643 acres, being 120 acres more than in the year before. In 1871 it was 17,626 acres, so that the area occupied by it has increased 34 per cent. in the quarter century.

Similarly large increases have taken place in the areas under cultivation in ginger, tobacco, cocoa, &c., and other minor products during the past 25 years, amounting, the Collector General reports, to 43 per cent., and he adds that if bananas be taken into account the increase has been no less than 61 per cent. —a very remarkable growth. Perhaps a simpler method of showing how steadily other products are compensating for sugar is to refer to the relative proportion which the export of that staple bears to the total exports of the Colony. Thus in 1875–76 the value of the island's exports was 1,440,080*l.*, sugar being 31·6 per cent. of the whole. In 1885–86 the value of the exports was 1,280,118*l.*, sugar being 15·9 of the whole, and in 1895–96 the total value of exports was 1,873,105*l.*, to which sugar contributed only 11 per cent.

One of the principal features of the year in the way of agriculture has been the large increase in the output of oranges. The number shipped was no less than 97,025,398, of the estimated value of 169,794*l.* This is said to be over 12 millions more than were shipped in the four preceding years put together. Jamaica thus continues to benefit by the blizzard which destroyed the Florida groves in 1894, but growers have much to learn yet in the way of cultivating the fruit, and in placing it in good condition on the market. The area under cultivation in bananas has increased by 319 acres during the year, and that under cocoa and ground provisions by 133 and 631 acres respectively. With regard to the last named, it is still remarkable that notwithstanding

the rapid increase of population the area under cultivation of the principal food of the people has so slightly increased. The cause is probably mainly attributable to the absence of many of the male members of the community from their homes working on the railway extensions. Possibly, too, it may be accounted for to some extent by the people acquiring a taste for imported foodstuffs, of which such large quantities have been imported during recent years.

The year has not been a prosperous one for those whose interests lie in the pastoral industries of the Colony. The disease among cattle, although not so destructive in particular places as it was last year—owing, perhaps, to the means for checking it becoming better understood—has been more widespread; and there is scarcely a parish which has not suffered more or less severely. It became increasingly evident during the year that some steps should be taken to endeavour to ascertain the precise nature of the disease and the means of eradicating it or, at least, of mitigating its ravages. Since the year under review closed, the services of an eminent veterinarian have been secured to examine into and advise on the subject, and the result of his inquiries are looked forward to with interest by all who have the welfare of the Colony at heart. That the industry specially affected by the disease is one of much importance to the Island may be judged from the fact that the lands devoted to pastoral purposes now extend to an area of considerably over half a million acres.

Education.

It has been customary hitherto in this Report to compare the results of the year under review with that of the preceding year only. As, however, it will be interesting to show as far as possible the effect of the passing of the Education Law of 1892 which abolished school fees, statistics are given in the following table for the last five years:—

Year.	Schools on Government List.	Schools Inspected.	Scholars on Books.	Scholars in Average Attendance.	Per-centage in Average Attendance of Number on Books.	First Class Schools.	Second Class Schools.	Third Class Schools.	Failure.	Not examined.	Fees.	Grants-in-aid, including Building Grants.
											£ s. d.	£

It will be seen that the number of scholars on the books in 1895–96 has been less by nearly 3,800 than in 1894–5; that the average attendance has been less by 2,070; and that the per-centage of average attendance has fallen from 60·09 to 59·41.

These results show that, as was suspected, the rapid rise which took place on the inauguration of the new system in 1892 was not stable and that the eager desire at first displayed by parents to take advantage of free education has not been sustained.

The Superintending Inspector of Schools does not, however, attribute this change altogether to fickleness on the part of the people, and he considers that the reduction of the age limit, and drought and failure of crops in some parts of the island, have done much in the way of decreasing the attendance. While admitting the falling off in the last three years, Mr. Capper points out that the advance in the number of scholars enrolled and the average attendance recorded by this year's figures over those of four years ago show a much greater rate of advance than the previous 10 years, and that the regularity of attendance, which in 1891–92 showed no improvement over 10 years before, now shows an increase in the ratio of 59½ to 55, and he adds that, "so far as we "can judge from this year's figures, the legislation of 1892 has "on the whole considerably accelerated the rate of educational "progress."

The considerable decrease in the number of schools, which averages about 2½ to each parish, is mainly attributable to the falling off in the attendance below the number which would entitle them to Government aid. Some few schools have been struck off the list on account of inefficiency.

Although the number of first class schools has slightly fallen, it is satisfactory to note an increase in the number of those of the second class.

The annual examination of teachers and Training College students, held in December, 1895, resulted in the passing of five teachers out of 17 candidates, and of 136 students out of 152 who presented themselves, viz.:—

—	Presented.	Passed.
1st Year - - -	60	53
2nd Year - -	51	47
3rd Year - -	41	36

There are now 339 certificated teachers, while 38 more have passed and will receive certificates after the prescribed period of probation.

The examination of pupil-teachers and volunteers, in connection with the general elementary educational system, was also conducted, with the result that 664 passed, out of 1,525 presented, or 43 per cent., showing a decided improvement on last year, the

candidates being greater by 407, and the per-centage of passes 43 as against 35.

In January, 1896, the new buildings of the Mico Institution were opened and have proved satisfactory. The matter of introducing agricultural and industrial training there is engaging the attention of the Board of Directors. At the same time the old Mico buildings were taken over by the Government, where the previously existing boys' school is continued, but which will shortly be converted into a model school for hand and eye training. With this object the Board of Education is now taking steps to secure a manual teacher from England and a kindergarten mistress for the infant school.

Training College for Girls at Shortwood.

The report on this institution is satisfactory. There were 22 students on the 1st of April; the number was increased to 30 in October, 1895. Twenty-two were presented for the certificate examination in December; of these, one passed in the first class, ten in the second, nine in the third, and two failed. Altogether nine students passed out in December, and all found employment at once.

Industrial Schools.

Shortwood Industrial School.

This is a girls' school, at which there were 35 inmates at the commencement and 36 at the end of the year, one of whom was on license.

Of these, 24 were under 12 years of age. The employment includes making, mending, and washing of clothes, baking, light field labour, and house work.

Hope Industrial School.

There were 27 boys in the institution both at the commencement and end of the year. Their chief occupation is working in the Botanical Garden at Hope, where they receive practical lectures daily. The elementary school at which the boys are educated was rated second class at its examination. The examination included questions in agriculture and horticulture at the Gardens, including vine culture, budding, watering, pruning of cocoa, and those properties of shape, symmetry, &c., upon which much of the value of a tree depends. The Inspector expressed his gratification at the excellent results of the training received.

Alpha Cottage.

This institution, which is under the control of the Roman Catholic Church, is maintained for both boys and girls. At the commencement of the year there were 45 of the former and 43 of the latter, and at the end 49 and 44 respectively.

The employment is chiefly in garden and field labour on the boys' side, and in laundry and domestic work on the girls'.

At the examination both the boys' and girls' schools passed first class, with 64 and 68 marks each respectively.

Belmont Orphanage.

There were 12 children in this Home, which is under the direction of the Bishop of Jamaica and members of his family. Their education is provided for at a neighbouring school—St. Jude's day school. The employment of the children includes straw plaiting and needlework. The former is stated to have been in great demand, as many orders for hats and baskets having been received as could be supplied.

Botanical.

The increased interest which is being taken in agriculture and the growing desire to improve the quality of the island's products have naturally had their effect on the Botanical Department, increasing the demand for instruction and for plants. During the year an orange experimental garden has been started near the Hill Gardens at an elevation of about 3,700 feet, with the view of testing the result of proper cultivation of an orange grove in suitable soil and climate and of supplying the demand for plants. Other citrus fruits have also been planted out here. A large number of budded and grafted trees have been imported from Florida, and from Rivers, in England, who supplied growers in Florida and California when the cultivation of this fruit was beginning.

The distribution of economic plants has been continued with success throughout the year, the number reaching 31,605 to which Liberian coffee contributed over 17,000, and oranges 6,400. Of ornamental plants 6,955 have been sold, while the free grants of plants have amounted to 4,820. The total has thus been 43,380.

The services of the superintendent of the Hope Gardens for lectures on cultivation, with practical illustrations in the country districts, are more and more in demand. I wish it were possible to arrange for more of these demonstrations. They are much appreciated by the small settlers, and I am convinced will prove of value in adding to the income of the island much of the large sums that are annually lost by reason of the unintelligent methods of cultivation adopted and the imperfect curing of crops.

The several gardens and plantations have been maintained in a state of efficiency during the year. They are all situated in picturesque positions, and are a source of attraction both to residents in the Island and to visitors.

The Hill Garden, 5,000 feet above the sea, is at present difficult to reach, but the new system of mountain roads will make it more accessible.

JAMAICA 1895-6.

Good work is being done at the Hope Garden in training boys as gardeners and agriculturists. These lads have been committed to the Industrial School established there, and which is under the control of the Director of Public Gardens. It is hoped that when they leave the school they will be able to obtain situations as gardeners, and may also be able to impart to others of their own class the instruction they have received.

Immigration.

Two ships arrived during the year, bringing together 1,167 immigrants. Of this number 30 had previously served in this or other Colonies, and had returned to India. All but nine of the adults, one of whom died after arrival, were found fit for allotment as agricultural labourers.

348 souls, equal to 316¼ statute adults, left for Calcutta in the "Moy" on the 18th May 1895. 99 adults who had claimed and were entitled to free passages did not present themselves, and the ships had to be despatched short of the full complement. The amount of 3,139*l.* 19*s.* 9*d.* was taken away in Treasury Bills by 89 families. A further instance of the prosperity and thrift of the East Indian population is shown in the increase of Savings Bank depositors compared with 1894 of from 793 to 1,029 and of deposits from 13,958*l.* 10*s.* 10*d.* to 22,680*l.* 1*s.* 11*d.*, notwithstanding the closing of several accounts by coolies.

Remittances to India were 59 for a total of 185*l.* 10*s.* 10*d.*

194 letters by immigrants were despatched to India through the Immigration Office, and 146 received from India.

The births numbered 112, the deaths 77, being per-centages of 3·40 and 2·34 respectively, the rates for the previous year having been 2·67 and 1·83. Four deaths were due to murder, two to executions, one to an accidental burn, and two to suicide.

Of the four cases of murder, one, that of a coolie headman, had not been tried when the year closed. The other three were wife murders, two on account of jealousy, the other owing to the wife having told her mother the husband had stolen money belonging to her.

Of the two suicides, the motive of one was not ascertained, the other was due to jealousy of a concubine.

So many cases of homicide, four being directly traced to jealousy, had never occurred in the Protector's experience in any one year. As a preventive measure, a circular was issued to employers asking them to telegraph all cases of jealousy among their immigrants, so as to enable steps to be taken in time to prevent murders, and six coolies have been permanently removed to other estates and one temporarily. It is hoped that the recent Law 22 of 1896, to regulate immigrants' marriage, divorce, and succession, will also act beneficially in this direction.

At the close of the year 30 East Indians, equal to 1·81 per 1,000, were undergoing imprisonment, almost all for crimes of violence, one was in the Lepers' Home and 52 were in the Lunatic Asylum.

In other respects the condition of the East Indian population has been satisfactory, and the depression in the sugar industry has had little if any effect on their average wages, the greater number being now employed on fruit-growing properties.

It is interesting to note that a high caste East Indian, formerly an immigrant, is now the possessor of over 2,600 acres of land and has been elected a member of the Parochial Board of Trelawny.

Emigration.

During the year 743 labourers left Jamaica for the Isthmus of Panama and for Carthagena, and 714 returned therefrom.

Government Savings Bank.

The number of depositors and the amount of deposits in the bank have been as follows in the last 10 years :—

Year.	Number of Depositors.	Amount of Deposits.
		£
1885–86 - -	16,320	363,292
1886–87 - -	17,047	363,481
1887–88 - -	18,510	393,250
1888–89 - -	19,444	408,213
1890–91 - -	21,747	423,011
1891–92 - -	22,824	428,348
1892–93 - -	23,902	417,978
1893–94 - -	25,533	457,924
1894–95 - -	27,045	453,875
1895–96 - -	28,385	464,737

The year under review shows an increase of 1,340 in the number of depositors and an increase of 10,862*l.* in the amount of deposits as compared with 1894–5.

In the above amount of deposits are included 14 deposit accounts for the following public funds :—

	£	s.	d.
1 Constabulary Reward Fund - -	76	5	10
1 Constabulary Pension Fund - -	2	14	10
10 Sinking Funds - - -	1,829	15	10
1 Smith and Beckford's Charity -	110	9	11
1 Turks Island - - -	643	0	7

There were also 327 accounts for trusts, charities, Chancery Administrator-General and bankrupt estates, amounting to a total deposit of 33,739*l.* 8*s.* 9*d.*; the remaining 28,044 accounts representing 426,740*l.* 19*s.* 9*d.* are all ordinary savings bank deposits; old savings bank balances, 1,585*l.* 4*s.* 2*d.*; surplus fund, 9*l.* 16*s.*, making a total of 464,737*l.* 5*s.* 8*d.*

Of the total number of accounts open at the end of the year, 19,929 were for 5*l.* and under, while only 1,343 were for over 100*l.*, the increase in the number of small accounts of 5*l.* and under being 1,217.

The assets of the bank on the 31st March last were distributed as follows:—

	£	s.	d.	£	s.	d.
Consols, 2¾ per cent. - - -				20,404	17	3
Inscribed Stock:—						
Canada, 3 per cent. -	27,908	0	8			
Cape of Good Hope, 4 per cent. - -	47,766	6	8			
Ceylon, 4 per cent. -	24,881	5	2			
New South Wales, 3½ per cent. - -	40,528	13	7			
Victoria, 4 per cent. -	32,043	1	0			
Jamaica, 4 per cent. -	9,900	0	0			
Queensland, 3½ per cent. -	9,974	14	0			
				193,002	1	1
Debentures:—						
Canada, 4 per cent. -	53,990	12	6			
New South Wales, 5 and 4 per cent. - -	60,997	10	0			
South Australia, 4 and 6 per cent. - -	52,431	2	6			
Victoria, 4 and 4½ per cent.	47,308	12	6			
Jamaica, 5 per cent. -	3,800	0	0			
				218,527	17	6
				431,934	15	10
Cash in Colonial Bank - -				32,802	9	10
				464,737	5	8

The accounts opened numbered 4,027 and those closed 2,709, the result being an increase of 1,340 in the number at the end of the year as compared with the number at the end of the preceding year.

The number of deposits amounted to 34,528 and withdrawals to 34,047, representing 240,542*l.* 12*s.* 6½*d.* and 242,251*l.* 8*s.* 4½*d.* respectively.

The expenses of management and interest credited to depositors amounted to 15,700*l.* 7*s.* 2*d.*, while the revenue realised was 16,716*l.* 1*s.* 1*d.*, thus showing a net profit of 1,015*l.* 13*s.* 11*d.* on the year's transactions.

The revenue compared with the preceding year shows an increase of 44*l.*

Trade.

If the prosperity of the Colony may be gauged by the increase or otherwise of the value of its business as indicated by its

importations, then it may be safely concluded that the prosperity of Jamaica has made considerable strides during the past year.

The value of the imports in 1894–5 was 2,191,745*l.*, while in 1895–6 it rose to 2,288,945*l.* 18*s.*, these figures being higher than in previous years, as will appear from the following table :—

Value of Imports.	£
1884–5	1,487,833
1885–6	1,325,603
1886–7	1,322,336
1887–8	1,695,605
1888–9	1,597,600
1890–1	2,188,937
1891–2	1,759,890
1892–3	1,941,481
1893–4	2,157,794
1894–5	2,191,745
1895–6	2,288,946

Of the total of 2,288,946*l.*, the value of imports for home consumption was 2,255,637*l.*, as against 2,190,712*l.* in 1894–95.

Taking the usual classification of imports under the heads of—

I. Live animals, food, drink, and narcotics;
II. Raw materials;
III. Manufactured articles; and
IV. Coin and bullion,

there appears under Head I. an increase of 51,197*l.*, and under Head III. an increase of 26,928*l.*; while under Heads II. and IV. there have been decreases as compared with the former year, in the case of the former to the extent of 2,525*l.*, and in the case of the latter to the extent of 10,675*l.* Food, drink, and tobacco, it may be stated, constituted 39 per cent. of the total entries for consumption; while manufactured articles were 57 per cent., raw materials 3 per cent., and coin and bullion less than 1 per cent.

The following statement shows the items of food supply which have principally contributed to the increased importations under this head as compared with 1894–95 :—

—	Increase in	
	Quantity.	Value.
		£
Bread and biscuit	916,054 lbs.	7,557
Butter and its substitutes	42,693 lbs.	1,810
Chese	30,032 lbs.	1,001
Flour	20,311 brls.	33,872
Corn	57,989 bush.	4,171
Corn meal	7,116 brls.	6,101
Peas and beans	2,661 bush.	998
Bacon	45,666 lbs.	1,903
Hams	31,674 lbs.	1,188
Rice	1,344,873 lbs.	2,771
Salt	767,595 lbs.	767

The importation of articles of drink has also been considerably above last year, and is shown by the following figures:—

—	Increase in	
	Quantity.	Value.
		£
Beer and ale - - -	27,614 galls.	5,523
Brandy - - -	385 „	192
Whiskey - - -	2,161 „	756
Wine - - - -	3,014 „	2,716
Tea - - - -	10,039 lbs.	1,004

The quantity of tobacco imported in the form of cigarettes increased by 24,983 lbs., but the value was less; of manufactured tobacco 1,325 lbs., and of unmanufactured 16,466 lbs. more was imported than in the year before.

The trade in live animals was not so brisk in the year under review as in 1894–5. Of horned stock only 955 were imported, as against 4,724 in the former year, the values being 5,158*l.* against 19,105*l.* Mules, however, increased from 101 to just double that number; sheep, on the other hand, fell from 302 to 27, the latter number being stock intended for breeding purposes.

The only item under Head I. in which there was marked decrease was refined sugar, the importation of which fell by 365,287 lbs. from the importation of 1894–95. This is said to arise from the fact that, anticipating an increase in the duty, larger quantities than usual were imported in 1894–95.

The decrease in the value of raw materials imported is principally caused by a decreased entry of coke and coals, which were 3,990 tons less than in the preceding year.

Of the various items coming under Head III.—manufactured articles—there are numerous instances of decreased importations as well as of increased entries, but the latter predominate, and the net increase mentioned in the earlier part of this report is the result. The following statement, however, shows the comparison with 1894–95:—

Manufactured Articles.	1895–96.	1894–95.
	£	£
Textile - - -	511,356	518,415
Metal - - -	198,339	185,897
Other - - -	566,909	545,364

The imports for the past three years were drawn from the several countries in the following proportions:—

—	1895–6.	1894–5.	1893–4.
United Kingdom - -	48·1	50·4	55·1
Dominion of Canada - -	7·5	8·5	8·8
United States - - -	41·8	36·8	33·3
Other countries - - -	2·6	4·3	2·9

The proportion from the United States continues to grow, and it may to some extent be accounted for, so far as the past five or six years are concerned at least, by the fact that an American firm of contractors engaged on the construction of an expensive line of railway have imported most of their supplies from America; but, even after allowing for that fact, there can be no doubt that the trade with the States is growing rapidly, and that American goods of many descriptions are gradually supplanting the English goods. This is to some extent due to greater enterprise on the part of the American manufacturers, but it is mainly the result of the greater facilities for trade with the United States, which, being so much the nearer market, enables traders here to carry on their business with a smaller capital, owing to cheap freight and frequent communication.

Turning now to the exports of the Colony, it is to be regretted that the value of these has again declined from the figures of former years, the difference as compared with 1894–95 amounting to 48,317*l.*

The following table gives the values of the exports for the past 10 years:—

Year.	Of Produce and Manufactures of the Colony.	Of British, Foreign, and other Colonial Produce and Manufactures.	Total.
	£	£	£
1885–86 - -	1,078,315	201,803	1,280,118
1886–87 - -	1,334,465	174,542	1,509,010
1887–88 - -	1,661,601	166,989	1,828,590
1888–89 - -	1,501,660	113,164	1,614,824
1890–91 - -	1,807,084	95,730	1,902,814
1891–92 - -	1,628,777	93,319	1,722,096
1892–93 - -	1,690,637	69,170	1,759,807
1893–94 - -	1,982,596	93,093	2,075,689
1894–95 - -	1,848,877	72,544	1,921,421
1895–96 - -	1,775,016	98,089	1,873,105

Taking the now recognised official classification into—

I. Live animals, food, drink and narcotics;
II. Raw materials;
III. Manufactured articles; and
IV. Coin and bullion,

it is found that a decrease under Head I. has occurred of 116,552*l.* The other three heads show an increase, but not sufficient to make up for the deficiency in the first class.

The following are the principal articles of which diminished quantities and values as compared with 1894–95 have been exported:—

——	Quantity.	Value.
		£
Coffee - - - -	10,738 cwts.	69,912
Bananas - - - -	457,965 bunches.	112,326
Sugar - - - -	7,765 cwts.	43,751
Rum - - - -	75,145 gallons.	22,878
Cigars - - - -	2,352 lbs.	1,176

The quantity of cocoa exported was 677 cwts. more than the preceding year, but a heavy fall of prices brought the value of the output down by 3,006*l.*

On the other hand the following articles improved:—

——	Quantity.	Value.
		£
Oranges - - - -	67,046,503	121,079
Grape fruit - - -	12,679 packages.	5,122
Ginger - - - -	2,001 cwts.	5,753
Lime juice - - - -	39,673 gallons.	1,118
Pimento - - - -	13,392 cwts.	6,091

The value of cocoanuts exported rose by 1,004*l.*, although the number exported was 700,048 less. It may be interesting to state as regards oranges that the total export in 1895–96 was 97,025,398, of the estimated value of 169,794*l.*, these figures exceeding the sum of the exports in the four preceding years by 12,062,754 in number and 44,319*l.* in value. The island is thus continuing to reap the result of the misfortune which befel Florida in 1894. The exports of raw materials call for little remark. Annotto, hides, lancewood, spars, and logwood, have all improved, while the output of fustic has declined.

Last year I noticed the appearance in the list of exports for the first time of dye extracts. The value of the export in 1894–95 was 3,126*l.* During the past year it rose to 27,965*l.*, of which the greatest proportion went to the United Kingdom.

The countries named below took the island's exports in the proportions set opposite their names during the past three years:—

—	1895–6.	1894–5.	1893–4.
United Kingdom -	27·6	27·1	26·7
United States - -	57·	58·1	57·3
Dominion of Canada -	1·6	1·5	1·7
Other countries - -	13·8	13·3	14·3

and the several staples of export and minor products bore the following proportions to the total exports in each of the years named:—

—	1895–6.	1894–5.	1893–4.
Sugar - - -	11·0	12·9	14·2
Rum - - -	9·3	10·1	7·4
Coffee - - -	16·0	19·3	17·3
Dyewoods - -	20·4	19·	24·3
Fruit - - -	29·9	27·9	26·6
Pimento - -	5·1	4·5	3·8
Minor products - -	8·3	6·3	6·4

The following table shows the exports of the principal staples of the Colony during the past 10 years:—

—	1885–86.	1886–87.	1887–88.	1888–89.	1890–91.	1891–92.	1892–93.	1893–94.	1894–95.	1895–96.
Sugar	Hhds. 16,460	Hhds. 23,043	Hhds. 24,524	Hhds. 16,163	Hhds. 20,994	Hhds. 21,210	Hhds. 18,591	Hhds. 24,149	Hhds. 23,452	Hhds. 22,994
Rum	Puns. 14,763	Puns. 24,126	Puns. 18,684	Puns. 13,749	Puns. 15,936	Puns. 17,049	Puns. 16,982	Puns. 14,612	Puns. 19,562	Puns. 18,811
Coffee	Lbs. 6,150,960	Lbs. 6,337,742	Lbs. 11,084,080	Lbs. 9,485,160	Lbs. 8,746,960	Lbs. 9,739,712	Lbs. 11,398,084	Lbs. 8,888,844	Lbs. 10,654,460	Lbs. 9,451,870

Fruit	£ 231,522	£ 215,583	£ 337,403	£ 303,910	£ 531,726	£ 288,159	£ 375,860	£ 527,474	£ 515,412	£ 493,722

Police

The allowed strength of the constabulary force at the 31st March 1896 was 777, and this number also represents the actual strength at that date. It is made up of 20 officers, 131 sub-officers, and 626 men.

Besides the regular force there were also 218 rural headmen of police, and 745 rural policemen, the total effective police force of the Colony being thus 1,740 of all ranks.

The rural police are reported to be of much assistance to the regular force in the outlying districts.

Sixty-eight men were enlisted during the year, 40 were discharged, 16 were dismissed, and 8 died.

The year witnessed the inauguration of the system of strengthening the ranks of the sub-officers by the addition of men from the Royal Irish Constabulary. Three of these European sub-officers were selected for service here and have been stationed at important points. It is hoped that they will not only exercise an improved discipline over the men, but that they may be an example to native sub-officers as to the manner in which their duties as such should be discharged.

I am glad to observe considerable improvement among the police in their musketry practice. Four hundred and seventy-seven trained constables and 99 recruits fired the annual course during the year. The firing of the recruits is reported to have given the best average for the last five years. Forty-two sub-officers and men qualified for prizes during the year.

The following statement shows a portion of the duties performed by the police during the past five years:—

——	1891–92.	1892–93.	1893–94.	1894–95.	1895–96.
Number of persons arrested on view and on information.	6,558	6,923	8,237	7,781	8,775
Number of persons apprehended on warrants.	1,645	1,802			
Number of search warrants executed.	116	102	122	150	151
Number of persons summoned.	17,588	18,896	19,212	19,249	20,279
Number of persons subpœnaed.	28,267	28,766	29,808	30,673	31,058
Number of seizures under revenue laws.	325	440	399	437	649
Number of post-mortems ordered.	460	432	594	603	610
Number of prisoners escorted.	9,638	10,570	8,599	8,224	9,911

The table shows an increased amount of duty performed, the most remarkable increase being under the head of seizures under the revenue laws. This is the result of special activity on the part of the police in detecting cases of rum-stealing. In order to

protect the revenue, the Law provides for the imposition of a penalty on any person found in illegal possession of rum on which the duty has not been paid. There has been good reason to fear that the offence—stimulated perhaps by an increased duty—has greatly increased, and the police have been warned to use all proper means to detect cases. The increased figures in the foregoing return may be taken as an indication that they are alive to their duties in this respect.

Turning now to offences against the person, with which the police have had to deal during the year, it is satisfactory to note that there were 7,040 arrests only as against 7,302 the year before. Of these 12 were charges of murder (including infanticide). This is two more than in the previous year. But under the head of accessory to, attempt to, and soliciting to commit murder, the figures have risen from 6 in 1894–5 to 19 in 1895–6, while the cases of manslaughter have risen in the same period from 3 to 20. Of the murder cases, seven resulted in convictions, two of them being reduced to the less grave charge of manslaughter. Five of the same were committed by coolies—jealousy, as usual, being the cause.

The crime of cutting and wounding has greatly increased, a feature of the criminal returns of the year which it is not agreeable to contemplate. For this offence the arrests in 1892–93 were 684, in 1894-95 they were 694, while in 1895-96 they were 847. The Inspector-General of Police attributes this increase to the dangerous fights which occur as the result of drink, or through jealousy or land disputes. As regards the first, it is probable that when the large gangs of labourers from different parts of the island engaged on the construction of the railway were paid, they indulged too freely in drink, and, as a usual consequence, engaged in fights. The second and third causes have always existed and they can scarcely be held to account for the large increase referred to. The resort of large numbers of labourers to Colon and other portions of Central America from time to time for work on the canal and elsewhere, and the bad habits they there acquire, has, no doubt, had much to do with the increase in cases of cutting and wounding. Whatever the cause, the fact is to be much regretted.

Assaults on the police were 351 against 349 in 1894–95, while cases of obstructing the police in their duty were 57 as against 75 the year before.

Of offences against property, committed with violence, the number rose from 326 in 1894–95 to 429 in 1895–6. The convictions were 245 this year as against 184 in the year before. Of offences against property, committed without violence, the number was 5,004 as against 4,079 in 1894–95. To this increase prædial larceny contributes no less than 1,560. It is hoped that the legislation dealing with this subject passed during the session of the Legislative Council in 1896 may go far towards checking this growing evil.

The number of habitual criminals under police supervision during the year was 1,250. Three hundred anl eighteen habituals were re-convicted in 1895–96. In 1894–95 the number was 252.

The Inspector-General reports that the discipline of the Force has been maintained, and he has written favourably as to the manner in which officers and men have discharged their duties. As legislation proceeds and as the population grows, these duties become heavier, and it is creditable to the Force, which gets less sympathy from the general public than it is entitled to, that so much good work is got through year by year with so little friction.

There are calls for new stations in many parts of the island, and it has become necessary to obtain the authority of the Legislative Council to increase the Force by 75 men. This will enable something to be done in the way of meeting the demand for police protection in parts of the island which are in need of it, and will tend, it is hoped, to an increased observance of law and order throughout the community.

Prisons.

The daily average number of prisoners in custody during each of the past five years, and the number on the 31st March of each year, *i.e.*, the day on which the financial year ends, were respectively as follows :—

Year.	Daily Average Number in Custody.	Number on 31st March of Year.
1892 - -	940	988
1893 - -	1,004	964
1894 - -	1,008	943
1895 - -	916	957
1896 - -	1,008	1,094

On the 31st March 1896 and 1895 there were also respectively 26 and 9 persons under detention in local lock-ups, for periods of 14 days and under.

The following Return gives some of the other main statistics of the Department for the year 1895–96 as compared with those the previous year :—

—	Year ended 31st March	
	1896.	1895.
Commitments :—		
To prison - - - -	4,289	3,654
To lock-ups - - - -	818	575
Total - - -	5,107	4,229

	Year ended 31st March	
	1896.	1895.
Re-convictions - - - -	1,717	1,210
Deaths :—		
General Penitentiary - - -	10	10
Other prisons - - -	12	15
Total - - -	22	25
Executions - - - -	5	1
FINANCIAL.	£ s. d.	£ s. d.
Gross expenditure - - -	19,292 4 10	18,531 15 1
Gross earnings in cash - -	5,606 11 0	5,688 8 7
Net cost of maintaining prisons -	13,685 13 10	12,843 6 5
Cost per prisoner - - -	13 11 6½	14 0 5
Estimated value of labour yielding no return.	5,658 2 0	4,667 13 2
Estimated value of bricklaying work and stone quarried (General Penitentiary).	4,294 16 1½	4,238 15 0
Washing and repairing (General Penitentiary).	1,086 11 1	1,742 14 5

The number of deaths per 1,000, reckoned on the basis of the average daily number of prisoners in custody was 18·48 in the General Penitentiary, compared with 19·08 last year. In the other prisons, 25·7 in 1896, 38·26 in 1895. The numbers in 1894 were 37·8 and 61·8, thus showing a continuous lessening of the death-rate for the three years in question. The greatest number of sick persons in the penitentiaries during 1896 who were treated in hospital on any one day was 16, and of persons treated outside the hospital 39. The average per-centages were 6·7 and 26·2 respectively.

Discipline has been well maintained in the prisons and the mark system at the penitentiary continues to work satisfactorily. Religious services have been regularly conducted at the several prisons, and school held at the General Penitentiary and St. Catherine and Falmouth district prisons.

The several prison buildings are reported as being in good order. Two new ranges of cells were completed at the St. Catherine's district prison, and the site for the further extension of that prison acquired. When completed, the closing of the few remaining district and short term prisons will follow (one short term prison was closed during the year) and prisoners hitherto committed to them will be sent to the St. Catherine district prison, the Middlesex and Surrey County Gaol or the local lock-ups.

Reformatories.

Boys' Reformatory.—On the 31st March 1896 there were 207 boys in the reformatory at Stony Hill, as compared with 200 on

the 31st March 1895. Of these 207, 120 belonged to the Reformatory and 87 to the Industrial School section. The daily average number of boys in 1894 was 206; 1895, 199; and 1896, 203.

Of 169 boys discharged during the three years in question, as far as known, seven, or 4·15 per cent., were reconvicted and sent to prison during the year 1895–96.

There were three boys out on license at the end and nine at the commencement of the year.

The following are the other main statistics of the institution for the year:—

	£	s.	d.	£	s.	d.
Gross expenditure - - -				3,707	4	0
Less earnings by labour and sale of articles -	549	7	11			
Less reimbursement from parishes for Industrial School children -	1,148	14	9			
				1,698	2	8
Net cost - - -				2,009	2	2

	d.
Gross cost per head per diem - -	11·97
Net cost per head per diem - -	6·49
Gross cost of superintendence per head per diem - - - -	5·15
Gross cost of diet per head per diem -	3·07

	£	s.	d.
Work done for customers and produce sold - - - -	462	19	9
Work bringing no money return -	999	13	2
	1,462	12	11
Rewards paid - - - -	38	3	0

Marks awarded school, 59, making it a good second-class one.

The usual religious services were conducted during the year.

The boys were actively employed during the year under trained superintendence in garden and field labour (part of which was for hire on neighbouring properties) and at carpenter's mason's, bricklayer's, blacksmith's and tailor's work. They also did the usual cooking, baking, &c., of the institution, and baked for the Girls' Reformatory and Hope Industrial School.

The boys on their discharge are provided with an outfit for the trades they have been taught.

With the exception of several mild cases of influenza, chicken-pox, measles and fever, which were also prevalent in the neighbourhood, the health of the inmates was generally satisfactory.

Girls' Reformatory.

On the 31st March 1896 there were 22 girls in the Reformatory at Admirals Pen, as compared with 25 at the commencement of the year. The daily average number was 23, against 27 in 1894-95. There are no girls out on license.

The gross cost of each child was 1*s.* 8*d.* per diem, in 1895 1*s.* 6½*d.*; the daily cost of superintendence 7·8*d.*, and of diet 4*d.*

The total cost of maintaining the institution was 701*l.* 7*s.* 3*d.*, but after deducting reimbursements from parishes for industrial school children, and the value of work done by the girls, the actual cost of the institution was only 415*l.* 17*s.* 11*d.*

The girls were employed as usual in cooking, preparing starch, making, washing, &c., their own clothes, making up underclothing for the boys at Stony Hill, and clothing for immigrants.

Divine service is regularly held, and prayers are read daily. The health of the girls during the year has been exceptionally good.

Vital Statistics.

There has been a net increase of population during the year of 11,126, being a rate of increase of 17·3 per 1,000 persons living, against an increase at the rate of 17·1 per 1,000 in the previous year. The total population at 31st March last is estimated at 694,865 souls, or an addition of over 55,000 since the census of of 1891.

The mean population for the year 1895-96 is taken at 690,667, and the rates for the year are calculated on that basis.

The number of marriages during the year was 3,242, equal to a rate of 4·6 marriages per 1,000 of population. Last year the rate was 5·3, while in the year before that it was 5·5. Indeed the rate has been lower in 1895-96 than in any one of the past five years.

Of the persons married 48·6 per cent. signed the marriage register by making their mark, more bridegrooms than brides being able to sign their names.

Ten years ago 55·8 per cent. signed by mark. In so far as this may be regarded as an indication of educational progress, it would show a slow rate, but the improvement has all been in the last five years only.

The births during the year have been 26,842, or a rate of 38·8 per 1,000 of the mean population. Of these no less than 16,331 were illegitimate, or a rate of 60·8 per 100 births. It is curious how the returns of illegitimacy vary in the different parishes; *e.g.*, in St. Andrew the rate is 53·8, while in St. Mary, the adjoining parish, it is 65·6, and in St. Thomas, adjoining it on the other side, it is 73·7. The influence of a less indulgent public opinion on this subject, which may be hoped for as a result of education, will ere long, I trust, have a beneficial result in bringing about a less discreditable state of things.

The deaths registered in the year numbered 15,716, the rate per 1,000 of mean population being 22·7. This is a somewhat heavier mortality than in 1894–95 when the deaths were 14,321. Of the total deaths 30·5 per cent. were those of children under one year of age, while 43 per cent. were of children under five years, or, to put the matter in another light, 17·8 of every 100 children born failed to reach one year, and 25·4 died before they were five years old.

The Registrar-General has endeavoured to test, from the statistics of his department, the correctness or otherwise of the impression that the prevalence of illegitimacy is a principal cause of high infant mortality. It is found that, so far as Kingston is concerned, the impression is not well founded. Of every 100 children born legitimate 27·5 died under one year, while of every 100 illegitimate 22·4 died under one year. Taking the rates for the whole island, however, 15 of every 100 legitimate births died under the age mentioned, while 19·6 of each 100 illegitimates died within a year.

The returns of deaths not medically certified show a strange apparent unwillingness on the part of the mass of the people to avail themselves of the medical aid now so easily obtainable. Of the 15,716 deaths in the year 11,688, or 74·3 per cent., were registered without medical certificate as to the cause of death having been obtained.

DEPENDENCIES OF JAMAICA.

In the Dependency of the Cayman Islands the total births in Grand Cayman during the year were 45·6 per 1,000 and numbered 170, of which 12, or 7 per cent., were illegitimate.

The deaths were 26, being an annual rate of 6·9 per 1,000 of the population.

In Cayman Brac and Little Cayman the births were 33, seven being illegitimate, and the deaths five.

The marriages in Grand Cayman numbered 21, and in the smaller islands two.

General.

Although the year was not one of special prosperity it cannot be said to have been one of depression in the Island generally. No doubt some industries have not been so fortunate as in previous periods, but others have been prosperous. Trade has not declined, although it has not largely increased in volume. The value of the imports of the Colony has again risen above that of any previous year, showing that the purchasing power of the population has not diminished.

The construction of the railway to Port Antonio has been vigorously prosecuted, and a part of this extension was completed during the year. When the year closed (31st March 1896), the work was well advanced and nearing completion. The line to Montego Bay (which was finished early in 1895) has enabled the

postmaster to double the mail service between Kingston and the western part of the island, and private parties have, with commendable enterprise, initiated a coach service connecting with the railway the towns in the west which the line does not reach. The people are undoubtedly beginning to recognise the value, and to take increased advantage, of improved means of communication, and I have no doubt that in Jamaica as elsewhere postal facilities and conveniences for travel both by road and rail will tend to their moral as well as their material advancement. In the towns of the Island the municipal authorities are aiding in the general progress by the introduction, so far as their resources will allow, of those measures which tend either to the increase of comfort, the improvement of health, or the transaction of business. In some places the electric light and the telephone have been introduced. In Kingston these conveniences have long been available. Much attention is being given on all hands to sanitary matters, particularly in the provision of wholesome water. In Kingston the laying of the sewers in connexion with the sewerage scheme inaugurated some years ago was completed so far as the streets are concerned, and I had recently the pleasure of opening the pumping station in connexion with the works. The house connexions are now being rapidly made.

I regret that the hopes I expressed in my last report that the cattle disease had been checked and would shortly disappear, have not been realised. Although individual owners have not perhaps suffered so severely as in 1894, the disease has spread and most of the districts of the Island have been visited by it. Steps have been taken since the year closed to which this reports refers, to obtain the best veterinary opinion and advice on the subject. The result of the measures which may be adopted cannot, however, be now reported.

The demand for Jamaica oranges which has risen since disaster overtook the groves in Florida has been a great help to many of the country districts during the year. The number exported reached the considerable total of 97 millions, of an estimated value of 169,800*l.* The year before the value was only 48,700*l.*, while four years ago it was less than half that sum.

Persistent complaints of the prevalence of prædial larceny resulted in the passing last session of two Laws dealing with the subject, the enforcement of which will, I hope, check this long-standing evil.

The health of the Island was good during the year; the fears of an epidemic breaking out in Kingston by the turning up of the soil during the progress of the improvement works have proved groundless. We were fortunate, too, in escaping hurricane, earthquake, and other disasters which have not infrequently overtaken countries in these latitudes.

No. 198.

TURKS AND CAICOS ISLANDS.

(For Report for 1895, *see* No. 174.)

GOVERNOR Sir H. A. BLAKE to Mr. CHAMBERLAIN.

King's House, Jamaica,
April 28, 1897.

SIR,

I HAVE the honour to forward to you a copy of the Blue Book of the Turks and Caicos Islands for the year 1896, together with the Commissioner's Report thereon.

I have, &c.

HENRY A. BLAKE,
Governor.

REPORT ON THE BLUE BOOK OF THE TURKS AND CAICOS ISLANDS FOR THE YEAR 1896.

1. *Taxes, Duties, &c.*

There is no alteration to report under this head.

2. *Revenue and Expenditure.*

The revenue figure of 1896 is a long way the highest that has been reached since the Islands became part of the Colony of Jamaica 24 years ago, and the financial results of the year's working are very satisfactory.

The total sum collected was 9,707*l.*, as against 7,312*l.* in 1895 and 8,840*l.* in 1894, and exceeded the estimate by 1,921*l.*

This result is attributable to the large export of salt, with its correspondingly large return from royalty and light dues, and to increased importations, import duties having brought in the biggest sum as yet received in any one year under the existing tariff, while also the figures of most of the minor heads of revenue show an upward tendency.

The balance carried forward from the previous year was 4,540*l.* giving a gross revenue of 14,247*l.*

The total expenditure amounted to 7,383*l.*, being less by 164*l.* than the sum expended in 1895. Of this amount 7,125*l.* was ordinary expenditure (including an item of 796*l.* on Public Works),

against 6,849*l.* in 1895, and 258*l.* was for works and services of a special nature, the sum so spent in 1895 having been 698*l.*

The revenue collected within the year exceeded by 2,324*l.* the total expenditure within the same period. Of the sum so in excess, 500*l.* was invested by the Crown Agents in Victoria stock and 1,000*l.* advanced at bank rate, while 400*l.* was invested in Jamaica in Jamaica inscribed stock, and 600*l.* placed in the Government Savings Bank, leaving a working balance to carry forward to 1897 of 2,365*l.*, which, with the investments above mentioned and a further sum of 2,000*l.* which the Dependency had already to its credit invested, gives a total credit balance of 6,865*l.*

The attainment of such a result as the above, in a small barren group of islands like these, with a scattered West Indian population of under 5,000, who at the same time enjoy complete immunity from the payment of direct taxes, is a little notable.

3. *Assets and Liabilities.*

There was a balance of assets over liabilities on the 31st of December 1896 of 6,864*l.* 15*s.* 9*d.*

4. *Public Debt.*

The Dependency has no public debt.

5. *Municipalities.*

There are local boards, established by various legislative enactments, to deal with the following subjects; namely, health, quarantine, prisons, pilotage, salt ponds, education, and medical relief.

6. *Public Works.*

The total expenditure under this head was 1,053*l.*, divided as follows:—

	£
Department - - - -	64
Recurrent - - - -	731
Extraordinary - - - -	258
Total - - -	1,053

The office of Colonial Surveyor and Inspector of Public Works, which was done away with in 1881, was revived and filled at the close of the year by the appointment, for a fixed period of three years, of a gentleman from the Public Works Department of Jamaica, at a salary of from 250*l.* to 300*l.* per annum.

The recurrent vote was for the most part expended in general renovation and improvement of the Government property. Some portions of the roads outside the town of Grand Turk were also taken in hand and metalled for the first time in their history,

and the great general improvement in the condition of the roads within the township of Cockburn Harbour, which has been effected little by little during the past three years, was further continued.

Under the extraordinary vote the following new works were carried out:—

	£	s.	d.
Extension of warehouse premises, Grand Turk - - -	130	11	2
Latrines, Grand Turk - -	26	7	2
Completion of Custom House extension, Cockburn Harbour - -	23	13	3
Removal of shoals near the shipping place, Cockburn Harbour - -	50	0	0
Breakwater, Salt Cay - -	27	1	6

In view of difficulties that arose in course of construction, it was deemed wise to defer the continuance of work on the breakwater at Salt Cay until the Government could obtain professional advice on the spot. Now that a Colonial Surveyor has been appointed it will be again taken in hand.

7. *Legislation.*

Some important legislation took place during the year under review.

The following Ordinances were passed:—

No. 1.—The Supplementary Appropriation Ordinance.
No. 2.—The Red Salina Improvement Ordinance.
No. 3.—The Crown Lands Ordinance.
No. 4.—The Salt Pond Ordinance.
No. 5.—The Public Officers' Securities Ordinance.
No. 6.—The Annual Appropriation Ordinance, 1897.
No. 7.—The Post Office (Offences) Ordinance.
No. 8.—The Pilotage and Harbour Ordinance.

Some little excitement was occasioned by the introduction of the Salt Pond Ordinance, which was at first viewed with great suspicion as constituting an infringement by the Government upon existing rights of proprietors. After due discussion and explanation, however, these suspicions were calmed, and the measure, I am glad to say, finally passed without dissent. The Ordinance effects a much needed consolidation and revision of the different enactments settling the tenure of Salt Ponds (which are a very peculiar kind of property), and providing for their management and improvement, and the satisfactory conclusion arrived at of this important and somewhat long pending question is matter for congratulation.

The Red Salina Improvement Ordinance provides for the appointment of a Committee who are empowered to undertake the cleaning out of the main reservoir of that salina, a work which was last done in 1857, five years before the responsibility of management and upkeep passed from the hands of the Crown to those of proprietors of allotments. The Government provides the

funds in the first instance, and the sum expended is to be repaid by the proprietors in instalments, under penalty of the sale of their allotments on failure to meet their obligations. This special Ordinance was rendered necessary by the refusal of the Salt Pond Board (the body in which the care of the salinas is legally vested) to take the matter in hand. The question has been a vexed one for some years, and it became necessary to deal thoroughly with it. The Ordinance met with determined opposition during its passage through the Legislative Board, but now that the chief part of the work has been satisfactorily done, and the beneficial results of it have been seen, I may, I think, say that its provisions are viewed with less disfavour.

The Crown Lands Ordinance is another important measure by which the law in regard to the disposal and acquirement of Crown property is consolidated and set out in a clear and simple form, and conditional rights are also given to parties who can prove a *bonâ fide* occupation of land for 20 years prior to the commencement of the Ordinance. Fifteen old Acts and Ordinances are repealed by the new law.

The Pilotage Ordinance is also a consolidation, having for its object the expression of the existing law in a less ambiguous form, and its amendment in certain necessary particulars.

There remains still, however, considerable work to be done before the laws of the Dependency can be said to be in a thoroughly satisfactory condition.

8. *Legislative Board.*

There was no change in the composition of the Board during the past year.

9. *Civil Establishment.*

The Commissioner and the Judge of the Supreme Court did not leave the Dependency during the year.

Mr. A. W. Harriott, Assistant Commissioner at Grand Turk, was absent on vacation leave from 30th April to the 26th July, his duties being performed by Mr. E. C. Harriott, the clerk to the Commissioner, whose place was filled for the time by Mr. L. Lea Smith.

Mr. T. O'Connor, Assistant Commissioner at Cockburn Harbour, was also away on vacation leave from the 22nd May to the 29th June, the work of his office being carried on by Mr. W. A. Astwood, the Boarding and Revenue Officer of the settlement.

Mr. F. E. Todd, Corporal of Police and Foreman of Works, was also granted vacation leave for six weeks.

10. *Pensions.*

The pension list was reduced during the year by the sum of 88*l.* 16*s.*, in consequence of the death of the widow and one of the daughters of the Rev. J. Maxwell, formerly rector of the parish of St. Thomas at Grand Turk, and the marriage of a second

daughter, and increased by a pension of 20*l.* 1*s.* 4*d.* to a retiring police constable, making a net reduction of 68*l.* 14*s.* 8*d.*

The total sum paid in pensions was 532*l.* 4*s.* 2*d.*

11. *Foreign Consuls.*

The following countries are represented :—

United States of America.
Sweden and Norway.
Denmark.
France.
Spain.
Dominican Republic.

12. *Population and Vital Statistics.*

The population of the Dependency continues to increase, the births for the year being returned as 225 against 119 deaths. Of the births 60, or about 27 per cent., were illegitimate, two-thirds of which number are from the Caicos Islands. There were 61 marriages solemnized in 1896, as against an average of 39 for the five years 1891–5, a clear sign of the better times among the labouring population.

13. *Education.*

An inspection of all the Government schools was held during the year by an inspector from the Jamaica Education Department.

The school at Grand Turk, under the new teacher appointed in 1895, showed a great advance, and was ranked equal to a good first-class Jamaica school.

The results at the schools in the outlying districts were not so satisfactory, and some of the teachers employed have not turned out well. With, however, an improved teaching staff, which will be at work during the year, and the inspector's report, which goes carefully into all the weak points, as a guide, there is a hope of some progress being made. The great stumbling block to education here is, and always has been, the scanty and irregular attendance of the children, owing to carelessness on the part of the parents and their want of appreciation of the advantages offered them.

14. *Imports and Exports.*

The year's revenue from import duties is the largest that has as yet been collected under the lowered tariff in force since 1884, and exceeds the figure of the previous year by 743*l.* The principal increase is in spirits, which gave 293*l.* more than in 1895. The receipts under the heads of flour, sugar, salt meat, lumber, and ad valorem duties are also all noticeably higher, especially the two latter.

A further good feature in connexion with the return of imports for 1896 is that, with the exception of a small proportion of the

lumber, the whole are genuine importations in the regular way of business, and the figures are not swelled by any fortuitous entry of wrecked goods. Thus they may, I think, be fairly taken as denoting a pleasing state of well-being throughout the community.

The export of salt was well above the average, being 1,904,627 bushels, bringing in a royalty to Government of 2,778*l.*

The ground fishery salt trade with British North America, which is of great importance to Grand Turk, and latterly also Salt Cay, revived, 331,000 bushels going out in this form, as against 71,000 in 1895. The year was nearly a perfect one for the salt raker, and a large crop was gathered at each of the three ports, which leaves an abundant supply of the staple on hand to meet demands from the States before the new crop is gathered.

The price, too, for this full export remained firm at 7 cents a bushel, against the 5½ cents to 6 cents which obtained for so many years prior to the end of 1895, the cheering effect of which condition is very perceptible.

The export of sisal or Bahama hemp increases gradually each year, the value declared for 1896 being 1,047*l.*, and, in spite of low prices and unfavourable prognostications, the local parties engaged in this industry seem fairly well satisfied with their prospects.

There was nearly 1,000*l.* worth of sponge also exported from the Caicos Bank.

Comparative tables showing the trade and other statistics of the Dependency are attached.

Her Majesty's ship "Magicienne," from Jamaica, having on board his Excellency the Governor-in-Chief, visited the Dependency for a few hours in the month of May, calling first at Cockburn Harbour and subsequently at Grand Turk. There were no other visits by men-of-war.

With the exception of a barque loading salt at Cockburn Harbour, which dragged her anchors and went ashore in a

south-west gale, there were, I am glad to say, no wrecks or strandings of any consequence on the coasts of the Dependency throughout the year.

16. *Agriculture.*

The year was a very dry one, and the provision crops in the outer Caicos settlements were proportionately scant. The "hard time" was, however, tided over with the assistance of only a few barrels of meal from Government to the old people and little children. I think the Caiconians are beginning to learn to be a little more resourceful on these occasions, and the regular employment by the fibre companies at East and West Caicos is, of course, a great help to them.

An effort in a small way was made to revive cotton cultivation, which was formerly a considerable industry in the Caicos, by the distribution of good seed through the different settlements, and information as to the proper times and method of planting and of gathering the crop. The people can find a modest barter market at Cockburn Harbour for any small quantities that they may bring, and I am in hopes they may take to it to some extent. One party from Grand Turk has planted out 50 acres of land, and is at present seeking to buy Crown land, with the view of a more extensive cultivation, which it is to be hoped he may make a success.

17. *Mines, Manufactures, &c.*

The production of salt from sea-water by solar evaporation is, as is well known, the one dependence of these islands. There is little machinery used in the industry, but I may perhaps note under this head that at the Port of Salt Cay, within the last two years, American "aermotor" plant for crushing salt to produce what is called "ground fishery salt" has been successfully established and given much satisfaction, as being a good deal more cleanly than the steam engine and somewhat more economical.

There is also a move towards greater cleanliness of pans and reservoirs at Grand Turk, to which the Red Salina Improvement Ordinance may have to some extent contributed.

There has also, I am glad to say, been a step made towards the working of the undeveloped salinas of the Dependency, and I hope shortly to conclude a lease for one large salina at Cockburn Harbour, which should ultimately give a crop of over 250,000 bushels per annum.

18. *Grants of Land.*

A comprehensive Ordinance dealing with the subject of Crown lands in the Dependency was passed during the year, and the financial conditions have been happily such as to enable the office of Colonial Surveyor to be revived. It is thus now possible to arrange for systematic survey work, and for the prompt dealing with land applications, so that I trust in a few years' time the present condition of uncertainty as to area, boundaries, and title will no longer exist, and that the Government will possess accurate

plans of the chief towns and settlements, the need of which is much felt.

19. *Gaols and Prisoners.*

The total number of persons committed during 1896 was 27, of whom 9 were for safe keeping and 18 for purposes of penal imprisonment.

The daily average in the gaol was 2, a figure which speaks well for the general good behaviour of the population.

20. *Criminal Statistics.*

The total number of offences reported to the police or to the magistrates in 1896 was 222, against 193 in 1895.

Of the offences reported in 1896 :—

67 were for offences against the person.
2 „ „ prædial larceny.
12 „ „ offences against property other than prædial larceny.
141 „ „ other offences.

The total number of convictions in the inferior courts in 1896 was 165, against 132 in 1895.

These convictions are classified as follows :—

39 for offences against the person.
1 for prædial larceny.
6 for offences against property other than prædial larceny.
119 for other offences.

The convictions in the Supreme Court were as follows :—

1 for offences against the person.
1 „ „ „ property.

The acquittals were as follows :—

In the inferior courts - - -	- 48
In the Supreme Court - - -	- 1

21. *Hospitals and Asylums.*

There is no hospital or asylum. In cases of lunacy the patient is placed in gaol under medical supervision, and, if necessary, ultimately sent to the asylum at Jamaica. These cases have been somewhat more frequent of late years, and there are now five patients from here under treatment at Jamaica, costing the Dependency 137*l.* per annum.

22. *Meteorological Observations.*

There is nothing special to record under this head.

The rainfall was a good deal below the average, and at both Salt Cay and Cockburn Harbour there was for a short while some little fear of a scarcity of water.

There was, I am glad to report, no hurricane, and the hurricane months passed without any disturbance to cause anxiety.

The summer was, however, an exceedingly hot and trying one.

Tables of temperature and rainfall are appended.

23. *Savings Banks.*

The Government Savings Bank was opened in 1890. The attached statement shows its condition at the present time:—

Bank.	No of Depositors.		Deposited.		Withdrawn.		To credit.	
	1895.	1896.	1895.	1896.	1895.	1896.	1895.	1896.
			£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.

The number of depositors and amount of deposits have nearly doubled within the last four years.

24. *Post Office.*

The Post Office revenue for the year was 230*l.* 15*s.* 2*d.*, an increase of 30*l.* 16*s.* 3*d.* over the previous year's figure.

This sum does not include the value of stamps demanded by dealers and others abroad, which is brought to account under the head of Miscellaneous, and amounted to 947*l.*

A direct money order exchange with the other West Indies, through the medium of Jamaica, was established during the year.

Messrs. Pickford and Black's steamer from Halifax and the Clyde line steamers from New York continued to run throughout the year.

25. *General Remarks.*

The year 1896 was decidedly one of prosperity and progress.

A fine salt season gave an abundant crop of the staple, the price of which remained steady throughout the year at a figure that is acknowledged to be fairly remunerative.

The result was a good revenue, which has enabled the Government to strengthen its reserve and at the same time to meet two long felt wants by the appointment of a Colonial Surveyor and a second Medical Officer to be stationed in the Caicos Islands, which have never before been so favoured.

The greater attention to salt pond property, and the appearance in several directions of new buildings, with the execution of long delayed repairs to those already existing, is an indication of a revival of well-being which it is pleasant to witness.

The legislation of the year may also, I venture to say, be fairly pointed to as a step forward.

In closing this my fifth Blue Book report from here, it is a satisfaction to me to be able to record that the general condition of the Islands, which in 1893 I spoke of as seeming to me to give "fair promise for the future," has in the interval been so materially bettered.

EDWARD J. CAMERON,
Commissioner.

JAMAICA.

JAMAICA, 1896–7.

(For Report for 1895–6, *see* No. 190.)

GOVERNOR SIR H. A. BLAKE to MR. CHAMBERLAIN.

King's House,
Jamaica,
29th December 1897.

SIR,

I HAVE the honour to forward herewith my Report on the Blue Book of this Colony for the year 1896-7.

I have &c.,

HENRY A. BLAKE,
Governor.

REPORT ON THE BLUE BOOK OF JAMAICA FOR 1896-97.

LEGISLATION.

During the Session of 1897 the Legislative Council passed 39 Laws, of which the following are the more important :—

Law 3 of 1897.—A Law to enable the Parochial Board for the Parish of Trelawny to buy out the Falmouth Water Company.

Law 4 of 1897.—A Law to provide against the unlicensed manufacture of explosives. This Law provides that no explosives shall be manufactured without a license from the Governor in Privy Council.

15770—750—2/98 Wt 21020 D & S—5

JAMAICA. 1896–7.

Law 9 of 1897.—The Leper Asylum Law 1896, Amendment Law, 1897—which provides for the reception of lunatic lepers at the Lepers Home at Spanish Town instead of at the Lunatic Asylum.

Law 12 of 1897.—The Immigration Protection and Regulation Law, 1879, Further Amendment Law, 1897. This Law alters the terms upon which Indian immigrants shall in future be entitled to return passages. Instead of being entitled after the prescribed term of industrial service to an unconditional free passage back to the port from which he originally embarked, for himself, his wife and children, subject to the proviso that he claimed it within twelve months of the time when it was due, the Indian immigrant by this Law will be required to contribute one-fourth of such passage money in the case of males, and one-sixth in the case of females.

Law 14 of 1897.—The Military Telephone Law, 1897. The object of this Law is to enable the Governor within an area for which a license has been given already, to grant a special license to the officer commanding the troops and to the Colonial Secretary to erect a telephone for Government purposes.

Law 17 of 1897.—The Marine Board Law, 1896, Amendment Law, 1897. This Law was introduced to give effect to certain recommendations of the Board of Trade and under instructions from the Secretary of State for the Colonies.

Law 19 of 1897.—The Pound Law, 1897. This Law repeals the Law on the subject of Pounds. Many of the provisions of the repealed Law are obsolete and inapplicable. The present Law proceeds upon lines which are familiar amongst the people and effects requisite improvements.

Law 22 of 1897.—The Tramways Law, 1895, Amendment Law, 1897. This Law amends the Law of 1895 in some important particulars. It provides that if an extension of a license is refused at the termination of the period fixed in such license, the Government shall purchase the tramway, lands, buildings, &c. belonging to the licensees. It also gives authority to the Government of Jamaica as well as to the local authority to require the licensees to sell the undertaking at the termination of the license upon certain terms. It alters the basis of valuation which was in the principal Law estimated on the value of all lands, buildings, works, material, and plant, and provides that the valuation shall be arrived at by also estimating the value of the undertaking as a tramway, and by taking into consideration the cost of construction less depreciation. It also provides that the revocation of a license can only take place through the intervention of the Supreme Court, which is given the necessary power to deal with the matter.

Law 23 of 1897.—The Building Societies' Law, Amendment Law, 1897. Building societies in Jamaica are constituted under

and governed by the Act 28 Vict. cap. 17, which corresponds with the Imperial Statute 6 and 7 Will. IV. cap. 32, and the object of this Law is to place the Law in this Island on a similar footing to the Law in England.

Law 24 of 1897.—The Kingston General Commissioners' Law, 1897. This law abolishes five distinct sets of Commissioners, whose powers and duties were connected with the management of an equal number of public undertakings in Kingston and substitutes one body for the same.

Law 25 of 1897.—The Marriage Law, 1897. This Law amends and consolidates the existing marriage laws of the Colony, and removes the inconvenience of having to refer to several Statutes in order to ascertain the precise legal position upon the subject of marriage. Under this Law a marriage officer holds his appointment for the whole Island, and not for a particular parish, as has hitherto been the case.

Law 30 of 1897.—The Kingston and Liguanea Waterworks further Loan Law, 1897. The object of this Law is to increase and improve the water supply to Kingston and the Liguanea Plains. It empowers the Water Works Commissioners to raise by loan the amount required for the purpose of constructing additional filter beds and reservoirs and acquiring lands, &c.

Law 31 of 1897.—A Law to provide for the acquisition of lands for public purposes. Previous to the passing of this measure, there was no general law in the Colony enabling lands to be compulsorily acquired for public purposes. Each time land was required for any public undertaking a special law had to be passed embodying and incorporating with it the sections of the Lands Clauses Law, 1872, which might be considered necessary for the purpose.

Law 32 of 1897.—The Law Officers Law, 1897. This Law abolishes the offices of assistants to the Attorney-General, and in lieu thereof provides for the appointment of an officer to be called the Solicitor-General. Under this Law, the Attorney-General and the Solicitor-General will between them perform the duty of conducting all criminal prosecutions in the Circuit Courts, hitherto performed by the assistants to the Attorney-General.

Law 33 of 1897.—The West India Electric Company's Law, 1897. This Law provides for the incorporation of certain persons as a Limited Liability Company under the name of The West India Electric Company. One of the objects of the Company is to obtain a license under the Tramways Law to operate electric tramways through and in the neighbourhood of Kingston.

Law 39 of 1897.—The Vere Irrigation Law, 1897. The object of this Law is to constitute a commission with power to raise a certain amount of money on loan for the purpose of irrigating the fertile district of Vere in the Parish of Clarendon.

JAMAICA. 1896–7.

FINANCE.

The surplus general revenue brought forward at the commencement of the year was £78,117 and the revenue collected during the year amounted to £591,864, making together a sum of £669,981, while the expenditure (including £34,458 for sinking funds) amounted to £664,222, thus leaving at the close of the year a surplus of £5,759. Compared with the previous year, general revenue shows a net decrease of £54,239 and general expenditure a net increase of £24,258.

Parochial revenues, which are devoted to parochial roads, poor relief, sanitary and other local services, and are administered by the several Parochial Boards, produced £116,774, a decrease of £1,018; this does not, however, include the advances from general revenue in aid of these funds, which amounted to £21,122. Parochial expenditure amounted to £135,842 or £7,260 in excess of the previous year, the repayment of advances from general revenue, which amounted to £17,104, not being taken into account.

The revenue specially appropriated to the construction and maintenance of main roads, parochial roads, and the reconstruction of the streets of Kingston amounted to £43,767, a decrease of £232, and the expenditure to £41,522, an increase of £5,919.

Immigration revenues were £1,681, a decrease of £9,112, and expenditure £979, a decrease of £12,069.

The following is a statement showing the whole revenue realised in the year under review compared with the previous year:—

General Revenue.

Totals	778,813	825,134	20,104	66,425
Net decrease	—	—	—	46,321

The large net decrease in the General Revenue of £54,239 is almost entirely due to the falling-off in imports and rum duties caused by the depression in business to which allusion is made elsewhere in this Report. The only item showing an increase of any importance is Reimbursements, which amounted to £2,375 more than in 1895-96.

The revenue for parochial purposes, which generally varies according to the rates imposed, shews very little change; the increases are chiefly in the Gas Rates and Miscellaneous, and the decreases in Parochial Road Tax, Poor Rates, and Sanitary Rates.

The total of revenues specially appropriated for the construction and maintenance of main roads, parochial roads, and the reconstruction of the Kingston streets shews a very small increase. The new tax under the Agricultural Produce Licenses Law 37 of 1896 produced £3,685, while the Holdings Tax and Spirit Licenses together shews a decrease of £4,050.

JAMAICA. 1896–7.

The net decrease of £9,112 on account of Immigration Revenue is due to the fact that there was no importation of immigrants during the year.

The following is a comparative statement of expenditure :—

Totals	833,336	849,532	54,541	70,737
Net decrease ...	—	—	—	16,196

The net increase in the General Expenditure was £24,258. The more important increases are to be found under the following heads, viz :—Charges of Debt (£1,306) due to increased interest under Law 33 of 1894 ; Revenue Departments (£1,048) due to changes in the staff and annual increments of salaries ; Postal Service (£2,468) for the manufacture of Postage Stamps and expenses of new daily mail service ; Judicial (£1,488) chiefly in the Resident Magistrates' Courts and for meeting Crown witnesses, expenses ; Constabulary (£1,654) for increasing the force and providing the necessary additional accoutrements and clothing ; Prisons (£2,002) for meeting the cost of an increased number of prisoners ; Education (£2,270) for meeting certain charges in respect of the previous year, an increase for grants-in-aid and for printing and stationery ; Military (£1,761) for providing new arms and increasing the force ; Public Works (£12,684) for new works on public buildings and taking over Myrtle Bank Hotel ; and Miscellaneous (£1,267) partially due to the charge to this head of the grant made towards the Local Agricultural Society.

PENSIONS.

During the year pensions amounting to £2,187 18*s.* 2*d.* were granted under the provisions of Law 34 of 1885 and the Resolution of the Legislative Council dated 23rd October 1887, while the pension list was relieved by the death of pensioners to the extent of £875 3*s.* 6*d.*

DEBT.

No loans were raised during this year.

The public debt directly secured on General Revenue stood as follows at the close of each of the last ten financial years, after making allowance in each year for the Sinking Funds actually invested for the eventual redemption of the debt :—

	£	*s.*	*d.*
1887	1,491,993	3	9
1888	1,502,684	9	8
1889	1,506,883	6	0
1891	1,458,221	12	7
1892	1,520,088	4	3
1893	1,523,944	2	11
1894	1,672,299	14	6
1895	1,678,744	11	2
1896	1,666,177	14	3
1897	1,787,479	18	7

Of the total amount of debt on the 31st March 1897, £749,720 was on account of the purchase, reconstruction and extension of the railway to Ewarton and Porus, £126,500 on account of the Rio Cobre Canal, £167,000 for the erection of new bridges, and £33,900 for debentures on account of the Myrtle Bank Hotel, which has now been taken over by the Government.

In this sum of £1,787,479 18*s.* 7*d.* is included £146,000 raised for the reconstruction and conversion of parochial roads into main roads, and £102,680 raised under Law 19 of 1880 for the purposes of the several Kingston Commissions, which had been previously shown as part of the general debt of the Colony, but which it has now been decided to treat separately.

LEGISLATIVE COUNCIL.

A special Session of the Council was convened on the 16th June 1896, for the purpose of considering the question of obtaining the services of an expert to examine into and report upon the cattle disease then prevalent in the Colony.

This Session lasted only one day and the Council adjourned until the holding of its Annual Session, which took place on the 23rd February 1897.

The Session continued beyond the close of the year under review and finally adjourned on the 10th May 1897.

During that period the Council held 40 meetings.

PUBLIC WORKS.

The total expenditure of the Public Works Department for all purposes, including the cost of administration and supervision was £164,337 1*s.* 4*d.* The cost of administration and supervision was equal to nearly 12¾ per cent. of the cost of the work executed.

The main roads, bridges and public buildings throughout the Island were maintained in good order and improvements effected. The number of separate institutions and buildings the upkeep of which devolved upon the Public Works Department was 286 and the cost amounted to £10,748 10*s.* 9*d.*, including the maintenance of telegraph lines. The new works on public buildings performed by the department during the year cost £17,201 19*s.* 5*d.*, and consisted mainly of additional accommodation for courts and public offices, police stations, prisons, hospitals, and asylums.

The mileage of main roads, of which the upkeep is chargeable to General Revenue, was 892 miles 36 chains, an increase of 10 miles 48 chains over the previous year, and the total average cost per mile for maintenance and repair and improvements of main roads and bridges was £36 9*s.* 11*d.*, being 8*s.* less than in the preceding year. The total cost of these works was £39,577 8*s.* 10*d.*

The work of reconstructing parochial roads taken over under Law 17 of 1890 was continued during the year; the total lengt' taken over was 987 miles 78 chains. The average cost of maintaining these roads was £21 15*s.* 1*d.* per mile.

At the end of the year there were 70 miles 54 chains of main roads and 61 miles 18 chains of parochial main roads under maintenance by contract.

The construction of bridges authorised by Law 20 of 1892 was continued, and the expenditure during the year on this work was £12,155 3*s.* 10*d.* At the close of the year, 84 out of the 104 bridges authorised were completed.

The work of constructing the New Female Lunatic Asylum was proceeded with and extensive additions were made to the St. Catherine's District Prison.

During the year 7 miles 54 chains of the mountain road in St. Andrew under Law 13 of 1895 were practically completed.

The lighthouses at Plumb Point, Morant Point, Folly Point, and Negril Point, were maintained and worked with efficiency and regularity throughout the year.

The telegraph lines throughout the Island were maintained in a state of efficiency, and as far as funds were available the remodelling and the improving of the lines were continued.

RIO COBRE CANAL.

The revenue earned during the year was £4,189 19*s.* 2½*d.*, and the cost of maintenance was £2,214 6*s.* 0*d.*

The demand for water has largely increased, and in consequence the works are continually being increased.

JAMAICA. 1896-7.

The following statement shows the Revenue and Expenditure during the last five years :—

Year.	Expenditure.			Revenue.		
	£	s.	d.	£	s.	d.
1892-93	1,339	13	11	3,423	5	0
1893-94	1,238	13	4	3,302	13	11¼
1894-95	1,434	10	4	3,341	3	2½
1895-96	1,652	16	11	3,700	17	1¼
1896-97	2,214	6	0	4,189	19	2¼

CROWN LANDS.

During the year judgment was obtained against 16,342 acres of land which had been previously advertised as liable to forfeiture for non-payment of Quit Rents, and material relating to 26,180 acres liable to forfeiture was collected for publication. Including the lots recovered last year, 115 lots of land in the North-West of Kingston have been recovered under Law 43 of 1887 from the squatters who were in possession. These lots, together with premises known as Ryans Pen, which was handed over to the Government by the Mayor and Council in January 1897, comprise about 18 acres of land, and the Government are having surveys made with a view to improving this quarter of the city.

It is regretted that the scheme promulgated for the sale of Crown lands to small settlers does not appear to have been clearly understood, but there are indications that the people are now beginning to realise the advantages to be gained by the purchase of these lands.

A number of Casuarina trees were planted on the Morant Cays to replace the coconut trees which have nearly all died out, but it is feared that they have suffered badly by the drought.

LANDS FOR RAILWAY TRACK.

The acquisition of lands for the railway track is now practically completed. The expenditure during the year in acquiring these lands was £17,802. The total expenditure from 1890 to date has been £77,960 9*s.* 10*d.* for 1,160½ acres, and the average cost per acre of these lands has been £67 2*s.* 8*d.*

During the year 45,868 acres of land were transferred to the West India Improvement Company under Law 12 of 1889,

making a total of 70,356 acres or nearly 110 square miles, which have been transferred to the Company. There are still 6,444 acres due to the Company, which are now in process of forfeiture by the Government.

These lands are nearly all situated in the east of the Island, and are good cultivable lands, but badly served by roads.

RAILWAY.

The gross receipts of the Jamaica Railway Company for the year ended 31st March 1897, amounted to £98,479 12*s.* 11*d.*, and the expenditure to £71,279 12*s.* 4d., leaving a net revenue of £27,200 0*s.* 7*d.*

The receipts were made up as follows :—

	£	*s.*	*d.*
Goods and cattle	53,200	14	0
Passengers	38,497	12	5
Wharf	5,990	14	3
Miscellaneous	790	12	3

The number of train miles run amounted to 342,985, which gave an expenditure per mile of 4*s.* 1·87*d.* and receipts equal to 5*s.* 8·91*d.* per mile, leaving a net revenue of 1*s.* 7·04*d.* per train mile.

The number of passengers carried amounted to 384,611.

Interest was paid on First Mortgage Bonds to the amount of £33,203 4*s.*

POST OFFICE AND TELEGRAPHS.

The total Postal Revenue for the year amounted to £24,425 11*s.* 1¾*d.*, as compared with £23,569 16*s.* 9½*d.* in 1895-96, an increase of £855 14*s.* 4¼*d.* The Telegraph Revenue was £5,479 19*s.* 3*d.* against £6,156 9*s.* 6*d.* in the preceding year, a decrease of £676 10*s.* 3*d.* The net increase of the collections by the Department for the year was thus £179 4*s.* 1¼*d.* The increase on Postal Revenue over that of 1895-96 is considerably less than was the increase in either 1894-95 or 1895-96, as compared with the years respectively preceding them. This fact the Postmaster for Jamaica attributes in part to the serious depression in trade and agriculture during the year, a condition which still more markedly affected the Telegraph Revenue, though the extended use of private telephone lines was also a factor in the large decrease under the latter.

The following statement shows the revenue and expenditure for the year 1896-97, compared with the two preceding years :—

REVENUE.

Year.	Postal Revenue.

1896–97	5,193	12	7	2,681	8	9	9,841	2	11	2,289	1	8	5,317	17	1½	25,323	3	0½	7,556	8	5	32,879	11	5½

The increase under postages occurs chiefly on packet postage. This is attributed to increased opportunities for exchanging mails, of which 2,925 were conveyed outwards and inwards, as against 2,680 in the previous year. The increase under inland postages is attributed to the establishment of new district post offices, the extension of the daily mail service by the railway on the completion of the line to Port Antonio, and to the retention of the freight on parcels per mail coach under new contracts.

The increase in postal business generally is shown by the fact that 4,375,374 letters and postcards passed through the post offices against 4,121,644 in 1895-96. The increase in expenditure has been chiefly due to the increase in post offices, in mail services, and in postal business generally.

Mail Services.

Nine new services came into operation during the year in connection with the opening of new offices, and daily services have been established along the railway extension to Port Antonio and to places connected with it, as well as in other parts of the Island. There were also extensions of the parcels post system.

New Post Offices.

Twelve district post offices were established, making the number opened 142 against 130 in the preceding year; 37 new post offices have been established during this and the two preceding years.

Money and Postal Orders.

The following figures give the transactions of the three years in question :—

Year.	Money Orders.					Postal Orders.		
	Jamaica Issue.		From other Countries payable in Jamaica.		Total Amount.	Issued.		Sold.

1894-95 ...	12,472	15,489 17 6	1,822	4,955 12 10	50,445 10 4	131,825	22,286 17 6	22,097 4 0
1895-96 ...	13,116	47,242 13 0	2,194	5,441 1 1	52,683 14 1	151,770	26,721 17 6	26,383 3 0
1896-97 ...	12,548	43,963 16 8	2,711	7,050 4 1	51,014 0 9	171,035	26,857 10 0	26,577 10 0

The decrease on Jamaica money orders and the very slight increase on the face value of postal orders issued and sold may be due to the general depression; it will be noted also that the number of postal orders increased far more than the face value.

Mail Coach Service—Earnings.

	£	s.	d.
1894-95	2,616	7	0
1895-96	2,291	17	9
1896-97	2,345	1	9

The slight increase in 1896-97 is due to the establishment of four new coach services, previously established services having shown a decrease in consequence of railway extension and increased facilities afforded by coasting steamers.

Parcels Post.

The declared value of parcels was—

	£	s.	d.
1894-95	2,752	15	9
1895-96	3,002	1	8
1896-97	3,273	14	5

These figures show the increasing appreciation by the public of this convenient mode of conveyance of parcels. It is gratifying to state that notwithstanding the large number—17,113—of parcels dealt with, there has been no complaint received of loss or miscarriage of any.

Telegraphs.

The revenue and expenditure under this head have been given in the general statement. The number of messages sent and received were—

	No.
1894-95	105,719
1895-96	110,715
1896-97	96,292

The decrease in the year under review is probably attributable to depression in Agriculture and Trade.

Three telegraph stations were opened during the year.

The double current system of telegraphy introduced in February 1896 on two lines is reported to have worked very successfully during the year, and arrangements are being made for its extension to the entire "Western Main circuits."

Miscellaneous.

An auxiliary female staff of eight has been established at the General Post Office with the best possible results, the Postmaster states, to the Department and to the Public. Most post offices and the district telegraph stations are now conducted by women.

Seven additional street letter boxes have been established in and near Kingston, and the system of street delivery of correspondence has been inaugurated in Spanish Town.

AGRICULTURE.

I regret to report that the year under review was one of increased depression, both in Trade and Agriculture. Compared with the preceding year, the value of exports fell from £1,873,105 to £1,470,241, and of imports from £2,255,637 to £1,864,612, decreases of 22·5 and 17·2 per cent. respectively. The main causes of this depression were a long and severe drought throughout a considerable portion of the Island, accompanied by a falling off in prices. The drought caused a partial and in some districts a total failure of the crops. In localities like the parish of Manchester and the south-eastern part of St. Elizabeth where there are no rivers, and where the people depend upon tanks for their water supply, the distress caused by want of water as well as by the failure of crops was very keen, while a plague of caterpillars and other destructive insects accentuated the distress.

As a factor in producing depression in some districts, it may be mentioned that the peasantry in localities near the railway had to a considerable extent neglected cultivation whilst the extensions were in progress, and on their completion numbers were thrown out of employment, and had nothing to fall back upon.

Exports, except fruit and certain minor articles, fell off considerably both in quantity and value. Fruit generally showed an increase in quantity, but the total value was less.

The prices of sugar and rum were at their lowest, the value of the export for both being only £271,890 8*s.* 0*d.*, as against £360,059 9*s.* 6*d.*, a decrease of £98,169 11*s.* 6*d.* in value and in percentage of 24·5.

The quantities exported decreased from 390,918 to 321,468 cwt. for sugar, and 1,881,146 to 1,642,819 gallons for rum. Rum duties at the rate of 6*s.* the proof, equal to about 8*s.* 1*d.* the liquid, gallon, are placed on rum taken out of bond for home consumption. They fell from £140,078 to £124,523, a decrease by over 11 per cent.

The quantity of coffee exported fell from 84,391½ cwt. to 66,614 cwt., a decrease of 17,777½ cwt. or nearly 21 per cent. The values realised were respectively £284,822 and £210,946, a decrease of nearly 26 per cent. Ginger fell from 17,505 cwt. to 11,014, with values of £50,328 and £33,041 respectively, the percentage decreases being 37·0 in quantity, and 34·4 in value.

Fruit showed generally a decided increase in quantity, but prices were so low that lesser values have to be recorded in almost every instance. Thus the bananas shipped increased from 4,220,769 to 4,838,645 bunches, but the estimated value was £302,415 as compared with £316,569 in the previous year. Oranges were 103,702,775 in number as against 97,025,398, but the value shrank from £169,794 to £155,554.

The yield of fruit such as mangoes, which are not exported in any quantity but consumed largely in the Island, helped greatly to ward off distress in some districts, coming as it did at a time when root crops, cereals, and pulse, which could only be planted at a late season after the rains had fallen, had not yet reached maturity. Except in times of severe drought our people, wherever labour is scarce, and the export trade sluggish, subsist almost entirely on root and food crops grown around their own homesteads, and rear small stock, such as swine, goats, and poultry at little or no cost to themselves; hence a considerable shrinkage in trade with other countries does not necessarily indicate distress, though some difficulty may be experienced in paying taxes and church dues, and purchasing articles of clothing.

Foreign competition has during the year seriously depreciated the logwood industry, which is regarded in many parts of the Island as the great stand-by for keeping money in circulation. The quantity exported fell from 84,477 tons 12 cwt. in 1895-96 to 43,084 tons in 1896-97, a decrease of 49 per cent., and the value from £359,030 to £161,565, or 55 per cent.

The prices realised in Europe fell greatly, owing to large quantities of very superior woods having been received from South America and Hayti. The quantity of other woods exported showed in almost every instance a considerable increase, but this was insufficient to counterbalance the decrease on logwood.

Professor Williams, of Edinburgh, the veterinary expert referred to in the Report on Agriculture for last year, after a careful research into the cattle disease, reported that it was mainly due to a tick introduced by cattle imported from the American Continent. Stringent quarantine regulations have been adopted to insure that tick-infested or diseased cattle shall not be imported, and I am happy to say that the disease has almost disappeared.

Dependent as is the cattle industry upon the demands of the sugar properties, the future is not to be contemplated without a certain amount of apprehension, having regard to the precarious

condition of all but the largest sugar estates, but I am not without hope that an outlet may later on be found in Cuba for the splendid cattle bred in this Island. Turning to the many small property owners, there is a decided movement apparent for improvement in cultivation; to this end the Jamaica Agricultural Society is rendering valuable assistance, by lectures and practical demonstrations in various districts, by the institution of model farms, and by the importation of improved breeds of horses, swine, goats, and fowls.

Grape farms are being established in districts of St. Elizabeth and Westmoreland, and it appears evident that grapes can be cultivated for the American winter market, where at certain seasons remunerative prices can be realised. Experiments are also being made in the cultivation of cucumbers, tomatoes, garden eggs, &c., for exportation to the United States. A large number of orange plants, of choice varieties, have been imported from Florida and elsewhere. A soil supposed to be exhausted for ginger was treated with mixtures of Bert's manure and marl and other substances, giving a rich yield of that staple. This will restore to cultivation a large area hitherto abandoned as exhausted "ruinate." I have reason to hope that the efforts now being made to improve and develop what have been considered as minor products, will result in the production of valuable exportable produce.

BOTANICAL.

The operations of the Botanical Department were conducted with vigour during the year. The head station is now at the Hope Garden, which is the chief distributing centre. As an indication of the work done there, it may be stated that 264,000 plants were grown at, and distributed from, this Garden, besides pods and packets of seeds; 31,000 plants were distributed from Castleton, and 40,000 from the Hill Garden. The number of visitors to Hope, which is about 5 miles distant from Kingston, was over 12,000, and when the electric tramway lines, to be constructed by a company already licensed for Kingston and its neighbourhood, run past the Garden as it is proposed they shall do, the number of visitors will doubtless increase greatly. Castleton Gardens, situated among the mountains on the borders of St. Andrew and St. Mary, are also largely visited, sometimes by as many as 150 persons in a day.

The work of laying out Hope on a design to follow the natural geographical distribution of the plants to be found there, *e.g.*, East Indian, Australian, Chinese sections, &c., has been begun. A new garden at "Resource" in the mountains of St. Andrew was commenced in October 1895, and economic plants, chiefly of the Citrus family, are being planted there. Numerous experiments have been made at the Gardens with new varieties of economic plants, such as the grape, sugar cane,

pineapple. The cultivation of fodder plants and the raising of seedlings of the cedar for reforesting have also been pursued.

Besides the above work, the Department within the last few years has afforded practical instruction in agriculture to the people. A bulletin conveying information on agriculture and horticulture, chiefly on economic points, is issued monthly, and a copy sent free of cost to anyone applying therefor. One of the superintendents pays visits to different districts in the Island, on the requisition of residents. Lectures were given during the year, and practical demonstrations afforded in five of the fourteen parishes of the Island on the growth and curing of such plants as kola, cocoa, coffee, oranges, grapes, &c., and the Director of Public Gardens reports that the efforts made meet with hearty response and grateful appreciation.

At the Hope Industrial School, the older boys work daily in the Hope Gardens near by; all the boys have half an hour's daily instruction from the Superintendent of those gardens in the theory and practice of gardening. The Superintendent of the school reports that the boys can carry out details of planting, preparing land, &c., and give clearly and intelligently their reasons for so doing. Though the school hours only amount to 12 per week the school took a higher number of marks than six-sevenths of the elementary schools of the Island, thus seeming to indicate that the boys' faculties are brightened by their practical out of door occupations and instruction.

The purely scientific work of the Department has been pursued. Numerous additions, chiefly of orchids, were made to the flora of Jamaica, specimens were preserved in the Herbaria, and numerous works on botany obtained for the library.

EDUCATION.

In order that a fair judgment of the effects of the passing of the Education Law of 1892 may be formed, the results of the inspection of Elementary Schools since 1891 is given in the following table :—

Year	Schools on Government List.	Schools Inspected.	Scholars on Books.	Scholars in average Attendance.	Percentage in average Attendance of No. on Books.	First.	Second.	Third.	Failure.	Not Examined.	Fees.	Grants-in-aid, including Building Grants.
											£ s. d.	£
1896-97	924	882	98,559	58,411	59.61	168	347	338	29	42	—	47,827

Increase on 1892-93 ...	20	23	8,217	6,634	1.91	11	—	—	35	—	—	2,224
Decrease on do. ...	—	—	—	—	—	—	34	1	—	35	—	—
Increase on 1891-92 ...	55	73	16,621	13,690	4.56	26	26	25	29	—	—	17,160
Decrease on do. ...	—	—	—	—	—	—	—	—	—	42	—	—

It will be seen from the above table that the number of scholars on the books was less by 1,793 in 1896-97 than in 1895-96; that the average attendance was less by 1,206; while there has been a slight rise in the percentage of average attendance from 5,941 to 5,961.

Taking the Island as a whole, the attendance since February 1893 has been fairly steady, with a slight downward tendency, until within the last six months of 1896-97, when, in spite of drought and other unfavourable conditions, it has increased until it has nearly reached the figures of February 1893, and has exceeded the figures of any intervening February.

In spite of the falling-off in the number of children on the books at inspection and in average attendance, it will be noticed that the regularity of attendance has slightly improved.

The number of first-class schools, notwithstanding the requirements of the New Education Code, has increased by 14, while the number of second and third-class schools has considerably decreased.

The total number of schools on the list has decreased by 8.

The annual examination of teachers and Training College students, held in December 1896, resulted in the passing of 4 teachers out of the 11 who went up for examination, and of 147 students out of 186 who presented themselves, viz.:—

	Presented.	Passed.
1st Year	91	77
2nd Year	54	41
3rd Year	41	29.

There was a large increase in the number of candidates who presented themselves, owing mainly to the increase in the number of students at the Mico.

The beneficial effect of the addition to the teaching staff of elementary schools and competent teachers from the various training colleges is increasingly manifest.

The examination of pupil teachers and volunteers was held on the 11th December 1896, with the result that 693 passed out of the 1688 who presented themselves, or 41 per cent.

Training College for Girls at Shortwood.

On the 1st April 1896 there were 30 students, who all remained throughout the year. They were all presented for examination in December; one passed in honours, four in the first class, seven in the second class, and eight in the third class.

Seven students passed out of the college at the conclusion of their three years' course. On the whole the report on this college is satisfactory.

INDUSTRIAL SCHOOLS.

Hope Industrial School.

There were 27 boys in this institution on the 1st April 1896, and at the end of the year there were 29. The average rate of increase in the number of boys for the past six years has been two.

The older boys were employed in work at the Hope Gardens, and the younger in keeping the buildings and grounds in order.

The boys have regularly attended the practical lectures in agriculture given by the Superintendent of the Hope Gardens. Lessons were also given them in the cultivation of grapes, coffee, cocoa, pine apples, oranges, &c.

The Elementary School was examined in August 1896, and took 56 marks. This is an increase of 6 marks on the previous year. Full marks were obtained in elementary science (including practical teaching in agriculture).

Belmont Orphanage.

There were 12 children in this institution both at the commencement and at the end of the year.

They attended school throughout the year at St. Jude's School, and were well spoken of at the examination of that school.

Alpha Cottage.

This is an institution for both boys and girls and is under the control of the Roman Catholic Church.

At the commencement of the year there were 49 boys and 44 girls, and at the end 51 boys and 40 girls.

The boys are chiefly employed in gardening and in field labour, and the girls in laundry and domestic work, and in gardening.

Both boys' and girls' schools retain their position as first-class schools, with 64 and 68 marks respectively.

Shortwood Industrial School.

There were 36 girls in this institution at the commencement of the year, one of whom was out on license, and 35 at the end of the year; of these 18 were under 12 years of age. There were also at the end of the year two apprentices in the school.

The employment of the girls consisted of mending, washing, and making of clothes, baking, and house work.

REFORMATORIES.

Boys' Reformatory.

On the 31st March 1897, there were 213 boys in the Reformatory at Stony Hill, as compared with 207 on the corresponding date in the preceding year. Of these 124 belonged to the Reformatory and 89 to the Industrial School section. The daily average number of boys in 1895 was 199, in 1896—203, and in 1897—204.

Of 142 boys discharged during these years, so far as is known, 8, or 15·63 per cent., have been re-convicted and sent to prison during the year 1896-97.

There were three boys out on license at the commencement of the year and two at the end of the year.

The following are the more important statistics of the institution for the year.

	£	s.	d.	£	s.	d.
Gross expenditure				3,857	18	3¼
Less earnings by labour and sale of articles.	318	13	11			
Less reimbursement from parishes for industrial school children.	1,211	2	0	1,529	15	11
Net cost				2,328	2	4¼
Gross cost per head per diem				0	1	0·43
Net " " "				0	0	6·49
Gross cost of superintendence per head per diem				0	0	5·10
Gross cost of diet per head per diem ...				0	0	3·16
Work done for customers and produce sold...				395	13	9½
Work bringing no money return				1,119	19	6
Rewards paid				31	6	0

Marks awarded school, making it a first-class Elementary School under the code, 61.

The boys have continued to be employed as carpenters, tailors, blacksmiths, masons, bricklayers, cooks, gardeners, and field labourers under trained superintendence. On discharge they are provided with an outfit for pursuing the trades which they have been taught.

The health of the inmates was generally satisfactory; the one death during the year was the result of an accident.

Girls' Reformatory.

On the 31st March 1897, there were 26 girls in the Reformatory at Admirals Pen, as compared with 22 at the commencement of the year. The daily average number was 24 against 23 in 1895-96. The gross cost of each child was 1*s.* 7*d.* per diem, in

JAMAICA. 1896-7.

1895-96 it was 1*s.* 8*d.*; the daily cost of superintendence was 8*d.* and of diet 3¾*d.* The cost of maintaining the institution was £690 0*s.* 2*d.*, but after deducting reimbursements from parishes for industrial school children and the value of work done by the girls, the actual cost of the institution was £513 0*s.* 1*d.*

The girls were employed as usual in making, mending, washing and ironing their own clothes, and in making up under-clothes for the boys at the Stony Hill Reformatory, washing clothes for private persons, and in cooking and cleaning.

The health of the institution has been good.

The buildings are stated to be in fair order.

IMMIGRATION.

No immigrants were introduced during the year, and none were sent back to India. The immigrants who arrived in 1891 completed their term of indenture during the year.

The births during that period were 374, and the deaths 246, shewing a net increase of 128, equal to 60 per 1000. The death rate for the whole period was 98·2 per 1000, averaging 19·6 per 1000 annually. When these coolies were allotted the proportion of the sexes was 1 female to 2·09 males; at the expiration of five years it was 1 female to 1·86 males. The proportion of the sexes amongst the East Indian population of the Island when the census was taken in 1891 was 1 female to 1·41 males. There seems to be a constant natural tendency towards the equalisation of the sexes.

The birth rate amongst coolies now under indenture was unusually small, being only 1·19 per cent., as against 3·40 per cent. for 1895. The death rate was 2·27 per cent., as against 2·34 in 1895.

Most of the deaths occurred amongst the allotments *ex* "Arno," 1895, the rate for this ship being 3·29 per cent., as compared with 1·52 per cent. amongst the other immigrants.

There has been a serious depression in many of the principal industries of the Island, but the only one which materially affects the immigrants is sugar planting. Fortunately the depression has been gradual, and has allowed time for a great many immigrants to find other means of earning their living; a number of them are now employed on fruit-growing properties. There are now only ten sugar estates which have indentured immigrants; but there are still many time-expired coolies employed on sugar estates.

The immigrants *ex* "Erne," "Moy," and "Belgravia" are the first to come within the terms of Section 13 of Law 20 of 1891, which was enacted in order to ensure the employers of immigrants who have completed their indentured service paying some portion of the cost of immigration. Only one employer refused to re-employ the coolies, and the bulk of the people remained on the estates where they had served their indenture.

There were 74 remittances to India, amounting to £246 ; 182 letters were dispatched to India through the Immigration Office, and 225 were received from India.

The number of depositors in the Government Savings Bank decreased from 1,029 in 1894-95 to 933 in 1895-96, and the amounts from £22,680 1*s.* 11*d.* to £21,628 17*s.* 1*d.*, being, however, in excess of the deposits of 1893-94 by £7,670 6*s.* 3*d.*

There were no murders, suicides, or cases of very serious crime during 1896. There were only three new prisoners undergoing penal servitude, and the number of coolies in the General Penitentiary has been reduced from 21 to 13. There were, however, 14 coolies undergoing imprisonment in the short-term prisons for wounding, one for assault and one for prædial larceny.

At the close of the year there were 54 East Indians in the Lunatic Asylum.

The year has been an uneventful one. The condition of the general East Indian population continues to be prosperous, and the relations between the labourers and their employers have been of the best.

Emigration.

During the year, 734 labourers left the Island for the Isthmus of Panama and for Carthagena, and 848 returned therefrom.

Government Savings Bank.

The number of depositors and the amount of deposits in the Bank have been as follows in the last ten years :—

Year.	No. of Depositors.	Amount of Deposits.
		£
1886-87	17,047	363,481
1887-88	18,510	393,250
1888-89	19,444	408,213
1890-91	21,747	423,011
1891-92	22,824	428,348
1892-93	23,902	417,978
1893-94	25,533	457,924
1894-95	27,045	453,875
1895-96	28,385	464,737
1896-97	29,719	469,226

JAMAICA. 1896–7.

The year under review shews an increase of 1,334 in the number of depositors, and an increase of £4,489 in the amount of deposits, as compared with 1895-96.

In the above amount of deposits are included 173 deposit accounts for the following Public Funds :—

		£	s.	d.
1	Constabulary Reward Fund ...	78	11	5
1	Do. Pension Fund ...	2	6	0
13	Sinking Funds	4,766	4	4
1	Smith and Beckford's Charity ...	73	9	11
2	Turks Island	1,612	16	2
5	Other Government Accounts ...	2,498	1	4
150	Chancery Fund Accounts ...	18,877	1	0

There were also 211 accounts for Trusts, Charities, Chancery, Adminstrator General and Bankrupt Estates, amounting to a total deposit of £19,103 9*s.* 3*d.* The remaining 29,335 accounts, representing £422,166 2*s.* 4¾*d.* are all ordinary Savings Bank deposits, old Savings Bank balances £1,632 13*s.* 10*d.*, Surplus Fund £9 16*s.* 0*d.*, making a total of £470,820 16*s.* 7¾*d.*

Of the total number of accounts open at the end of the year, 21,402 were for £5 and under, while only 1,216 were for over £100; the increase in the number of small amounts of £5 and under being 1,473.

The Assets of the Bank on the 31st March last, were distributed as follows :—

			£	s.	d.
Consols 2¾ per cent.			20,404	17	3
Inscribed Stock :—					
Canada	3 per cent.		27,908	0	8
Cape of Good Hope	4 "		47,766	6	8
Ceylon	4 "		24,881	5	2
New South Wales	3½ "		40,528	13	7
Victoria	4 "		32,043	1	0
Jamaica	4 "		9,900	0	0
Queensland	3½ "		14,963	18	1
New Zealand	3½ "		15,011	9	5
			£213,002	4	7
Debentures :—		£ s. d.

			218,527	17	6
Cash in Colonial Bank			451,934	19	4
" hands of clerk at Port Royal			18,914	19	5¾
			19	11	0
			£470,869	9	9¾

The accounts opened numbered 3,970, and those closed 2,819, the result being an increase of 1,334 in the number at the end of the year, as compared with the number at the end of the preceding year.

The number of deposits amounted to 30,697, and withdrawals to 36,583, representing £227,562 3*s.* 4*d.* and £234,462 5*s.* 5¼*d.* respectively.

The expenses of management and the interest credited to depositors amounted to £16,358 19*s.* 5½*d.*, while the revenue realised was £17,011 0*s.* 2*d.*, thus shewing a net profit of £652 0*s.* 8½*d.* on the year's transactions.

The revenue compared with the preceding year shews an increase of £294 19*s.* 1*d.*

TRADE.

The two first causes of the depression under the head of Agriculture, viz., the long severe drought, and the decline of prices of the Island's products, were probably the main factors in the serious fall in the values both of exports and imports in 1896–97, compared with the preceding year. Exports fell from £1,873,105 to £1,470,241 or by £402,864 in amount, and 21·51 in percentage, and imports from £2,288,946 to £1,856,377 or by £432,569 in amount, and 18·9 in percentage. If entries of imports for home consumption are taken, the figures are respectively £2,255,637 and £1,864,612, a decrease by £391,025 in amount, and 17·33 in percentage. A considerable proportion of this decrease, however, is due to the cessation of work on the railway extensions, importations under the Railway Law 12 of 1889 having fallen from £145,981 to £11,491, or by £133,490. These figures are almost entirely the value of manufactured articles, £139,596 in 1895–96, and £11,453 in 1896–97. If railway importations be omitted, it will be seen that the imports for general use have not declined in nearly the same degree as have the exports.

The following table shows the exports and imports for ten years :—

Year.	Exports.				Imports.			
	Home Products and Manufactures.	British and Foreign Products and Manufactures.	Coin and Bullion.	Total Exports.	Home Consumption.	Coin and Bullion.	Total for Home and Specie.	Total Imports.
	£	£	£	£	£	£	£	£
(a) 1886-87.	1,334,469	19,350	155,191	1,509,010	1,294,320	57,074	1,351,394	1,322,336
(a) 1887-88.	1,661,601	17,668	149,321	1,828,590	1,586,129	145,986	1,732,115	1,695,607
(a) 1888-89.	1,501,660	15,942	97,222	1,614,824	1,501,905	61,017	1,562,922	1,597,600
Half-year 1890.	883,965	8,094	40,483	932,546	899,901	30,415	929,416	938,153
(b) 1890-91.	1,807,084	15,290	80,440	1,902,814	2,089,836	63,343	2,153,180	2,190,746
1891-92.	1,628,777	32,109	61,210	1,722,096	1,756,150	6,849	1,762,999	1,759,890
1892-93.	1,690,637	18,944	50,226	1,759,807	1,917,278	11,279	1,928,557	1,941,482
1893-94.	1,982,596	17,342	75,751	2,075,689	2,095,037	41,076	2,136,113	2,157,795
1894-95.	1,848,877	14,700	57,844	1,921,422	2,162,188	28,525	2,190,712	2,191,745
1895-96.	1,775,016	9,553	88,537	1,873,105	2,237,787	17,850	2,255,637	2,288,946
1896-97.	1,384,278	16,411	69,552	1,470,241	1,836,849	27,763	1,864,612	1,856,378
(c) Average of Ten Years. £	1,661,499·5	17,730·9	88,529·4	1,767,759·8	1,847,747·9	46,076·2	1,893,824·1	1,903,252·5

(a) Year commenced 1st October. (b) Year has commenced on 1st April since 1890. (c) Excluding half-year ended 31st March 1890.

Comparing exports of home products with imports for home consumption, and excluding from exports re-shipments of British and foreign goods, which only exceeded £20,000 a year in the year after the Exhibition, when unsold goods were taken back, and specie from both heads, it will be seen that there has been a remarkable increase in imports since 1890-91, the year of the Exhibition.

This may be accounted for by the large number of people withdrawn from cultivation during the construction of the railway and important public works, and the importation of materials used in each.

Exports.

The following table shows the quantities of the principal staples of the Colony exported during the past ten years :—

—	1886–87	1887–88	1888–89	1890–91	1891–92	1892–93	1893–94	1894–95	1895–96	1896–97
Sugar ... ... cwts.	460,887	490,480	323,238	377,901	425,793	371,821	410,537	398,683	390,918	321,468
Rum ... ... galls.	2,412,596	1,868,490	1,374,931	1,593,584	1,704,919	1,698,272	1,461,220	1,956,291	1,881,146	1,642,919
Coffee ... ... cwts.	56,587	98,966	84,606	75,680	86,926	97,304	88,293	95,129	84,392	66,614
Dyewoods— Logwood and Fustic. tons	63,114	103,364	116,247	110,994	87,352	99,083	99,068	78,172	85,575	45,863
Pimento ... cwts.	65,497	66,560	46,180	90,363	63,730	69,747	87,756	83,956	97,347	99,551
Ginger ... ... "	9,927	10,222	8,952	10,886	16,273	13,632	14,932	15,504	17,505	11,014
Fruit, value ... £	215,583	337,403	303,910	531,726	288,159	375,860	527,474	515,412	493,722	468,808

The values do not correspond very closely with these figures. During most of the years in question, the average price of sugar was 12*s.* to 13*s.* per cwt., in 1896 it was 10*s.*, in 1895 about 9*s.* 3*d.* The price of rum was 2*s.* 6*d.* per gallon in 1886-87, gradually lessening to 2*s.* 1*d.* in 1895. In 1895-96 it was 1*s.* 9*d.*, and in 1896-97 only 1*s.* 4*d.* per gallon. Coffee sold at an average of say 70*s.* per cwt. from 1886-87 to 1891-92, for the next three years at 74*s.*; in 1895-96 at 67*s.* 6*d.*, in 1896-97 at only 63*s.* 4*d.* Taking logwood to represent dyewoods, the rest being very small in comparison, we find the price fairly steady at from £3 5*s.* to £3 12*s.* 6*d.* per ton till 1893-94, when it rose to £5 per ton continuing high until 1896-97, when it dropped to £3 15*s.* Pimento has kept a fair average value of say 18*s.* per cwt., but in 1896-97 the price was only 15*s.* 6*d.* Ginger only 36*s.* per cwt., in 1886-87, has increased in value, and was 60*s.* per cwt. in 1896-97, the decreased quantity being probably due to drought. The quantity of fruit exported has increased within the last two years, but the value has decreased. Bananas which had been at about 1*s.* 9*d.* a bunch average fetched only about 1*s.* 6*d.* a bunch in 1895-96 and 1*s.* 3*d.* in 1896-97, and oranges, which had sold at about 700 for 20*s.*, rose in quantity in 1895-96 to about three and half times the number of the preceding year with a better price, but this dropped in 1896-97 to almost the average of former years, and although the quantity was greater, the total value was less. The increase in oranges for the two years could not, however, quite make up for the decrease in bananas.

The several staples of export and minor products bore the following proportions to the total exports in each of the years named :—

—	1896–97.	1895–96.	1894–95.
Sugar	10·1	11·0	12·9
Rum	8·4	9·3	10·1
Coffee	14·4	16·0	19·3
Dyewoods	11·6	20·4	19·0
Fruit	34·3	29·9	27·9
Pimento	5·2	5·1	4·5
Minor Products	16·1	8·3	6·3

These figures show a gradual decline proportionally in the larger exports except fruit, and also that exporters endeavoured in the past year to make up for this decrease by attention to minor products.

JAMAICA. 1896–7.

The following are the figures for the two years of total exports :—

—	1896–97.	1895–96.	Increase.	Decrease.
I. Live Animals, Food, Drink, and Narcotics.	1,146,687	1,359,628	—	212,941
II. Raw Materials	215,757	390,825	—	175,068
III. Manufactured Articles	38,245	37,116	1,129	—
IV. Coin and Bullion ...	69,552	85,536	—	15,984
Total	1,470,241	1,873,105	1,129	403,993
Net Decrease ...	—	—	—	402,864

The chief decreases in quantity and values have occurred in the following products :—

—	Quantity.	Value.	Quantity decrease.	Value decrease.	Percentage decrease quantity.	Percentage decrease value.
	Cwt.	£	Cwt.	£		
I. Sugar ...	321,468	148,679	69,450	46,780	17·8	23·9
	Gallons.		Gallons.			
Rum	1,642,819	123,211	228,327	41,389	12·7	25·2
	Cwt.		Cwt.			
Coffee ...	66,614	210,946	17,717	73,876	21·1	25·9
	Cwt.		Cwt.			
Ginger ...	11,014	33,011	6,492	17,286	37·1	34·4
	Tons.		Tons.			
II. Logwood ...	48,084	161,565	41,393	197,464	49·0	55·0

While there have been increases in quantity and decreases in value in the following :—

—	Quantities.	Value.	Quantity increase.	Value decrease.	Percentage increase quantity.	Percentage decrease value.
	Bunches.	£	Bunches.	£		
Bananas ...	4,838,645	302,415	617,849	14,144	14·6	4·5
	Number.		Number.			
Oranges ...	103,702,775	155,554	6,617,377	14,240	6·9	8·4
	Cwt.		Cwt.			
Pimento ...	99,551	77,152	2,205	12,893	2·3	14·3
	Number.		Number.			
Coconuts ...	11,802,224	35,407	2,358,772	2,367	25·0	6·3

The above comprise all the chief exports, and show in all cases, except ginger, a lowering of price, in most exceeding 20 per cent. The decrease on logwood is remarkable, the price per ton, though much lower than that of the three previous years, being above that realised in the six years preceding those three. The Collector-General explains, however, that large quantities of very superior foreign woods competed.

The total decrease in value on these nine exports is £420,439, on all exports £402,864, thus showing increases in minor products. Grape fruit, which has only become an export of any consequence within the two years under comparison, increased in value from £5,832 to £9,024, or by £3,192; lancewood spars increased by £9,339 in value, fustic by £5,043.

Dye extracts, the only export under head III. realising a considerable value, showed a slight decrease last year. The value for the three years of its manufacture has been—1894-95, £3,126; 1895-96, £27,965; 1896-97, £27,525.

The countries named below took the Island's exports in the proportion set opposite their names during the past three years:—

—	1896-97.	1895-96.	1894-95.
United Kingdom	27·4	27·6	27·1
United States	56·6	57·0	58·1
Dominion of Canada	1·2	1·6	1·5
Other Countries	14·8	13·8	13·3

Turning now to imports, we find also a general decrease, though, as shown in paragraph 1 of this head, not so large proportionately as that on exports:—

—	1896-97.	1895-96.	Increase 1896-97.	Decrease 1896-97.
	£	£	£	£
I. Food, Drink, and Narcotics	759,419	896,276	—	136,857
II. Raw Materials ...	49,778	64,907	—	15,129
III. Manufactured Articles	1,027,008	1,276,604	—	249,596
IV. Coin and Bullion ...	28,407	17,850	10,557	—
Total	1,864,612	2,255,637	10,557	401,582 10,557
Net Decrease ...	—	—	—	391,025

JAMAICA. 1896–7.

The falling-off under I. amounts to about 15 per cent., and occurs on almost every article; that under II. to 23 per cent., and under III. to 20 per cent., occurring on the most important articles. More than half the decrease under III. is due to the completion of the railway extensions.

The decreases on imports, of a total value of over £50,000, are as follows :—

—	Quantity.	Value.	Quantity decrease.	Value decrease.	Percentage decrease quantity.	Percentage decrease value.
	Gallons.	£	Gallons.	£		
Alcoholic liquors	302,689	67,078	93,277	29,989	23·6	30·9
	Lbs.		Lbs.			
Fish, dried or salted.	14,238,981	121,121	373,333	9,590	2·2	10·0
	Barrels.		Barrels.			
Flour, wheat ...	167,919	155,326	31,553	24,199	15·7	13·4
Apparel and slops	—	67,561	—	8,216	—	11·0
Boots and shoes, Leather	—	57,585	—	1,380	—	2·4
Cottons (including Hosiery).	—	249,160	—	50,454	—	16·8
	Feet.		Feet.			
Wood (Lumber)	13,214,291	55,871	419,650	7,186	3·1	11·4

Other large imports showing considerable percentage decreases in value are :—Imports valued at from £40,000 to £50,000—Beef and pork, wet salted, 16·1 ; coals and coke, 18·1 ; haberdashery and millinery, 24·0 ; woollens, 18·1 ; £30,000 to £40,000—Corn, 17·6 ; hardware and cutlery, 15·9 ; £20,000 to £30,000—Bread or biscuit, 19·3 ; butter, butterine, &c., 32·3 ; rice, 47·3 ; oil, 11·2 ; soap, 30·4. Of these, beef and pork and corn showed increased quantity but decreased value, and in most cases the percentage decrease on value has been greater than that on quantity. Only one article of importance shows the opposite tendency, viz., fish, pickled or smoked, value £41,785, an increase in cost on last year of 3·6 per cent., with a decrease in quantity of ·7. Of articles of less total cost, there were striking decreases on bacon, candles, gunpowder, matches, salt, refined sugar, tea, and tongues.

Of the several decreases mentioned, those on coal and coke and gunpowder were probably due in great measure to the completion of the railway extensions and other public undertakings ; also the remarkable decrease on rice, which is often substituted to a great extent for ground provisions in feeding gangs of labourers. The decrease on matches (£800 to £92)

arises from the locally manufactured ousting the imported article; six to seven years ago the cost was placed at £2,500 or thereabouts. The decrease on soap is chiefly due to the same cause; that on refined sugar has been observed since the duty of 1*d.* per pound was imposed.

Increases both in quantity and value on peas and beans are due probably to the severe drought in many districts causing local supplies to fail. More satisfactory increases are those of shooks, 1,124,531 in number and £3,767 in value; agricultural engines, £7,978; other steam engines, £4,423.

The imports for the past three years were drawn from the several countries in the following proportions :—

—	1896-97.	1895-96.	1894-95.
United Kingdom	49·9	48·1	50·4
United States	39·4	41·8	36·8
Dominion of Canada	8·2	7·5	8·5
Other Countries	2·5	2·6	4·3

A tendency of late years to an increasing importation from the States and a decreasing importation from the United Kingdom was reversed in 1896-97. Speaking generally, foodstuffs come from the United States and Canada, and drinks and manufactures from the United Kingdom. Of late years, manufactured articles for the railway extension, the contractors for which were Americans, have been imported from the United States. These extensions have now been completed, and importations from the States have lessened.

POLICE.

The allowed strength of the Constabulary Force on the 31st March 1897 was 852, the actual strength 849, an increase by 72 over the allowed and actual strength, 777 for 1895-96. The allowed increase of 75 for the year is referred to in the last paragraph of my Report on Police for that year. It is of course too soon yet to determine with any accuracy what deterring influence this increase may have on crime.

The number 849 is made up of 18 officers, 134 sub-officers (2 of whom were previously in the Royal Irish Constabulary) and 697 ordinary constables. I am glad to say that the sub-officers from the Irish Constabulary have proved themselves to be a valuable addition to the force in instructing other sub-officers and the men, at their stations, in police work generally.

JAMAICA, 1896–7.

In addition to these 849 members of the regular force, there are 193 rural headmen of police and 744 rural policemen, together 937, against 963 last year.

The effective police force of the Colony was thus 1,786 for 1896-97; in 1895-96 it was 1,740.

The rural police, it is reported, continue to be of great aid to the Constabulary. There are, however, several men who prove inefficient and have to be discharged; the number removed for misconduct and other causes during the year was 84, while 83 appointments were made. Of the Constabulary only 16 men were dismissed during the year and the same number in 1895-96, indicating apparently better general efficiency in regular and disciplined force. There were 154 enlistments in the Constabulary, 52 men discharged (18 of them with pensions and gratuities) and 12 deaths.

The Inspector-General reports that the officers and men have worked efficiently and well, and that on the whole the sub-officers and men have performed their arduous and at times unpleasant duties satisfactorily and with cheerfulness.

The following table shows the principal duties, outside of patrolling and attendance at Courts, performed by the Constabulary during the past 5 years, viz.:—

——	1892-93.	1893 94.	1894-95.	1895-96.	1896-97.
Number of persons arrested on view and on information.	6,923	8,237	7,781	8,775	8,351
Number of persons apprehended on warrants.	1,802				1,780
Number of search warrants executed.	102	122	150	151	142
Number of persons summoned.	18,896	19,212	19,249	20,279	19,537
Number of persons subpœnaed.	28,766	29,808	30,673	31,058	27,161
Number of prisoners escorted.	10,570	8,599	8,224	9,911	11,542
Number of seizures under Revenue Laws.	440	399	437	649	309
Number of post-mortems ordered.	32	594	603	610	641

It will be observed from the table that the number of arrests and apprehensions, together 10,131, and of prisoners escorted show a decided increase in 1896-97 over the four preceding years, while subpœnas are correspondingly less, and summonses show a decrease on 1895-96. Revenue seizures are less than in many of the preceding years.

The following are statistics of Crime for the five years in question :—

Offences.	Apprehensions.					Convictions.				
	1892–93.	1893–94.	1894–95.	1895–96.	1896–97.	1892–93.	1893–94.	1894–95.	1895–96.	1896–97.
I.—Offences against the Person	6,827	7,232	7,302	7,040	6,653	3,086	3,375	3,218	3,309	3,140
II.—Offences against Property, committed with violence.	306	251	326	429	394	193	162	184	245	264
III.—Offences against Property, committed without violence.	4,416	4,071	4,079	5,004	5,700	2,443	2,154	1,914	2,586	3,021

JAMAICA. 1896–7.

The above figures indicate a general increase in cases of crime, for the four years, except in 1894-95. Taking the increase of population from 1892-93 as estimated by the Registrar-General, viz., roughly from 650,000 to 706,000, or say by one-twelfth, and of crime at from 27,600 to 29,142 cases, an increase by one-eighteenth, there has been a decrease in the proportion of crime to population.

The salient feature of 1896-97 compared with the preceding year is the decrease under "Offences against the person" and "Other Offences," which may be classed together as "Offences of violence and disorder," and the corresponding increase in number and more considerable increase in percentage of offences against property committed without violence, especially under "Prædial Larceny." The increase under this head doubtless arises from the depression and scarcity of crops during the period. A similar increase in the offence has been noticed at previous times of depression and scarcity, when not only are there more people in want, who plunder their richer neighbours, but when slight thefts, which would be condoned at other times, are brought before the Courts. The Inspector-General reports that the value of the articles stolen was in almost every instance insignificant, and brings to notice that cases chiefly occurred in the first half of the year, and that when the provisions of the Prædial Larceny Law of 1896 (since disallowed) began to have full effect, the number of cases considerably diminished; it should be stated, however, that the drought was most severe during the earlier part of the year.

Turning now to crimes against the person; of 16 persons charged with murder only one was convicted of the crime, and executed; another case was reduced to manslaughter; 11 were discharged by the magistrates or acquitted, and three cases remained undisposed of at the end of the year.

There is a considerable increase in convictions, viz., from 302 to 449, for cutting and wounding. This is due, however, to the fact that the departmental reports show in 1894-95, 154 cases, and in 1895-96, 234 cases reduced to common assault, while in 1896-97 there were only 18 so reduced. The fact of such large reductions to a minor offence appears to indicate that a large proportion of the offences classed under this head are not of a very serious nature. This offence rapidly increased on the cessation of work on the Panama Canal in 1887-88, and the repatriation of several thousands of able-bodied men, who had acquired the habit of using the knife on the Isthmus, when excited by drink, jealousy, &c.

Prisons.

The daily average number of prisoners in custody during each of the past five years and the number on the last day of each year were respectively as follows :—

Year.	Daily average number in custody.	Number on 31st March
1892-93	1,004	964
1893-94	1,008	943
1894-95	916	957
1895-96	1,008	1,094
1896-97	1,159	1,149

The more important statistics relating to this department are as follows :—

	Year ended 31st March.	
	1897.	1896.
Commitments—		
To Prison	4,748	4,289
To Lock-ups	930	818
Total	5,678	5,107
Reconvictions	1,976	1,717
Deaths—		
General Penitentiary ...	12	10
Other Prisons	23	12
Total	35	22
Executions	1	5

	Year ended 31st March.					
	1897.			1896.		
FINANCIAL.	£	s.	d.	£	s.	d.
Gross expenditure	21,285	11	2¾	19,292	4	10
Gross earnings in cash	4,796	15	4¾	5,606	11	0
Net cost of maintaining prisons ...	16,488	15	10	13,685	13	10
Cost per prisoner	14	4	6¼	13	11	6½
Estimated value of labour yielding no return.	8,550	9	4	5,658	2	0
Estimated value of bricklaying work and stone quarried (General Penitentiary).	3,789	2	2	4,294	16	1½
Washing and repairing (General Penitentiary).	1,151	19	5	1,086	11	1

The number of deaths per 1,000 reckoned on the basis of the average daily number of prisoners in custody was 20·37 in the General Penitentiary compared with 18·48 last year, and in the other prisons 40·2 compared with 25·7. The average percentage of deaths at the General Penitentiary for the three years preceding the one under review was 25·13, while that at the other prisons was 41·47.

The greatest number of sick prisoners in the General Penitentiary during 1896-97 who were treated in the hospital on any one day was 21, and of prisoners treated outside the hospital 39. The average percentages were 8·6 and 28·4, respectively.

School has been held regularly at the General Penitentiary, the St. Catherine's District Prison and Falmouth District Prison, and religious services have also been regularly conducted at each prison. The discipline in these institutions has been maintained, and the mark system at the General Penitentiary is reported to continue to work satisfactorily. All the buildings have been maintained and are in good condition. The boundary walls for the extension of the St. Catherine's District Prison were in course of construction at the close of the year.

VITAL STATISTICS.

The total population of the Island on the 31st March last was estimated at 706,394, the net increase during the year being

11,529 or an increase at the rate of 16·6 per 1,000 living, as against an increase at the rate of 16·3 per thousand in the previous year.

The mean population for the year 1896-97 is estimated as 701,181, and the rates for the year are calculated on that basis.

The average annual increase of population for the last 6 years has therefore been 11,000.

The number of marriages during the year was 3,026, equal to a rate of 4·3 per 1,000 as compared with 3,242 or a rate of 4·6 in the previous year. There has thus been a falling-off of 216 marriages in the year under review. In fact, there has been a considerable decrease in the number of marriages year by year since 1893-94.

Of the 6,052 persons married, 47·83 per cent. signed the marriage register by making their marks, more brides than bridegrooms being able to sign their names, shewing that while the females have advanced in writing skill the males have slightly retrograded.

The number of births during the year was 27,064, or a rate of 38·5 per 1,000. There was an excess of 222 births over those of the previous year, but allowing for increase of population, the birth rate shows a slight fall from 38·8 to 38·5. Of these births 16,563 were illegitimate, or a rate of 61·1 per 100 as against a rate of 60·8 per 100.

The deaths registered during the year numbered 15,535, or a rate of 22·1 per 1,000 mean population, being a slight reduction on the mortality of the previous year.

Of the total number of deaths, 4,757, or 30·6 per cent., were those of children under one year and 7,266, or 46·7 per cent., of children under five years, or in other words 17·5 per 100 of children born died under one year and 26·8 per 100 under five years. The heaviest mortality was amongst children of illegitimate birth. The infant mortality in Kingston was exceptionally heavy, nearly one-fourth of the children born dying before one year, and one-third before reaching five years.

Of the 15,716 deaths registered in the year, 11,678 or 75·1 per cent. were registered without medical certificate as to the cause of death.

DEPENDENCIES OF JAMAICA.

Cayman Islands.

The total births at Grand Cayman numbered 173, being at the rate of 46·4 per 1,000 of population, of which 16, or 9·2 per cent., were illegitimate. The deaths were 40, or an annual rate of 10·7 per 1,000 of the population.

Cayman Brac and Little Cayman.

The births were 25, 4 being illegitimate. The deaths were 7. The marriages in Grand Cayman were 17, or an annual rate of 4·5 per 1,000, and in Cayman Brac and Little Cayman 3.

GENERAL.

I have entered so fully into the details of the various departmental reports that but little remains to be said. The completion of great public works that had been in progress for four years, coupled with a serious fall in the price of almost all our staple commodities, added to a drought more severe than has been experienced for many years, has produced a state of depression; but writing, as I do, eight months after the close of the period under review, I observe signs of revival. The thousands of labourers no longer employed on the railway extension works have returned to the cultivation of the soil, and I have never seen the country looking better. There is, therefore, no fear of distress among the people, who are, in the main, as comfortably circumstanced as any peasantry in the world. There is, however, grave fear that the destructive effects of subsidised competition are slowly crushing the life out of the sugar industry, as represented by the estates of average size, and with the disappearance of the sugar estates, cattle breeding will cease to pay except some other outlet be found. The substitution of a fruit industry is at best the substitution of a perishable for a non-perishable product, and the tendency to look to fruit alone as a source of future prosperity is not without its dangers. Were the competition in sugar reduced to the sound basis of the natural cost of production, Jamaica, with her multiple resources, representing, as she does, one half the area and population of the British West Indies, would soon be restored to a prosperity as great as she has ever known, where invested capital would secure a generous return and honest labour receive its just reward.

As this is the last time that I shall have the opportunity of reporting upon the condition and prospects of this Colony, I may be permitted to travel a little outside the period dealt with in the Blue Book for 1897, and to compare in a few particulars the condition of the Colony at the beginning and the close of my administration which has covered a period of nearly nine years.

In March 1889 when I arrived in Jamaica, there were 790 miles of main roads under the management of the Public Works Department, all of which were in excellent condition; there were 2,300 miles of parochial roads for wheeled traffic managed by the Parochial Boards, of the condition of which loud complaints were made, and about 900 miles of bridle paths. In Kingston there were two or three small boarding houses; outside Kingston the accommodation for travellers was nil; visitors to Jamaica who had introductions were passed on from

house to house with unwearying hospitality, and some absentee proprietors made special allowances to their overseers for the entertainment of such visitors. The rivers that flow to the sea from the Port Royal and Blake Mountains were unbridged, and as they are liable to sudden and dangerous floods the traveller sometimes found himself imprisoned for days between two impassable rivers, while every year had its death roll from fatal accidents in attempting the passage of the flooded fords. With such conditions it was evident that the Island could not hope to share in the benefits to be derived from the examination by large numbers of tourist travellers of its exquisite beauties, its salubrious climate, and its productive capacities. On one occasion 40 people arrived in Kingston on a tourist trip, they spent the day in driving about Kingston in the vain endeavour to obtain a night's accommodation, but had to return to the ship and leave the Island because it was not to be had. Nor could the expanding fruit trade be carried on with regularity or profit when, for want of good roads, bananas were carried from the interior on mens' heads or mule back, and when nearer the sea the carts laden with perishable fruit were stopped by floods, while the ships must either be detained or leave the fruit behind to rot upon the wharf.

In 1890 it was determined to hold an Exhibition, which was opened for three months and was an unqualified success. For reasons which need not here be stated, strenuous exertion was made by certain persons to prevent the black people from attending the exhibition and thus diverting money that would presumably otherwise be used at home; they were told that the Exhibition was a snare to entrap them and make them slaves once more, and they believed it. For six weeks not a score of black people visited the Exhibition. Nor was the spell broken until I had brought up all the school teachers and the rural headmen of the police, shown them the Exhibition and sent them home safe. Then the black people flocked to Kingston, and during the next six weeks the Exhibition was visited by half the population. The deficit only amounted to £29,000 of which £21,000 was paid by the guarantors.

It was evident that to build an Exhibition and invite the world to visit it would be useless extravagance if we were not to supply hotel accommodation for the reception of visitors. One hotel had been projected by a company, but there were no funds to complete it. The Legislative Council passed a Law guaranteeing 3 per cent. on the money necessary to build hotels on the condition that they should be built in time for the Exhibition; under that Law £48,000 was raised by five companies, and five hotels built in different parts of the Island. The sum expended so far for the interest on the Debentures over the interest received, paid by the hotels, has been compensated for by the hundreds of tourists who have since 1891 annually visited the Island, and have spent large sums therein.

JAMAICA 1896–7.

In 1892 a Law was passed under which a number of the parochial roads were taken over by the Public Works Department, and another Law was passed authorising a loan for the building of bridges. The main roads now managed by the Public Works Department are in extent 1,879 miles, which with the parochial roads make over 4,000 miles of carriage roads in the Island; and during the past five years 150 bridges have been built extending in the aggregate to a total length with their approaches of 22 miles. The effect of these roads and bridges on the fruit trade may be seen by the following figures:—The value of fruit exported from 1889 to 1893 was £2,470,100; the value for the next period of four years to 1897, during which roads were being constructed and bridges built, was £2,653,397. But the benefits of facility of travel, coupled with the Exhibition, can be seen in other directions. Among the visitors were many keen business men, who were not slow to see the opportunities for prudent investment. The extension of the railway to Montego Bay and Port Antonio that had been decided upon by Sir Henry Norman was being rapidly pushed forward, and the value of inland properties materially enhanced. Investments were made in land, and companies have been formed for various manufactures that give promise of a prosperous future. A general awakening of interest in the improvements of our products has also followed the examination of those of other countries, and the agricultural activity has been further stimulated by the Jamaica Agricultural Society formed in 1895 and which has now several affiliated local branches.

I may be permitted to give a few figures that will show the general progress of the Colony.

In 1889 the postage rate was one penny for half an ounce within a radius of 13 miles from Kingston, and twopence per ounce beyond that area. In 1890 the rate of one penny per ounce was adopted for the whole Island.

In 1888-89 the number of letters and postcards passing through the post was 563,736; in 1896-97 it was 4,375,374.

In the same periods the postal and telegraph revenue was respectively £22,241 and £29,494. In 1888-89 there were 95 post offices and 44 telegraph stations. In 1896-97 the number increased to 162 post offices and 67 telegraph stations. In the former period there were 71,649 scholars entered on the books. In the latter the number was 83,731.

As regards the improvement in the condition of the people, I extract the following figures for a slightly different period submitted by me to the Royal West India Commissioners in the early part of this year.

In 1886 the number of taxpayers under £1 was 73,926; under £2, 7,964; £2 and upwards, 7,045. In 1896 the numbers were respectively 80,487, 16,013, and 10,928.

Put in another way the proportion of taxes paid was as follows :—

—	Under £1.	Under £2.	£2 and upwards.
	per cent.	per cent.	per cent.
1886 ...	83·1	8·9	7·9
1896 ...	74·9	14·9	10·1

The general condition of the labouring classes at the two periods may be estimated by the following. In 1886, 603,354 persons deposited £313,323, or 10*s.* 4·6*d.* per head of the total population. In 1896, 694,865 deposited £427,240, or 12*s.* 4·9*d.* per head.

As regards the Government Savings Bank returns I fear that the figures are somewhat fallacious. Under the provisions of the Law the maximum sum allowed can be invested by two persons opening a joint account, and I find that in some cases large sums have thus been invested by the owner opening several joint accounts for the maximum sum in his own name and some other, using different names for the joint lodgment of each maximum. He was thus enabled to invest at call at 3 per cent. For instance, on making some enquiries into the causes of the increase in the withdrawals, I find that one person withdrew sums to the aggregate amount of £8,000 for the purchase of a property. The reduction of the rate of interest to 2½ per cent. will probably discourage the use of the Savings Bank for such investments, and tend to confine its operations to the legitimate sphere for which it was intended.

The commercial progress in the same period may be inferred from the following :—In 1886 the total tonnage entered and cleared was 466,124. In 1896 it was 803,702.

The comparative financial condition of the Colony cannot be shown by the figures of revenue received, as the taxation is not the same. The result of the activity caused by the Exhibition was a very large surplus, of which advantage was taken to remit various export duties and taxes on cattle, and in 1892, under the reciprocal arrangements with the United States, Customs duties were abandoned to the extent of over £30,000 per annum.

Upon the withdrawal from the arrangements by the United States these duties were not reimposed as there was still a considerable surplus, and it was understood that when that surplus was exhausted the Legislative Council would vote the necessary increase in the duties. The remission of taxation and Customs revenues thus abandoned since 1891 amounted to £685,700, and

JAMAICA. 1896–7.

deducting from that amount increased duties on rum, beer, sugar, and tobacco, the net amount abandoned was, to March 1897, £499,100. Last year the surplus was at length exhausted, and I proposed that the duties abandoned should be restored; this the majority of the elected members refused, and, as was pointed out to them during the debate, the result will necessarily be a deficit at the end of the financial year. I have no doubt that in the ensuing session the elected members will recognise the mistake they have made, and restore the finances to a satisfactory condition. That the position is clearly understood is evident from the fact that Jamaica 4 per cent. Inscribed Stock that in 1889 stood at 104 to 105 is now 121 to 123.

It is a matter of deep regret to me that in the last year of my lengthened administration the Colony should have been visited by drought, floods, depression, and disease. Jamaica has not been exempted from the abnormal climatic conditions that have produced universal disturbance and distress. For the first time for many years yellow fever has appeared at two of the ports and in one inland parish, and all over the Island the people have suffered severely from low fevers, not such as place them in doctors' hands, or to increase the mortality to any appreciable extent, but enough to produce a general feeling of lassitude and depression that re-acts upon all business, and makes them despondent in the face of low prices. But this is only a passing condition. The yellow fever is rapidly declining, and with the advent of the cool weather and sea breezes, that ought to have come before now, it will, I have no doubt, entirely disappear, as will the autumn fevers that have been so unduly prolonged, and the normal condition of salubrity will be restored. In the meantime local authorities are busily engaged in the permanent improvement of sanitation all over the Island, so that the losses caused by the exceptional trials of this year will not be without their compensating advantages in the future.

In conclusion, I would say that after nine years intimate experience of the Island, with its law-abiding population, I am convinced of its financial soundness, its steady progress, and its future prosperity.

HENRY A. BLAKE,
Governor.

King's House,
31st December 1897.

TURKS AND CAICOS ISLANDS.

(For Report for 1896, *see* No. 198.)

GOVERNOR SIR A. W. L. HEMMING to MR. CHAMBERLAIN.

King's House,
Jamaica,
12th May 1898.

SIR,

I HAVE the honour to forward to you copy of the Blue Book of the Turks and Caicos Islands for the year 1897, together with the Commissioner's Report thereon.

I have, &c.,

AUGUSTUS W. L. HEMMING,
Governor.

REPORT ON THE BLUE BOOK OF THE TURKS AND CAICOS ISLANDS FOR THE YEAR 1897.

1.—TAXES, DUTIES, &c.

There is no alteration to report under this head.

2.—REVENUE AND EXPENDITURE.

The Revenue figure of 1897, though £230 less than that of the previous year, was still larger by £1,636 than the average of the previous ten years 1887-96.

17058—750—6/98 Wt 21620 D & S—5 (B)

The total sum collected was £9,477, against £9,707 in 1896 and £7,312 in 1895, and exceeded the estimate by £1,224.

This result is attributable to the very large export of salt, with its proportionately large return from royalty and light dues, the figures being respectively £3,261 and £1,033, against £2,778 and £827 in the previous year; such increase, however, being more than balanced by a slight fall in the sums realised from import duties and some other minor heads, and a large decline in the receipts under the head of Post Office.

The balance carried forward from the previous year was £6,865, giving a gross available sum of £16,342.

The total Expenditure amounted to £8,384, being larger by £999 than the sum expended in 1896, the principal increase being under the head of Public Works, for which the figure was £1,896, as against £1,053 in the year previous.

The Revenue collected within the year exceeded by £1,093 the total Expenditure within the same period. Of the sum so in excess, £1,000 was invested by the Crown Agents in Victoria 4 per cent. Stock, leaving a working balance to carry forward to 1898 of £2,458, which, with the investment above mentioned and a further sum of £4,500 which the Dependency had already to its credit invested, gives a total credit balance of £7,958.

The financial condition is thus decidedly satisfactory.

3.—Assets and Liabilities.

There was a balance of Assets over Liabilities on the 31st December 1897 of £7,957 13s. 11d.

4.—Public Debt.

The Dependency has no public debt.

5.—Municipalities.

There are local boards, established by various legislative enactments, to deal with the following subjects, namely:—Health, quarantine, prisons, pilotage, salt ponds, education, and medical relief.

6.—Public Works.

The total expenditure under this head was £1,896, distributed as follows :—

	£
Department	319
Recurrent	1,013
Extraordinary	564
Total	£1,896

A Colonial Surveyor and Inspector of Public Works, appointed at the end of 1896, had charge of the Department, and hence it was possible to do a good deal.

The Government property was well looked after and maintained, and considerable improvement of the water supply at Salt Cay and Cockburn Harbour effected by repairs and addition to the several storage tanks.

Work on the breakwater at Salt Cay, which, as mentioned in my last report, had been deferred until professional advice could be obtained, was recommenced and proceeded with satisfactorily throughout the year, the sum expended thereon being £448. This work—one of some magnitude for this little place—is now in a fair way to completion, and the Surveyor reports that he has been able to effect an appreciable economy over the probable cost of the undertaking had it been carried out on the original local lines.

The presence of a surveyor also enabled a good deal of useful and necessary survey work to be done, notably the laying out of an important uncultivated salina at Cockburn Harbour, for the lease of which negotiations were in progress during the year, which have now resulted in an arrangement by which this property will, it is hoped, be turned to good account.

7.—Legislation.

The following Ordinances were passed during the year :—

No. 1.—The Supplementary Appropriation Ordinance.

No. 2.—The Pilotage and Harbour Ordinance, 1896, Amendment Ordinance.

No. 3.—The Jury Ordinance.

No. 4.—The Coroner's Ordinance.

No. 5.—The Cable Company's Ordinance, 1897.

No. 6.—The Annual Appropriation Ordinance, 1898.

The Jury Ordinance is a useful measure, the necessity for which has been long felt. It consolidates four Ordinances, the earliest of which dates from 1853, and effects several improvements, particularly the reduction in number of the jury from twelve to seven in civil cases, as also all criminal cases, not capital, while at the same time setting out the law in simpler and clearer form.

8.—Legislative Board.

During the absence of the Commissioner on leave, the Judge of the Supreme Court, who acted as Commissioner, was appointed to act also as President of the Board, the official vacancy being filled by the appointment of Dr. L. O. Crosswell, the Government Medical Officer at Grand Turk. There were no other changes.

9.—Civil Establishment.

Mr. E. J. Cameron, Commissioner, was absent on leave from 21st May until the end of the year, his duties being performed during that period by Mr. J. Bayldon Walker, Judge of the Supreme Court.

10.—Pensions.

The pension list was further reduced during the year by the sum of £82 1*s*. 7*d*., in consequence of the deaths of Mrs. Maxwell, widow of the late Rector at Grand Turk, and of two former Police Constables.

The total sum paid in pensions was £450 14*s*. 11*d*.

11.—Foreign Consuls.

The following countries are represented :—

United States of America.

Sweden and Norway.

Denmark.

France.

Spain.

Dominican Republic.

12.—Population and Vital Statistics.

The births for the year are returned as 201, against 168 deaths, and the marriages at 44, which is slightly above the average figure.

13.—Education.

There was no inspection during the year, but, as far as can be judged, the average attendance and the standard of teaching were fairly maintained.

14.—Imports and Exports.

The total value of goods imported into the Dependency during the year was over £33,000, and the duty collected £3,568, both figures being somewhat above the average, but with no special feature calling for report.

The export of salt was 2,236,008 bushels, or some 120,000 bushels more than in 1894, the previous record year, and the royalty received by the Government on the export was £3,260. More than two-thirds of this quantity went during the first six months of the year, a great rush being made to get it into the United States before the coming into force of the new Tariff Bill, by which the old duty of 8 cents per 100 pounds on salt in bulk, which amounts as nearly as possible to 6 cents a bushel, is re-imposed.

Such re-imposition has, I regret to say, had the expected effect of bringing down the price to the old figure of 5½ cents to 6 cents a bushel, which leaves but a small margin over cost of production.

The revival of the ground fishery salt trade with British North America, spoken of in my last report, was fortunately maintained, 381,000 bushels going out in this form during the year.

The value of sisal hemp exported was £2,539, or more than double the figure of the previous year, and extraction and export are steadily continuing. At present prices, the outlook for plantations where the growth has been successful is rather more encouraging than it has been for some time.

The value of the sponge export from the Caicos Bank for the year mounted up to between £4,000 and £5,000, or nearly five times the sum of the previous year's taking. Nearly the whole of this is taken by Bahamas sponging craft and carried to Nassau for sale, the business being one that the Caiconian fishermen are too

idle to work at with any steadiness, and the local merchant, moreover, for some not very clear reason, is shy of meddling with. Thus the Dependency really reaps but a slight proportion of the benefit that should, one would suppose, accrue from this source of wealth.

A very small minor industry, the collection and export of palmetto straw, which gives employment to women and children in some of the Caicos Islands, has come into evidence again, owing principally to the troubles in Cuba, which have, as I understand, caused the supply ordinarily obtainable from there to fail.

The total value of the exports, of which over £41,000 was the value of the local products, was over £43,000—a not inconsiderable figure for a Dependency of this calibre.

Comparative tables showing the trade and other statistics of the Dependency are attached :—

The Dependency was not visited by any of Her Majesty's ships during 1897.

There were two wrecks during the year, both on the reefs off the Caicos islands.

16.—AGRICULTURE.

The year was a very dry one, and the provision crops in the Caicos were short in consequence, so that some small sum had to be expended on relief. The attempt at revival of cotton cultivation in the Caicos Islands was carried on, and during the present year it is probable that some moderate quantity of cotton will be shipped.

17.—MINES AND MANUFACTURES.

There is nothing new to report under this head.

18.—GAOLS AND PRISONERS.

The total number of prisoners committed during 1897 was 33, of whom 6 were for safe keeping, and 27 for purposes of penal imprisonment.

The daily average in the gaol was 5.

19.—CRIMINAL STATISTICS.

The total number of offences reported to the police or to the magistrates in 1897 was 181, against 222 in 1896.

Of the offences reported in 1897,

59 were for offences against the person.
9 „ „ praedial larceny.
30 „ „ offences against property other than praedial larceny
92 „ „ other offences.

The total number of convictions in the inferior Courts in 1897 was 122, against 165 in 1896.

These convictions are classified as follows :—

34 for offences against the person.
5 „ praedial larceny.
17 „ offences against property other than praedial larceny.
66 „ other offences.

The convictions in the Supreme Court were as follows :—

2 for offences against the person.
4 „ „ „ „ property.

The acquittals were as follows :—

In the inferior Courts	43
In the Supreme Court...	5

20.—Hospitals and Asylums.

There is no hospital or asylum. In cases of lunacy the patient is placed in gaol under medical supervision, and, if necessary, ultimately sent to the asylum at Jamaica. There were four such patients maintained at Jamaica during the year, at a cost to the Dependency of £110 9*s.* 6*d.*

21.—Meteorological Observations.

There was an average rainfall at Grand Turk, but the fall at Salt Cay and Cockburn Harbour was small, and the water supply in the Government tanks had to be carefully husbanded.

The hurricane months happily passed without the approach of any disturbance to cause anxiety.

Tables of Temperature and Rainfall are appended :—

	Maximum.	Minimum.	Mean.
January ...	80	73	77
February ...	80	76	78
March ...	80	77	78

23.—Post Office.

The ordinary Post Office revenue was £223 10s. 2d., but the sale of stamps to dealers and others gave only £310, or some £640 less than in 1896.

The Mail service was satisfactorily performed during the year by Messrs. Pickford and Black's contract steamer from Halifax, and the Clyde line of steamers from New York.

24.—General Remarks.

The year 1897 was one of financial prosperity, as will be seen from the revenual figures. The salt crop was a very abundant one and the shipments exceptionally heavy, the bulk of which realised a remunerative figure, while continuous employment was provided for the labourers.

The Jubilee of Her Majesty the Queen was loyally and enthusiastically celebrated at Grand Turk, and the happening of this auspicious event will be marked in due course by the erection of suitable memorials at each of the three settlements, taking the form of Public Libraries at Salt Cay and Cockburn Harbour, and the addition of a Clock Tower to the already existing Library at Grand Turk, erected in 1887. A sum of £700 is to be devoted to this purpose.

The year 1897 will furthermore always be notable in the history of the Dependency as the one in which arrangements were at length concluded by the Imperial Government with the Halifax and Bermudas Cable Company for the extension of the cable from Bermuda *viâ* Grand Turk to Jamaica. It is hoped that good may accrue to the place, as time goes on, from the establishment of this cable connection, which is now a *fait accompli*.

The other side of the picture is the unpleasant fact of the re-imposition of the duty on salt by the latest United States Tariff, which so materially affects the trade and general welfare of the place.

There is no difference, however, between the present trade conditions and those existent for many years prior to 1894, and there is therefore, I think, no reason to be despondent as to the Dependency's prospects, though undoubtedly things are not likely to be quite as bright for a time as they have been in the past four years.

Edward J. Cameron,
Commissioner.

GOVERNOR SIR A. W. L. HEMMING to MR. CHAMBERLAIN.

King's House,
Jamaica,
27th January, 1899.

SIR,

I HAVE the honour to transmit herewith my Report on the Blue Book of this Colony for the year 1897–98.

I have, &c.,
AUGUSTUS W. L. HEMMING,
Governor.

BLUE BOOK REPORT, 1897–98.

LEGISLATION.

During the Session of 1898 the Legislative Council passed 41 laws, of which the following are the more important :—

Law 5 of 1898—The Obeah Law.—This law consolidates and simplifies the laws relating to Obeah, and provides for the suppression of Obeah literature.

Law 11 of 1898—The Stamp Duty Law, 1898.—This law reduces the stamp duty on marine policies, increases the rate of probate duty from two to three per cent., and requires agreements for leases to be stamped with the same duty as leases.

Law 13 of 1898,—The Jury Law, 1898—consolidates the laws relating to juries and makes certain amendments of the system.

Law 14 of 1898 repeals the schedule of duties to the Legacy Duty Law of 1879, and substitutes a schedule of reduced rates.

Law 15 of 1898.—The Kingston General Commissioners Extended Powers Law, the object of which is to give the Commissioners, in whom are vested the power and duties of the Kingston and Liguanea Water Works Commissioners, extended

2006—800—2/99 Wt 21935 D & S—5 (B)

powers for the purpose of protecting from defilement the various sources of water supply for Kingston and the plains of St. Andrew.

Law 16 of 1898—The Direct West India Cable Company's Law, 1898.—This law gives legal effect to the arrangements made by the Direct West India Cable Company to extend their cable to Jamaica.

Law 17 of 1898.—This law amends and incorporates the Marine Board Laws of 1896 and 1897.

Law 18 of 1898.—The Adulteration of Food and Drugs Law.

Law 20 of 1898.—The Succession Duty Law, 1898, which imposes certain duties on succession to property.

Law 28 of 1898.—The Tariff Law.

Law 29 of 1898, which enables the Governor to raise, on behalf of the Kingston General Commissioners, a loan for the purpose of improving the supply of water to Kingston and the Liguanea Plains.

Law 34 of 1898.—The Cayman Islands Commissioners Law, which gives the Governor power to appoint a Resident Commissioner for those Islands.

Law 36 of 1898—The Resident Magistrates Amendment Law. —This law incorporates the Resident Magistrates Law of 1887, removes the inelastic provisions of the 1887 Law, which confines the jurisdiction of each resident magistrate within the boundaries of a particular parish.

Law 38 of 1898.—The West India Electric Company's Law, 1897, Amendment Law, 1898.

Law 40 of 1898, which gives the Governor power to raise by loan a sum not exceeding £100,000 to meet the liabilities of the Government.

FINANCE.

The revenue collected during the year amounted to £540,509, while the expenditure amounted to £627,422, thus showing on the year a deficit of £86,913. Compared with the previous year, general revenue shows a net decrease of £51,355, and general expenditure a net decrease of £36,800.

Parochial revenues, which are devoted to parochial roads, poor relief, sanitary and other local services, and are administered by the several Parochial Boards, produced £113,527, a decrease of £3,247 as compared with the previous year. This does not, however, include advances made from general revenue in aid of these funds, which amounted to £18,440.

Parochial expenditure during the same period amounted to £126,712, or £9,130 less than in the previous year, the repayment of advances from general revenue, which amounted to £11,814, not being taken into account.

Immigration revenues during the year amounted to £4,529, an increase of £2,848, and expenditure to £403, a decrease of £576 on the previous year.

The following is a statement shewing the whole revenue realised in the year under review compared with the previous year :—

Immigration Revenues ...	4,529	1,681	2,848	—
	677,063	778,813	2,848	104,598
Net Decrease	—	—	—	101,750

The large net decrease in General Revenue of £51,297 as compared with the previous year is almost entirely due to the falling off in the Imports and Rum Duties, caused by the depression in business to which allusion is made elsewhere in this report, and to the reduction of Stamp Duties under Law 27 of 1896. The only items showing increases of any importance are Reimbursements and Miscellaneous, which respectively showed £16,599 and £13,915 more than in 1896–97.

The revenue for Parochial purposes, which varies according to the rates imposed, shows very little change, there being slight increases under General Purposes Rate and Miscellaneous, and slight decreases under the other items.

JAMAICA 1897-8.

The following is a comparative statement of the expenditure during the year under review :—

COMPARATIVE STATEMENT OF EXPENDITURE, 1897-98.

Immigration Expenditure ...	403	979	—	576
	766,534	833,204	—	—
Net Decrease	—	—	—	66,670

The net decrease in the General Expenditure was £2,027. The more important increases are to be found under the following heads, viz :—

Charges of Debt £30,233, due to the inclusion of the amount required for Sinking Fund, for interest on temporary advances, and interest on Law 27 of 1890, with increased interest by Laws 20 of 1892, 6 of 1893, and 13 of 1895, that cause an excess of £37,500 which is, however, reduced by paying off of the debt due under Law 39 of 1869, &c.; Pensions £4,607, due to grant to

Constabulary Pension Fund being charged to this account (Law 21 of 1895); Constabulary £5,289, due to clothing, arms, &c., provided for increased number of men, and to the transport of men and prisoners consequent on the closing of certain prisons; Medical, £1,785; Education, £1,848; Railway Track, £1,505, due to settlement of more claims for land acquired than in the previous year; and £2,556, the cost of the Queen's Jubilee celebrations.

PENSIONS.

During the year pensions amounting to £736 11*s.* 9½*d.* were granted under the provisions of Law 34 of 1885 and the resolution of the Legislative Council dated 23rd October 1887, while the Pension List was relieved by the death of pensioners to the extent of £1,176.

DEBT.

No new loans were raised during the year under review.

The Public Debt directly secured on General Revenue stood as follows at the close of each of the last ten years, after making allowance in each year for the Sinking Funds actually invested for the eventual redemption of debt :—

	£	*s.*	*d.*
1888	1,502,684	9	8
1889	1,506,883	6	0
1891	1,458,221	12	7
1892	1,520,088	4	3
1893	1,523,944	2	11
1894	1,672,299	14	6
1895	1,678,744	11	2
1896	1,666,177	14	3
1897	1,787,499	18	7
1898	1,993,284	4	10

The above amount was raised at varying rates of interest, and the balance at present outstanding is held—

£	
118,168	... at six per cent.
7,500	... at four and a half per cent.
1,553,056	... at four per cent.
30,860	... at three and a half per cent.
283,700	... at three per cent.
£1,993,284	

JAMAICA. 1897–8.

A considerable portion of the amounts originally raised by debentures has since been converted into Inscribed Stock under the provisions of Law 13 of 1885, but the present liability is divided as follows :—

	£
Debentures	635,297
Inscribed Stock, England ...	1,116,459
Inscribed Stock, Jamaica ...	123,360
Deposits, Rectors and Island Curates Fund, and Widows and Orphans Fund	118,168
	£1,993,284

The debenture debt is mainly redeemable by a one per cent. Sinking Fund, which is applied to the redemption of debentures chosen by lot at annual drawings, and the Inscribed Stock, both English and Jamaica, is to be redeemed by a cumulative Sinking Fund of one per cent. on the total amount issued, which is calculated to produce sufficient to redeem the stock at its maturity in the year 1930.

Of the total of debt on the 31st March 1898, £742,920 was on account of the purchase, reconstruction, and extension of the Jamaica Railway to Ewarton and Porus, £126,500 on account of the Rio Cobre Canal, £217,000 for the erection of new bridges, and £48,700 for debentures issued on account of the Myrtle Bank and Constant Spring Hotels, which have now been taken possession of by the Government.

LEGISLATIVE COUNCIL.

The annual session of the Council commenced on the 15th March 1898 ; it continued far beyond the close of the year under review, and adjourned *sine die* on the 3rd August 1898.

During that period the Council held 33 meetings.

PUBLIC WORKS.

The total expenditure of the Public Works Department was £128,074 6*s.* 4*d.*, being £26,262 15*s.* less than in the preceding year. The cost of administration and supervision was equal to 12¾ per cent. of the total expenditure of the Department.

The total expenditure on main roads and bridges chargeable against General Revenue was £26,081 2*s.* 1*d.* The total length of these roads was 913 miles 42 chains, being 21 miles 6 chains more than in 1896–97.

The total average expenditure per mile for maintenance, repair, and improvement of the roads and bridges was £27 15*s.* 9*d.* This was not, however, found sufficient to maintain the roads in the good condition they were in at the beginning of the year, and they were considerably damaged by heavy rains in the months of October and November.

The total expenditure during the year for reconstruction of roads taken over under Law 17 of 1890 was £692 1*s.* 10*d.* The total length taken over to the 31st March, 1898, was 985 miles 17 chains, and the average expenditure for maintaining these roads was £16 11*s.* 9*d.* per mile.

At the end of the year there were 71 miles 46 chains of main roads, and 52 miles 76 chains of parochial main roads under maintenance by contract.

The number of separate institutions and buildings the upkeep of which devolved upon the Public Works Department was 286, the same as in the previous year, and the cost amounted to £4,047 19*s.*, being £4,680 2*s.* 9*d.* less than the sum authorised. Owing to the depressed condition of the Colony, no work that could possibly be deferred was carried out. The expenditure was therefore kept very low, averaging about £14 per building. No new buildings were erected during the year.

The construction of bridges authorised by Law 20 of 1892 was continued, the expenditure during the year on this work was £12,621 3*s.* 8*d.* At the close of the year 89 out of the 104 bridges authorised were completed.

Considerable progress was made with the work of constructing the new Lunatic Asylum.

The enlargement of St. Catherine's District Prison was proceeded with, and the new female prison containing 66 cells was practically completed.

The lands for the extension of the Kingston Public Hospital were, with the exception of one or two lots, acquired and prepared for building operations.

Six and three-quarter miles of the second section of the mountain road in St. Andrew, under Law 13 of 1895, from Hopewell Gap to Hardware Gap were practically completed. Eight miles of the third section (12½ miles), from Hardware Gap to Silver Hill Bridge on the Buff Bay Road, were cut to full width, and the remainder was in hand at the close of the year.

The fourth section (1 3/8ths miles), the branch to Silver Hill, was completed, and it is now possible to drive from the "Cooperage" near Gordon Town, *via* Hardware Gap to Silver Hill, a distance of 19 miles.

The survey of the road from Gordon Town to Mavis Bank and Windsor Forest was completed, and surveys for the road from Bath *via* Cuna Cuna Pass to Moore Town were commenced.

The total expenditure on the mountain roads during the year was £15,463 2*s.* 4*d.*

The lighthouses at Plumb Point, Morant Point, Folly Point, and Negril Point were maintained and worked with efficiency and regularity throughout the year at a cost of £1,795 19*s.* 1*d.*

693½ miles of telegraph lines were under maintenance at the end of the year. The expenditure under this head amounted to £1,643 4*s.* 1*d.*

IRRIGATION.—RIO COBRE CANAL.

The revenue earned during 1897-98 from these works was £5,561 6*s.* 3*d.*, but only £5,132 10*s.* 3*d.* was collected; the cost of maintenance and supervision was £2,413 19*s.* 2*d.*, thus leaving a net profit of £2,618 11*s.*; the net profit in 1896-97 was £1,975 13*s.* 2*d.*

The irrigation works continue to prove of great benefit to the cultivation of bananas and oranges; since 1893 the area under bananas in the district irrigated has increased from a few hundred acres to nearly 5,000.

CROWN LANDS.

The Surveyor-General reports that there were numerous sales to small settlers of Crown land in lots of from 5 to 50 acres during the year under revision; 301 applications for land to the extent of 3,431¼ acres having been received. The demand for this class of land is steadily increasing.

Two bridle roads were laid out during the year giving access to the lands purchased at Adam Brandon's patent, and at Claremont, in Portland.

The Legislative Council having voted the sum of £778 in the Sessions of 1897, the Surveyor-General was enabled to construct a road, opening up the Crown lands at Troy, in Trelawny. It is gratifying to note that the settlers whose lands were opened

up by this road, although only 9 months elapsed between the voting of the money and the end of the year under review, had at the 31st March made great strides in the cultivation of their properties. Twenty-one settlers have laid out their holdings in coffee, oranges, kola, ground provisions, &c. on a small scale, and are making strenuous efforts to increase the crops. The men seem thoroughly to appreciate their privileges of ownership; nearly all of them have either built or are building shingled houses on the land.

During the year final judgments of forfeiture for non-payment of Quit Rents were obtained in the cases of 96 properties covering 36,066½ acres. Most of the land is suitable for cultivation.

Exclusive of four lots of land transferred to the West India Improvement Company, 3 pieces of land in Kingston, and one each in Portland and Clarendon were sold by the Government, realizing £341 13*s.*, or an average of about £3 per acre.

A large number of lots, principally in Kingston, were leased out by the Government, realizing an annual rental of £295 12*s.*

Lands to the extent of 1,472 acres were transferred to the West India Improvement Company during the year ended 31st March last, making 71,828 acres granted up to the present time under Law 12 of 1889.

It is to be regretted that the cocoanut trees on the Palisadoes show signs of decay; remedial measures have been taken by the Director of Public Gardens and Plantations, but without successful results.

Land for Railway Track.

The expenditure on account of lands for railway track to 31st March, 1898, was £81,057 0*s.* 9*d.*

The acquisition of lands for the track may now be regarded as practically completed, only £2,085 18*s.* 3*d.* of claims remaining to be paid on 31st March, 1898.

Railway.

The records of the transactions of the Jamaica Railway Company shows that during the year ended 31st March, 1898, the gross earnings of the railway amounted to the sum of £102,170 0*s.* 4*d.*, while the expenditure was £74,592 9*s.* 10*d.*: thus leaving a net revenue of £27,577 10*s.* 6*d.*

JAMAICA. 1897–8.

The following is a comparison of the receipts with those of the preceding year :—

—	1896–97.			1897–98.		
	£	s.	d.	£	s.	d.
Goods and cattle	53,200	14	0	58,424	9	6
Passengers	38,497	12	5	37,267	18	0
Wharf	5,990	14	3	5,682	9	11
Miscellaneous	790	12	3	795	2	11
Totals	98,479	12	11	102,170	0	4

The number of train miles run during the year amounted to 406,302, which shows the revenue to be at the rate of 5/0·35 per mile, and the expenditure 3/8·05, or a net revenue of 1/4·30 per mile. The operating expenses were equal to 73 per cent. of the receipts.

The number of passengers carried during the year shows a falling off, the total being 356,949, as against 384,611 in 1896–97.

£23,159 13*s.* 4*d.* was paid on account of Interest on Mortgage Bonds, and £3,200 on account of Sinking Fund.

POST OFFICE AND TELEGRAPHS.

The total postal receipts for the year amounted to £22,883 19*s.* 0½*d.*, being £1,541 12*s.* 1¼*d.* less than in 1896–97.

The telegraph receipts amounted to £5,085 12*s.* 6*d.*, a decrease of £394 6*s.* 9*d.* as compared with the previous year.

The Postmaster estimates £941 of the falling off in postal receipts to be due to the general depression in trade and agriculture which prevailed throughout the year, and £600 to the abolition of the system of prepaying official correspondence by means of stamps purchased by the Public Departments from the Post Office, and reversion to the franking system from 1st January 1898, the annual value of official postages being estimated at £2,500.

A decrease occurred under the head of packet as well as inland postages, and is attributed to the same causes.

The following statement shows the revenue and expenditure for the year 1897–98, compared with the two preceding years :—

REVENUE.

Year.	Postages.			Postal Revenue.		Miscellaneous.	Total Postal Revenue.	Telegraph Revenue.	Grand Total.
	Packet.	Inland.	Total.	Commission on Money Orders.	Commission on Postal Orders.				
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.

The total number of letters and postcards which passed through the Kingston Post Office and the several district post offices was 4,980,191, as against 4,375,374 in the previous year.

Nine new mail services came into operation and 18 district post offices were established during the year, making the total number of post offices in existence at the close of the year 160, as against 142 at the end of 1896–97.

The following figures show the money and postal order transactions for the year compared with the years 1895–96 and 1896–97 :—

Year.	Money Orders.					Postal Orders.		
	Jamaica Issue.		From other Countries payable in Jamaica.		Total Amount.	Issued.		Sold.
	No.	Amount.	No.	Amount.		No.	Amount.	Amount.
		£ s. d.		£ s. d.	£ s. d.		£ s. d.	£ s. d.
1895–96 ...	13,116	47,242 13 0	2,194	5,441 1 1	52,683 14 1	151,770	26,721 17 6	26,383 3 0
1896–97 ...	12,548	43,963 16 8	2,711	7,050 4 1	51,014 0 9	171,035	26,857 10 0	26,577 10 0
1897–98 ...	11,994	40,068 5 1	2,770	7,679 8 6	47,747 13 7	175,985	29,397 10 0	28,745 1 0

The earnings of the mail coaches for passenger fares and parcels amounted to £1,632 2*s.* 6*d.*, or £712 19*s.* 3*d.* less than in the preceding year. The falling off is due to the extension of the railway to Montego Bay and Port Antonio.

The declared value of parcels which passed through the parcels post was £3,289 11*s.* 10¾*d.*, against £3,273 14*s.* 5*d.* in 1896-97.

The revenue and expenditure under the head of telegraphs is shown in the statement already given.

The number of telegraph messages sent and received was 87,545, against 96,292 in 1896-97.

Sixty-nine telegraph stations were in existence at the close of the year, being the same number as in the previous year.

AGRICULTURE.

The depression of the year ended 31st March, 1897, continued during the following year, but the Colony was not afflicted to any extent with the drought and floods referred to in the penultimate paragraph of last year's Blue Book Report. The October rains were heavy in several parishes, and in a few parts caused some destruction of roads and private property. Speaking generally, however, the seasons were favourable to agriculture, and but for the lowered prices of nearly all the staples, even compared with the previous year, there would probably have been an appreciable increase in the value of exports. As it was, home products and manufactures (the latter a very small item proportionately) decreased very slightly compared with 1896-7, viz.:—from £1,384,278 to £1,377,826. Fruit and vegetables were more plentiful than during the preceding year owing to good seasons, and most crops were good except that of pimento, which was only about one-third of the average, though this disadvantage was somewhat counterbalanced by the unusually high prices obtained. The coffee crop was a fine one, but a very low price was secured both at home and abroad. The producer, though realizing very little cash from his sales, had a sufficiency of food from his provision ground owing to the fine seasons. In Jamaica the seasons are usually good, and there is little distress except during occasional prolonged droughts, which chiefly occur in a narrow comparatively rainless tract, made abnormally so by deforestation, which lies along the south-eastern sea-board. Further, in parishes almost entirely of the limestone formation, which covers most of the western and middle sections and part of the eastern section of the Island, the porous nature of the rock causes the water to sink until an impermeable stratum is found, usually very far below the surface, or else, where this formation

JAMAICA. 1897–8.

ends near the sea at a bed of alluvium, streams gush out. The inland limestone tract has very few streams, and these usually disappear after a course of a few miles into what are termed "sink holes." A great portion of Jamaica is not, therefore, a land of streams, as the Island is usually supposed to be, and the extensive limestone districts derive their water supply chiefly from tanks and ponds. A family can thus obtain a sufficient water supply to outlast any but very dry weather from a tank or pond constructed at the expense of a few pounds, provided a sufficient catch-water area is constructed, but this is seldom done, and most of the peasantry and a good many other occupiers of property do not thus secure themselves against the rainless day, but live on from day to day in contented neglect of what the future may bring, and in times of drought look to their more provident neighbours, usually the larger proprietors, to give them water for themselves and their stock. It is no wonder, therefore, if privation and distress occur at times, as during the severe droughts of 1896-97, when the supply in Manchester and St. Elizabeth especially became too low to be any longer given away. Were tanks with a sufficient catch-water area constructed by all owners of land in limestone districts, which have usually a good rainfall, there would be comparatively little distress in country parishes. In some places public tanks or reservoirs have been constructed, and greater attention has been paid of late years to water storage and supply. The greater portion of the dry Liguanea district contiguous to Kingston has an excellent water supply for household use by pipes from the Hope River, and a few artesian wells have been sunk with success, but it is feared that the cost of boring through the usually thick stratum of the limestone districts would be too great to be undertaken.

The returns of acreage under cultivation during the years ended 31st July 1897 and 1898 show a considerable shrinkage.

The following figures indicate the declension during the five years ended 31st July 1897. The figures for 1897-98 are also given. Compared with the previous year they may serve to indicate more nearly the present outlook as foreseen by cultivators. The figures are taken from the returns of property tax, and the collecting year begins on the 1st August. The Collector-General has thus to give returns of acreage 9 months in arrear of the figures for the financial year to which his report refers.

It should, however, be understood that the only alarming shrinkage in production has been in sugar and rum, which require capital and labour in large quantities for growth and manufacture, and the decay of the industry means loss of capital and restriction in the circulation of money. The falling off in logwood, pimento, oranges, and cocoanuts represent a diminished yield from trees on which very little labour is expended, except that of reaping,

as the logwood, pimento, and oranges grow without having been planted, and the cocoanuts, after having been once brought into bearing by cultivation, require no further expenditure. The diminished yield does not mean any failure of the source from which these products are derived. Low prices have resulted in logwood not having been reaped, but allowed to remain for further maturity pending better prices. Recently the growth of oranges has been commenced as a cultivated crop, but the groves planned out have not yet come into bearing. Substantial increases occurred in the production of coffee, bananas, cocoa, and ginger, and the only drawback has been the low prices of coffee. The apparent falling off in the acreage under cultivation is in a large measure to be attributed to taxes not having been paid on the full area under cultivation.

ACREAGE, YEAR ENDED 31ST JULY, OF LAND CHARGED WITH PROPERTY TAX.

DESCRIPTION OF LAND.	1892–93.	1893–94.	1894–95.	1895–96.	1896–97.	1897–98.
I.—CULTIVATED LAND	177,497	181,295	182,668	182,489	164,644	164,307
II.—GUINEA GRASS	123,881	125,972	126,877	127,437	124,672	123,136
III.—PASTURE AND PIMENTO LAND ...	375,774	384,802	382,422	383,748	374,244	373,228
	677,152	692,069	691,967	693,674	663,560	660,671
IV.—WOOD AND RUINATE	1,268,483	1,284,477	1,260,178	1,268,563	1,218,149	1,187,909
Totals	1,945,635	1,976,546	1,952,145	1,962,237	1,881,709	1,848,580
Principal Items under I.						
Bananas	17,297	18,528	18,847	19,227	19,760	23,405
Canes (yielding Sugar and Rum) ...	31,555	31,284	30,971	30,036	28,764	27,123
Cocoa...	1,315	1,554	1,687	1,632	1,611	1,527
Cocoanuts	9,065	10,395	10,956	10,940	10,799	11,293
Coffee	22,423	23,523	23,643	25,559	22,387	22,901
Ginger	246	128	84	84	82	98
Ground Provisions	94,716	95,177	95,808	95,808	80,656	77,271

Three staples with an export value of over £10,000 are omitted, viz., logwood growing in pasture or ruinate land, pimento in pasture land or guinea grass, and oranges chiefly in pasture. It is difficult to classify descriptions of cultivation with more than an approximation to accuracy, as, except for bananas, canes, and coffee, and one or two other products usually cultivated in large patches, a property generally contains several descriptions of produce mingled together. Thus in 1896–97 the figures for the seven articles given above total 164,059 out of 164,644 acres of all descriptions of cultivated land.

There is no ground whatever for supposing, however, that only 585 acres represented the acreage of all other cultivated products during 1896–97, besides those tabulated. One of the tabulated articles (ginger) illustrates this clearly.

The acreage for the last few years is returned at 80 to 90 acres, while the export value, leaving out of consideration home consumption, was an average for the five years 1894–98 of £41,525, or, say, from £450 to £500 per acre, a value per acre far above that realized. The truth is that could we total the acreage of fruit, logwood, and other economic plants scattered over properties and growing around homesteads we would probably have to add many thousands to the acres shown under head I. At the same time the three heads, cultivated land, guinea grass, and pasture land, give almost the entire area of the Island made use of for the support of its inhabitants. This inhabited area, *i.e.* less than 700,000 acres out of a total estimated area of 2,692,000 acres, it will be seen, increased generally from 1st August 1892 to 31st July 1896, and has decreased by over 30,000 acres since, *i.e.* by about 4 per cent. The decrease occurs principally under cultivated land, where it has been about 10 per cent.

The most rapid decrease under this head occurs on ground provisions. For the 6 years included in the table there was but a slight difference year by year in acreage till 1895–96, since which the decline has been rapid—1895–96, 94,332 acres; 1896–97, 80,656 acres; 1897–98, 77,271 acres.

There has been a decrease generally in quantities of imported goods within the period. As ground provisions, *i.e.* root esculents, are the staple vegetable food of all classes, and are almost entirely cultivated by the peasantry, these figures seem to indicate general decrease in prosperity, when decreased importations are taken into account. In this connection it may be remarked that the agricultural holdings returned for the year ended 31st July 1896 (including those on which there were arrears of taxes) were 90,667, and in the following year only 76,585, and that all the tax returns of the last few years indicate a considerable increase of arrears. It must be borne in mind, however, that the decrease in the amount allowed by the Legislative Council for travelling by revenue officers has in all probability appreciably affected the collection of taxes, and

JAMAICA. 1897–8.

while there has undoubtedly been a considerable temporary decline in the Colony's income, it is very likely not so great as some of the tax returns might lead one to imagine.

Turning now from cultivation of products to their exportation, we find the value of exported home products and manufactures in the year ended 31st March 1897–98, in both of which the total values realized were almost the same, has been about 20 per cent. less than 1895–96, or about double the decline in acreage. Besides the fact that cultivation cannot recklessly be thrown up because less quantity or value is realized in one or other period, and that therefore less fluctuation in acreage must be expected than in exports, it must be remembered that the figures for acreage are given for a period nine months before those of exports, that crops mature, and are therefore planted ahead of reaping at different periods, and also that there are no accurate data available of the quantities and therefore of the total values of articles consumed in the Island. At the same time when several years are compared it is evident that there has been a considerable shrinkage both in cultivation and exportation.

In Jamaica only a very limited number of persons have adopted improved methods of cultivation, hence the average yield per acre may fairly be taken as much the same year by year, except as affected by rains or drought. Comparing cultivation and exportation of home products and manufactures for the last five years we find exports highest in 1893–94, viz., £1,982,596, whence they declined moderately every year till 1895–96 when they leapt suddenly down from £1,775,016 to £1,384,278, falling slightly the next year to £1,377,826. Cultivated and grazing land increased or decreased generally very slowly till the same year when the acreage went down from 693,674 to 663,560, with a slight declension for the year ended 31st July, 1898, to 660,671 acres.

The details of exports are more fully given under trade, but the following figures furnish a succinct comparison with the preceding year :—

—	Value 1896–7	Value 1897–8	Price 1896–7.	Price 1897–8.
	£	£		
Bananas ...	302,415	445,866	1*s.* 3*d.* a bunch	1*s.* 3¼*d.* a bunch
Oranges ...	155,554	134,674	33 to 34 a 1*s.*	32 to 33 a 1*s.*
Sugar ...	148,679	120,959	9*s.* 3*d.* per cwt.	8*s.* 6*d.* a cwt.
Rum ...	123,211	92,053	1*s.* 6*d.* a gallon	1*s.* 4*d.* a gallon
Coffee ...	210,946	165,494	63*s.* 4*d.* a cwt.	38*s.* 9*d.* a cwt.

Details of exports—*cont.*

—	Value 1896–7.	Value 1897–8.	Price 1896–7.	Price 1897–8.
	£	£		
Logwood ...	161,565	118,215	75*s.* a ton	55*s.* 6*d.* a ton
Pimento ...	77,152	52,943	15*s.* 6*d.* a cwt.	27*s.* 3*d.* a cwt.
Cocoa ...	15,297	37,435	33*s.* 4*d.* a cwt.	46*s.* 7*d.* a cwt.
Cocoanuts ...	35,407	39,648	60*s.* per M.	68*s.* 9*d.* per M.
Ginger ...	33,041	34,884	60*s.* a cwt.	55*s.* 6*d.* a cwt.
	1,263,267	1,242,171		
Minor products and manufactures ...	121,011	135,655		
Totals ...	1,384,278	1,377,826		

There was thus a considerable increase in the export value of bananas with a slight rise in price, a remarkable rise in price of pimento, but a crop stated by the Collector-General to have been only about a third of the average, resulting in a loss of total value. A good crop of coffee made the total loss less than it would have otherwise been with the very low prices. This product and logwood suffered the most, though sugar and rum together show a serious loss to the cane industry. Happily the price of sugar has lately risen, and steps now being taken to establish an irrigation scheme in Vere, if carried into effect will, it is hoped, considerably benefit the planters, and enable a central factory to be started. The price of cocoa was excellent for Jamaica, though low as compared with that of the best Trinidad varieties. There is no apparent reason why the intelligent use of capital in the production of cocoa, combined with due care in its curing and packing, should not lead to its becoming a major product as in Trinidad. The demand for the article is not likely to decrease as its valuable qualities become more known.

Generally speaking the export value of bananas, cocoa, cocoanuts, ginger, and minor products realising £10,000, and under, very nearly set off the loss on most staples, a loss greater in value than quantity owing to generally low prices.

Stock rearing has declined as well as cultivation. Guinea grass and pasture land has not increased as much in acreage as cultivated land has, as the table of acreage shows, but stock seem

JAMAICA. 1897–8.

to have sensibly decreased in number. The following figures appear to indicate this.

The tax on horsekind used on public roads is 11*s*. each, on livery horses 7*s*. each.

The collection for the year 1895–96 showed 33,506 horses, and for the year 1896–97 showed 31,667 horses used on public roads (including livery horses). For the same periods we have 14,059 and 12,588 asses so used.

Returns by taxpayers for these years show :—

—	1895–96.	1896–97.
Horsekind	13,322	10,541
Cattle	103,403	99,201
Asses	2,217	1,769
Sheep	14,456	13,831
Goats	8,554	6,869
Swine	24,060	20,718

The above figures are for years ended 31st July. Returns are also furnished of taxes collected on horsekind and asses for the years ended 31st March 1897 and 1898. They show in 1897 £16,896 for horsekind and £2,219 for asses, in 1898 £15,801 for horsekind and £1,914 for asses, decreases indicating a diminished use of these animals, or a failure to pay taxes on them.

The war in Cuba resulted in benefit to stock raisers. The exportation of stock in 1896–97 amounted to only 57 animals, including cattle, horsekind, mules, and swine; in 1897–98 it amounted to 1,327 animals, viz. :—1,243 cattle, 8 horsekind, 54 swine, and 22 sheep, all except the horsekind, shipped to Cuba ; 3,120 fowls were also exported to that country. These exportations to Cuba realised £9,163 13*s*. If quarantine restrictions on Cuba are removed, with the better sanitary regulations now in force, a considerable trade in stock might spring up between the two islands, until the larger one recovers its heavy losses owing to the war.

The Jamaica Agricultural Society has done excellent work during the year in encouraging the breeding of stock, by importations of choice stallions for pens, boars, sheep, poultry, &c., by the encouragement of agricultural shows, the formation of local branches, the publication of an agricultural journal, &c. Demonstrations of the best methods of cultivating and curing products are given to the peasantry by a Superintendent of the Botanical

Department. Model grape farms which had been established in districts of St. Elizabeth and Westmoreland have given excellent results. It is hoped that the culture of grapes for the American winter market may in time become a profitable industry. Public opinion has been awakened to the need of agricultural training as an important portion of the curriculum of teaching in a Colony depending almost entirely on agriculture for its income, and were more modern tools and methods of cultivating, curing, and packing of products resorted to, and were exporters more prudent in forbearing to glut the market at every slight indication of a rise in prices, the income of the Colony might be considerably increased. Bearing these facts in mind, and remembering that less than 700,000 of the 2,692,000 acres of land in the Colony, most of which is more or less fertile and blest with good seasons, is occupied as cultivated and grazing land, it is evident that by the exercise of prudence and skill in cultivation and exportation, the Colony would be able to support comfortably a considerably larger population.

BOTANICAL.

The activity of the Department is indicated by the following figures :—

Plants distributed—	Hope Gardens	...	135,005
"	Castleton Gardens	...	5,602
"	Resource "	...	66,699
	Total ...	...	207,306

besides pods, seeds, &c. About seven-eighths of the plants distributed were economic ones.

The stock in the nursery at Hope Industrial School comprises about 129,300 plants.

The visitors to Hope were 18,071, as against over 12,000 last year.

Plants are distributed at a very cheap rate and carriage free, some economic plants being priced as low as one halfpenny each, and a very large number are distributed free.

A great deal of the time of the Department, the Director states, is taken up in research and the giving of information respecting the value, properties, &c., of plants and specimens sent to the Herbarium, and in replying to enquiries from merchants and others as to whether articles they require are procurable in the Colony or would pay if cultivated. The Department is thus a valuable auxiliary to traders as well as agriculturists.

Information is also given to the public through the monthly bulletins.

Considerable attention has been paid during the year to the culture of coffee, cocoa, sugar canes, grape vines, pines, oranges, mangoes, tobacco, rubber, &c., especially in discovering what varieties best suit the soil and climate.

At what is called the Orange Garden at Resource, which has only been started within the last few years, timber trees, cassava, fodder plants, &c., are grown and experimented on, as well as oranges.

At Hope Industrial School there were 41 boys in residence at the end of the year, as against 29 on the 1st April 1897. A few of the bigger boys have small garden plots allotted to them, where they cultivate tomatoes, cucumbers, pumpkins, cabbages, &c., which they sell to the Institution for their own consumption, besides supplying a few outside customers. In one month, 2 cwts. of vegetables were thus sold to the School. The boys are allowed to spend the money earned in this way in purchasing story books, toys, &c., and a small portion of the money rewards is deposited in the Penny Bank at the Jamaica High School. The School, it is stated, may fairly be considered a first-class one.

Mr. Cradwick, the Superintendent at Hope Gardens, has continued his lecturing tours, visiting during the year the parishes of Portland, St. Ann, Manchester, St. James, and Hanover.

He has induced many persons in dry districts of Manchester and St. Elizabeth to grow grapes, with excellent results, and finds an increasing desire shown by the people to adopt improved methods according to their resources. As an illustration, a piece of land formerly planted with ginger, and now looked upon as worthless, had been forked and manured with rotten cane trash, and with this simple treatment produced excellent ginger, thus showing that this product can be grown on land for a term of years.

EDUCATION.

The number of school children on the books decreased by 354 during the year, and those in average attendance by 428, as compared with the preceding year.

The amounts expended on Education in the last two years were £67,539 in 1896-97, and £69,387 in 1897-98.

There has been a falling off of 8 in the number of first-class and 18 in the number of third-class schools, but an increase of 42 in the number of those of the second-class, showing that on the whole the schools are continuing to improve in efficiency.

The total number of schools on the list has decreased by 11.

The annual examination of Teachers and Training College Students was held in December as usual, and resulted in the passing of 5 Teachers out of 11 who went up for the examination, and 149 Students out of 183 who presented themselves, viz. :—

—	Presented.	Passed.
1st year	63	57
2nd year	78	68
3rd year	42	24

The examination of Pupil Teachers and Volunteers was held in July 1897, with the result that 643 passed out of 1,671 who presented themselves, or 38 per cent.

In accordance with the expressed wish of the Members of the Legislative Council, a Commission, under Law 9 of 1873, was appointed by the late Governor to enquire into the present system of Elementary Education in the Colony.

Training College for Girls at Shortwood.

On the 1st April 1897 there were 29 Students; one was admitted during the year, one dismissed, two left to look for work, one died, and one was discharged on medical certificate, leaving 25 in the Institution at the end of the year. They all sat for examination in December 1897. One passed in Honours, three in the First Class, and nine in the Second, and five in the Third.

The Practising School obtained 47 marks, and was placed in the Third Class.

INDUSTRIAL SCHOOLS.

Hope Industrial School.

There were 29 boys in this Institution on the 1st April 1897, and at the end of the year there were 41. This gives an increase in the number of boys for the year of 12, and an average increase for the past 6 years of 3·7.

The older boys were employed in work at the Hope Gardens, and the younger in keeping the buildings and grounds in order, and in other light work.

The School was examined in August 1897 by Mr. J. Kerrich, Inspector of Schools, who states that as the School is being worked on the lines of an Agricultural Elementary School, it is hardly possible to mark it in the same manner as an ordinary Elementary School, but that it shows an improvement over last year, and may now fairly be considered a first-class one.

Lessons in the practice and theory of agriculture were given to the boys by the Superintendent of the Hope Gardens.

The health of the boys has been good.

Belmont Orphanage.

This school was maintained partly by public and partly by voluntary contributions.

The children were employed in washing, plaiting, &c., and in garden work, and at the Eistoddfod competition, held at the Jamaica Institute, in June 1897, one girl was awarded the prize for hats and another for baskets.

The children attended school as usual.

Alpha Cottage.

This is an Institution for both boys and girls, and is under the control of the Roman Catholic Church.

At the commencement of the year there were 51 boys and 40 girls, and at the end 48 boys and 40 girls.

The boys are chiefly employed in gardening and in field labour, and the girls in laundry, sewing, cooking, and domestic work, and in gardening.

Both schools retain their positions as first-class schools. The Boys' School gained one mark during the year, making 65 marks.

Shortwood Industrial School.

There were 35 girls in this Institution at the commencement of the year and 33 at the end, 2 of whom were out on license.

The employment of the girls consisted of mending, washing, and making of clothes, baking and housework, &c.

REFORMATORIES.

BOYS' REFORMATORY.

The following are the more important statistics of the Institution for the year 1897–98 compared with 1896–97 :—

GENERAL.	1st April, 1897.	1st April, 1898.	1896–97.	1897–98.
Boys in Reformatory section	124	120		
" Industrial School ...	89	77		
	213	197	213	197
Daily average number of boys			204	201
Discharged			37	55
" during 3 years ended 1st April, 1897 and 1898, respectively			142	144
Percentage re-convicted and sent to prison (so far as known) during 1896–97 and 1897–98			15·63	2·78
On license at end of year			2	1
Deaths			1	1
Marks awarded school (making it a first-class Elementary School under the Code)			61	61

Financial.

—	1896–97.	1897–98.	1896–97.	1897–98.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.
Gross Expenditure	... ...	... ...	3,857 18 3¼	3,612 8 6¾

	1,529 15 11	1,961 18 2	1,529 15 11	1,961 18 2
Net cost			2,328 2 4¼	1,650 10 4¾

JAMAICA. 1897–8.

	£	s.	d.	£	s.	d.
Gross cost per head per diem		1	0·43			11·80
Net " " "			6·49			
Gross cost of superintendence per head per diem...			5·1			5·1
Gross cost of diet per head per diem ...			3·16			3
Work bringing no money return	1,119	19	6	1,092	7	7
Rewards paid...	31	6	0	36	15	9

The description of labour in which the boys are employed under trained superintendence fall under the general heads of garden and field labour, carpentering, tailoring, blacksmiths, masons' and bricklayers' work, cooking, and baking. It is satisfactory to note from the statistics given above that although the average number of inmates was slightly less than in the preceding year, earnings by labour and sale of articles were £555 3*s.* 5*d.* (about £2 15*s.* per inmate) compared with £318 13*s.* 11*d.* in 1896–97.

The health of the inmates was in the main satisfactory, but 23 cases of malarial fever occurred, and 33 of influenza; the latter was prevalent in the neighbourhood at the time the cases occurred in the Reformatory. The cases generally were of a mild character, but there was one severe case of malarial remittent fever, resulting in the only death in the Institution during the year.

GIRLS' REFORMATORY.

Cost of diet per diem			3¾			3½

On the 11th March, 1898, thirty-one girls were temporarily removed to the Girls' Reformatory premises from the Industrial School at Shortwood, consequent on sanitary alterations which were being effected at the latter Institution.

The girls continued at their usual occupations of making and washing, &c., of clothes for the Institution and the Boys' Reformatory. Washing for private parties was taken in also.

The health of the inmates was not so good as usual; there were 21 cases of malarial fever (then very prevalent throughout the Island) two of which terminated fatally.

IMMIGRATION.

There were no immigrants introduced into the Colony, and none were sent back to India during the year under review.

Forty-five coolies were granted passports to leave the Colony, 29 for British and the remainder for foreign ports.

There was a great decrease in the birth-rate as compared with that of the previous year, only seven births being reported or ·44 per cent., as against 1·19 per cent. in 1896 of the total number of immigrants under indenture, while the deaths numbered 30 or 1·91 as compared with 2·27 in 1896.

Although the present year has been one of great depression, causing many sugar estates to go out of cultivation, it is a matter of congratulation that no cases of distress amongst coolies were reported to the Protector. Most of the men easily found

employment on the banana plantations, while others were able to make a living by growing rice, and otherwise working for themselves.

An increase was shown in the number of coolie depositors in the Government Savings Bank, there being 998 in 1896–97 as compared with 933 in 1895–96, the amount on deposit increasing from £21,628 17*s.* 1*d.* to £21,964 19*s.* 3*d.*, or £22 per head this year as compared with £21·78 last year.

There were no murders, suicides, or other serious crimes amongst the East Indian population during the year under review.

Fifty-five coolies were undergoing treatment in the lunatic asylum at the end of the year. The Protector reports that the general condition of the East Indian population continues to be prosperous, and that the relations between employer and employed are healthy.

During the year, 616 labourers left the Island from Kingston for the Isthmus of Panama and Carthagena, and 637 returned from those places and from British Guiana and other parts of the West Indies.

GOVERNMENT SAVINGS BANK.

The number of depositors and the amount of deposits in the Bank have been as follows in the last ten years :—

Year.	No. of Depositors.	Amount of Deposits.
1887–88	18,510	393,250
1888–89	19,444	408,213
1890–91	21,747	423,011
1891–92	22,824	428,348
1892–93	23,902	417,978
1893–94	25,533	457,924
1894–95	27,045	453,875
1895–96	28,385	464,737
1896–97	29,719	469,226
1897–98	30,660	468,199

The year under review shows an increase of 941 in the number of depositors, but a decrease of £1,027 in the amount of deposits as compared with 1896–97.

In the above amount of deposits are included 185 deposit accounts for the following Public Funds :—

		£	s.	d.
1	Constabulary Reward Fund ...	80	15	7
1	„ Pension Fund ...	2	7	1
14	Sinking Funds	7,525	14	0
1	Smith and Beckford's Charity ...	100	0	0
2	Turks Islands	1,666	10	10
162	Chancery Fund Accounts ...	23,476	5	4
4	Other Government Accounts ...	1,770	2	8

There were also 250 accounts for trusts, charities, suits, administrator general and bankrupt estates, amounting to £23,394 0*s.* 11*d.*

The remaining accounts, 30,225, representing £410,184 0*s.* 8½*d.*, are all ordinary deposits, and old Savings Bank balances £1,678, making a total of £469,878 13*s.* 10½*d.*

Of the total number of accounts open at the end of the year 19,518 were for £5 and under, while those of £100 and over numbered 1,161, being decreases of 1884 and 55 respectively, as compared with the previous year.

The assets of the Bank on the 31st March last were distributed as follows :—

						£	s.	d.
Consols 2¾ per cent.						20,404	17	3
Inscribed Stock :—

Total						£469,878	13	10½

JAMAICA. 1897-8.

The deposits during the year amounted to £228,831 8*s.* 8¼*d.*, and the withdrawals to £229,773 11*s.* 5½*d.*

The expenses of management and the interest credited to depositors amounted to £15,984 19*s.* 7*d.*, while the revenue realised £17,307 9*s.* 4*d.*, leaving a net profit of £1,322 9*s.* 9*d.* on the year's transactions.

The revenue compared with the preceding year shows an increase of £296 9*s.* 2*d.*

TRADE.

The depression in the trade commented on in last year's report continued during 1897-98.

Compared with 1896-97 exports were £1,448,443 as against £1,470,241, and imports for home consumption £1,674,381 as against £1,864,612, a decline of £190,231. Exports will be seen to have been almost stationary in value, while imports have considerably decreased. There has been no appreciable increase in the products for home consumption, returns of rum duties, stock on pens, acreage under cultivation, &c., showing decreases generally, while, except in Kingston, where the construction of the Improvement Works on certain streets and sewers continued, there were few works affording continuous remunerative employment for artisans and labourers.

The following table shows the exports and imports for ten years :—

Year.	Exports.				Imports.			
	Home Products and Manufactures.	British and Foreign Products and Manufactures.	Coin and Bullion.	Total Exports.	Home Consumption.	Coin and Bullion.	Total for Home and Specie.	Total Imports.
	£	£	£	£	£	£	£	£
(a) 1887–88	1,661,601	17,668	149,321	1,828,590	1,586,129	145,986	1,732,115	1,695,607

(a) Year commenced 1st October. (b) Year has commenced on 1st April since 1890. (c) Excluding half year ended 31st March 1890.

JAMAICA. 1897-8.

The considerable decrease in wealth in the last two years is apparent when increase of population is taken into account. Thus in 1887-88 the estimated mean population was 613,376, exports £1,828,590 or £1,679,269 if we exclude specie, which was taken away and imported in large quantities until the exodus to Colon came to an end. £1,679,269 divided amongst that number of persons would be £2 14*s.* 9*d.* per head. Imports for home consumption (excluding specie) were £1,586,129, or £2 11*s.* 8½*d.* per head. In 1897-98 the estimated mean population was 713,384, exports (including specie) £1,377,826, or £1 13*s.* 3½*d.* per head, and imports for home consumption (excluding specie) £1,658,632, or £2 4*s.* 7½*d.* per head.

In a tropical climate, blest in most districts with abundant rainfall and a fairly productive soil, such a temporary check to prosperity does not imply destitution except in a few isolated instances, as fruit, pulse, and ground provisions can be raised with comparatively little trouble. The pinch too is felt far less by the peasantry than by artisans and traders, and the professional classes. At the same time progress is greatly retarded, and great effort is needed to keep up the necessary competition with other countries for which the initiation of new enterprises, fostering of new products, and opening new markets is requisite, owing to the check to the cultivation of staples induced by low prices, and heavy duties at American ports. There is, however, no surplus in private hands with which to initiate new enterprises. Indeed the greater withdrawals from, than deposits in, Savings Banks of late years is one indication that the people generally are drawing on their reserve funds to meet present necessities.

The Collector-General reports that, owing to low prices in 1896-97 and in 1897-98, the Colony has lost about one-fourth of its former income from exports alone, and that the prices of produce continue flat and irresponsive with no sure indications of an immediate revival of trade. The only substantial increase compared with the past year has been in bananas and some minor products, especially cocoa, while former staples, such as coffee, rum, sugar, and logwood continue on the down grade.

The quantities and prices of the principal products during the past ten years are given in the annexed table :—

—		1887–88.	1888–89.	1890–91.	1891–92.	1892–93.	1893–94.	1894–95.	1895–96.	1896–97.	1897–98.

° Half-year, 1889-90, omitted.

JAMAICA. 1897–8.

These figures indicate the general lowering of prices within the past 4 or 5 years on the older staples, particularly within the last two, when the depreciation was most marked on coffee and logwood. Sales of these articles, which are dealt in to a great extent by the yeoman and small trader, afford to many the wherewithal for purchasing articles of clothing, and paying taxes and church dues, and the unremunerative prices obtained on them have led to poverty, though not to any large extent to destitution, in the districts where they are staples. Coffee is especially a small settler's crop; of the total area under coffee, which amounts to 22,387 acres, more than 20,000 are in lots of under 50 acres each, and parishes, such as Manchester, where it is largely cultivated have felt the pinch severely. On the other hand, bananas though lowered in price give so excellent a yield, compared to the labour employed and cost of production, that the two parishes, Portland and St. Mary, where they are cultivated most have remained fairly prosperous.

The following are the figures for the two years of total exports :—

—	1896-97.	1897-98.	Increase.	Decrease.
I. Live animals, food, drink, and narcotics.	1,146,687	1,186,743	40,056	—
II. Raw materials... ...	215,757	172,846	—	42,911
III. Manufactured articles ..	38,245	38,483	238	—
IV. Coin and bullion ...	69,552	50,371	—	19,181
Total	1,470,241	1,448,443	40,294	62,092
Net decrease ...	—	—	—	21,798

The net decrease in 1896-97 was £402,864.

In 1897-98 a year of favourable seasons (while 1896-97 was one of drought in many districts), there would undoubtedly have been an increase instead of a small decrease but for the lower prices, as shown in the statement of products.

The following table shows increases or decreases on products with an exportable value in both years of over £10,000 :—

Article of Export.	Quantity.	Value.	Quantity Increase.	Value Increase.	Percentage Increase Quantity.	Percentage Increase Value.	Price.
			Increased Quantities and Values over 1896–97.

JAMAICA. 1897–8.

The increases in value on bananas, cocoa, ginger and cocoanuts amount together to £171,675, the decreases on the other 7 articles yielding over £10,000 during both years to £199,310, a net decrease of £27,635. These 11 articles represent a value of £1,263,155 out of £1,377,826 for home products and manufactures in 1897–98, leaving £114,671 for about 60 other articles under that head ; in 1896–97 they represented £1,290,792 out of £1,384,278, leaving £93,486 for these other articles, the increase for 1897–98 being £21,185. Add the increase £28,223 for cocoa, cocoanuts, and ginger, usually classed among minor products, and we get £49,408 increase. Add £143,451 for bananas making £192,859, and it is evident that exportation of this fruit, and of minor products, saved the Colony from a grave loss of income. Bananas increased by 47·4 per cent. value, and all minor products, including cocoa, cocoanuts and ginger by 27·9 per cent. during the year.

Of all the exported articles cocoa showed the most remarkable percentage increase, viz., from £15,297 to £37,435, or by 144·7 per cent.

Minor products, besides cocoa, cocoanuts, and ginger, showing substantial increases in quantity and value, were honey and beeswax, cigars, fustic, bitterwood, and annatto, together £20,812. Against this set lancewood spars 21,613 less in number and £6,975 in value. The demand for spars is limited, and the number (45,223) and value (£13,567) for 1896–97 were abnormal.

The average prices, which are now given for the first time in comparison with the quantities, have, it will be seen, declined within the last few years, especially within the last two, on nearly every staple, and markedly so on rum, sugar, coffee, and the dyewoods—logwood and fustic. Bananas have decreased in value, but considerably increased in quantity, demand being great and the cost of production very moderate. The price of oranges keeps a fair value, and would improve if greater care were exercised in selection and packing. The price of ginger has improved. In 1897–98 pimento realised a very high price, owing to the failure of the crop ; this berry being an exportable product in Jamaica only, as trees grown in other countries do not possess spicy qualities.

The following table gives the percentage proportion of each product :—

—	1893–94	1894–95	1895–96	1896–97	1897–98
Sugar	14·2	12·9	11·0	10·1	8·3
Rum	7·4	10·1	9·3	8·4	6·3
Coffee	17·3	19·3	16·0	14·4	11·4
Dyewoods	24·3	19·0	20·4	11·6	8·9
Fruit	26·6	27·9	29·9	34·3	42·8
Pimento	3·8	4·5	5·1	5·2	3·6
Minor products ...	6·4	6·3	8·3	16·1	18·7

This increase, however, has not compensated for the decrease on staples generally. A glance at the table of exports and imports from 1887-88 to 1897-98 shows that the highest figure was reached in 1893-94, when home products realised £1,982,596, decreasing thereafter year by year, particularly between 1895-96 and 1896-97, till in 1897-98 the figures stood at only £1,377,826, or 30·5 per cent. below those of 1893-94. In 1893-94 the estimated mean population was 667,554 ; in 1897-98 713,384, or 6·9 per cent. more. The country's income from exported home products and manufactures thus fell from about £2 18*s.* 7*d.* per caput to about £1 18*s.* 7*d.*, a decline of about 34·1 per cent., or more than one third. In 1893-94 fruit realised £493,792 and minor products £160,170, together £653,962 ; in 1897-98 fruit gave £590,365 and minor products £226,674, together £817,039, a gain of £163,077. Sugar, rum, coffee, dyewoods, and pimento gave together in 1893-94 £1,328,634, *i.e.*, nearly as much as the total in 1897-98 of home products and manufactures. In that year these five old staples gave only £560,786, *i.e.*, less than fruit alone, a loss on the five of £767,848, or, deducting the gain £163,077 on fruit and minor products, a net loss of £604,771 on home products and manufactures. The loss on total exports during the period was £627,246, the difference as against home products only being chiefly due to a lesser shipment of coin and bullion in 1897-98.

It will be seen that the compensation from fruit and minor products is only between one-fourth and one-fifth of the loss on the older staples, and that the percentage comparison of the proportion of products one to another is highly fallacious, without reference also to the total values obtained on each and all exports. Thus minor products were 6·4 of the total in 1893-94 and 18·7 in 1897-98, but their value increased not by between 200 and 300 per cent. but by 41·5 per cent. It is evident also that owing to the influence of bounties and competition the income from the older staples is unlikely to be very greatly increased in the immediate future, and that such increase as takes place will probably be gradual, while fruit and minor products can hardly be expected to so increase in value as to fully compensate for stagnation in trade on the older staples, with an increasing population. The country will, therefore, probably not recover for some time to come the prosperity enjoyed during the period from, say, 1889 to 1893, when good prices were realized and foreign capital flowed into the country for railway extension. At the same time the steps now being taken to secure a fast steamship service with Europe and other local measures, such as the irrigation of lands in Vere, now receiving attention will, when carried into effect, undoubtedly afford an opportunity for a greatly increased export trade, add to the earning capacity of the Jamaica Railway, and tend to convert certain minor products into staples.

JAMAICA. 1897–8.

The Island exports were distributed to the following countries during the last 5 years in the proportions set below :—

—	1893–4.	1894–5.	1895–6.	1896–7.	1897–8.
United Kingdom	26·7	27·1	27·6	27·4	22·6
United States of America...	57·3	58·1	57·0	56·6	62·3
Dominion of Canada ...	1·7	1·5	1·6	1·2	1·3
Other countries	14·3	13·3	13·8	14·8	13·8

In 1891-92 the proportion for the United Kingdom was 32·7, United States 50·9, and Canada 3·5.

It is evident that the country is seeking the nearest market for its products. The States are likely to draw away more and more of our export trade from the British dominions as fruit becomes more and more the one great staple, unless this effect is neutralised by fast steam communication with England, where admission duty free, even with the disadvantage of greater freight dues and distance, would balance American protective duties. The decrease in exports to the United Kingdom is likely further to decrease with the decline in rum, coffee, and logwood. As to Canada, the proportion of trade with which has considerably declined, the Collector-General hopes her liberal tariff concessions, coupled with more frequent direct steam communication, will considerably improve this state of things in the immediate future.

Of foreign countries, France and Germany together took £113,713 worth of exports—France £82,211, chiefly in coffee and logwood ; Germany £31,502, chiefly in cocoa, pimento, rum, logwood, and logwood extract. Of £10,325 realized on a variety of articles, £8,810 was for cattle.

Turning now to imports, the following figures indicate a general decrease compared with 1896-97, especially under manufactured articles :—

—	1896-7.	1897-8.	Increase, 1897-8.	Decrease, 1897-8	Percentage Increase, 1897-8.	Percentage Decrease, 1897-8.
	£	£	£	£		
I. Live animals, food, drink, and narcotics.	759,419	724,359	—	35,060	—	— 4·6
II. Raw materials	49,778	65,427	15,649	—	+ 13·2	—
III. Manufactured articles	1,027,008	868,845	—	158,163	—	— 15·4
IV. Coin and bullion	28,407	15,749	—	12,658	—	— 44·6
Total	1,864,612	1,674,380	15,649	205,881	—	—
Net decrease	—	—	—	190,232	—	10·2

The previous year's imports showed a falling off of £391,025, and the rate of retrogression therefore was somewhat arrested during the year under review. In last year's report, it was remarked that there had been a remarkable increase in imports since 1890-91, the year of the Exhibition and of the beginning of the railway extension. This, and other important public undertakings, *e.g.*, new roads and bridges, led to the importation of materials for construction, and withdrew a large number of people from cultivation, who used a greater proportion of imported foods than when at their homesteads, and having ready money to dispose of, bought more manufactured articles. Public undertakings being at a standstill generally, except in and about Kingston, where street and sewerage works are being completed, imports tend to balance exports.

The decreases on imports with a total value of over £50,000, are as follows :—

—	Quantity.	Value.	Quantity Decrease.	Value Decrease.	Percentage Decrease Quantity.	Percentage Decrease Value.
Alcoholic liquors	Gallons. 230,100	£ 52,871	Gallons. 72,589	£ 14,207	— 24·0	— 21·2
Fish, dried or salted	lbs. 13,284,564	116,240	lbs. 954,417	5,681	— 6·7	— 4·7
Cottons, including hosiery	—	218,854	--	28,577	—	— 11·5
	Increases on such Imports in Value, Decrease in Quantity.					
Flour, wheat	barrels. 147,615	162,378	Decrease barrels. 20,304	Value increase. 7,053	— 12·1	Increase. + 4·5
	Increase Quantity and Value.					
Coals	tons. 56,628	56,628	Increase tons. 15,320	Increase value. 15,320	Increase. + 37·1	+ 37·1

Importations for the Public Service, Army and Navy, are not included in this computation. Apparel and slops fell from £66,533 to £45,239 ; boots and shoes of leather from £56,091 to £45,190 ; lumber (pine) from £55,871 to £37,374.

Haberdashery and hardware also show large decreases. Increases in quantity and value besides those tabulated occurred in butter substitutes, meal, alewives. Condensed milk showed an increase in quantity with a cheapening in value. The few manufactured articles showing substantial increases were those in use for public undertakings, such as electric lighting, telegraphic and telephonic appliances, cement, &c. Textile manufactures show decreases generally, but the Collector-General points out that a considerable percentage of the decrease in value should be attributed to fall of price in manufacturing centres, especially in the case of cottons, the prices of which have probably decreased by one-half within the last 20 years, and by a considerable percentage within the last five years.

The following table shows how the import trade was distributed in each of the last five years, viz. :—

—	1893–4.	1894–5.	1895–6.	1896–7.	1897–8.
United Kingdom	55·1	50·4	48·1	49·9	47·2
United States of America ...	33·2	36·8	41·8	39·4	43·0
Canada	8·8	8·5	7·5	8·2	7·1
Other countries	2·9	4·3	2·6	2·5	2·7

As in exports, trade has lessened with the United Kingdom and increased with the United States. Last year the tendency was accentuated owing to a greater decline on importations of manufactured articles and drinks than on food supplies.

POLICE.

The allowed strength of the police during the year was 853 against 852 in 1896-97, the actual strength 850 against 849. The number 850 is made up of 20 officers, 134 sub-officers, and 696 constables. One sub-officer, a sergeant-major, formerly in the Irish Constabulary, was promoted to be a sub-inspector.

To the 850 members of the regular force must be added 949 rural headmen and policemen, together 1,799 men engaged in police duties, against 1,786 in 1897. 72 constables were enlisted during the year, and 77 rural headmen and policemen appointed. 49 constables were discharged, 30 of them with pensions or

gratuities, 16 were dismissed, and one deserted, while 6 died. 83 of the rural police force were "removed," which is tantamount to dismissal in the regular force.

The Inspector-General reports very favourably on the conduct of officers, sub-officers, and men generally during the year.

The rural police are chiefly employed in assisting to detect and to bring to notice cases of praedial larceny, and illegal possession of rum, of children needing medical treatment for yaws, or persons requiring to be vaccinated.

The rural headmen receive £1 per month, and the rural policemen, of whom there are three to four per headman, receive one shilling and sixpence a day when called out on duty.

The principal duties, outside of patrolling and attendance at courts, performed by the constabulary during the past five years were as follows :—

——	1893–4.	1894–5.	1895–6.	1896–7.	1897–8.
No. of persons arrested on view and on information.	8,237	7,781	8,775	8,351	7,330
No. of persons apprehended on warrants.	—	—	—	1,780	1,629
No. of search warrants executed.	122	150	151	142	148
No. of persons summoned ...	19,212	19,249	20,279	19,537	17,785
" " subpœnaed ...	29,808	30,673	31,058	27,161	27,161
" prisoners escorted ...	8,599	8,224	9,911	11,542	12,081
" seizures under revenue laws.	399	437	649	309	854
No. of post-mortems ordered	594	603	610	641	703

Compared with last year this table shows considerable decreases in arrests and apprehensions taken together and in summonses, and increases, though not so numerically large, in cases of prisoners escorted and of seizures under revenue laws. The number under the latter head, compared with the preceding years, is remarkable. Offences of illegal possession of rum &c. had become very numerous, and their detection has been stimulated by the grant of a larger number than usual of rewards to the constabulary and rural policemen in cases detected by them which have resulted in conviction.

The more important statistics of crime during the past five years are as follows:—

—	Apprehensions.					Convictions.				
	1893–4.	1894–5.	1895–6.	1896–7.	1897–8.	1893–4.	1894–5.	1895–6.	1896–7.	1897–8.
I. Offences against the person	7,232	7,302	7,040	6,653	6,500	3,375	3,218	3,309	3,140	3,008
II. Offences against property committed with violence.	251	326	429	394	350	162	184	245	264	229
III. Offences against property committed without violence.	4,071	4,079	5,004	5,700	5,488	2,154	1,914	2,586	3,021	2,995
IV. Malicious offences against property ...	179	182	137	169	162	43	53	57	43	39

Trespass	825	940	941	973	883	436	449	467	482	471

JAMAICA. 1897-8.

In the report for last year under this head attention is called to a general increase in cases of crime for the five years ended 1896-97, which was counterbalanced, however, by a greater proportional increase in population. It is satisfactory to note from the preceding table that the year 1897-98 shows with the normal increase in population a decided decrease in crime. The apprehensions were lower than in any of the four preceding years, the convictions than in any of them except 1894-95. Compared with 1896-97 each of the six heads of crime shows a decrease both of apprehensions and convictions, except for forgery, apprehensions for which were the same. Turning to the eleven descriptions of crime given in the table, which comprise between them about two-thirds of the total number of crimes, there are decreases under all the apprehensions except for "Cutting and Wounding," and under most of the convictions. While cases under this head have increased, none of them were of a very serious nature, the weapons used being almost invariably sticks and stones. It appears that the tendency to use knives, referred to in last year's report as noticeable since the exodus to and repatriation from the Isthmus of Panama, is passing away. The relations between the people and the police were, the Inspector-General states, generally satisfactory, and it is pleasing to note that Her Majesty's Diamond Jubilee was celebrated by thousands in each parish without disorder—indeed, in some of the parishes not an arrest was made during the celebrations.

PRISONS.

The following return shows the daily average number of prisoners in custody during each of the past five years, and the number on the last day of each year :—

Year.	Daily average number in custody.	Number on 31st March.
1893-94	1,008	943
1894-95	916	957
1895-96	1,008	1,094
1896-97	1,159	1,149
1897-98	1,172	1,049

Other important statistics of the Department for the years 1896–97 and 1897–98 are given below :—

—	Year ended 31st March.	
	1897.	1898.
Commitments—		
To prison	4,748	4,998
To Lock-ups	930	987
Total	5,678	5,985
Reconvictions	1,976	2,076
Deaths—		
General Penitentiary ...	12	28
Other prisons	23	12
Total	35	40
Executions	1	3

FINANCIAL.

—	Year ended 31st March.	
	1897.	1898.
	£ s. d.	£ s. d.
Gross expenditure	21,285 11 2¾	20,884 11 5¾
Gross earnings in cash	4,796 15 4¾	5,939 19 4½
Net cost of maintaining prisons ...	16,488 15 10	14,944 12 1¼
Cost per prisoner	14 4 6¼	12 15 0¼
Estimated value of labour yielding no return.	8,550 9 4	5,577 0 4
Estimated value of bricklaying work and stone quarried (General Penitentiary).	3,789 2 2	3,507 11 11
Washing and repairing (General Penitentiary).	1,151 19 5	1,085 4 11

It will be seen from the first returns that there has been an increase of late years in the daily average number of prisoners in custody. There has also been an increase of committals, the number for the year under review being greater than that of 1896-97 by 307, 1895-96 by 871, 1894-95 by 1,756.

The large mortality both at the General Penitentiary and other prisons is attributable to an outbreak of typhoid fever at the Penitentiary, and of dysentery at the St. Catherine's District Prison.

The outbreak at the Penitentiary lasted for nearly three months. There were also an unusual number of cases of malarial fever and of influenza.

The epidemic of dysentery at the St. Catherine's District Prison was very protracted, and it became necessary, in order to stamp out the disease, to largely reduce the number of prisoners during part of the year, and to transfer inmates from time to time to other prisons until the complaint had disappeared.

At both institutions various sanitary improvements were effected with a view to prevent further similar outbreaks, and these have so far proved successful. The defects in the systems for disposing of sewerage have been removed, and Berkfield filters for filtering the drinking water have been introduced.

The Black River short term prison, which had been closed in 1895, was re-opened from August to December 1897 to provide accommodation for prisoners who could not be received at the St. Catherine's District Prison during the occurrence of dysentery there. The district prison at Lucea and the short term prison at Port Antonio were closed on the 28th February 1898. It had been found that discipline was not so well maintained in these smaller prisons, and that some ultimate saving in expenditure for supervision, &c. could be effected by transferring the prisoners to the St. Catherine's District Prison (the enlargement of which for the purpose is now approaching completion), except in the case of prisoners with very short sentences, who are sent to the lock-ups of the several parishes.

VITAL STATISTICS.

The total population of the Island on the 31st March last was estimated at 718,367, the net increase during the year being 11,973, or an increase at the rate of 16·8 per 1,000 persons living as against an increase at the rate of 16·6 per 1,000 in the previous year.

The mean population for the year 1897-98 is estimated at 713,384, and the rates for the year are calculated on that basis.

The average annual increase of population for the last six years has been about 11,500.

The number of marriages during the year was 2,661, equal to a rate of 3·7 per 1,000, as compared with 3,026 marriages or a rate of 4·3 per 1,000 in the previous year. This shows a serious falling off, to the extent of 365, in the number of marriages solemnized during the year under review. In fact the number of marriages has, year by year, decreased to a considerable extent since 1893–4.

Of the 5,322 persons married during the year, 2,510 or 47·16 per cent. signed the marriage registers by making their marks, as against 47·83 per cent. in the previous year. This slight decrease, however, is probably due to a falling off in the number of marriages amongst the poor and illiterate class, and is not a sign of better education.

The proportion of females who signed the registers during the year was greater than that of the males, showing that the former are still more skilled in writing than the latter.

The number of births registered during the year was 28,447, or a rate of 39·8 per 1,000, as compared with 27,064, or 38·5 per 1,000—an excess of 1,383 births over the previous year.

Of these births 17,729 were illegitimate, or a rate of 62·3 per cent., as against a rate of 61·1 in the previous year. This is the highest point that the number of illegitimate births has yet reached in this Island.

The deaths registered during the year numbered 16,474, or a rate of 23 per 1,000, as against 15,535 or 22·1 per 1,000 in the previous year.

Of the total number of deaths 5,047, or 30·6 per cent., were those of children under one year of age, while 7,389, or 44·8 per cent., were children under five years of age. The heaviest mortality as usual was amongst children of illegitimate birth.

Of the 16,474 deaths registered in the year 12,445, or 75·5 per cent., were registered without medical certificate as to the cause of death.

CAYMAN ISLANDS.

Grand Cayman.

The number of births at Grand Cayman during the year was 149, or 40 per 1,000 of population, of which 17 or 11·4 per cent. were illegitimate.

The number of deaths was 46, or 12·3 per 1,000 of population.

There were 23 marriages solemnized during the year, or a rate of 6·1 per 1,000.

Cayman Brac.

The number of births was 37, of which 4 were illegitimate, and the number of deaths was 6.

Seven marriages were solemnized during the year.

GENERAL.

The serious decline in the income of the community, due principally to low prices, which characterised the year 1896-97 continued during the year under review as the preceding heads of the report clearly indicate. The decline was far less marked, as for instance the value of exports almost realised the figure for 1896-97, but the resources of the people were already to some extent exhausted on account of the unremunerative prices of their products, and the acuteness of the depression was felt to a greater extent than in that year. At the time I write there is good reason to hope that the better prices now being realised for sugar and some other staples, which had shown a very retrograde tendency of late, will result before long in an appreciable if not a very considerable increase in the spending power of the community, and I am happy to be able to report that the depression in trade seems to have passed through its worst stages.

General depression in the West Indies led to the appointment of a Royal Commission of Enquiry. The Commissioners arrived in this Colony on the 28th March, 1897, and left on April 14th. Their report regarding Jamaica indicates that this Island has in their opinion greater natural resources than most of the West Indies, in variety of soil and climate, and greater proximity to the American market, and the Commissioners saw no ground for despondency as to the future of the Colony.

The administration has made strenuous efforts to cope with the problem presented by a deficit in public revenue due to the depression. A committee of enquiry was appointed towards the end of 1897, but further reductions than those recommended by them were found necessary, and a second committee was appointed shortly after the close of the financial year.

Notwithstanding the efforts made to lower general expenditure, which was £36,800 less than in 1896-97, a deficit of £86,913 was left at the close of the year. The present upward tendency of trade and the stringent public economies in progress will probably result in an improvement in the revenues for the succeeding year.

In the latter part of the calendar year 1897, an epidemic of yellow fever broke out and spread from Kingston to several other parishes. The disease was more virulent than is usual in this Colony, not only in the number of cases, but in the percentage of deaths. The coloured and black population who are usually almost immune to the disease were attacked as well as the whites, though the percentage of deaths among them, was far less than

among the latter. Stringent measures were adopted to check the progress of the disease, and by February, 1898, it had disappeared. In one respect the epidemic was beneficial, as it has led to the adoption by the municipalities of improved sanitary measures.

Various public improvements were initiated during the year in the Colony or in connection with it. The Direct West India Cable Company connected the Colony with Bermuda and Halifax.

Some new lines of steamers commenced to run; the Boston Fruit Company considerably increased its carrying capacity; the Street Car Company of Kingston and its neighbourhood, whose cars were drawn by mules, gave place to the West India Electric Company, which was granted a license during the year for an electric tramway service to be extended in new directions. The Company commenced their works during the year. The general sewerage works of Kingston were practically completed, and considerable progress made with the house connections. Few local industries were started, but the establishment of two dairy associations in the neighbourhood of Kingston, where the milk supply had hitherto been principally in the hands of hawkers and small vendors; the formation of new branches of the Jamaica Agricultural Society which now numbers among its members almost every influential and energetic agriculturist in the Colony, and numbers of smaller cultivators; the importation of better breeds of cattle, stock and poultry; and the increased interest taken by the peasantry in the lectures given by a Superintendent of the Botanical Department, are all indications that the pressure of harder times has led the community to realise more than was previously the case the necessity for a thorough knowledge and practice of improved methods of culture, stock raising, and disposal of products.

The local celebrations of the 60th Anniversary of Her Majesty's Accession were carried out with great enthusiasm throughout the Island, and the greatest order prevailed. The community generally has always been characterised by its loyalty to the Throne and Government.

A. W. L. HEMMING,

Governor of Jamaica.

TURKS AND CAICOS ISLANDS.

(For Report for 1897, *see* No. 230.)

GOVERNOR SIR A. W. L. HEMMING to MR. CHAMBERLAIN.

King's House,
Jamaica,
20th June 1899.

SIR,

I HAVE the honour to transmit to you a copy of the Blue Book of the Turks and Caicos Islands for the year ended 31st December 1898, together with the Commissioner's report thereon.

I have, &c.,

AUGUSTUS W. L. HEMMING,
Governor.

REPORT ON THE BLUE BOOK OF THE TURKS AND CAICOS ISLANDS FOR THE YEAR 1898.

I.—FINANCIAL.

(A.) *General Revenue and Expenditure.*

The following comparative statement and table gives the heads of Revenue and Expenditure and the amounts received undert hose heads for the years 1897 and 1898, as well as the total revenue and expenditure for the last five years 1894–98 :—

3395—800—7/99 Wt 21935 D & S—5 (B)

Total Revenue and Expenditure for five years, 1894–98.

—	1894.			1895.			1896.			1897.			1898.		
	£	s.	d.	£	s.	d.	£	s.	d.	£	s.	d.	£	s.	d.
Revenue ...	8,840	9	6	7,312	9	5	9,706	19	2	9,477	7	4	7,232	6	8
Expenditure...	7,459	2	3	7,547	0	7	7,382	10	10	8,384	9	2	8,061	4	5

The total of the revenue for 1898 is less by £2,245 0*s.* 8*d.* than the similar total for 1897. It is noticeable that £2,142 16*s.* 2*d.* of this deficiency is under the three heads—Import Duties, Royalty on Salt, and Port Dues, showing how surely the tide of the Dependency's fortunes flows or ebbs according as the conditions for the disposal of salt are favourable or the reverse.

The expenditure of 1898 was less than that of the previous year by £323 4*s.* 9*d*, the difference being due to a less outlay on Public Works. The figure would have been still smaller, but for the exceptional items for which special votes were taken (£137 17*s.* 3*d.*). A new annual liability of £120 for five years was also assumed, being a payment to the Direct West India Cable Company, recently established here, in respect of a daily supply of news. This subsidy was payable for three quarters of last year, and the total expenditure was thus increased by £90.

The deficit on the year's working was £828 17*s.* 9*d.*, but there still remains from previous years a surplus balance of over £7,000. With care and economy, it is hoped that the figures for 1899 may show a nearer approach to financial equilibrium.

(B.) *Taxation.*

No changes took place during the year under review.

(C.) *Assets and Liabilities.*

There was a balance of Assets over Liabilities on the 31st December 1898 of £7,128 16*s.* 2*d.*, as set out in the annexed table :—

(D.) *Public Debt.*

The Dependency has no public debt.

(E.) *Currency.*

Gold, American and British, an occasional Bank of England or Colonial Bank note, with British silver and Jamaica nickel coinage, constitute the currency of the Dependency. Mexican dollars pass to some small extent for purchase at the stores &c., but they are not legal tender, and are not accepted at the Treasury.

(F.) (G.) } *Finances of Municipalities or Public Boards.*

There is no municipality and no public board which levies rates or has sole control of any funds.

II. TRADE, AGRICULTURE, AND INDUSTRIES.

(A.) *Imports and Exports.*

The dutiable articles imported into the Dependency which contribute over £100 per annum to the Customs revenue, are shown in the following comparative table :—

Articles.	Quantity.		Value.		Duty.	
	1897.	1898.	1897.	1898.	1897.	1898.
			£ s. d.	£ s. d.	£ s. d.	£ s. d.

* Of the coffee imported in 1898. 6.500 lbs. was exported; also the price of coffee from Hayti in 1898 fell very low.

The chief and only considerable article of export is salt, of which there was exported :—

—	Quantity.	Value.			Royalty Paid.		
		£	s.	d.	£	s.	d.
In 1897	2,236,008 bushels	33,630	5	5	3,260	12	6
In 1898	1,431,850 ,,	18,701	14	4	2,088	3	8

The total value of the imports and exports for the last 5 years is as follows :—

—	1894.			1895.			1896.			1897.			1898.		
	£	s.	d.	£	s.	d.	£	s.	d.	£	s.	d.	£	s.	d.
Imports - -	28,525	14	10	26,734	18	0	30,245	4	4	33,239	2	7	27,066	16	0
Exports - -	32,774	5	10	21,687	17	8	31,497	14	5	43,303	15	5	24,810	12	4

Broadly speaking, about seven-ninths of the imports are from, and three-fourths of the exports to, the United States of America.

In explanation of the decrease in the value of imports and exports in 1898, I quote from a previous report on the revenue and expenditure of the past year :—

"The quantity of salt exported was 1,431,850 bushels, which is below the average and greatly below the export of 1897, when the figures were 2,236,008. The export of that year was however an abnormal one, owing to the rush to get salt in to the United States before the coming into operation of the new tariff by which the duty on salt was re-imposed. This occasioned something of a glut of Turks Islands salt in the States, and is the cause to some extent, together with the fact of the re-imposition of the duty and consequent encouragement of the domestic salt trade, of the demand in 1898 having been so unfortunately slack. The Spanish-American war also interfered with trade to some small degree. The fishery salt trade with British North America has kept up moderately well and is a valuable aid to the industry, taking 270,486 bushels, but we have, unfortunately, since 1895 lost the Newfoundland trade. The diminution in the receipts for 1898, as compared with those for 1897, under the heads of Royalty on Salt Exported and Light Dues on Vessels, are respectively £1,173 and £340.

"Import duties show a decrease of £650 on the figure of 1897. A poor salt season with small shipments naturally reduces the employment of labour and the purchasing power of the community generally; hence smaller consumption and fewer importations. Besides this, the shutting down of the West Caicos Fibre Company and stoppage of the supplies which it used to import for consumption in the Caicos Islands, and the fact that since the month of April last, when war was declared, the steamers from New York have, until the present month*, called but once in six weeks instead of once in three weeks as formerly, have both contributed to reduce the amount of supplies brought into the Dependency. Flour, spirits, and lumber are the items between which the diminution is for the most part distributed."

* February.

(B.) *Manufactures.*

There is nothing new to report under this head. There is but one industry, namely, the production of salt from sea-water by solar evaporation. At present the producers are much handicapped by the low price of their commodity in the United States, the result mainly of the re-imposition of the import duty by the last United States tariff and consequent encouragement of the United States domestic salt output, but also to some extent (as to exactly how much opinions differ) of a suicidal policy of underselling. Generally speaking, the condition of the various salinas of the Dependency has decidedly improved of late years, and a much larger quantity of salt could be obtained from them than the present average annual yield, if there were only a market for it.

The development of a very large and hitherto unworked salina has been recently undertaken by one of the most enterprising of the local merchants, who is proceeding steadily with the expensive work of laying out and preparing the ground in spite of the somewhat discouraging existent conditions.

I have in a recent report suggested enquiries being made with a view to the possibility of increasing the export of salt to British North America.

(C.) *Agricultural Industries, &c.*

Agriculture in the Dependency is practically confined to a few scanty provision fields in the Caicos Islands and a few patches of guinea corn, grown chiefly for the fodder afforded by the stalks. The barren nature of the soil, coupled with the absence of rainfall, makes anything else impossible.

(D.) *Land grants and general value of land.*

Seven grants were made in 1898 under the Crown Lands Ordinance of 1896, which Ordinance, however, is only workable so long as the Dependency is able to afford the services of a Colonial surveyor.

There is still a large amount of survey work required to be done. The value of land, other than town lots, is very small.

(E.) *Shipping.*

A table is annexed of the steam and sailing vessels inward and outward during the past two years. The steamers are those of the Clyde line from New York to Dominican ports, at uncertain dates, but about triweekly, which touch at Grand Turk both on the outward and homeward voyages, taking labourers for the Dominican trip to work the cargo, and landing them on return. There is also the monthly steamer of Messrs. Pickford and Black's line from Halifax to Jamaica, which is under contract with this Government to convey the Turks Islands mails.

359

The decrease in the steam shipping is due to the Clyde Company running only one steamer in six weeks to Santo Domingo, from the commencement of the Spanish-American war till the end of the year, instead of two, and in the sailing shipping to the smaller demand for salt.

A comparative statement of total shipping for the last five years is also annexed :—

—	1894.	1895.	1896.	1897.	1898.
	Tons.	Tons.	Tons.	Tons.	Tons.
Inwards ...	126,215	120,037	131,106	164,751	120,278
Outwards ...	125,400	120,087	130,572	163,623	122,829
Total ...	251,615	240,124	261,678	328,374	243,107

These figures do not include men-of-war, of which there have been several (all British) since cable communication was established.

III.—LEGISLATION.

The principal measures passed during the year were :—

Ordinance No. 4 *of* 1898.—To provide for the payment to the Direct West India Cable Company, Limited, of an annual sum in respect of a news supply and for other purposes.

The sum provided is £120 per annum for a period of five years, and the Ordinance fixes the maximum rates to be charged by the Company for messages.

Ordinance No. 8. *of* 1898.—To amend the law relating to quarantine and the boarding of vessels.

This Ordinance repeals the old fashioned Ordinance of 1870, and assimilates the law of quarantine in the Dependency to that of Jamaica.

IV.—EDUCATION.

(A.) *Primary Education.*

A sum of £600 per annum is set aside by Ordinance for the work of education in the Dependency.

There are seven schools, of which five are in the Caicos Islands.

Education is not compulsory, and the main difficulty that has to be contended with is the irregular attendance of children.

The majority of the teachers are trained men from Jamaica, and an inspection is held by an officer of the Jamaica Education Department once in two years.

An inspection was held during 1898 and the report of the condition of the schools was decidedly satisfactory, and showed that there had been appreciable improvement.

(B.) *Secondary Education.*

There is no provision for secondary education. The children of the better class usually obtain their education in Jamaica, the United States, or Canada.

(C.) *Industrial, Technical, and Agricultural Schools.*

Nil.

V.—GOVERNMENT INSTITUTIONS.

(A, B, C, D.) *Hospitals, Asylums, Poor Houses, Reformatories.*

There are no institutions of this class in the Dependency at the present day, but a portion of the old poorhouse has been set aside as a place where any infectious disease or serious case for operation or otherwise may be placed under the care of an attendant temporarily engaged. It is very rarely required.

Lunatics are sent to the asylum in Jamaica.

(E.) *Savings Banks.*

The Government Savings Bank was opened in 1890. The attached statement shows its condition at the present time :—

Bank.	Number of Depositors.		Deposited.		Withdrawn.		To Credit.	
	1897.	1898.	1897.	1898.	1897.	1898.	1897.	1898.
			£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
Grand Turk	99	108	433 11 1	448 18 4	523 10 8	507 11 4	806 4 4	747 11 4
Salt Cay	49	48	34 17 9	13 13 8	55 13 5	23 7 4	59 13 4	49 19 8
Cockburn Harbour ...	27	28	75 18 11	21 16 5	87 9 4	4 5 6	281 14 11	299 5 10
Total	175	184	544 7 9	484 8 5	666 13 5	535 4 2	1,147 12 7	1,096 16 10

VI.—JUDICIAL STATISTICS.

(A.) *Police.*

The police force consists of :—

At Grand Turk—a corporal, three constables, and two district constables.

Salt Cay—one constable and one district constable.

Cockburn Harbour—one constable and one district constable.

The other Caicos Islands—seven district constables.

The total cost of the upkeep of the force in 1898 was £472 13*s.* 3*d.*

(B.) *Prisons.*

The one prison of the Dependency is at Grand Turk. The daily average in prison in 1898 was four. Long sentence prisoners are usually sent to serve their time at Jamaica, but fortunately there are rarely any prisoners of this class.

(C.) *Criminal Statistics.*

The total number of offences reported to the police or to the magistrates in 1898 was 195, against 181 in 1897.

Of the offences reported in 1898, 53 were for offences against the person ; 3 were for praedial larceny ; 22 were for offences against property other than praedial larceny ; 117 were for other offences.

The total number of convictions in the Inferior Courts in 1898 was 121, against 122 in 1897.

These convictions are classified as follows :—30 for offences against the person ; 3 for prædial larceny ; 5 for offences against property other than prædial larceny ; 83 for other offences.

The convictions in the Supreme Court were as follows :—1 for offences against the person ; 3 for offences against property.

The acquittals were as follows :—In the Inferior Courts 58 ; in the Supreme Court 2.

VII.—VITAL STATISTICS.

(A.) *Population.*

The total by the last census, 1891, was 4,744. The registered births from that date up to the end of 1898 have exceeded the registered deaths by 738, so that the population would appear to be increasing. Such increase is, however, discounted by the emigration, chiefly to Hayti and San Domingo, and the population is probably about stationary.

(B.) *Public Health.*

The general state of the public health during 1898 was good, but I observe that the Government medical officers in their reports refer to tubercular disease as being very prevalent in the Dependency. Interesting and exhaustive reports have recently been made on the health conditions at the Caicos Islands by the Government medical officer at that station.

(C.) *Sanitation.*

The Towns and Public Health Ordinance of 1895 gives power to deal with nuisances generally, and provides for the exercise of precautions in case of epidemics, for the cleaning of streets, the regulation of slaughter yards, and other kindred matters.

The sea is handy to all for the carrying away of refuse, and the soil is of a nature that readily absorbs impurities.

(D.) *Climate.*

(1.) The rainfall is small, averaging about 26 inches from year to year.

(2.) The temperature is not excessive, and it is rarely unbearably

hot, save on certain still days which are experienced as a rule in the months of September and October.

Tables of rainfall and temperature are attached :—

RAINFALL.

For the Year 1898 *compared with the average for the previous seven years.*

3. The wind is usually equable and blows strongly, the prevailing direction being from the south-east.

VIII.—Postal, Telegraph, and Telephone Services.

The mails are brought to and despatched from the Dependency by a monthly steamer from Halifax, Nova Scotia, under contract, and also by the steamers of the Clyde line from New York tri-weekly. These latter, unfortunately, do not sail on schedule time so that it is not possible to arrange for a regular despatch

from the United Kingdom by that route, but letters that arrive at Halifax soon after the departure of the monthly boat are sent on to New York, and thus usually arrive here some days earlier than they would if they waited at Halifax for the next monthly steamer. By far the larger portion of the mails for the United Kingdom go north by the New York steamers; letters so despatched get to their destination in a shorter time by a week or more than they would by the longer Halifax route.

The new 1*d.* postal rate has been adopted by the Dependency, as also the new parcel post rates.

The Island of Grand Turk is now in telegraphic connection with Bermuda and Jamaica by the cables of the Direct West India Cable Company, which opened its Grand Turk station in January of 1898.

There is no telephone service.

IX.—Military Forces and Expenditure.

Nil.

X.—General Observations.

1. The one event of importance during 1898 was the landing of the telegraph cable, by which the Dependency is now placed in communication with the outside world, and relieved from that sense of complete isolation which was formerly such a feature of life here.

2. The breakwater at Salt Cay was completed during the year, the total cost from commencement in 1895 having been £970 10*s.* 5*d.* The protection afforded by this work to the boats and small vessels during heavy weather at the Cay is a source of much satisfaction to the people there.

3. A change took place in the office of Judge of the Supreme Court, Mr. J. Bayldon Walker being promoted to the Chief Justiceship of St. Vincent, and his place being taken by Mr. G. P. St. Aubyn, police magistrate of that Island.

4. I am pleased to be able to report that the sisal hemp industry at East Caicos is doing very fairly well; its management has been good and businesslike, and the ground selected for the cultivation eminently suitable. The second cultivation—that at West Caicos—has unfortunately proved a failure.

TURKS AND CAICOS ISLANDS, 1898.

5. The general condition of the Dependency is not so bright at the present time as has been the case during the last few years, owing to the lowered value of its one staple commodity, salt. As yet, the difference is not so very noticeable, the effect of the recent prosperous period being not yet wiped out, but, if present conditions continue to obtain for any lengthened time, and especially if they be coupled with anything like a slackening demand, I fear the little place will suffer appreciably, and some re-casting of the schedule of revenue may not improbably be called for. The chief hope is that the trade with British North America may increase, that being the only alternative market to the United States, as far as can be seen.

6. There are no other matters calling for special remark.

GOVERNOR SIR A. W. L. HEMMING to MR. CHAMBERLAIN.

King's House,
Jamaica,
12th September 1899.

SIR,

With reference to your circular despatch of 31st January last, I have the honour to transmit my Report on the Blue Book of this Colony for the year ended 31st March 1899.

I have, &c.,

AUGUSTUS W. L. HEMMING,
Governor.

GOVERNOR'S REPORT ON THE BLUE BOOK OF THE COLONY OF JAMAICA FOR THE YEAR ENDED 31ST MARCH 1899.

I.—FINANCIAL.

GENERAL REVENUE AND EXPENDITURE.

The deficit of general revenue as compared with general expenditure on the 31st March 1898 amounted to £123,291. The revenue collected during the year 1898-99 amounted to £600,271, and the expenditure to £630,702, leaving a deficit on the year's transactions of £30,431, which added to the deficit left over from the preceding year made the deficit of general revenue on 31st March 1899 £153,722.

Comparing the two years 1897-98 and 1898-99, general revenue in the former amounted to £540,509, and in the latter to £600,271, showing an increase of £59,762; general expenditure for 1897-98 was £627,422, and for 1898-99, £630,702, an increase of £3,280.

The following is a comparative statement of revenue for the two years :—

4066—800—11/99 Wt 21935 D & S—5 (B)

Comparative Statement of Revenue, 1898-99.

Total	600,271 2 11	540,509 0 9	92,561 9 6¾	32,799 7 4¾
Net Increase	—	—	59,762 2 2	—

JAMAICA, 1898-9.

The increase in general revenue was chiefly due to (*a*) an increase in Import Duties of £53,175, due to alterations in the tariff under Law 28 of 1898, by which duties were raised generally, especially on manufactured articles, (*b*) to the imposition of a new tax, viz., on cigars and cigarettes, which yielded £3,004, and (*c*) to the transfer from appropriated to general revenue during 1898-99 of the collections under Law 17 of 1890, under which certain parochial roads have been taken over as main roads. These collections amounted to £24,725 in 1898-99. Against the increases under these three items together (£80,904) must be set decreases (*a*) of £4,696 on Rum Duties, (*b*) of £6,766 under Reimbursements, and (*c*) of £13,005 under Miscellaneous, to which head a sum of £15,262 was credited in 1897-98 on account of profit by the sale of sinking funds. The aggregate of these decreases—£24,467– taken from £80,904 leaves £56,437, or £3,325 less than the actual net increase of £59,762, which is explained by increases exceeding decreases on the several other heads.

The following is a comparative statement of expenditure for the two years in question :—

Comparative Statement of Expenditure, 1898–99.

General Expenditure.	1898–99.	1897–98.	Increase.	Decrease.

Total	630,701 17 3½	627,422 1 2½	45,016 5 7¾	41,736 9 6¾

JAMAICA, 1898–9.

The net increase of expenditure in 1898–99 (£3,280) was very small.

The largest increases occurred under Revenue Departments £2,646, due chiefly to the reimbursement of expenses of collecting certain parochial funds (£1,992) being no longer credited to this account; Postal Service £4,274, owing chiefly to £2,140 of the Colony's contribution to the Postal Union (£5,140) being transferred from "Miscellaneous" account, which had hitherto been charged £3,000 only; Military £4,437, due to an increased vote for the Jamaica Militia, which enabled a larger force to be raised; and Public Works £19,424, arising from the expenditure under Law 17 of 1890 (referred to above in dealing with revenue) being now charged to general expenditure.

The chief decreases occurred under (1) Charges of Debt £5,336 Interest amounting to £7,142 was paid in 1897–98 under the guarantee loan which was called in in that year, and £20 on account of coupons not presented was paid in 1898–99. (2) Judicial £3,820; (3) Medical £4,947, and Education £2,497; with smaller decreases on other departments, particularly the Constabulary and Prisons, which arose generally from new arrangements by which economy was secured. The cessation of the subsidy for the Coasting Service on account of which £1,707 14*s.* was expended in 1897–98, and the expenditure in that year of £2,373 for Jubilee celebrations accounted for further decreases in 1898–99.

The total revenue and expenditure for the five years ended 31st March 1899 are as follows:—

—	1894–95.	1895–96.	1896–97.	1897–98.	1898–99.	Total.
	£	£	£	£	£	£
Revenue ...	624,024	646,103	591,864	540,509	600,271	3,002,771
Expenditure ...	580,803	605,505	629,764	627,422	630,702	3,074,196

As regards 1897–98 and 1898–99, the following changes in methods of accounting made in 1898–99 increased the figures for general revenue and expenditure as compared with the previous year, viz.:—

1. Under Law 4 of 1898 the collections under Law 17 of 1890 for the up-keep of roads taken over as main roads were shown as general revenue, and the expenditure for such up-keep was correspondingly shown as general expenditure.

2. The expense incurred by the Collector-General's Department in collecting parochial rates was for the first time treated as a part of the expenditure of the department.

3. The expense incurred by the Audit Office in auditing the accounts of the Parochial Boards was similarly treated in the same way as (2) for the first time.

Collections made under (1) amounted to £24,725 in 1898–99, expenditure under (1) to £20,189, and under (2) and (3) to £1,992 and £537 respectively. Had the accounts therefore been treated as in 1897–98, general revenue would have been £575,546 and general expenditure £607,984.

Important Changes in Taxation.

The most important measure as affecting taxes and dues which was passed during the year 1898–99 was the Tariff Law 28 of 1898. The object of the law was to recoup as far as possible a considerable temporary deficit in the revenue, and it was only in force to the end of the year. It increased the duties on most imported articles. As regards foods, drinks, and narcotics, duties were increased on several articles already rated, *e.g.*, on spirits from 12*s.* 6*d.* per liquid gallon to 16*s.* per proof gallon, provided the duty should in no case be less than 12*s.* 6*d.* per liquid gallon. On "unenumerated" foods and drinks, which had usually borne an ad valorem duty of 12½ per cent., 20 per cent. was imposed. On manufactured articles, except cotton piece goods which remained at 12½ per cent., duties varying from 20 per cent. to 25 per cent. were imposed, the heavier duty being placed almost entirely on articles of luxury.

The Rum Duty Law 31 of 1898 reduced the duty from 6*s.* to 5*s.* per proof gallon, as the former duty was considered to press unduly on a declining native industry.

Succession duties were imposed for the first time by Law 20 of 1898.

Assets and Liabilities.

On the 31st March 1899 the assets of the Colony stood at £916,030 and the liabilities at £1,069,752, leaving a balance against the Colony of £153,722. In making this computation £700,000 Jamaica Railway second mortgage bonds are no longer reckoned as an asset, nor are certain advances to hotels. On the 31st March 1898 the assets, including the second mortgage bonds, &c., were reckoned at £1,477,069 and the liabilities at £900,956, leaving a balance in favour of the Colony of £576,113, or, if the bonds in question be excluded from assets, a balance against the Colony of £123,887. The debit balance therefore increased by £29,835 during the year.

The following is a comparative statement of the assets and liabilities on the 31st March 1898 and 1899 respectively :—

Assets.			*Liabilities.*		
Heads.	1897–98.	1898–99.	Heads.	1897–98.	1898–99.
	£	£		£	£
Investments on account of Deposits at Interest.	463,743	463,743	Deposits at Interest	587,681	617,725
Investments on account of Trust Funds	21,620	23,086	Trust Funds	24,429	24,478

Cash	56,485	99,811	Immigration Exchequer	3,761	8,397
Balance General Liabilities	—	153,723	Balance General Assets	*576,114	—
Total ... ... £	1,477,069	1,069,752	Total ... ... £	1,477,069	1,069,752

* Includes second mortgage bonds, Jamaica Railway.

Under Liabilities, the increase in deposits at interest is chiefly due to a gratifying increase in Savings Bank deposits, which rose from £469,513 in 1897–98 to £493,894 in 1898–99. The large increase of deposits not at interest invested occurs under Chancery Fund Account £25,332, which a glance at assets shows to be practically all invested. The decrease on account of Loan Works occurred almost entirely on the public buildings and Jamaica bridges loans, and was due to expenditure for these purposes under the loans lessening the amount for which the Treasury was liable.

Under Assets, the decrease in other securities is due to the striking out for the first time of the second mortgage bonds, while the considerable increase of £60,542 under Advances to be Recovered arises chiefly from advances to the Kingston General Commissioners for sewerage, streets, and waterworks purposes, totalling £75,678. Against this must be set a decrease under advances to Parochial Boards, owing to a large increase in repayments of advances by these Boards.

Public Debt, showing Provision for Repayment.

The public debt of the Colony, after allowing for provision made by means of sinking funds for repayment of loans raised through debentures or inscribed stock, stood as follows in each of the last five years :—

Year.	Amount.
	£
1894–95	1,856,345
1895–96	1,873,859
1896–97	1,860,181
1897–98	2,058,912
1898–99	2,053,822

JAMAICA, 1898-9.

These figures include (A) certain monies, chiefly legacies for the endowment of schools, which had been permanently deposited with the Government and appropriated thereby for the purposes of the trust, and the interest on which is guaranteed by the Act 28 Vic. cap. 23. (B) Certain deposits on account of the widows and orphans (1) of clergy who were on the civil establishment, and (2) of public servants properly speaking. The interest on these deposits is chargeable to general revenue. (C) Loans for general purposes of Government raised by means of debentures or inscribed stock which are redeemed by drawing of lots, while sinking funds are provided also for gradually extinguishing the liability; and (D) Loans for special purposes, *i.e.*, undertakings for the benefit of Kingston and its neighbourhood, of which the Kingston General Commissioners have the management. These loans are secured primarily on special revenues, guaranteed by the general revenue of the Colony.

In 1898-99 the liability under each of these heads was as follows:—

	£	s.	d.	£	s.	d.
Funded Debt				77,416	6	11
Deposits at Interest	123,830	11	3			
Less Investments	11,809	6	7	112,021	4	8
				189,437	11	7
Loans for general purposes				1,612,420	12	10
Loans for special purposes				251,963	8	6
Total ...				£2,053,821	12	11

The third item is the only one which is strictly speaking public debt, as distinguished from Government liabilities or debenture and stock debt.

Of loans for general purposes outstanding on 31st March 1899, £363,575 was raised by means of debentures which have not been converted into inscribed stock, and £1,260,159 10*s.* 8*d.* is inscribed stock raised in England, £875,874 of which represents debentures raised for general purposes and converted into stock,

while £123,360 is inscribed stock raised in Jamaica. Of loans for special purposes, £241,620 represent debentures and £37,980 inscribed stock. The total debenture debt outstanding on the date mentioned was therefore £605,195, and inscribed stock debt £1,421,499 10*s.* 8*d.*, amounting together to £2,026,694 10*s.* 8*d.* Of this amount £1,747,094 10*s.* 8*d.* was debt for Government purposes, to repay which there were sinking funds amounting to £134,673 17*s.* 10*d.*, leaving a net liability of £1,612,420 12*s.* 10*d.*, while debt for special purposes was £279,600, against which must be set £27,636 11*s.* 6*d.* of sinking funds, leaving a net liability of £251,963 8*s.* 6*d.*, or together of £1,864,384 1*s.* 4*d.* On the greater portion, say nearly six-sevenths of the debenture and stock debt, interest is payable at 4 per cent., on deposits 6 per cent. is paid, and on funded debt 6 per cent. and upwards.

CURRENCY.

The money of account in Jamaica is pounds, shillings, and pence sterling. The general currency is British sterling silver. British gold has a very limited circulation, its place for large transactions being taken by a paper currency issued by the Colonial Bank, London, through its local branch. This bank carries on business under The Imperial Act 19 & 20 Vic. cap. 3. British copper coinage is replaced by a nickel one of the same denominations, which is specially issued from the Mint for use in the Colony. This metal is recommended in Jevons' "Money and the Mechanism of Exchange" as very suitable for coinage.

The British silver coins in circulation are crowns (very rare), half-crowns (rather infrequent), florins, shillings, sixpences, and threepences.

Silver coins current in Great Britain and above the value of sixpence are legal tender in Jamaica to any amount, those of lower value to the extent of forty shillings in any one payment. Nickel coins are legal tender to the extent of twelve of a denomination for one payment, *e.g.*, pennies to one shilling, half-pence to sixpence, farthings to threepence.

Other coins current here are doubloons, Mexican and Spanish, of full weight at £3 4*s.*, doubloons, Columbian, at £3., aliquot parts in proportion, and United States American gold on a basis of 4*s.* 1*d.* value to the dollar.

During the 20 years ended 31st December 1898 the Colonial Bank imported silver coins of a total value of £533,443, and exported such coin to a value of £817,414.

JAMAICA, 1898–9.

For the five years 1894–98 the average circulation was :—

Year.	Amount.
	£
1894	182,673
1895	169,844
1896	173,650
1897	150,754
1898	152,802

REVENUE AND EXPENDITURE OF PAROCHIAL BOARDS.

Parochial Boards were instituted for the management of municipal affairs and the maintenance of parochial roads, as distinguished from main roads, within their respective parishes.

Their revenue is derived from local rates and taxes collected by Government revenue officers, and from fees, such as market fees.

The following is a comparative statement of the revenue and expenditure of these Boards for the five years ended 31st March 1899, to which are added the figures for Kingston, whose municipality is the most important of these Boards :—

—	1894–95.	1895–96.	1896–97.	1897–98.	1898–99.
Revenue of all Boards ...	111,706	113,702	108,232	104,307	117,568
Expenditure „ „ ...	120,134	128,580	135,842	125,704	111,288
Revenue of Kingston ...	24,855	26,190	25,656	25,870	30,313
Expenditure „ ...	27,270	29,168	35,334	32,557	28,643

DEBTS OF MUNICIPALITIES AND BOARDS.

In 1898-99 the total amount due by Parochial Boards to general revenue was £108,645. Of this amount, £17,008 were lent to St. Catherine, £16,508 to Kingston, £14,171 to St. James, leaving £60,958 due by the other parishes.

Of the total indebtedness, £45,936, or over two-fifths, were due on account of water supplies, chiefly for towns and villages, £39,277 for the construction of markets, and £14,145 advances to pauper funds, usually for the construction of almshouses, or to avert deficiencies. These advances are repayable from rates or fees levied for the purpose. The remaining advances were principally for roads or sanitary objects, and are being met either from collections of specific rates or from the Parochial Surplus Fund, which is devoted to useful local objects. The most important of these latter advances are for the benefit of Kingston, £6,304 to the Kingston Road Fund, £1,254 for improvements in certain suburban districts, and £3,850 for the reconstruction of the theatre, this last amount being the only considerable debt incurred by a Parochial Board for other than a strictly necessary purpose.

Debts to general revenue, aggregating £53,741, were outstanding in 1898-99 on account of specific undertakings by corporations formed for the purpose.

Of these, the Kingston General Commissioners owed by far the greatest amount, £34,390 being due for advances made to meet expenditure for sewage works, and £16,288 for advances on account of waterworks, so as to enable the works to be continued pending the raising of loans for the purpose. These amounts form part of the sum of £75,678 referred to under the head of Assets and Liabilities. In addition to these amounts, the Kingston General Commissioners have incurred debt on account of amounts raised by means of debentures or inscribed stock and guaranteed by general revenue. These are referred to more particularly under the head of "Debt."

II.—TRADE, AGRICULTURE, AND INDUSTRIES

IMPORTS AND EXPORTS.

The imports and exports of the year ended 31st March 1899 were both greater in value than in the preceding year; imports amounted to £1,788,432, as against £1,674,380, an increase of £114,052 in value and 6·8 in percentage of value, and exports to £1,662,543, as against £1,448,443, an increase of £214,100 in value and 14·8 in percentage of value.

JAMAICA, 1898-9.

Under imports, the very considerable increase of £164,543 on manufactured articles was partially set off by a decrease of £50,265 on live animals, food, drink, and narcotics, whilst a small decrease on raw material was almost counterbalanced by a small increase on specie. On the other hand, exports showed an increase on every head except manufactured articles, in which there was a trifling decrease of £2,895.

The year was one of abundant rain, which benefitted both pastoral and agricultural interests. A heavy duty imposed on imported animals checked importations, and there was also a brisk export trade to Cuba in stock and poultry. Less cereals were imported owing to an abundance of ground provisions. These several causes increased the exports, relieved the depression and enabled the community to provide itself with a greater quantity of manufactured articles, notwithstanding a general increase in import duties. The increase in importations only began in October, that is about the middle of the financial year, and this month therefore probably marks the end of the depression which had existed since 1896.

The following table of imports and exports for the past five years shows that there had been signs of this depression for a couple of years before its occurrence :—

Year.	Exports.				Imports.			
	Home Products and Manufactures.	British and Foreign Products and Manufactures.	Coin and Bullion.	Total Exports.	Home Consumption.	Coin and Bullion.	Total for Home, including Specie.	Total Imports.

JAMAICA, 1898–9.

The above statement shows that in every instance the quantities of staples exported increased in 1898–99 compared with 1897–98, but that values declined in four cases and prices in seven out of ten. The only considerable products which have improved in price generally within the past five years are cocoa, ginger, pimento, and oranges.

Salient features of the year were (1) the abnormally high price of pimento, which raised the value to a greater figure than it has ever attained since 1880, though the quantity was below the average of late years, and (2) the improvement of the sugar industry after a persistent decline for many years. The old staples coffee and logwood continue to suffer from competition abroad, in the latter case not alone with foreign wood but also with aniline dyes.

It is an interesting coincidence that while the value of the chief products increased from £1,242,171 to £1,381,589, or by 11·2 per cent., minor products and manufactures increased from £135,655 to £150,789, or by 11·1, almost an identical percentage.

Minor exports which show increases generally in quantity and value are fustic, which increased by £10,431 in value, spars by £4,592, hides by £3,430. Small decreases occurred on pineapples, limejuice, annatto, beeswax, lignumvitæ, bitterwood. A feature of the exports is the increase in shipments to Cuba. In 1897–98 the total value of these was £10,325, in 1898–99 £59,350. They consisted chiefly of cattle, horses, and mules, poultry, eggs, and yams. These exports will, however, probably continue for a few years only, as with returned peace and prosperity and progressive administration Cuba will become independent of such supplies from Jamaica.

The island's exports were distributed in the following proportions during the past five years :—

—	1894–95.	1895–96.	1896–97.	1897–98.	1898–99.
United Kingdom	27·1	27·6	27·4	22·6	20·6
" States	58·1	57·0	56·6	62·3	59·1
Canada	1·5	1·6	1·2	1·3	1·4
Other countries	13·3	13·8	14·8	13·8	18·9

The Collector-General points out that the trade with the Mother country and the United States fell a few proportional points owing to the new market developed in Cuba, whither, as has been stated, products valued at £59,350 were exported. Other countries which took goods to a large extent were France £96,133, Germany £55,044, Austria £13,924, and Russia £13,420. Relatively to 1897–98 the output to the United Kingdom increased in value from £318,854 to £342,726, or by over 7 per cent., and that to America from £902,932 to £982,464, or by over 8 per cent., so that the real cause of the seeming declension in English trade, if proportional parts only are regarded, is the far greater relative increase in trade with foreign countries.

The following were the percentages of exportable value of the chief products of the Colony during the five years 1894–95 to 1898–99.

—	1894–95.	1895–96.	1896–97.	1897–98.	1898–99.
Sugar	12·9	11·0	10·1	8·3	9·8
Rum	10·1	9·3	8·4	6·3	6·1
Coffee	19·3	16·0	14·4	11·4	10·5
Dyewoods	19·0	20·4	11·6	8·9	8·8
Fruit	27·9	29·9	34·3	42·8	41·4
Pimento	4·5	5·1	5·2	3·6	8·3
Minor products ...	6·3	8·3	16·1	18·7	15·1

These figures, read with those showing the relative distribution of exports and the table of increase and decrease of the ten products mentioned, will help to explain the proportionate declension in trade with the United Kingdom, which 20 years ago took over 60 per cent. of the exports. At that time fruit, nearly the whole of which has always been exported to the United States, and which now forms over 40 per cent. of all exported products, was comparatively a minor product, while practically

JAMAICA, 1898-9.

all the rum and logwood and a much larger proportion than at present of coffee and pimento (all of which except the last were of considerably greater value than they are now) were exported to the United Kingdom. The market for sugar has also been transferred to the States, which takes also our fruit, cocoanuts, and usually a larger proportion of coffee, pimento, and logwood than the Mother country. Several minor products, *e.g.*, ginger and cocoa, which are increasing in value, also turtle, limejuice, honey, &c., are taken in larger proportion by the United Kingdom, but unless the direct steamship service now being arranged for can induce a considerable development of the fruit trade, which is now the mainstay of the Colony, the trend of trade must continue to be to the United States, a country which is our nearest important market, and has a population about double that of the United Kingdom. At the same time there is an increasing tendency to seek new markets, as exemplified by the large shipments now made of coffee, cocoa, and logwood to France, pimento and rum to Germany, and the recently developed export trade in stock to Cuba.

Before turning to imports, it may be remarked that of the total value—£35,588—of manufactured articles only £17,657 is for products of the Colony, £17,164 of this latter being the value of logwood extract. Of the balance of £17,931, representing British and foreign manufactures exported, £3,987 is the value of old metal, principally from abandoned sugar estates. The increase in specie over last year is due chiefly to large exportations of gold to the United Kingdom and Cuba.

Under imports, a decrease of £50,265 occurred on live animals, food, drink, and narcotics. The decrease on live animals is accounted for by the heavy duty now imposed. The values of cattle, horsekind, mules, and sheep decreased by £11,968, a sum which has thus been retained in the Colony, instead of being sent out in payment for animals which can be and are raised here.

On the other hand, the placing of bees on the free list has given a stimulus to apiculture, a rapidly developing industry. No bees were imported in 1897-98, while the importations in 1898-99 were valued at £1,082.

There were decreases on almost all farinaceous foods, totalling £38,139, the largest being on wheat flour £16,739, meal not wheat £7,977, bread and biscuit £8,129, and rice £4,660. Increased duties were imposed on bread and biscuit, and all meal except wheat meal, and the decreases on these articles were about 40 per cent. each. On the other hand, no increased duties were imposed on wheat flour, or farinaceous food not for man, and on rice. The decreases in value of these articles, which were less in percentage than on those bearing heavier duties, must be attributed chiefly to the abundance of root crops and other provisions. It is not attributable to lowering of prices, which were much the same as those of the previous year. The abundance of

native provisions probably accounts also for the decrease of £1,095 on peas and beans. That the decreases were not due to more straitened means, appears probable from the fact that corn, of which there is a comparatively small local supply, wheat and oats, all being used here as food for animals, increased in net value by £5,493.

Fish stuffs decreased in value by £9,276. Fish dried or salted (*i.e.*, cod fish), on which no additional duty was imposed, decreased from £119,828 to £116,239, or by £3,589 say 3 per cent., while other fish stuffs, on which additional duties were placed, decreased from £37,429 to £31,742, or by £5,687, *i.e.*, 15 per cent. Other articles the decreases on which may in part be due to a higher tariff of temporary character are butter and butter substitutes, cheese, hay and straw, condensed milk, and cotton seed oil. The higher duties have had little appreciable effect on bacon, hams, beef and pork wet salted, pickles, and sauces.

Alcoholic beverages increased in value from £52,869 to £65,607, or by £12,738. Spirits, which bore additional duties under Law 28 of 1898, increased only from £11,849 to £12,212, or by £363, while ale and beer and wines, the duties on which remained unchanged, increased respectively from £31,631 to £40,504, or by £8,873, and from £9,389 to £12,891, or by £3,502. These several increases, with one of £1,136 on tobacco and of £103 on tea, appear to indicate that the community had a larger surplus to devote to comforts and luxuries.

The chief item of "raw material" imported is coal, the value in 1898-99 was £45,090, a decrease on 1897-98 of £11,538. Contrary to previous years, the chief importations were from the United States, instead of the United Kingdom. The comparison for the two years is as follows :—

Year.	United Kingdom.	United States.
1897-98 ...	42,456 tons, or 75 per cent.	13,710 tons, or 24 per cent.
1898-99 ...	20,854 tons, or 46 per cent.	24,137 tons, or 53 per cent.

Importations of coal from the States have been gradually increasing. In 1894-95 there were 6,559 tons compared with 47,401 from the United Kingdom.

Manufactures, which are principally imported from the United Kingdom, show increases on most articles.

JAMAICA, 1898-9.

The following is a comparison for five years of those of greatest value :—

—	1894-95.	1895-96.	1896-97.	1897-98.	1898-99.
Apparel	61,426	73,486	66,533	45,239	62,426
Cottons	299,778	293,380	247,431	218,851	254,310
Haberdashery	60,845	55,465	42,237	33,084	28,170
Woollens	43,370	47,786	38,687	30,578	34,321
Hardware and Cutlery ...	38,129	40,099	34,638	28,342	31,061
Boots and Shoes	70,965	59,418	56,091	45,190	53,721

The above show increases over 1897-98, except haberdashery, which shows the only appreciable decrease in textiles, viz., £4,914, compared with that year. This decrease was probably influenced by increases of duty from 12½ per cent. to 20 and 25 per cent., but other classes of imports on which higher duties were laid have nevertheless increased in value, *e.g.*, apparel, some cottons, linens, woollens, ribbons, while silks have slightly declined. These facts appear to point to a healthy revival of trade.

A feature of the trade in textiles is the advance made by American manufacturers in the market for the cheaper description of cotton goods. In 1897-98 the value of textiles from the States was £26,614, in 1898-99 £50,595, an advance of 90 per cent. in one year. Of these amounts, cottons, including hosiery, &c., represent £16,940 and £40,829 respectively.

It should be noted, however, that in 1895-96 American textiles were £50,187 in value, cottons being £31,858, and that they had declined considerably since, until 1898-99.

Metal manufactures were £230,056, against £132,864, an increase of £97,192. The chief portion of this increase is due to the construction and equipment of an electric car system in Kingston, though increases on articles of general commerce also bear testimony to reviving trade.

As the Electric Company, which is of Canadian origin, imported their materials almost entirely from the United States, this fact chiefly accounts for an increase in metal manufactures from that country of from £43,535 in 1897-98 to £133,433 in 1898-99. A similar temporary increase in this class of manufactures occurred during the construction of the railway by American contractors.

Under "other manufactures" the increases generally preponderate over the decreases.

The following figures show the respective proportions of imports from the several countries during the five years ended 31st March 1899 :—

—	1894–95.	1895–96.	1896–97.	1897–98.	1898–99.
United Kingdom	50·4	48·1	49·9	47·2	44·7
United States	36·8	41·8	39·4	43·0	45·1
Canada	8·5	7·5	8·2	7·1	7·1
Other countries	4·3	2·6	2·5	2·7	3·1

The Collector-General points out that probably for the first time in the history of the Colony the value of imports from a foreign country (United States) has exceeded the value of those drawn from the United Kingdom. As already stated, however, a large part of the increased importations from that country in 1898–99 were materials for an electric tramway system, which has now been almost completed. The general trend of the Colony's trade from the United Kingdom to the United States is, however, unquestionable, and may be accounted for not only by contiguity, but also by the superior finish which is said to be given by American manufacturers to cheap articles, such as cheap cottons, common boots, shoes, &c., which are so largely used by the mass of the people of this Colony.

MANUFACTURES, MINES, AND FISHERIES.

Excepting sugar and rum, the manufactured articles of the Colony are of comparatively small value and importance. The export value of sugar in 1898–99 was £150,312, of rum £104,295, and of articles shown in the Blue Book as exported manufactured articles of home production £17,657, making together £272,264.

Besides exported sugar there is a fair quantity manufactured for the home market, principally by small settlers. There is no means of ascertaining the quantity or value disposed of. The prices obtained in the market, which last year were about 2*s.* 6*d.*

JAMAICA, 1898–9.

to 3*s.* for 16 quarts, could only prove remunerative to small settlers working at home with inexpensive mills driven by their own stock. A means of approximately ascertaining the home consumption of rum is afforded by the duty of 5*s.* per proof gallon imposed on rum taken out of bond for home consumption. The proof gallon is reckoned at 1·35 to 1 to the liquid gallon. The duty collected in 1898–99 was £100,028; the number of gallons sold locally was about 296,379, making with 1,564,436 exported an output of 1,860,815 gallons.

Of the minor manufactured articles exported the most important is logwood extract. The manufacture of this article has only been taken up within the past few years. The export value has been :—

Year.	Amount.
	£
1894–95	3,126
1895–96	27,965
1896–97	27,525
1897–98	20,984
1898–99	17,164

Showing unfortunately a decline, except at its first inception.

76 local manufactories are enumerated in the Blue Book. There are 16 for the manufacture of cigars and cigarettes, 2 tanneries, 10 breweries, 7 aerated water factories, 6 brick-making factories, 2 soap manufactories, 3 ice factories, a match factory, &c. Most of these are small and employ but few hands. Only one employs as many as 130 hands.

There are no mines and no organized fishing industries in the Colony. A considerable quantity of fish is of course caught off the shores of the island for home consumption.

Agricultural Industries and Botanical Stations.

Agricultural Industries.

During the year 1898–99 excellent seasons were experienced generally, and the outlook had improved by the close of the year.

At its commencement, however, the condition of cultivators, as gauged by receipts of property and holdings tax, was even more depressed than in 1897–98. Thus, the acreages of lands on which property tax was payable in the tax-collecting years ended 31st July 1897 and 1898 respectively were as follows :—

—	1896–97.	1897–98.
Cultivated land at 3*d.* an acre	164,644	164,307
Guinea grass at 1½*d.* an acre	124,672	123,136
Pasture land at ¾*d.* an acre	374,244	373,048
Wood and ruinate at ¼*d.* an acre	1,218,149	1,187,909
Total	1,881,700	1,848,400

These figures include arrears, which in every case were greater than in the preceding year. Were these arrears eliminated, the figures for each year would stand at 1,791,160 and 1,725,930 acres respectively. Similarly, the number of holdings for the tax-collecting year 1896–97 stood at 76,585, for 1897–98 at 71,759 only.

Returns of acreage and holdings for the financial year ended 31st March 1899 are not available, but that the condition of cultivators had improved during the 9 months following the period to which those returns relate, is shown by the increased

JAMAICA, 1898–9.

collections of internal revenue, particularly on agricultural items, *e.g.*, payments of quit rents, taxes on cultivated lands and on holdings, and purchase money for Crown lands. For holdings, the payments for the year ended 31st March 1898 were £11,309, but for 1898–99 £13,219; while the taxes on cultivated lands gave £5,415 in 1897–98 and £5,838 in 1898–99.

This improvement was largely due to the excellent seasons causing unusually large crops, which compensated, as a rule, for lower prices. Thus, while the export quantity of nine agricultural products, each valued at over £30,000 annually, was greater in every instance than the yield of 1897–98, the price was less in five cases, about the same in one, and greater in three instances, viz., those of pimento, ginger, and cocoa, none of which are among the chief products. The average price of pimento was phenomenally high, 32*s.* 9*d.* per cwt., against 27*s.* 3¼*d.* in 1897–98, itself an unusually good price. The Collector-General points out that the comparatively large output of this article was not the result of larger production but of reduction of local stocks.

The upward tendency of sugar and rum, after a decline for several years past, was another feature of the year.

The reports of collectors of taxes on the agricultural outlook in their respective parishes were nearly all characterized by a buoyant tone, and agree, especially in respect of the latter half of the year, that trade is reviving and that there is a healthier and more cheerful spirit pervading all classes. Products for the home market, fruit, vegetables, ground provisions, and pulse were more or less plentiful, and caused a decrease in the importations of certain kinds of foods. The peasantry, who are for the most part cultivators of their own land, or tenants on fairly easy terms, had enough to supply their wants.

Hopeful signs of a more intelligent determination to meet changed conditions, consequent on the decline of former standard industries, are the formation and activity of associations like the Jamaica Agricultural Society, which specially addresses itself to the improvement of breeds of stock, especially small stock, and to the spread of information as to the proper methods of cultivating the minor products, the initiation of experiments for placing articles on the market profitably in a concentrated form, *e.g.*, logwood extract, farine, banana flour, banana figs, &c., the endeavour to find new markets, *e.g.*, for fruit in Europe, and for stock, fowls, eggs, &c., in Cuba, and the successful practice by a growing number of the peasantry of improved methods taught them by the Instructor from the Botanical Department. As an instance, one of the reports by collectors of taxes speaks of the ready sale in Mandeville of grapes grown by peasants at Alligator Pond, who have taken up viticulture under directions given by the Instructor. Peasant lads taught at Hope Industrial School

performed very successfully during the year budding operations for a proprietor near Brown's Town, at a cost to him of £4 3*s.*, while budded trees procured from nurseries would have cost £30 5*s.*, irrespective of the expense of transit.

At Montpelier, the property of the Hon. Evelyn Ellis, an extensive factory for the manufacture of cigars is now in full working, the entire cigar being the product of Jamaica soil. Mr. Ellis has planted out 60 acres exclusively with seedlings of the famous Vuelta Abajo tobacco, obtained from the Botanical Department; the tobacco, cured on the spot, realized high prices in New York. This gentleman has also during the past year successfully prepared ensilage from native plants, cured banana figs, &c. Orange growers from Florida have induced several persons to properly cultivate the trees instead of practically leaving them to nature, after clearing the surrounding land, and there has been much activity during the year in the planting and cultivation of new orange groves.

The banana industry, now the mainstay of our agriculture, was initiated by an American sea-captain, the founder of the Boston Fruit Company. At the same time Jamaicans have not been behind hand. As an instance, may be cited the wide cultivation of late years by native landowners of bananas on the irrigated plains of St. Catherine. The area so cultivated is stated in a report by the collector of taxes to be more than double that lost to cane culture by the abandonment of many sugar estates in that parish. In the neighbouring district of Vere, which has always been devoted to cane cultivation, it is hoped irrigation will be established ere long. Should this hope be realized, the sugar industry in that district will probably be saved from the fate which has befallen it in the plains of St. Thomas in the east. In St. Thomas, however, the Boston Fruit Company are cultivating bananas widely, as also tomatoes and other vegetables for the American market. But Jamaica, with two-thirds of the surface wholly uncultivated, needs the sugar as well as the fruit industry, instead of the substitution of the one for the other.

Botanical Stations.

The Botanical Department did useful work during the year in experimental cultivation, in the distribution of plants and seeds, and in affording information by means of bulletins and private correspondence with planters.

The department distributed during the year no less than 197,139 plants, of which the greater proportion were economic plants.

Advice was given during the year to orange growers as to remedies for sickly plants, to cocoa planters by leaflets and demonstrations by the Agricultural Instructor of the department,

to viniculturists through the Instructor, whose advice given during the last few years has resulted in remunerative cultivation of grapes for the home market in a dry district of St. Elizabeth, hitherto considered of little value for agricultural purposes, to sugar planters by distributing the best varieties, the "No. 95" variety having afforded a planter more than double the yield of the kind hitherto grown on his estate, to tobacco cultivators by obtaining the best kinds of the famous Vuelta Abajo tobacco, with which the Hon. Evelyn Ellis exclusively planted out 60 acres, manufacturing tobacco which realized a high price in New York. This has induced him to lay out 130 acres more. The department has also had under training two lads from the Colony of Lagos, and has trained as agriculturists several lads from the Hope Industrial School.

A scheme for starting an experimental agricultural station was formulated during the year by the Botanical Director, the Agricultural Inspector, and the Principal of the High School at Hope for the employment and instruction of industrial school boys, and of boys whose parents are willing to pay for their maintenance. The scheme was approved by the Government, but cannot at present be carried out for want of funds.

The great rise in the beginning of 1899 in the price of quinine and cinchona bark led to an enquiry into the present condition of the cinchona plantations and the practicability of manufacturing quinine locally as in India. As a result it appears doubtful, unless prices rise still further, whether bark can be harvested for sale, or quinine manufactured locally, as a source of profit.

LAND GRANTS AND GENERAL VALUE OF LAND.

No grants of land have been made by the Crown of late years, except to the West India Improvement Company under the Railway Law 12 of 1889. During the year under review 1,565½ acres of Crown land were transferred to this Company, making an aggregate of 73,393½ acres transferred to them. The Company are still entitled to 3,506½ acres in addition.

Crown land continues to be sold on easy terms to small settlers. During the year 322 applications were received, covering 3,329 acres, and 354 lots were surveyed, covering 3,617¼ acres, the purchasers of which were placed in possession. From 1st January 1897, when the scheme was started, to 31st March 1899, 623 applications have been received for 6,624½ acres, and 511 satisfied, covering 5,984½ acres.

No Crown lands were sold during the year to parties other than small settlers under the above scheme. The lands were sold at prices ranging from £1 to £3 per acre, as compared with the ruling prices—£1 to £16 per acre—of private land for agricultural purposes.

The value of property generally is at present lower than in 1890-95.

SHIPPING.

There was a considerable increase in shipping compared with last year, as the following figures indicate :—

Year.	Vessels Entered.	Vessels Cleared.
1897-98	1,060	1,055
1898-99	1,420	1,429
Increase ...	360	374

This increase is far in excess of that exhibited by the trade of the Colony, as shown by its exports and imports. Indeed the figures for 1898-99 are considerably greater than those of any of the preceding four years, when the number of vessels did not show any considerable fluctuations from year to year. The highest previous numbers were 1,174 entered and 1,168 cleared in 1895-96, a year of much greater prosperity than 1898-99.

The Collector-General explains that the increase in 1898-99 is due partly to extra activity in the fruit trade with the United States, but mainly to the creation of a trade with Cuba after the war. The vessels employed in this trade are very small, and its addition to the volume of trade would not therefore be commensurate with the increased number of vessels engaged in it.

JAMAICA, 1898-9.

The following is a comparative summary of vessels, tonnage, and crews for the past five years :—

Year.	Reported.			Cleared.		
	Vessels.	Tonnage.	Crews.	Vessels.	Tonnage.	Crews.
1894–95	Sailing, 448	102,127	3,437	432	97,066	3,171
	Steam, 683	671,887	22,790	704	693,260	23,570
	1,131	774,014	26,227	1,136	790,326	26,741
1895–96	Sailing, 472	106,408	3,611	470	110,467	3,663
	Steam, 702	697,294	24,308	698	693,178	24,199
	1,174	803,702	27,919	1,168	803,645	27,862
1896–97	Sailing, 343	66,447	2,522	361	70,557	2,675
	Steam, 688	672,955	23,686	694	678,946	23,724
	1,031	739,402	26,208	1,055	749,503	26,399
1897–98	Sailing, 348	70,238	2,596	346	71,388	2,641
	Steam, 712	710,623	24,554	709	708,695	24,503
	1,060	780,861	27,150	1,055	780,083	27,144
1898–99	Sailing, 445	71,058	3,365	457	76,218	3,535
	Steam, 975	839,391	31,938	972	841,052	31,809
	1,420	910,449	35,303	1,429	917,270	35,344

Of the vessels reported and cleared, the majority are British. Thus in 1898–99 there were 319 sailing vessels of this nationality out of 445 which entered, 4 being direct from the United Kingdom and 315 from British possessions. Of the 975 steamers, 514 were British, 497 from the United Kingdom and 17 from British possessions. The great majority of British sailing vessels belong to the West Indies, a large number coming from the Bahamas, the Turks, and the Cayman Islands. Of the remainder, nearly all are from Nova Scotia, as also the majority of steamers of British possessions trading here.

Of foreign vessels the majority are Norwegian. In 1898–99, 40 sailing vessels and 235 steamers of this nationality were reported. Next in order came those of the United States of America, 44 sailing and 165 steam vessels. The number of American vessels entering these waters is increasing far beyond that of any other nationality. Thus in 1894–95, vessels reported from the United Kingdom and British possessions numbered 692, in 1898–99, 833, an increase of 20 per cent.; Norwegian vessels were respectively 222 and 275, an increase of nearly 24 per cent., but the number of American vessels rose from 116 to 209, a gain of 80 per cent. Next in number, but at a considerable distance behind, come the Germans, with 35 vessels in 1894–95 and 40 in 1898–99.

Sailing vessels of British nationality, most of them as already stated belonging to the West Indies, doing a small intercolonial trade, are of much smaller tonnage than those of foreign nations. In 1898–99 the tonnage of 319 British sailing vessels entered was 25,656, or say 80 tons each, that of 126 foreign was 45,403, say 360 tons each. The converse holds good for steamers. Thus 514 British steamers entered in 1898–99 had a tonnage of 588,061, or 1,144 tons each, while the tonnage of 461 foreign steamers was 251,330, or 545 each, the proportion being more than two to one. It may also be mentioned that of the total tonnage of 1,827,719 for ships entered and cleared, 1,284,116 tons were British.

III.—LEGISLATION.

The following were the more important laws passed by the Legislative Council during that portion of the Session of 1898 which fell within the year 1898–99.

Law 17 of 1898.—This law amends and incorporates the Marine Board Laws of 1896 and 1897.

Law 18 of 1898.—The Adulteration of Food and Drugs Law.

JAMAICA, 1898-9.

Law 20 of 1898.—The Succession Duty Law, 1898, which imposes certain duties on succession to property.

Law 28 of 1898.—The Tariff Law.

Law 29 of 1898, which enables the Governor to raise on behalf of the Kingston General Commissioners a loan for the purpose of improving the supply of water to Kingston and the Liguanea Plains.

Law 34 of 1898.—The Cayman Islands Commissioners Law, which gives the Governor power to appoint a Resident Commissioner for those islands.

Law 36 of 1898.—The Resident Magistrates Amendment Law. This law incorporates the Resident Magistrates Law of 1887, and removes the inelastic provisions of the 1887 law, which confines the jurisdiction of each Resident Magistrate within the boundaries of a particular parish.

Law 38 of 1898.—The West India Electric Company's Law, 1897, Amendment Law, 1898.

Law 40 of 1898, which gives the Governor power to raise by loan a sum not exceeding £100,000 to meet the liabilities of the Government.

No laws were passed during that portion of the 1899 Session which ended on the 31st March.

IV.—EDUCATION.

Elementary Schools.

The following is a comparative table of results for this and the preceding year with respect to public elementary schools :—

Year.	Schools on Annual Grant List.	Schools Inspected.	Scholars on Books.	Scholars in Average Attendance at Inspection.	Average Attendance from Monthly Returns.	Percentage in Average Attendance of Number on Books.	First Class Schools.	Second Class Schools.	Third Class Schools.	Total Payments to Elementary Schools and Teachers.
										£
1897–98 ...	913	869	98,205	57,983	50,627	59·04	160	389	330	53,554
1898–99 ...	893	876	96,252	56,853	54,044	59·28	176	397	267	51,565

As compared with the preceding year, 1898–99 shows a slight improvement in regularity of attendance, the monthly returns showing an increase of nearly 7 per cent., notwithstanding the closing of 21 small inefficient schools.

The gradual closing of such schools has been accompanied by a remarkable rise in the number of first and second class schools. The increase in attendance has been steady throughout the island.

JAMAICA, 1898–9.

The annual examination of candidates for trade and other scholarships for admission to training colleges and for exhibitions tenable at their schools gave the following results compared with last year :—

Year.	Presented.		Passed.		Percentage Passed.	
	Pupil Teachers.	Voluntary Candidates.	Pupil Teachers.	Voluntary Candidates.	Pupil Teachers.	Voluntary Candidates.
1897–98	590	1,081	330	313	55	28
1898–99	533	1,099	212	183	40	17

The results, especially in 1898–99, are disappointing. The instruction of pupil teachers by the head teachers appears from the inspectors' reports to be still too perfunctory.

The same remarks apply in part to a comparison for the same years of the results of an examination of training college students and of teachers.

Year.	Presented.		Passed.		Honours.	
	Students.	Teachers.	Students.	Teachers.	Students.	Teachers.
1897–98	183	14	149	5	27	—
1898–99	179	18	127	6	22	—

The inferiority of teachers to students at the examinations appears to show that many teachers do not keep up their knowledge after leaving college. At the same time it must be borne in mind that several of the teachers are comparatively untrained, and others passed out of the training colleges when the teaching there had not attained to its present standard.

It is hoped that results will improve as year by year more certificated teachers pass out of the training colleges and the need for employing uncertificated teachers diminishes.

The general results of elementary education as reported on by the inspectors are that reading is more careful but lacks intelligence, one inspector remarking that apparently few children leave school with a taste for reading or ability to read out and appreciate ordinary books and newspapers. Handwriting is too careless; composition is bad, there being constant lapses into the vernacular of the streets; dictation is poor in the average schools; arithmetic somewhat improved, though mental arithmetic is still very weak; science teaching has improved; more attention is paid to instruction in tillage; while the introduction of the tropical readers, which relate chiefly to domestic animals and useful plants found in the West Indies, has already led to more intelligent replies on such subjects. Organization and discipline are somewhat improved, though there is still too much resort to corporal punishment. Good progress is shown in a few schools, but the advance along the whole line is slow. It must be remembered, however, that the curriculum of last year as laid down in the Education Code is more detailed and exacting, whilst the continued increase notwithstanding this fact in first and second class schools appears to show that the education given, however inadequate, is improving.

In pursuance of a promise made to the Legislature, my predecessor appointed in 1897 a Commission to enquire into the system of education in the Colony, with a view to ascertain whether improved results might not be obtained for the large sum annually spent, and whether, indeed, the expenditure might not be reduced and efficiency increased at the same time. The Commission reported in November 1898, and formed the subject of much criticism in the Colony. The report was laid before the Legislative Council, but any legislation rendered necessary by the Commissioners' report had not taken place when the year closed.

SECONDARY SCHOOLS.

There is only one such school established under the provisions of Law 32 of 1892, viz., at Montego Bay, to which an annual subsidy of £200 is granted by the Legislative Council. There are, besides, several endowed schools over which the Jamaica Schools Commission exercises general control, and a few high schools or grammer schools supported by religious bodies, such as the York Castle High School (Wesleyan), the Church of England High School (Kingston), &c. There is also the University College and Jamaica High School, which are maintained from public funds. In addition, six colleges afford training for teachers of the public elementary schools. Only one of these, that at Shortwood for training female teachers, is maintained from public funds, others, called voluntary colleges, are assisted by scholarships.

The full number of scholarships provided for by law has continued to be given, but it has been decided to reduce the number

of smaller one-year scholarships from 15 to 6, and to give the Jamaica scholarship of £200 a year, tenable for three years, in place of one of the £60 scholarships.

GOVERNMENT TRAINING COLLEGE FOR FEMALE TEACHERS.

Miss Marvin, the new principal, took up her duties in August 1898, in succession to Miss Johnson, who had retired on account of ill-health, after many years' zealous and able service.

On 1st April 1898 there were 30 students, as against 29 on 1st April 1897. Two left during the year for pecuniary and medical reasons respectively, and ten on completion of their course of training. These latter have all obtained work as head or assistant teachers of schools. No admissions were made in January 1899, owing to uncertainty as to the fate of the college, the question having arisen of transferring it to the list of voluntary colleges assisted by scholarships. 18 students were in residence during the first term of 1899.

Of 28 students who sat at the December examination, six failed, two passed in honours. The practising school obtained 48 marks on inspection. The industrial school children at Shortwood form the bulk of the scholars. The inspector considers the school would be made more efficient in every way if more outside children attended.

INDUSTRIAL SCHOOLS.

There are no technical and agricultural schools, properly so called, though the following schools all give some agricultural instruction, especially that at Hope, which is under the general supervision of the head of the Botanical Department.

Hope Industrial School.

On 1st April 1897 and 1898 the number of boys were 29 and 41 respectively. On 31st March 1899 the number was 38. The average for the year was 39, and the greatest number at any time 42. There was one death, that of a boy sent to the Public Hospital, Kingston. Four boys were transferred to Stony Hill—three for insubordination, one on medical grounds; four time-expired boys obtained employment at Hope Gardens; another was given over to the guardianship of a lady.

The time-expired boys show a preference for work at Hope Gardens; one is nursery foreman and timekeeper there, another is now a warden at the industrial school.

The boys above 12, about two-thirds in number, receive daily training at Hope Gardens in cultivation of cocoa, coffee, fruits, &c., in addition to school duties; the boys below 12, chiefly in

keeping the grounds and roads in order. The bigger boys have small plots of vegetables for their own use, cultivated during their play hours. They sold to the institution during the year 1,402 lbs. of vegetables, besides effecting some sales to outside customers, and have been able to purchase toys, books, &c., from their earnings, and occasionally to make penny bank deposits.

The school again showed satisfactory results at examination. The rate charged against the parishes for each boy was 7*s.* 2*d.* per week.

Alpha Cottage Industrial School.

This school is for both boys and girls, and under the control of the Roman Catholic Church.

On 1st April 1898 there were 48 boys and 40 girls in the institution; on 31st March 1899, 44 boys and 34 girls.

On the first-mentioned date, eight time-expired boys were licensed out as apprentices; on the latter date, 14. These apprentices have been very favourably reported on. The boys are employed in garden and field labour, cooking, limewashing, and other house work; the girls in cooking for themselves and baking for the institution, in laundry work, cutting and sewing garments, and straw plaiting. The boys' school gained 64 and the girls' school 67 marks at the last examination.

Belmont Orphanage.

This school for girls is under the superintendence of the Church of England authorities.

There were 12 children on 1st April 1898, and seven on 31st March 1899. Besides school work, they are employed in weeding and cleaning, hat making, washing, sewing, baking, &c.

Three girls who completed their term were placed in situations which they still retain, two doing well.

Shortwood Industrial School for Girls.

This is worked in connection with the training college. On 1st April 1898 there were 33 girls and on 31st March 1899 37 girls on the books, one being on license.

The industrial work done comprises needlework, washing, cooking, baking, house cleaning, whitewashing, and gardening.

The rate charged the parishes was 8½*d.* per head per diem, or 4*s.* 11½*d.* per week.

V.—GOVERNMENT INSTITUTIONS.

HOSPITALS.

Public Hospital, Kingston.

The total number of patients treated in 1898-99 was 3,561, the greatest number yet treated in any year, and 202 more than 1897-98. 4,419 persons were rejected for want of room. It may be mentioned that an enlargement of the Public Hospital now in contemplation will provide 100 more beds.

The number of deaths was 272; of this number, 61 were admitted in a serious condition and died from five minutes to 72 hours after admission. The death-rate was only 7·23 per cent., nearly 2 per cent. less than in the previous year, which was an unusually unhealthy one. This low rate compares favourably with the death-rate of Kingston for the period, 29·5 per 1,000.

The recent reconstruction of North Street, Kingston, on which the hospital is situated, has removed long-standing insanitary features in the immediate neighbourhood.

Besides constables and inmates of the Maternity Hospital, 864 out-patients were treated, and no fewer than 10,270 casualties.

The institution and the public service of the Colony have suffered a great loss by the death of Dr. Boyd, the chief medical officer, of whose skill and care the superintending medical officer speaks in the highest terms.

Maternity Hospital, Kingston.

This hospital, which is also called the Victoria Jubilee Lying-in Hospital, was founded by General Sir H. W. Norman, as a memorial of Her Majesty's Jubilee in 1887. It is of the greatest service to the community in the training of skilled nurses, of whom there had previously been practically none, and in the treatment of indigent women in childbirth. 10 pupil nurses completed their terms of training, and 11 entered.

500 patients were admitted, as against 444 in 1897-98. 12 had to be refused admission, as against 29 in 1897-98. Except seven, all the patients were from Kingston and St. Andrew.

Of 502 infants delivered, 60 were still-born and 13 were twins. There were seven deaths among patients, but two were moribund on admission. The medical officer in charge states that a large proportion of the cases admitted are difficult ones, and those requiring operative assistance were decidedly more numerous than formerly. It is becoming a practice to send patients to the hospital as soon as any unusual difficulty or complication presents itself.

Public General Hospitals.

The admissions to the 19 public general hospitals during the year totalled 11,320. The mortality rates were low; in five of the 19 hospitals ranging from 1 to 2 per cent.; in four, from 2 to 3 per cent.; four, from 3 to 4 per cent.; three, from 4 to 5 per cent.; one, 5·1 per cent.; one, 6·13 per cent.; and one, 6·7 per cent. These low rates are the more creditable, considering the large percentage of patients received in the last stage of disease.

Compared with 1897–98, cases treated were 11,320, and deaths 321, against 14,495 and 404 respectively. Taking admissions to the hospitals as an index of the general health conditions, which the superintending medical officer states elsewhere are distinctly improved, the decrease in admissions appears satisfactory.

The prevailing diseases as in former years were fevers, rheumatism, enteric, pulmonary, urinary, and skin affections.

ASYLUMS.

Lunatic Asylum.

This institution is situated in the immediate vicinity of Kingston, and has been considerably enlarged within the last few years.

During 1898–99, 953 cases were treated at a cost to the public of £13,292, £11,767 being contributed by the parochial poor rates, and the remainder by general revenue. The average daily number of patients under treatment, 775, was greater than in any previous year, but for the first time in many years there were less inmates on the last day of the year than on the first.

Admissions during the year were 168, against 204 in the previous year; discharges 123, against 70; and deaths 69 against 63. The medical superintendent records as an obstacle to admission the refusal of the railway authorities to allow lunatics any longer to travel by train.

As the railway will shortly pass under the control of the Government, this difficulty will not long continue to be felt.

The death-rate was 6·60 of the total number under treatment, against an average of 7·98 in the last 10 years and 13·96 in the antecedent 10.

Lepers' Home.

This institution is situated near Spanish Town. The medical attendant, Dr. Donovan, after nine years' skilful administration, was transferred on the 1st August 1898 to the position of Health Officer, Port Royal, Dr. W. D. Neish succeeding him.

No useful work is performed by the inmates, except one hour's weeding each morning by the males and washing by the females. The lands attached to the home are very barren.

The present medical attendant has compiled a return of deaths from leprosy, pulmonary consumption, and syphilis in Jamaica within the last 20 years, from which it appears that the death-rate of leprosy has largely decreased in ratio to population, that of consumption has slightly decreased, whilst syphilis has increased enormously since 1889. Admissions to the home in 1898 were 16, the least number since it was opened, except in 1894.

Besides leprosy, yaws (*Framboesia*) and other diseases have been treated at the home. 1,125 of such persons have been so treated within the last 21 years, not one of whom has returned to the home as a leper, the only case of acquired leprosy having been that of the cook, who suffered after working in the institution for 17 years.

The several methods of treatment advocated by experts have been employed at the home by the late and present medical attendant with varying success.

POOR HOUSES AND POOR RELIEF.

Poor relief in Jamaica is regulated by Law 6 of 1886. This law places the administration of relief in the hands of the Parochial Boards, but a Central Board called the Board of Supervision enquires into the management of the poor in the several parishes.

The only persons entitled by law to poor relief are those who are wholly destitute and unable to work and earn the means of subsistence, but temporary relief is given to persons not so incapacitated, in exceptional cases of destitution arising from drought, epidemics, &c.

Statistics furnished by the Board of Supervision show that in 1887, *i.e.*, shortly after the new system of compulsory relief regulated by law was inaugurated, there were 4,564 paupers in the island; in 1898 there were 4,497, a decrease of 1·5 per cent. The population during the period increased from 605,800 to 730,300, or by 20 per cent. It is in Kingston alone that the number of paupers has increased greatly in rate, *i.e.*, from 14·4 to 19·7 per 1,000. The island generally shows a decreased ratio of from 7·5 per 1,000 in 1887 to 6·2 in 1898.

It is hard to decide whether this decrease indicates improvement in the social condition of the people or a stricter administration of the pauper fund. For instance, the largest decreases in persons relieved occurred in Portland, Trelawny, and St. Mary. Portland and St. Mary are prosperous parishes owing to the banana industry, but Trelawny which largely depended on the sugar industry is becoming poorer, and the decrease in number of

paupers there is due to the Parochial Board being compelled to refuse relief except in cases of extreme need, owing to a large decrease in the yield from the poor rates.

There were 3,939 outdoor paupers on 1st April 1898, and 3,797 on 1st April 1899; the indoor poor on these dates were 791 and 700 respectively. The number of registered poor in 1898–99 were 5,337, of casual poor 2,058, and of orphans and deserted children 347.

Poor Houses.

There are 15 almshouses provided for at the cost of the poor rates, one in Kingston for Jewish poor, supported by voluntary contributions, and an institution in St. Mary which supports about 12 indigent persons from the invested funds of a charity.

The poor houses are in no sense workhouses, except for the trifling labour of occasionally cleaning the land surrounding the institution, or performing light household duties. In the poor house at Spanish Town the experiment of teaching basket and hat making to the inmates has been tried of late but proved a failure financially.

BOYS' REFORMATORY.

The following are the more important statistics of this institution for 1898–99, compared with 1897–98 :—

GENERAL.	1st April 1898.	1st April 1899.	1897–98	1898–99.
Boys in reformatory section	120	110		
" industrial school "	77	66		
	197	176	197	176
Daily average number of boys			201	187
Discharged			55	55
Percentage of boys discharged during three years to April 1st, 1898 and 1899, respectively, who were reconvicted.			2·78	2·38
On license at end of year			1	(Returned to Reformatory.)
Deaths			1	—
Marks awarded school			61	—

Boys' Reformatory Statistics—*continued.*

FINANCIAL.	1897–98.	1898–99.	1897–98.	1898–99
	£ s. d.	£ s. d.	£ s. d.	£ s d.
Gross expenditure	—	—	3,612 8 6¾	3,412 11 2
Less earning by labour and sale of articles.	555 3 5	462 14 7	—	—
Reimbursements from parishes for industrial school children.	1,406 14 9	1,112 0 0	—	—
	1,961 18 2	1,574 14 7	1,961 18 2	1,574 14 7
Net cost to general revenue			1,650 10 4¾	1,837 16 7
Gross cost per head per diem			11·80*d.*	11·99*d.*
Gross cost of superintendence and instruction in school, trades, &c., per head, per diem.			5·1*d.*	5·7*d.*
Gross cost of diet per head, per diem			3*d.*	2·99*d.*
Work bringing in no money return			1,092 7 7	1,023 18 4
Average earnings of each boy			7 2 1	7 1 11
Rewards			36 15 9	44 6 9

Nearly six-sevenths of the boys in the institution are of ages between 12 and 16. Towards the end of the year under review arrangements were therefore entered into with the Boston Fruit Company and other large employers of labour to take on several of the older boys as apprentices, due provision being made for their clothing, diet, &c. It was considered that the institution would thus be relieved of the cost of many boys, who on the

other hand would acquire a practical training in agriculture and estates' work generally. The arrangement is only tentative, and will be reconsidered a few months hence.

The boys at the reformatory are employed in garden and field labour, carpentering, and tailoring, and as blacksmiths, masons, and bricklayers.

114 cases of mumps occurred during the year and several cases of malarial fever, many of a very severe type. It is satisfactory to note that no death took place.

GIRLS' REFORMATORY.

Statistical Information.

—	1897–98.			1898–99.		
Number of inmates at end of year	26			12		
Admissions from Courts, &c.	4			5		
Discharges	2			19		
Deaths	2			—		
	£	s.	d.	£	s.	d.
Gross expenditure...	736	3	4½	656	4	4
Less for work done by girls and reimbursements from parishes for industrial school children.	160	7	9	132	16	4
Net cost to general revenue	575	15	7½	523	8	0
Gross cost per inmate per diem	0	1	6	0	2	0
Cost of diet per inmate per diem	0	0	3½	0	0	3½

The girls were employed as usual in cooking, in making, washing, &c., of clothes for both reformatories, also in washing for private parties.

The institution was closed on the 31st March 1899, 12 children having previously been returned to their friends, and three transferred to the Shortwood Industrial School, and four discharged, their terms of detention having expired. The remaining girls were licensed to Miss Gifford, their late superintendent, the Government paying the sum of 3*s.* per week towards their maintenance. The premises have been rented to Miss Gifford at a nominal sum.

GOVERNMENT SAVINGS BANK.

The following is a comparative statement of the chief transactions of the bank during the past five years :—

Year.	No. of Depositors.	Amount of Deposits.*	Amount of Withdrawals.
		£	£
1894–95	27,045	200,983	237,646
1895–96	28,385	240,543	242,251
1896–97	29,719	227,562	234,462
1897–98	30,660	216,309	229,774
1898–99	31,870	225,431	212,689

The increase in deposits over withdrawals as compared with preceding years appears to indicate some revival of former prosperity.

Of the deposits in 1898–99, £20,523, say, two-thirds, were for amounts of £5 and under. There is a continued increase in the number of small accounts, showing that the Savings Bank is of especial benefit to the class for whom it was chiefly established.

The total deposits at credit of depositors on the 31st March 1899 were :—£492,074, or adding £1,721 for old Savings Bank deposits, £493,795. The figures last year were respectively £468,200 and £1,679 = £469,879.

* Exclusive of interest.

The assets of the bank on the 31st March 1899 were distributed as follows :—

	£	s.	d.	£	s.	d.
Consols 2¾ per cent....				20,404	17	3
Inscribed Stock.						
Jamaica 4 per cent.	9,900	0	0			
Canada 3 per cent.	27,908	0	3			
Cape of Good Hope 4 per cent.	47,766	6	8			
Ceylon 4 per cent.	24,881	5	2			
New South Wales 3½ per cent.	40,528	13	7			
Queensland 3½ per cent. ...	14,963	8	1			
Victoria 4 per cent.	32,043	1	0			
Western Australia	498	13	4			
New Zealand...	15,011	9	5			
				213,500	17	11
Debentures.						
Jamaica 5 per cent.	3,800	0	0			
Canada 4 per cent.	53,990	12	6			
New South Wales 4 and 5 per cent.	60,497	10	0			
South Australia 4 and 6 per cent.	52,431	2	6			
Victoria 4 and 4½ per cent. ...	47,308	12	6			
Government of Jamaica ...	41,817	10	2½			
Cash in hand...	43	19	0			
				259,889	6	8½
Total ...				£493,795	1	10½

There were no new investments in inscribed stock and debentures during the year, the above figures except the last two items being the same as in the preceding year.

During the year the indebtedness of the Government has been increased by £23,883 10*s.*

The income of the bank during 1898-99 amounted to £17,412 1*s.* 3*d.*, the expenditure for management, &c., to £14,465 5*s.* 3*d.*, leaving a net profit of £2,946 16*s.* In 1897-98 the net profit was £1,322 9*s.* 9*d.*

In the 29 years of the bank's existence a profit of £31,183 has been made and carried to general revenue.

VI.—JUDICIAL STATISTICS.

POLICE.

The allowed strength of the police during the year was 853, as in 1897-98, the actual mean strength only 788. The large difference of 65 was due to the suspension of enlistments owing to the financial condition of the Colony, and not, the Inspector-General states, to any difficulty in obtaining eligible men for the force. The actual strength is made up of 19 officers, 131 sub-officers, and 638 constables, against 20, 134, and 696 respectively during the preceding years.

Formerly, one inspector was allowed at the depôt and an inspector was placed in charge of each parish.

For the sake of economy, the parishes of St. Ann and Trelawny have been placed under one inspector and those of St. James and Hanover under another, and further amalgamations of parishes for constabulary purposes are in contemplation. The depôt will also be in charge of the inspector for St. Catherine.

On the 31st March 1899 the actual strength of the constabulary was 769, and of the rural police 873, together 1,642. In 1887-98, 1,799 men were engaged in police duties, showing a decrease on the date mentioned of 157.

The rural police were chiefly employed in assisting to detect cases of prædial larceny and illegal possession of rum, also in discovering cases of children needing medical treatment for yaws or of persons requiring to be vaccinated.

The principal duties, besides patrolling and attendance at Courts, performed by the constabulary during the past five years were as follows :—

—	1894–95.	1895–96.	1896–97.	1897–98.	1898–99.
Number of persons arrested on view and on information	7,781	8,775	8,351	7,330	7,183
Number of persons apprehended on warrants			1,780	1,629	1,264
Number of search warrants executed	150	151	142	148	188
Number of persons summoned	19,249	20,279	19,537	17,785	17,084
Number of persons subpœnaed	30,673	31,058	27,161	27,161	25,734
Number of prisoners escorted	8,224	9,911	11,542	12,081	8,912
Number of seizures under revenue laws	437	649	309	854	605
Number of post-mortems ordered	603	610	641	703	527

These figures indicate a general diminution in police duties within the past few years, corresponding with the decrease in cases of crime, referred to elsewhere under the heading "Criminal Statistics."

JAMAICA, 1898–9.

PRISONS.

—	Year ended 31st March.	
	1898.	1899.
Daily average number of prisoners in custody.	1,172	1,102
Number on last day of year	1,049	984
Commitments—		
To prison	4,998	3,818
To lock-ups	987	894
Total	5,895	4,712
Reconvictions	2,076	1,364
Deaths	40	31
Executions	3	—
FINANCIAL.		
	£ s. d.	£ s. d.
Gross expenditure	20,884 11 5¾	18,780 12 4¼
Gross earnings in cash	5,939 19 4½	6,275 2 1½
Net cost of maintaining prisons ...	14,944 12 1¼	12,505 10 2¾
Cost per prisoner	12 15 0¼	11 6 11¾
Estimated value of labour yielding no return.	5,577 0 4	6,401 19 8
Estimated value of bricklaying work done and stone quarried, &c. (General Penitentiary).	3,507 11 11	4,141 15 9

Of the prisoners in custody on 31st March 1899, 882 were males and 102 females, together 984. This is a lower number than in any preceding year since 1895, when it was 957. The committals to prisons and lock-ups were lower than in any year since 1894–95.

A Hoffman brick kiln has been built at the General Penitentiary for the manufacture of bricks of a superior quality for street

paving in Kingston, as well as to ensure a greater output of ordinary bricks than could be obtained from the ordinary processes.

The Falmouth District Prison and the Cornwall County Gaol were closed on the 31st August 1898. The penal institutions of the Colony now consist of the General Penitentiary for convicts with sentences of 12 months and over, and for white and female prisoners generally, the St. Catherine District Prison for prisoners with sentences exceeding 14 days but less than 12 months. Persons with sentences of 14 days and under, are in most cases detained in the lock-ups of the chief town of the parish in which they were tried. Debtors and first class misdemeanants are confined in the Middlesex and Surrey County Gaol.

The health of the prisoners generally throughout the year has been good. There have been no serious outbreaks of disease such as characterised the preceding year. At the General Penitentiary the surgeon found 4·28 of the males and 4·85 of the females admitted to be in feeble health, and of those discharged in feeble health 3·72 of the males and 2·55 per cent. of the females, showing an improvement in health during incarceration.

CRIMINAL STATISTICS.

The following table gives the more important criminal statistics of the past five years —

Offences as Classified in Police Reports.	Apprehensions.					Convictions.				
	1894–95.	1895–96.	1896–97.	1897–98.	1898–99.	1894–95.	1895–96.	1896–97.	1897–98.	1898–99.

JAMAICA, 1898-9.

It was my pleasing duty last year to record a decided tendency to a decrease in crime during the quinquennial period 1893-94 to 1897-98, and particularly during 1897-98. A further decrease was shown in 1898-99. Both apprehensions and convictions were lower than in any year since 1893-94. Compared in each case with the preceding year, apprehensions in 1897-98 were 7·9 per cent. less, in 1898-99 11·5 less, while convictions in 1897-98 were 12 per cent. less, but exhibited a further decrease of only 3·7 per cent. in 1898-99. Of the six classes of offences, the statistics given above show increases only under malicious offences against property and offences against the currency, both being classes of crime of comparative infrequency, while of the particular offences specially noted in the table, all show a decrease compared with last year both in apprehensions and convictions, except obscene and abusive language, which has increased under both. The decrease is particularly noticeable in the graver offences against the person. The one conviction for murder was a case of infanticide; the criminal's sentence was commuted to penal servitude for life. Hardly any of the cases of manslaughter and of cutting and wounding were of an aggravated nature. The only offence which I regret to report as generally increasing, particularly in Kingston, is that of gambling. A more stringent law has now been passed, which it is hoped may be the means of checking this grave social evil.

VII.—VITAL STATISTICS.

POPULATION, COMPARED WITH FIGURES OF LAST CENSUS.

The population taken at the census of April 1891 consisted of 639,491 persons, 305,948 being males and 333,543 females; the estimated population on the 31st March 1899 was 730,725 persons, 353,226 males and 377,499 females. This estimate is based on the annual excess of births over deaths, and, in the absence of any migratory disturbance causing an appreciable excess of persons leaving the island over those entering it, or *vice versâ*, may be accepted as practicably correct.

During the eight years since 1891 the increase has thus been 91,234 in number, or a percentage of nearly 14·3. At this rate the population by the next census may be expected to have increased by 17·84 per cent. From 1881-91 it increased by

10·1 per cent., and from 1861–71 and 1871–81 by 14·7. The Registrar-General pointed out in the report on the last census that the low rates of increase from 1881 to 1891 arose from the exodus of a large number of males of the reproductive age to Colon.

During the past eight years males have increased by 47,278 in number and 15·4 in percentage, and females 43,956 in number and 13·0 in percentage. In 1871 the excess of female population was 13,008, in 1881 14,890, in 1891 27,595, and in 1898 24,273. The large excess of females from 1881–91 was doubtless owing to the considerable emigration of male labourers to the isthmus during that period.

The number of marriages during the year was 3,362, the rate per 1,000 of the population being 4·6. The rate per 1000 in 1897–98, a year of greater depression, was 3·7. The rates ranged between 5·1 and 5·5 from 1890 to 1895,—a period of comparative prosperity; since then they have ranged from 3·7 to 4·6.

The births registered numbered 27,648, a rate of 38·1 per 1,000; the deaths 15,290, a rate of 21·0 per 1,000. The births showed an increase of 799 over those of 1897–98, the deaths a decrease of 1,184. The year, as explained elsewhere in this report, was one of comparative healthfulness.

The rate per 1,000 of illegitimate births reached 63·4 per 100, the highest rate attained during the 21 years of registration.

Deaths among illegitimate children were proportionately more numerous than among legitimate children, owing doubtless to the comparative neglect of the former.

Of the 15,290 deaths registered in the year, 11,856, or 77·5 per cent., were not medically certified. Last year the percentage was 75·5, while the average of the five years 1894–99 was 75·46. Medical practitioners in the country parishes are very few, and proportionately numerous in Kingston, facts which account for the percentage in the city being 26·9 and for the rest of the island 82·6. The percentage for Kingston has, however, increased considerably since 1894–95, when it was 14·4.

PUBLIC HEALTH, GENERAL STATE OF.

The Superintending Medical Officer reports a marked decrease during 1898–99 in the sick rate and a milder character in the

JAMAICA, 1898-9.

cases treated, facts which denote a return to the more normal health standard which obtained prior to 1897 and 1898, when there was an unusual amount of sickness of various types, including some cases of yellow fever, malarial fever, influenza, and measles. These conditions were unusual. Yellow fever only occurs in a few isolated cases, as a rule, and the other diseases referred to usually prevail within limited areas only, and are not generally of a severe type.

Prominent causes of this improvement were, in Dr. Mosse's opinion, the greater attention paid by the local authorities to sanitary questions, and the more equable distribution of rains during the year. The sudden alterations of temperature and the excessive humidity during the wet seasons, with the malarial conditions prevailing on their cessation, are responsible for a large number of cases of sickness in this Colony.

The diseases most frequently occurring were malarial fevers, pulmonary, rheumatic, and enteric affections. Mumps was very prevalent in many districts, but other infectious diseases were rare. Leprosy appears to be gradually dying out, due, probably, in some measure, to the more stringent provisions of the present law as to segregation, committal to the leper asylum of lepers wandering about, &c.

Yaws (*Framboesia*) is exceedingly prevalent in many districts. Arrangements are made by which cases are brought by rural constables to the district medical officer for treatment, but the disease though readily curable is difficult to control, as the peasantry expose their children to infection whenever possible, under the impression that they must pass through a course of the complaint.

Venereal disease is also prevalent. Several medical officers call attention to the large proportion of syphilitic cases treated in hospital, 32·40 and in one case 60 per cent. of admissions being recorded as due to, or complicated by, this malady. Cases are not usually brought to the medical man until they are in an advanced stage, quack remedies being preferred. The prevalent immorality greatly fosters this disease.

SANITATION, PROVISION MADE FOR.

The Parochial Boards, which are the local Boards of Health, have recently paid more attention to sanitary matters, especially as affecting towns and villages, since the occurrence of cases of yellow fever in 1897. Comprehensive bye-laws now exist for preventing the pollution of the sources of water supply for towns and villages.

The establishment of underground sewerage and the reconstruction of the streets in the greater part of Kingston has tended to improve the sanitary conditions. The total mortality in 1898–99 was 1,876, or 29·5 per 1,000, *i.e.*, 131 less in number and 1·4 in ratio than in the previous year. The birth-rate was, however, also lower, being 38·2 per 1,000 as against 40·8 in 1897–98.

The Superintending Medical Officer considers that the lessening of the death-rate should have been more marked considering the sanitary improvements effected. He notes, however, a decided decrease in the sick-rate for the period under review, and attributes it largely to steady progress in the sanitary work undertaken by the Improvement Commissioners. Dr. Mosse adds that the efforts of the Commissioners are in a measure counteracted by the over-crowding, faulty ventilation, and disregard of cleanliness which largely prevail among the occupants of the humbler tenements, where, he states, the diseases responsible for a large percentage of the total mortality are fostered. Tuberculosis, for instance, largely prevails in this lower stratum of the community.

It should also be borne in mind that the improvement of Kingston proper by the Commissioners, as also by the municipal authorities, who have also of late years effected many improvements in the suburbs, has not yet extended in any degree to the west and north-west of Kingston where thousands of the humbler classes live.

It must not be overlooked that a fair proportion of the deaths in Kingston occur in the public hospitals and asylum, and other public institutions, among persons admitted from other parishes, frequently in a moribund or very enfeebled condition. Deaths among such persons swell the Kingston rate.

At Port Royal the district medical officer estimated the mortality as high as 34·8 per 1,000. From its natural conditions Port Royal, which is situated at the end of a narrow spit of land swept daily by a health-giving breeze, should, the medical officer points out, be one of the healthiest spots in the lowlands of Jamaica. A good water supply has just been provided, steps have been taken for the proper disposal of night soil, and it is in contemplation to place the town under the control of a specially constituted municipal authority to include representatives of the naval and military services as well as of the civil population. It is believed that a local Board of this character will exercise more effective supervision than can be expected of the Mayor and Council of Kingston, with their many and onerous duties in connection with that city.

CLIMATE.

Particulars under this head are given for the calendar year, the Government Meteorologist having always furnished his returns for that period.

Rainfall.

The rainfall for 1898 was 71·88 inches, which is above the average.

For meteorological purposes, the island is divided into four districts; the greatest rainfall occurs in the north-eastern district, which comprises the highest mountains. In this district as many as 170 inches per annum fall in some parts. The least rainfall occurs in the southern district, which contains almost all the level land in the Colony. The heaviest rains fall as a rule in May and October, and are known locally as "the seasons," while the first three months of the year are usually the driest throughout the island.

Temperature.

The mountainous character of Jamaica, the greater portion of which is over 1,000 feet above sea level, renders its climate a mild one notwithstanding its tropical situation. The weather on the moderately elevated land near the sea, *i.e.*, in about one-eighth of the island, is hot from May to October, but the thermometer even in August in the hottest part of the day rarely shows a higher reading than 90 degrees Fah. with a minimum of about 72 degrees. The heat on the plains is, however, tempered by the sea breeze during the day, and by a land breeze at night.

Taking the temperature of Kingston as illustrating that of the warm districts, we find in 1898 a maximum temperature of 88·7 degrees in July, a minimum of 66·4 degrees in February, an average maximum for the year of 86·9 degrees, an average minimum of 70·7 degrees, and a mean range of 16·2 degrees. At Stony Hill Reformatory, with an elevation of 1,400 feet, which may be regarded as about the average for a great portion of the island, the maximum temperature during 1898 was 85·8 degrees, the minimum 62·9. The average maximum for the year was 83·8, the minimum 65·9, while the mean range was 17·9. At Hill Gardens, with an elevation of 4,907 feet, which is exceeded by only a comparatively limited area in the Blue Mountains to the north-east, the maximum temperature was 71 degrees, the minimum 52·8, average maximum 68·4, average minimum 56·2, and mean range only 12·2.

On the highest spot in the island, Blue Mountain Peak, with an elevation of 7,300 feet, a thin film of ice has formed on the grass on rare occasions.

Direction and Force of Wind.

The general direction of the wind is easterly, from the north-east in the northern, and south-east in the southern parts. The Government Meteorologist considers that, as in England, the wind from the north-east is the more invigorating.

VIII.—POSTAL AND TELEGRAPH SERVICES.

The following are comparative statements of revenue and expenditure for these services during the three years ended 31st March 1899 :—

REVENUE.

Year.	Postages.			Commission on Money Orders.	Commission on Postal Orders.	Miscellaneous.	Total Postal Revenue.	Telegraph Revenue.	Grand Total.
	Packet.	Inland.	Total.						
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1896–97 ...	5,472 16 2	17,858 10 11¼	23,331 7 1¼	414 5 6	534 3 9½	145 14 9	24,425 11 1¾	5,479 19 3	29,915 10 4¾

1898–99 ...	4,832 14 2¼	16,605 19 11¾	21,438 14 2¼	392 9 11	594 2 3	125 13 5	22,550 19 9¼	6,101 9 0	28,652 8 9¼

EXPENDITURE.

Year.	Salaries.		Mail Conveyance.			Services.	Total Postal Expenditure.	Telegraph Expenditure.	Grand Total.
	Head Office.	District Offices.	Inland.	Ocean.	Proportion of Royal Mail Contract with Imperial Government.				
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1896–97	5,193 12 7	2,681 8 9	9,841 2 11	2,289 1 8	5,140 0 0	5,317 17 1½	30,463 3 0½	7,556 8 5	38,019 11 5½
1897–98	5,268 1 4	2,965 2 8	10,479 6 11	859 0 3	5,140 0 0	5,060 17 6	29,772 8 8	7,686 5 3	37,458 13 11
1898–99	5,388 1 10	3,014 11 5	10,652 4 0	1,938 6 11	5,140 0 0	5,001 9 10½	31,134 14 0¼	7,707 11 4	38,842 5 4½

Postal revenue diminished by £322 19*s.* 3¼*d.*, and telegraph revenue increased by £1,015 16*s.* 6*d.*, compared with the previous year. The decrease in postal revenue occurred entirely under the head of Postages, other heads show slight increases. The decrease on packet postage was slight, and may have been affected by the reduction in postage with Canada from 25th December 1898 from 2½*d.* to 1*d.* per half-ounce; the similar reduction on postage with the empire generally was not in force in Jamaica till the 24th May 1899.

The reduction on inland postage arose from the re-establishment on the 1st January 1898 of the privilege of franking official correspondence. Such correspondence was formerly prepaid by means of official postage stamps, the estimated total value of which was £2,500 per annum. If three-fourths of this amount, £1,875, be deducted from the postage revenue for 1897-98—£21,853 13*s.* 3*d.* (official postage having been used for nine months of that period), and the entire £2,500 from postages for 1896-97—£23,331 7*s.* 1¼*d.*, it will be seen that this branch of revenue increased by £1,460 0*s.* 11¼*d.* over 1897-98 and by £607 7*s.* 1*d.* over 1898-99. Increases on the other three heads of revenue amounted to £81 19*s.* 10½*d.* over 1897-98 and £18 1*s.* 6½*d.* over 1898-99.

The general increase in postal revenue during the year corresponded with an improvement in the condition of the Colony, which is more particularly dealt with under the heads of Agriculture and Trade. The increase in telegraph revenue is attributable chiefly to the war in Cuba, but a portion must also be due to the general brightening of trade.

As regards the statement of expenditure, it should be explained that the Colony's proportion of the Royal Mail subsidy was for the first time in 1898-99 charged wholly against the Postal Department, but the entire amount is included also for the other two years for purposes of comparison. Including this amount, £5,140, the expenditure for 1898-99 exceeded that of 1897-98 by £1,383 11*s.* 5½*d.* and of 1896-97 by £822 13*s.* 11*d.* The chief increase, compared with the previous year, occurs under Ocean Mail Conveyance, due, the Postmaster explains, to the adjustment of the account between the Colony and Imperial Post Office under the Postal Union Treaty.

A comparison of the statements of revenue and expenditure shows that the latter exceeds the former by from £9,000 to £10,000 per annum, but when it is borne in mind that the Colony has to pay a contribution of £5,140 to the Royal Mail subsidy, and that official letters amounting to about £2,500 in total annual value are carried free of charge, it will be seen that the general business of the department—which is not, it must be remembered, undertaken with the object of affording revenue for Government purposes—almost pays its way.

JAMAICA, 1898–9.

The number of letters and postcards received and despatched during the years under comparison were as follows:—

Year.	Number.
1896–97	4,375,374
1897–98	4,980,121
1898–99	4,980,623

189,521 registered articles of mail matter were dealt with in 1898–99, a number 12,745 in excess of that of the preceding year.

Not a single case of loss or miscarriage of registered matter occurred in this or the preceding year, a fact highly creditable to the management of the department. There were only 117 complaints of miscarriage of unregistered letters and postcards during 1898–99, out of a total of 4,791,102—in some instances the missing articles were traced, or it was found the alleged miscarriage did not take place in the department.

In addition to letters and postcards, the department dealt in 1898–99 with 14,891 parcels, as compared with 14,647 in 1897–98 and 17,113 in 1896–97.

The Postmaster reports that there has not been a single case of miscarriage of a parcel in the Colony since the commencement of the parcels post system in October 1885.

The number of ocean mails despatched was 1,461, while 1,839 were received, as against 1,333 and 1,379 respectively in the previous year. The increase is chiefly due to an additional semi-weekly service inaugurated on 1st January 1899 by the Boston Fruit Company.

A new system of inland mail conveyance was initiated, certain services being undertaken experimentally by the Public Works Department, instead of by private contractors as hitherto. The results of the trial have been so satisfactory that it has been decided to entrust the service generally to the department as far as possible. A large saving in expenditure is anticipated from the change.

On the ground of economy, which had to be rigidly exercised in all departments, 11 district post offices, which did but a

small business and were not self-supporting, were closed towards the end of the year. One had been opened in September 1898. There was thus a decrease by 10 of the number—160—open at the commencement of the year.

Year.	Money Orders.		Postal Orders.	
	Number Issued.	Amount.	Number Issued.	Amount.
		£ s. d.		£ s. d.
1896–97 ...	15,259	51,014 0 9	171,035	26,857 10 0
1897–98 ...	14,764	47,747 13 7	175,985	29,397 10 0
1898–99 ...	14,981	50,827 12 1	178,360	28,748 2 6

The Postmaster points out a continued decrease in money orders on the United Kingdom of from £34,545 15*s.* 7*d.* in 1895–96 to £27,243 15*s.* 1*d.* in 1898–99. There has been no such continued decrease in money orders generally, compared with 1897–98, indeed the figures show an increase almost bringing the amount up to that of 1896–97, when the depression in trade began to be severely felt.

These results, taken with others noticed under other heads, appear to indicate a comparative decline in business with the mother country. It may be noted that money orders on other countries, the United States particularly, show an increase in almost every case.

Orders issued from Jamaica are about four times as many as those issued on it.

As regards postal orders, there has been a steady increase during the three years. The figures should be compared with those of 1890–91, when the system was commenced and sales amounted to £10,433 7*s.* 6*d.*

The mail coach service yielded £1,441 5*s.* 9*d.*, a decrease of £190 16*s.* 9*d.* on the preceding year's earnings. On three of the 15 lines, however, the Post Office has ceased to collect fares. These are now collected by the contractors, who received last year £187 7*s.* on this account, showing, if this fact be considered, that the decrease was very trifling.

JAMAICA, 1898–9.

Telegraph receipts and expenditure have been already given. The number of messages sent and received during the three years were as follows :—

Year.	Number.
1896–97	96,292
1897–98	87,545
1898–99	97,368

The Postmaster states that war correspondents and press agents expressed themselves as satisfied with the very expeditious manner in which their messages were forwarded during the war with Cuba.

TELEPHONES.

There is no Government telephone system, but a private company does an extensive business in Kingston and the neighbourhood, nearly all Government institutions, places of business, and the principal residences being supplied by it. The Boston Fruit Company has telephone lines throughout the eastern portion of the island, connecting their properties with Kingston and other seaports. There are a few other small telephone companies in other parts of the Colony. Detailed particulars of the several telephone services are given in the Blue Book.

IX.—MILITARY FORCES AND EXPENDITURE.

REGULAR FORCES.

At the close of the year 1898–99 there were in Jamaica five officers on the general staff, and a strength of 1,615 of all ranks, belonging to the regular forces.

The total expenditure for the year on the forces was £119,430, which was defrayed from Imperial funds.

MILITIA.

The Jamaica militia when first enrolled was wholly unconnected, for administrative purposes, &c., with the regular forces, although the adjutant was an army officer seconded for the purpose, and the militia was occasionally reviewed, &c., by the officer commanding the forces. Corps were enrolled in Kingston and several country parishes.

It was found, however, that this arrangement did not secure proper efficiency and discipline, especially of the country corps. These have now been disbanded, while the corps in Kingston have been placed under the supervision and control of an officer of the army, to which the militia is attached for administrative purposes.

The change has had a most salutary effect; discipline is now strictly enforced, the men are properly clothed and properly trained.

On the 31st March 1899 the number of officers, non-commissioned officers, and men on the strength was 761, an increase of 347 during the year. 440 men were enrolled and 93 struck off the strength. Two companies have been added to the infantry, and one to the artillery, raising the allowed strength to 800 non-commissioned officers and men.

The principal changes introduced during the year were (1) issue of clothing from headquarter store by the staff, (2) the employment of two retired non-commissioned officers from the regular army as drill instructors on the permanent staff, and (3) the construction of a miniature rifle range at militia headquarters for Morris tube practice. The shooting of the force has considerably improved in consequence of this last provision.

The drill both of artillery and infantry is reported on generally as showing decided improvement, and the men's conduct during the training as good.

CONSTABULARY OR SEMI-MILITARY COLONIAL FORCE.

See "Judicial Statistics.—Police."

JAMAICA, 1898-9.

GENERAL OBSERVATIONS.

The year under review was not characterised by any events of special importance. The drought and unfavourable sanitary conditions which prevailed in certain districts last year were followed by excellent seasons and by general improvement in public health. No new works of progress could be undertaken by the Government or by private enterprise, owing to the need for economy, until the improvement in the condition of the Colony had become more assured, but trade revived in the latter part of the year, which was one without either privation or plenty.

STATE OF RAILWAYS, ROADS, AND CANALS.

Railway.

The business of the railway improved during the year under review. Receipts were £115,647, compared with £102,170 in 1897-98, but total expenditure (excluding interest charges) was £98,481, against £74,664 in the previous year.

The train miles run in 1898-99 amounted to 574,352, the receipts were equal to 4*s.* 0·32*d.*, and the working expenditure to 3*s.* 5·15*d.* per train mile. Passengers transported were 402,095, as against 356,949 in the previous year.

On the 31st March 1899 the rolling stock comprised 325 vehicles, including 24 locomotives, 37 carriages, 160 waggons of all kinds, 79 fruit cars, &c. This rolling stock was insufficient for the increasing traffic, and its deficiency has hindered especially the speedy transportation of fruit. Arrangements are being made for raising the necessary funds to meet the more urgent requirements. The railway company not having been able to pay interest for over 12 months on first mortgage bonds, the line and stock were taken over by the trustees of the bondholders, and at the close of the year steps had been taken for winding-up the affairs of the company and transferring the line and stock to the Government, under the provisions of the Railway Law of 1889.

It is hoped that on such transfer taking place it will be feasible to make arrangements for increasing the earnings and usefulness of the line.

Roads.

The total length of main roads under maintenance by the Public Works Department at the end of the financial year was 1,912 miles 41½ chains, an increase over the mileage of the previous year of 13 miles 62 chains, consisting of additional mountain roads in Portland and deviations of existing roads.

The expenditure on main roads and bridges was £45,690, only £878 of which was for new works. The average cost per mile was £23 8*s.* 7*d.*, being £2 3*s.* 5*d.* more than in the previous year.

The necessity for economy in public departments has led to reduced expenditure on roads. This has led to the deterioration of many roads. Fortunately, the weather since the reduction of expenditure has been unusually favourable for road maintenance.

The roads taken over from Parochial Boards under Law 17 of 1890 have under Law 4 of 1898 been classed with main roads maintained from general revenue. The revenue for these roads proved insufficient to meet the expenditure, including interest and sinking fund on the loan raised for their reconstruction as main roads, and a debt of £2,078 was taken over on the transfer of the charges of these roads to general expenditure.

The entire length of mountain roads in Portland, the raising of funds for the construction of which is provided for by Law 13 of 1885, has been cut through either as bridle or driving road, and the whole length would have been opened for wheel traffic by the close of the year but for the restriction of expenditure. The expenditure on mountain roads was £5,470.

Eight bridges, provided for under Law 20 of 1892, were completed during the year and opened to traffic, at a cost of £4,844.

Surveys were made for a proposed driving road from Bath (where the hot springs are situated) to Port Antonio. This road, the Director of Public Works remarks, would pass through a country capable of very great and early development.

Rio Cobre Irrigation Works.

There are 41½ miles of non-navigable canals. The earnings for rates and sale of the water amounted to £5,732, the amount actually collected to £5,605, as against £4,685 in the previous year. The cost of maintenance and supervision was £1,934, against £2,414 in 1897–98. Thus receipts have increased and charges diminished.

The area in bananas under irrigation has increased considerably, and the cultivation, it is stated, appears in every way satisfactory.

Vere Irrigation Scheme.

Surveys for the irrigation of Vere, a level district of about 20 miles square in Lower Clarendon where many sugar estates are situated, were completed during the year, and the preliminary plans and estimates were prepared.

The plans provide for a flow of 6,000 cubic yards of water per hour being taken to the lower part of Vere, which frequently suffers from drought, and for the construction of a reservoir to contain about 4½ million cubic yards of water with distributing channels to the neighbouring sugar estates.

It is intended to provide for 5,000 acres being brought under irrigation, if a charge of 15*s.* per acre to cover the necessary expenditure is agreed to by the landowners.

There are good grounds for hoping that this district, which is eminently suitable for cane cultivation, may become by this means as prosperous as the irrigated plains of St. Catherine.

IMMIGRATION.

There were no importations of immigrants during the year, nor were any sent back to India, but 43 coolies were granted passports, 33 of which were for British ports.

The mortality amongst indentured immigrants was 1·90 per cent., as against 1·91 in the previous year, and the birth-rate ·65 per cent., as against ·44 formerly.

Eleven marriages were solemnised during the year under the provisions of Law 22 of 1896, ten of which were performed by ministers of religion, the interested parties having embraced the Christian faith.

There were no murders amongst the East Indian population, and only one case of suicide, apparently the result of excessive indulgence in opiates.

At the close of the year there were 47 East Indians under treatment in the lunatic asylum, as compared with 55 in the previous year.

The number of East Indian depositors in the Government Savings Bank fell from 998 in 1896–97 to 950 in 1897–98, but the amounts at credit increased from £21,964 19*s.* 3*d.* to £25,668 15*s.* 4*d.*

The number of remittances made to India during 1898 was 80, amounting to the value of £222 1*s.*, as against 64 amounting to £173 in the previous year.

Four estates of deceased immigrants were administered by the department during the year, under the provisions of Section 45 of Law 22 of 1896, and the proceeds amounting to £32 12*s.* 2*d.* duly forwarded to the Emigration Agent in India for distribution amongst the heirs to the estates.

The sum of £716 6*s.* was paid in by employers of second-term coolies under Section 13 of Law 20 of 1891.

The condition of the general East Indian population continues to be prosperous, and their relations with employers are most satisfactory.

EMIGRATION.

1,498 labourers left the Colony and 870 arrived there during the year 1898–99. In the previous year, 616 left and 637 returned. There was thus a loss from this cause to the Colony this year of 628 persons, compared with a gain last year of 21.

928 labourers left for Central America, principally for Colon, Port Limon, and Belize, and 802 returned therefrom, a loss of 126. 479 departed for Cuba and only 53 returned, a loss of 426.

A few labourers left for or arrived from Carthagena, Hayti, or New York.

The above figures appear to show that there were greater openings for employment abroad afforded to labourers, especially in Cuba, emigration to which is a new feature.

The loss of men to the Colony in this latter case has been counterbalanced by the thriving export trade which has sprung up since the late war, as noticed under "Imports and Exports."

PUBLIC WORKS.

The necessity for retrenchment in public departments prevented any public work of importance being carried out by the Government during the year. The only private undertaking of importance has been the construction of electric tramway lines by the West India Electric Company, an association of Canadian capitalists, who had laid down 18 miles of tramway by the 31st March 1899 in Kingston and its neighbourhood, employing for the purpose native labourers, of whose willingness and efficiency the local manager of the Company has spoken in high terms.

IMPORTANT CHANGES IN THE ESTABLISHMENT.

The necessity for retrenchment in public departments led to several reductions being made in the establishment during the year. Most of these reductions were in pursuance of recommendations made by a committee consisting of certain heads of departments and members of the Legislative Council, which submitted their report in July last. But whenever the opportunity offered to effect economy without impairing efficiency, reductions have been made which were not contemplated by the committee. A committee was also appointed to report what changes should be made in the Audit Office establishment and system of check. Different members held different views, their reports were submitted to the Colonial Office, but no decision has yet been reported to me on the questions raised.

The chief reductions effected have been :—

The office of Chief Clerk in the Colonial Secretary's Office has been abolished, the late holder of the appointment being pensioned from the Jamaica Civil Service and appointed Commissioner of the Cayman Islands, a dependency of this island.

Opportunities offering by the superannuation or retirement of certain inspectors of police, the parishes of St. Ann and Trelawny were amalgamated and placed under one inspector, and those of St. James and Hanover under another.

The staff of the respective head offices of the Constabulary and Prisons Departments were amalgamated, the first-class clerk of the latter department placed on the redundant list, and certain constables who had done clerical work in the head office were sent to do duty as constables in the ranks.

Various economies were effected in the medical establishment, consequent on the transfer of the medical attendant at the Lepers Home to Port Royal as Health Officer, and the retirement, &c., of a few district medical officers whose successors were appointed at smaller salaries.

As part of a scheme for reducing the number of resident magistrates, a resident magistrate was placed in judicial charge of the united parishes of Westmoreland and Hanover, on the death of the resident magistrate for the latter parish.

Mr. F. Watts, Government Chemist at Antigua, was appointed in May 1898 Government Analytical and Agricultural Chemist in Jamaica in succession to the late Mr. Bowrey, under an arrangement by which his services were made available to the Jamaica Agricultural Society and the public as well as the Government, at less cost to public revenue.

The office of Travelling Assistant Collector of Taxes for St. Catherine was abolished.

Arrangements were authorised during the year, but not given effect to till a few months later, for the amalgamation of the offices of Registrar-General and Deputy Keeper of the Records, for the Chief Clerk at the Treasury holding also the appointment of Stamp Commissioner, and for abolition of the office of Chief Clerk at the Public Works Office, and of those of the Engineer of the Western District, and of two Superintendents of Public Works.

Future Prospects of Trade.

It is difficult to form a forecast of the future prospects of trade in the Colony, as the break in the late marked depression only began in October 1898, whilst in an almost purely agricultural country much depends on the continuance of favourable seasons and the securing of good markets and good prices. Prices were generally even lower in 1898–99 than in 1897–98, and the comparative prosperity of the latter year was very largely due to the abundant crops, the result of excellent seasons which cannot always be expected.

So far the prospects of trade during 1899–1900 appear promising. The latest returns of the Collector-General show that for the quarter ended 30th June 1899 the value of exported produce was £582,582, as against £426,791 during the corresponding period last year.

The rise in the price of sugar of from 8*s*. to 10*s*. per cwt., and the greatly increased value of exports referred to, must have the effect of increasing the purchasing power of the community and should therefore favourably affect trade.

Suitability of Climate for Europeans, and Openings for White Labour.

As shown under the special headings on "Climate" and "Public Health," Jamaica has a temperate climate in most districts owing to its generally high elevation above the sea. The slope of the land gives good drainage, the range of temperature is not great, the sea breeze blows throughout the day for a long distance into the interior where the air is fresh and pure. There are practically no marshes, except in certain flat districts near the sea, and the rains are only heavy during a few months of the year. Epidemics also occur very rarely, owing to the vigilance of the authorities and the general healthfulness

of the island. These conditions render the island a very healthful place of abode for Europeans of careful and temperate habits.

Many Europeans, especially in the upland pastoral districts, live to advanced years.

At the same time, the heat in the open air during the greater part of the day has, in all but a limited high area, been found too great for continuous European labour throughout the year. Artizans of careful habits could, however, work in the shade and maintain their health. Unfortunately, a great number of the European workmen who come here fall into intemperate habits. It cannot be said also that there are many openings for white labour. The style of living of the native artizans and peasants is simple, and they accept wages which would only afford a bare subsistence to Europeans, as the following head of this report shows.

The West India Improvement Company and the West India Electric Company found it to their advantage to use native labour almost exclusively in constructing the railway and tramway lines respectively.

RATES OF WAGES AND COST OF LIVING.

Details of the rates of wages, chiefly for task work, are given in the Blue Book and Handbook of Jamaica for 1898–99. As regards day labour, the reports by collectors of taxes appended to the annual report of the Collector-General afford full information on the subject for each parish. From these reports, it would appear that there has been a slight rise of wages generally above those given last year. For prædial labour the rates in 1898–99 were as follows:—Men 1*s.* to 1*s.* 3*d.* or 1*s.* 6*d.* a day in most parishes, 1*s.* to 1*s.* 9*d.* or 2*s.* a day in St. Andrew, St. Thomas, Portland, and Manchester; for women 9*d.* to 1*s.*; children 4½*d.* to 9*d.* a day. For artizans, the rate in Kingston is stated at 2*s.* 6*d.* to 5*s.* a day, in country parishes it is from 2*s.* to 4*s.* generally. Men servants earn usually about 5*s.* to 8*s.* per week, and occasionally 10*s.* or 12*s.*; women servants 3*s.* to 5*s.* or 6*s.*, in some parishes only 2*s.* to 4*s.*

The higher rates are rare, except in Kingston and its neighbourhood, and are then only given by employers in comfortable circumstances.

The above rates of wages are low, but the cost of living to the peasantry is much less than in England—vegetable food and fruit, on which with salted or pickled fish they principally subsist, is cheap. For instance, ground provisions can be obtained at about 1*d.* a lb., and salt fish (cod) at 3*d.* to 4*d.* a lb. Cotton piece goods are obtainable almost at English rates; their houses, except

in towns which do not contain more than about one-seventh or one-eighth of the population, cost little to build, and house rent in the country is very moderate.

For the middle and upper classes the cost of living in the country parishes is not high. In Kingston and some other towns it is more expensive than in English towns. Meat ranges from 6*d.* to 1*s.* a pound (beef being 6*d.*), but clothing is dearer and house rent higher than the English rates for like accommodation.

OPENINGS FOR INVESTMENT OF CAPITAL.

Persons who have enough means at their command to expend money judiciously for two or three years on thorough cultivation before expecting much interest on their investments will find profitable investment in Jamaica.

The price of land is lower than it was several years ago, but prices realised for produce exported have also declined sensibly in the last few years, as is more fully explained under Imports and Exports.

The low prices ruling for sugar, rum, and coffee render great care necessary to secure profit. Logwood fetches low prices and suffers from foreign competition, but the cost of bringing it to market is not very great.

Jamaica has practically the monopoly of the export trade in pimento, which grows on pasture lands, is picked and cured at moderate cost, and forms a profitable industry, combined with stock raising, especially now that a thriving trade in cattle with Cuba has sprung up.

Fruit does not cost much to cultivate, and provided better care is taken in selecting and packing it and European markets are opened to the trade the possibilities of developing the industry are very great.

Cocoa and ginger now fetch good prices, and with proper curing the former might be made a prominent industry. Good samples of Jamaica tobacco fetch high prices, and its cultivation, with proper care, is likely to be highly remunerative, and it has the advantage of being a crop which gives early returns.

Capitalists now investing in land before prices rise with the revival of trade, and employing their means at first in thorough tillage and cultivation and in securing the best descriptions of plants, may reasonably look for profitable results.

GENERAL CONDITION OF THE COLONY.

The detailed information given in the preceding sections of this report leaves me little to add under this head. There are several indications that the depression in trade is passing away, and although foreign competition is more keenly felt, and the prices of staples are generally lower than was the case a few years ago, I see no reason to doubt that the Colony will hold its own, and enjoy a fair measure of prosperity. The general condition of affairs has undoubtedly considerably improved within the last twelvemonth.

AUGUSTUS W. L. HEMMING,

Governor of Jamaica.

King's House,
16th September 1899.

ACTING GOVERNOR HALLOWES to MR. CHAMBERLAIN.

King's House, Jamaica,
30th June, 1900.

SIR,

I HAVE the honour to forward herewith the Blue Book of the Turks and Caicos Islands for the year 1899, together with a letter from the Commissioner, forwarding his Report thereon.

I have, &c.,

H. JARDINE HALLOWES, Major-General,
Administering the Government.

From the COMMISSIONER of the Turks Islands to the COLONIAL SECRETARY.

Grand Turk,
2nd June, 1900.

SIR,

I HAVE the honour to forward herewith my Report on the Blue Book for the year 1899.

I regret the slight delay in rendering the Report, which has arisen from my absence on duty in the Caicos Islands in April, and subsequent illness.

I have, &c.,

EDWARD J. CAMERON,
Commissioner.

REPORT ON THE BLUE BOOK OF THE TURKS AND CAICOS ISLANDS FOR THE YEAR 1899.

I.—FINANCIAL.

(A.) GENERAL REVENUE AND EXPENDITURE.

The following comparative statement and table give the heads of Revenue and Expenditure, and the amounts received under those heads for the years 1898 and 1899, as well as the total Revenue and Expenditure for the last five years 1895-99:—

6472—800—7/1900 Wt 24600 D & S—5

Contribution to Barbados and St. Vincent Hurricane Relief Fund.	100 0 0	—	—	—
		137 17 3		
Total	—	8,061 4 5	—	7,644 9 7

Total Revenue and Expenditure for five years, 1895–99.

—	1895.			1896.			1897.			1898.			1899.		
	£	s.	d.	£	s.	d.	£	s.	d.	£	s.	d.	£	s.	d.
Revenue ...	7,312	9	5	9,706	19	2	9,477	7	4	7,232	6	8	8,032	15	8
Expenditure...	7,547	0	7	7,382	10	10	8,384	9	2	8,061	4	5	7,644	9	7

The total of the Revenue for 1899 exceeds by £800 8*s.* 7*d.* the similar total for 1898. This result is attributable to a good salt-raking season and large shipments, with consequent fuller employment of labour and larger importation of food supplies.

The Expenditure of 1899 was less than that of the previous year by £416 14*s.* 10*d.*, the difference being due to a reduced expenditure on public works and the absence of certain exceptional expenses which were incurred during 1898.

The surplus on the year's working was £388 5*s.* 8*d.*, which is to be added to the existing surplus balance from previous years of over £7,000.

(B.) Taxation.

No changes took place during the year under review.

(C.) Assets and Liabilities.

There was a balance of Assets over Liabilities on the 31st December, 1899, of £7,517 1*s.* 10*d.*, as set out in the annexed table:—

TURKS AND CAICOS ISLANDS.

(D.) PUBLIC DEBT.

The Dependency has no public debt.

(E.) CURRENCY.

Gold, American and British, an occasional Bank of England or Colonial bank note, with British silver and Jamaica nickel coinage, constitute the currency of the Dependency. Mexican dollars pass to some small extent for purchase at the stores, &c., but they are not legal tender, and are not accepted at the Treasury.

(F. and G.) FINANCES OF MUNICIPALITIES OR PUBLIC BOARDS.

There is no municipality and no public board which levies rates or has sole control of any funds.

II.—TRADE, AGRICULTURE, AND INDUSTRIES.

(A.) IMPORTS AND EXPORTS.

The dutiable articles imported into the Dependency which contribute over £100 per annum to the Customs revenue are shown in the following comparative table:—

Articles.	Quantity.		Value.		Duty.	
	1898.	1899.	1898.	1899.	1898.	1899.
			£ s. d.	£ s. d.	£ s. d.	£ s. d.

Molasses, syrup, &c. -	4,666 gallons	5,263 gallons	244	16	10	289	13	7
Mules - - - -	9	4	150	0	0	60	0	0
Stationery, &c. - -	92 packages	77 packages	131	2	4	121	12	3

* Of the coffee imported in 1898, 6,500 lbs. was exported.

The chief article of export is salt, of which there was exported :—

—	Quantity.	Value.			Royalty Paid.		
		£	s.	d.	£	s.	d.
In 1898	1,431,850 bushels	18,701	14	4	2,088	3	8
In 1899	1,821,490 "	21,138	8	7	2,656	8	2

The fibre—"sisal grass"—export, however, continues to increase steadily, the value in 1899 being £7,493 12*s.* 9*d.*, more than double that of the previous year.

The sponge export direct to the United States—which covers sponges gathered and shipped by local enterprise, as opposed to the sponge taken away from these waters by Bahamas fishermen without affording any profit to the Dependency—was valued at nearly £1,100, which is the largest figure yet reached, and double the average of the past ten years.

It is to be hoped that the industry will be followed up more closely by the inhabitants of the place than has hitherto been the case, as it is one which, besides affording fair prospects of good return from capital cautiously laid out, offers remunerative employment to the owners of small craft and boatmen of the Caicos, and is thus likely to appreciably assist in improving the conditions of existence in those barren islands.

The total value of the imports and exports for the last five years is as follows:—

—	1895.			1896.			1897.			1898.			1899.		
	£	*s.*	*d.*	£	*s.*	*d.*	£	*s.*	*d.*	£	*s.*	*d.*	£	*s.*	*d.*
Imports - -	26,734	18	0	30,245	4	4	33,239	2	7	27,066	16	0	25,707	11	3
Exports - -	21,687	17	8	31,497	14	5	43,303	15	5	24,810	12	4	31,909	19	2

The bulk of the trade is absorbed by the United States, as from the geographical position of the islands and the nature of their produce is inevitable.

In connection with the increase in the value of the exports, it is to be noted that the increase in value of the salt export over that of 1898 does not follow in the same proportion the increase in the quantity exported, in consequence of the very low price that ruled during nearly the whole year. In further explanation, I quote from my previous Annual Report on the Revenue and Expenditure of the year:—

"The quantity of salt exported was 1,821,490 bushels, which is some 220,000 above the average, and nearly 400,000 more than the figure for the previous year. The reason of the increased export may, I think, be found in the very low price at which, for the greater part of the year, salt was offered, owing to the large quantities on hand and the anxiety of the local manufacturers to realise. The figures therefore do not indicate quite as much general well-being among the community as they would appear to.

"The fishery salt trade with British North America took only 171,634 bushels, as against 270,486 in 1898. This is much to

be regretted, but the Dependency's product appears to stand little chance in competition with the lower priced Mediterranean article.

"The improvement in the receipts for 1899, as compared with those for 1898, under the heads of Royalty on Salt exported and Light Dues on Vessels, is respectively £568 4*s.* 6*d.* and £109 11*s.* 4*d.*"

As regards imports, the value, as taken from the return, appears less, though the duties collected show an appreciable increase. This is seemingly due to the lower price of provisions, such as flour, sugar, &c., and to a smaller importation of non-dutiable goods.

(B.) MANUFACTURES.

There is nothing new to report under this head. There is but one industry, namely, the production of salt from sea-water by solar evaporation. The price was very low during the greater part of the year, but went up from something under five cents a bushel to six cents during the last quarter, as a result of a mutual arrangement entered into between the local producers and the dealers in the United States, by whom the trade is apparently controlled. These improved conditions have been maintained up to the present time.

(C.) AGRICULTURAL INDUSTRIES, &C.

Agriculture in the Dependency is practically confined to a few scanty provision fields in the Caicos Islands and a few patches of guinea corn, grown chiefly for the fodder afforded by the stalks. The barren nature of the soil, coupled with the absence of rainfall, makes anything else impossible.

(D.) LAND GRANTS AND GENERAL VALUE OF LAND.

Sixty-nine grants were made in 1899 under the Crown Lands Ordinance of 1896.

The value of land, other than town lots, is very small.

(E.) SHIPPING.

A table is annexed of the steam and sailing vessels inward and outward during the past two years. The steamers are those of the Clyde line from New York to Dominican ports, at uncertain dates, but about tri-weekly, which touch at Grand Turk, both on the outward and homeward voyages, taking labourers for the Dominican trip to work the cargo, and landing them on return. There is also the monthly steamer of Messrs. Pickford and Black's line from Halifax to Jamaica, which is under contract with this Government to convey the Turks Islands' mails:—

SAILING VESSELS.

A comparative statement of total shipping for the last five years is also annexed:—

—	1895.	1896.	1897.	1898.	1899.
	Tons.	Tons.	Tons.	Tons.	Tons.
Inwards ...	120,037	131,106	164,751	120,278	119,032
Outwards ...	120,087	130,572	163,623	122,829	118,872
Total ...	240,124	261,678	328,374	243,107	237,904

These figures do not include men-of-war, of which one (British) visited the Dependency during the year.

III.—LEGISLATION.

The principal measures passed during the year were:—

Ordinance No. 4, of 1899.—To consolidate, define, and amend the Law relating to Magistrates and the Procedure in Magistrates' Courts.

Ordinance No. 5, of 1899.—To consolidate and amend the Statute Law of the Turks and Caicos Islands relating to offences punishable on summary conviction.

These ordinances take the place of a large number of out-of-date and scattered laws, ranging from 1844, down, and greatly simplify the magisterial work of the Dependency.

Ordinance No. 8, of 1899.—To consolidate and amend the Law of the Dependency relating to the Customs, and to make further provision for the management and regulation thereof.

This ordinance is one which has been badly needed for many years. It similarly takes the place of various ancient and conflicting laws.

IV.—EDUCATION.

(A.) PRIMARY EDUCATION.

A sum of £600 per annum is set aside by ordinance for the work of education in the Dependency.

There are seven schools, of which five are in the Caicos Islands.

Education is not compulsory, and the main difficulty that has to be contended with is the irregular attendance of children.

The majority of the teachers are trained men from Jamaica, and an inspection is held by an officer of the Jamaica Education Department once in two years.

(B.) SECONDARY EDUCATION.

There is no provision for secondary education. The children of the better class usually obtain their education in Jamaica, the United States, or Canada.

(C.) INDUSTRIAL, TECHNICAL, AND AGRICULTURAL SCHOOLS.

Nil.

V.—GOVERNMENT INSTITUTIONS.

(A, B, C, D.) HOSPITALS, ASYLUMS, POOR HOUSES, REFORMATORIES.

There are no institutions of this class in the Dependency at the present day, but a portion of the old poorhouse has been set aside as a place where any infectious disease or serious case for operation or otherwise may be placed under the care of an attendant, temporarily engaged. It is very rarely required.

Lunatics are sent to the asylum in Jamaica.

(E.) SAVINGS BANKS.

The Government Savings Bank was opened in 1890. The attached statement shows its condition at the present time :—

Bank.	Number of Depositors.		Deposited.		Withdrawn.		To Credit.	
	1898.	1899.	1898.	1899.	1898.	1899.	1898.	1899.
			£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
Grand Turk	108	115	448 18 4	210 8 8	507 11 4	352 13 8	747 11 4	605 6 4
Salt Cay	48	44	13 13 8	12 4 11	23 7 4	13 14 2	49 19 8	48 10 5
Cockburn Harbour ...	28	27	21 16 5	100 6 10	4 5 6	59 3 9	299 5 10	340 8 11
Total	184	186	484 8 5	323 0 5	535 4 2	425 11 7	1,096 16 10	994 5 8

VI.—JUDICIAL STATISTICS.

(A.) POLICE.

The police force consists of:—

At Grand Turk—a corporal, three constables, and two district constables.

Salt Cay—one constable and one district constable.

Cockburn Harbour—one constable and one district constable.

The other Caicos Islands—seven district constables.

The total cost of the upkeep of the force in 1899 was £464 14*s.* 9*d.*

(B.) PRISONS.

The one prison of the Dependency is at Grand Turk. The daily average in prison in 1899 was two. Long-sentence prisoners are usually sent to serve their time at Jamaica, but, fortunately, there are rarely any prisoners of this class.

(C.) CRIMINAL STATISTICS.

The total number of offences reported to the police or to the magistrates in 1899 was 176, against 195 in 1898.

Of the offences reported in 1899, 65 were for offences against the person; seven were for prædial larceny; 17 were for offences against property other than prædial larceny; 87 were for other offences.

The total number of convictions in the inferior courts in 1899 was 130, against 121 in 1898.

These convictions are classified as follows:—Fifty-one for offences against the person; seven for prædial larceny; seven for offences against property other than prædial larceny; 65 for other offences.

The convictions in the Supreme Court were as follows:—Two for offences against the person; one for offences against property.

The acquittals were as follows:—In the inferior courts 38; in the Supreme Court 4.

VII.—VITAL STATISTICS.

(A.) POPULATION.

The total by the last census, 1891, was 4,744. The registered births from that date up to the end of 1899 have exceeded the registered deaths by 860, so that the population would appear to be increasing. Such increase, is however, discounted by the emigration, chiefly to Hayti and San Domingo, and the population is probably about stationary.

(B.) PUBLIC HEALTH.

The general state of the public health during 1899 was good.

(C.) SANITATION.

The Towns and Public Health Ordinance of 1895 gives power to deal with nuisances generally, and provides for the exercise of precautions in case of epidemics, for the cleaning of streets, the regulation of slaughter yards, and other kindred matters.

The sea is handy to all for the carrying away of refuse, and the soil is of a nature that readily absorbs impurities.

(D.) CLIMATE.

(1.) The rainfall is small, averaging about 26 inches from year to year.

(2.) The temperature is not excessive, and it is rarely unbearably hot, save on certain still days, which are experienced as a rule in the months of September and October.

Tables of rainfall and temperature are attached:—

RAINFALL.

For the Year 1899 *compared with the average for the previous seven years.*

November	83	78	81
December	84	76	78

(3.) The wind is usually equable and blows strongly, the prevailing direction being from the south-east.

VIII.—POSTAL, TELEGRAPH, AND TELEPHONE SERVICES.

The mails are brought to, and despatched from, the Dependency by a monthly steamer from Halifax, Nova Scotia, under contract, and also by the steamers of the Clyde line from New York tri-weekly. These latter, unfortunately, do not sail on schedule time, so that it is not possible to arrange for a regular despatch from the United Kingdom by that route, but letters that arrive

at Halifax soon after the departure of the monthly boat are sent on to New York, and thus usually arrive here some days earlier than they would if they waited at Halifax for the next monthly steamer. By far the larger portion of the mails for the United Kingdom go north by the New York steamers; letters so despatched get to their destination in a shorter time by a week or more than they would by the longer Halifax route.

The island of Grand Turk is in telegraphic connection with Bermuda and Jamaica by the cables of the Direct West India Cable Company, which opened its Grand Turk station in January of 1898.

There is no telephone service.

IX.—MILITARY FORCES AND EXPENDITURE.

Nil.

X.—GENERAL OBSERVATIONS.

1. The year under review was a quiet and uneventful one.

2. A visit of inspection was paid in January to the Dependency by His Excellency the Governor-in-Chief, Sir Augustus Hemming, K.C.M.G., in Her Majesty's ship "Proserpine."

3. A reciprocity treaty was negotiated with the United States, by which the Dependency is to obtain a reduction of the duty levied on salt, and certain other advantages, in consideration of reciprocal concessions in the duties on imports of United States origin. This treaty awaits ratification.

4. There are no other matters calling for special remark.

VIII. POSTAL, TELEGRAPH, AND TELEPHONE SERVICES.

IX. MILITARY FORCES AND EXPENDITURE.

(A.) Regular Forces.
(B.) Militia.
(C.) Constabulary or semi-military Colonial Force.

X. GENERAL OBSERVATIONS.

DIVISION I.

FINANCE.

(A.) GENERAL REVENUE AND EXPENDITURE.

At the beginning of the financial year, on the 1st April, 1899, the deficit on the General Revenue Account of the Colony stood at £153,722.

The year's revenue amounted to £624,623, and the expenditure to £593,927, showing a surplus on the year's transactions of £30,696, and reducing the deficit to £123,026 on the 31st March, 1900.

The following is a comparative statement of revenue for the two years:—

Comparative Statement of Revenue, 1899–00.

General Revenue	1899–1900.	1898–99.	Increase.	Decrease.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.
Customs	353,765 1 2½	331,443 4 7	22,321 16 7½	—
Port, Harbour, and Light House Dues ...	4,906 19 11	5,136 17 7	—	229 17 8
Licences, Excise and Internal Revenue, not otherwise classified	153,925 7 3¼	147,746 14 10	6,178 12 5¼	—
Fees of Office, Stamp Duties, Reimbursements in aid, and Irrigation Receipts ...	55,313 2 7¾	60,650 13 7	—	5,337 10 11¼
Post Office and Telegraph	26,444 12 11¼	28,767 4 1	—	2,322 11 1¾
Rents	2,518 7 4	1,133 3 8	1,385 3 8	—
Interest	19,858 11 5	18,368 9 7	1,490 1 10	—
Miscellaneous Receipts	5,879 1 10½	7,024 15 0	—	1,145 13 1½
Total, exclusive of Land Sales ...	622,611 4 7½	600,271 2 11	31,375 14 6¾	9,035 12 10½
Land Sales	2,011 10 0¼	—	2,011 10 0¼	—
Total General Revenue	624,622 14 7½	600,271 2 11	33,387 4 7	9,035 12 10½
Net Increase	—	—	24,351 11 8½	—

The revenue exceeded that of the previous year by £24,352, chiefly owing to an increase of £22, 322 in import duties under the new Tariff imposed by Law 20 of 1899. Of increases under other heads, the principal were in rum duties, £2,711, road revenues £1,585, interest £1,333, rents from lands £1,298, and sale of Crown lands £2,011.

There were decreases under the heads of postal £1,680 (resulting from the adoption of the penny postage scheme), £5,951 under printing office sales (owing to a change in the method of keeping the accounts against Public Departments), and £1,003 (owing to a decrease in the amount of Chancery deposits forfeited).

The general expenditure of the Colony for the year, as compared with that of the previous year, is shown in the following statement :—

Comparative Statement of Expenditure, 1899–1900.

General Expenditure.	1899–1900.	1898–99.	Increase.	Decrease.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.

Total	595,776 8 1¾	628,852 7 3½	9,927 3 7¾	46,701 15 3
Net decrease	—	—	—	36,774 13 7¼

It will be noticed that there were considerable reductions of expenditure under most of the heads, resulting in a total nett decrease of £36,775.

The principal increases are in charges of debt £4,377 4*s*. (of which £2,362 due to interest on temporary advances made by the Crown Agents), Pensions £2,140, and taxes and premiums of Insurance £3,141 (this expenditure was formerly included under the head of public works and buildings).

The decrease in the expenditure of public departments is chiefly due to the economies effected and reductions made in establishments. The most notable are :—

	£
Administrative Departments (of which £2,316 is under Public Works Staff)	5,379
Revenue Departments	2,316
Postal Service	3,017
Medical	8,060
Constabulary	7,430
Education	6,909
Public Works	3,039

There were also reductions amounting to £1,849 in respect of non-recurring items of expenditure, besides substantial reductions on other heads.

The totals of revenue and expenditure for the five years ended 31st March, 1900, are as follows :—

—	1895–96.	1896–97.	1897–98.	1898–99.	1899–00.	Total.
	£	£	£	£	£	£
Revenue ...	646,103	591,864	540,509	600,271	624,623	3,003,370
Expenditure ...	605,505	629,764	627,422	630,702	595,776	3,089,169

(B.) CHANGES IN TAXATION.

Law 20 of 1899.—"The Tariff Law" was the most important measure affecting taxation which was passed during the year. This law consolidated and amended former laws levying duties on imports. It recast the schedule of rated and free goods, and levied an *ad valorem* duty of £16 13*s.* 4*d.* per £100 on the value of all unenumerated goods, the rate having previously been 12½ per cent.

Among measures affecting taxation may also be mentioned—The Parochial Rates law, combining for the purpose of collection the several rates levied on house property in each parish for different local purposes, the Succession Duty and the Stamp Duty amendment laws, the License Duty amendment law, which increased the duties on livery stable horses and carriages and on firearms, and imposed a tax on bicycles, tricycles, and hand-carts, and laws 30 and 36 of 1899, which require horse dealers and commercial travellers to take out licences.

(C.) ASSETS AND LIABILITIES.

On the 31st March, 1899, the assets of the Colonial Government stood at £916,030 and the liabilities at £1,069,752, leaving a balance against the Government of £153,722.

On the 31st March, 1900, the assets amounted to £857,786, and the liabilities to £980,812, leaving a balance against the Government of £123,026.

The debit balance was therefore reduced by the sum of £30,696 during the year, being the surplus of revenue over expenditure.

The following is a comparative statement of the assets and liabilities on the 31st March, 1899 and 1900 respectively :—

Assets.			*Liabilities.*		
Heads.	**1898–99.**	**1899–1900.**	**Heads.**	**1898–99.**	**1899–1900.**
	£	£		£	£
Investments on account of Deposits at Interest.	463,743	458,519	Deposits at Interest	617,725	596,975
Investments on account of Trust Funds	23,086	22,579	Trust Funds	24,478	25,219
Investments on account of Sundry Deposits not at Interest.	82,569	75,726	Sundry Deposits not at Interest invested as per contra.	86,748	81,354
Other Securities	2,910	9,227	Sundry Deposits not at Interest uninvested	42,252	33,512
Advances on Loan Works	9,378	15,229	Loan Works	54,409	51,955

Total ... ... £	1,069,752	980,812	Total ... ... £	1,069,752	980,812

JAMAICA, 1899-1900.

The gross amount of the Liabilities has been reduced by £88,940, the reduction in deposits at Interest being £20,750 and that in the amount of the Crown Agent's advances no less than £65,000.

Provision has been made for covering the deficit on general revenue account by borrowing from the Imperial Treasury under the provisions of the Colonial Loans Act, 1899. The amount authorised to be lent was £150,000 at 2¾ per cent. interest, but it will, it is hoped, not be necessary actually to borrow more than a moderate portion of this amount.

(D.) PUBLIC DEBT, SHOWING PROVISION FOR REPAYMENT.

The nett amount of the established public debt of the colony, after setting off investments of sinking funds for repayments of loans, stood as follows at the close of each of the last five financial years :—

Year.	Amount.
	£
1895-96	1,873,859
1896-97	1,860,181
1897-98	2,058,912
1898 99	2,053,822
1899-1900	2,037,542

On the 31st March, 1900, the liability was made up as follows :—

	£	s.	d.	£	s.	d.
Funded Debt	...	...		77,416	6	11
Deposits at Interest	128,617	4	0			
Less Investments	6,585	3	0	122,032	1	0
				199,448	7	11
Loans for general purposes				1,587,875	18	10
Loans for special purposes				250,217	12	10
Total ...				£2,037,541	19	7

The first item (specially designated as "Funded Debt") represents certain trust funds (chiefly legacies for the endowment of schools) the capital of which was taken over by the Government under the provisions of the Act 28 Vic. cap. 23, which guarantees the payment of interest on the funds from general revenue.

It may be noted that the Act expressly states that the amount of these moneys shall be excluded from the statement of Public Debt.

"Deposits at Interest" are the balances on the Treasurer's accounts with the associations established for the provision of pensions for the widows and orphans of (1.) Clergy who were formerly on the civil establishment, and (2.) Public Servants. The interest on these deposits is chargeable to General Revenue.

The third item is the only one which, strictly speaking, may be regarded as funded public debt, representing loans for general purposes of Government, which are directly secured on General Revenue, and in respect of which annual provision is made for sinking funds to extinguish the liability.

Of the amount outstanding in respect of these loans on the 31st March, 1900, £359,175 was raised by means of debentures which have not been converted into inscribed stock, £1,258,859 10*s.* 8*d.* is on inscribed stock raised in England, and £123,360 on inscribed stock raised in Jamaica, making a total of £1,741,394 10*s.* 8*d.*, against which must be set invested Sinking Funds amounting to £153,518 11*s.* 10*d.*, leaving a nett outstanding liability of £1,587,875 18*s.* 10*d.*

The last item, "Loans for special purposes", represents loans raised in respect of undertakings for the benefit of Kingston and the neighbourhood (now under the management of the Kingston General Commissioners), which are secured primarily on special revenues, but are guaranteed by the general revenue of the Colony. Annual provision is made by the Commissioners for the interest and redemption of the debt, which is made up as follows :—

	£	*s.*	*d.*
Debentures	240,120	0	0
Inscribed Stock, England	39,280	0	0
Total... ...	279,400	0	0
Set off, Sinking Funds	29,182	7	2
	£250,217	12	10

JAMAICA, 1899–1900.

Account should be taken in this Report of a large body of Debt, which although not actually funded within the year was, in fact, a liability of the Colonial Government, and which has since that period taken its place on the schedule of Funded Debt, viz. :—

(1.) £1,475,600 Three and a half per cent. Debt on Inscribed Stock, to be issued to First Mortgage Bondholders of the Jamaica Railway Company on the winding up of that Company, and the vesting of the Railway in the Government under Order of the Supreme Court. The provision for repaying this Debt will be an annual investment of 1 per cent in a Sinking Fund.

(2.) £198,000 Two and three quarter per cent. Debt on account of an Imperial Loan of this amount to pay arrears of interest due First Mortgage Bondholders of the Railway, and to repair, improve, and properly equip the Railway for traffic. This Debt will entail a charge for 20 years of an annuity at the rate of £13,004 for interest and repayment combined.

(3.) £150,000 of Debt authorised to be funded at 2¾ per cent., by borrowing from the Imperial Government, to cover the floating deficit on the General Revenue Account of the Colony. This would entail a charge of £17,361 5*s.* for ten years, for an annuity to cover interest and repayment. The borrowing under this authority will, however, it is expected, not exceed £50,000, entailing a charge of £5,787 per annum.

(4.) £105,000 of Three and a half per cent. Debt, authorised to be funded by borrowing from the Imperial Government for Kingston Improvements and Waterworks. £85,000 has now been borrowed for these purposes, repayable, with interest, in 40 years, by an annuity of £3,938 a year.

These must accordingly be counted as to be added to the total of funded Debt—

For General Purposes :—		
Railway Inscribed Stock ...	£1,475,600	
Railway Improvements, &c. ...	198,000	
Deficit (say)	50,000	
	£1,723,600	
Net amount stated above ...	1,787,324	
		3,510,924
For Local Purposes :—		
Kingston Improvements	£65,000	
„ Water Works	20,000	
	£85,000	
Net amount stated above ...	250,218	
		335,218
Total net Public Debt		£3,846,142

involving annual charges on General Revenue amounting to £194,080, being not far off one-third of the estimated total of current annual expenditure, besides the charges payable from local funds.

(E.) CURRENCY.

The currency of Jamaica is similar to that of the United Kingdom, British silver is in general circulation, but gold is not very much used, its place being supplied by £1 notes, issued by the two banks doing business in the island, the Colonial Bank and the Bank of Nova Scotia.

The last-named Bank was granted a licence to issue notes in February last. The parent bank has a paid-up capital of $1,750,000, and a reserve fund of $2,000,000.

The Colonial Bank, which has long been established in the Colony, has had an average note circulation as shown below during the past five years :—

Year.	Amount.
	£
1895	169,844
1896	173,650
1897	150,754
1898	152,802
1899	152,643

(F.) REVENUE AND EXPENDITURE OF PAROCHIAL BOARDS.

The following statement shows the Revenue and Expenditure of the Parochial Boards for the five years ended 31st March, 1900.

JAMAICA, 1899-1900

Kingston, the chief parish of the island, is also shown separately :—

—	1895-96.	1896-97.	1897-98	1898-99.	1899-00.
Revenue of all Boards ...	113,702	108,232	104,307	117,568	133,568
Expenditure „ „ ...	128,580	135,842	125,704	111,288	128,414
Revenue of Kingston ...	26,190	25,656	25,870	30,313	30,298
Expenditure „ ...	29,168	35,334	32,557	28,643	29,857

The revenue is derived chiefly from rates on houses, a property tax on cultivated lands, and licence duties on animals and vehicles used on the roads.

(G.) Debts of Municipalities and Boards.

On the 31st March, 1899, the total amount due by parochial boards to general revenue was £108,645.

On the 31st March, 1900, the close of the year under review, this indebtedness had been reduced to the sum of £98,050.

This satisfactory reduction tends to show that these Boards are paying increased attention to their responsibilities, and are in most cases making adequate annual provision for the discharge of their obligations.

Of the total indebtedness of £98,050, the sum of £44,354 is due on account of local water works, £27,675 for the establishment of markets, some of which have not proved financially successful. The balance, £26,021, is made up of £9,675 lent to parochial poor funds (of which St. Mary owed £2,300 and St. Catherine £1,755), and £16,346, advanced chiefly for sanitary purposes and for road work.

Of the last-mentioned amount, Kingston, the principal parish of the Island, owed £12,737, for the repayment of which satisfactory provision is made on the annual estimates.

In addition to the debts by parochial boards there were also due to general revenue amounts totalling £97,228 on account of specific undertakings by corporations established for the

purpose, and of this amount the Kingston General Commissioners were responsible for £94,752 advanced on account of loans to be raised for sewerage and water works. Particulars of the debt incurred by the Commissioners, which is guaranteed by general revenue, have been given above.

DIVISION II.

TRADE, AGRICULTURE, AND INDUSTRIES.

(A.) Imports and Exports.

The imports for the year ended 31st March, 1900, show a slight increase, and the exports a considerable increase in value, compared with the totals for the preceding year. The value of imports was £1,806,865, against £1,788,432, an increase of £18,433, or about 1 per cent., that of exports £1,868,079, against £1,662,543, an increase of £205,536, or about 12½ per cent.

For the first time since the year 1886-87, exports have exceeded imports. During nearly the whole of the intervening period, special causes, such as the Exhibition, Railway extension, the Kingston improvement works and electric tramway construction, have all helped to swell importations considerably.

Excluding from the comparison, coin and bullion, the considerable rise in which, viz., one of £55,535, was due to increased importations of silver for the two banks doing business in the Colony, the imports show a decrease of £37,102. Small increases on other heads, the principal being under "Raw materials," coal-counterbalance somewhat a large decrease of £76,931 under "Metals," due principally to the practical cessation of importations of railway and electric tramway materials during the year.

Again, excluding coin and bullion, of which £52,025 less were exported than in 1898-99, the increase in exports for 1899-1900 was no less than £257,561. Live animals, food, drink and narcotics were £302,900 more and raw materials £50,115 less, other heads nearly balancing.

The following table shows the value of Imports and Exports for the past five years :—

Year.	Exports.				Imports.			
	Home Products and Manufactures.	British and Foreign Products and Manufactures.	Coin and Bullion.	Total Exports.	Home Consumption.	Coin and Bullion.	Total for Home, including Specie.	Total Imports.
	£	£	£	£	£	£	£	£
1895–96	1,775,016	9,553	88,535	1,873,105	2,237,787	17,850	2,255,637	2,288,946
1896–97	1,384,278	16,411	69,552	1,470,241	1,836,849	27,763	1,864,612	1,856,378
1897–98	1,377,826	20,246	50,371	1,448,443	1,658,632	15,749	1,674,381	1,660,668
1898–99	1,532,378	34,302	95,863	1,662,543	1,770,768	17,664	1,788,432	1,814,793
1899–1900	1,797,996	26,245	43,838	1,868,079	1,733,666	73,199	1,806,865	1,844,332

The foregoing figures show that the values both of Exports and Imports were higher than in any year since 1895–96, that is, since a marked depression in trade began.

TABLE EXHIBITING THE INCREASES OR DECREASES IN QUANTITY, VALUE, AND PRICE OF THE TEN PRINCIPAL EXPORTS.

The following table exhibits the increases or decreases i

Article.	Quantity.		Value.		Increase or Decrease (as shown by + or —) on 1898–99.

+ 59·1	+ 36·0	1898–99 : 32 9 „ cwt. 1899–00 : 28 0 „ „	Value nearly treble that of 1898–99. Price brightening of late—that of 1898–99 unusually good.
— 0·3	+ 12·5	1898–99 : 1 4 „ gallon. 1899–00 : 1 8 „ „	Value about ⅔ that of 1888–89. Price has declined generally.
— 8·2	+ 29·8	1898–99 : 8 4 „ cwt. 1899–00 : 10 0 „ „	Value in 1899–00 about ⅔ that of 1888–89. Price generally has declined greatly—that of 1899–00 was unusually high.
—	+ 18·9	—	—
—	+ 17·3	—	—
—	2·9	—	—

JAMAICA, 1899-1900.

The main characteristics of the general improvement above mentioned in the Export trade during the year appear in this table :—

Coffee and logwood, it will be noticed, which were among the principal staples 10 years ago continue to decline. The Collector-General attributes the decrease in coffee to the short crops resulting from a dry spring. The fall in price has also much to do with it, and unfortunately instead of stimulating attention to cultivation and curing, which by improvement of quality would repair this loss, it tends among the thriftless and shortsighted class of cultivators to result in increased neglect and consequent further loss of trade.

The export of bananas for the year would doubtless have exceeded all previous records, but for the disastrous weather experienced in the autumn. Up to the end of October, the quantity shipped had increased by 2,011,698 bunches, or nearly 50 per cent., but the violent rain and wind storms which visited the Island at that season caused the destruction of a large proportion of the trees, and the Exports between November and March were less than in the corresponding period of the previous year by 1,461,834 bunches. Had the rate of increase of the first seven months continued, it seems probable that the export would have approached 10,000,000 bunches.

The prices of both sugar and rum, especially of the former, improved considerably, a dry spring however, materially checked the prospects of the 1899–1900 crops, and hindered the growth of the cane so that only a small proportion of the new crop was exported during the year.

For all the more important products except pimento, prices improved. The high price realized for pimento in 1898–99 could not be expected to continue but the price in 1899–1900 was still above the average.

It will be seen from the column of remarks given in the table that the Exports which show the most marked increase during recent years are bananas, oranges, pimento, cocoa, cocoanuts and ginger. The last three have increased threefold or fourfold since the year 1888–89.

The notable increase in the trade in cocoanuts was due to better demand and organisation.

Among minor products, which showed little improvement in the aggregate compared with last year, honey and lime juice merit attention; the increase in the output of the former the Collector-General attributes to the teachings of the Jamaica Agricultural Society. A factory established of late years in St. Ann ships increasing quantities of lime juice and concentrated extracts of the lime, and elsewhere also attention to this product appears to be increasing.

The exports were distributed in the following proportions during the past five years :—

—	1895–96.	1896–97.	1897–98.	1898–99.	1899–00.
United Kingdom	27·6	27·4	22·0	20·6	19·2
United States	57·0	56·6	62·3	59·1	63·6
Canada	1·6	1·2	1·4	1·4	1·6
Other countries	13·8	14·8	14·3	18·9	15·6

The value of the exports from Jamaica which go to the United States continue to increase in total value and in proportion to the whole amount of the trade. The exports to the United Kingdom diminish steadily. This tendency is largely due to the development of the Fruit trade, which has hitherto been almost exclusively with the United States.

The following table of the relative proportion of the chief items of export in the five years compared is illustrative of this explanation :—

—	1895–96.	1896–97.	1897–98.	1898–99.	1899–00.
Sugar	11·0	10·1	8·3	9·8	10·8
Rum	9·3	8·4	6·3	6·1	7·2
Coffee	16·0	14·4	11·4	10·5	7·8
Dyewoods	20·4	11·6	8·9	8·8	4·8
Fruit	29·9	34·3	42·8	41·4	45·0
Pimento	5·1	5·2	3·6	8·3	9·7
Minor products ...	8·3	16·1	18·7	15·1	14·7

JAMAICA, 1899-1900.

The products named were shipped :—Sugar, almost entirely to the United States and to the United Kingdom, in the proportion, roughly, of eight to 1. Fruit, almost exclusively to the United States and rum to the United Kingdom. The other main products were variously distributed. Of the coffee, 7-8ths to the United States, Germany, and the United Kingdom, in the order named. Logwood, to seven countries, nearly two-thirds going to the United States and Russia, the United Kingdom taking the fifth place. Pimento, about 5-8ths to the United States and United Kingdom, in the order named; the remainder principally to France and Germany. Lesser products of some importance, which have increased more in proportion than any of the main staples, are cocoa, cocoanuts, and ginger. Of the cocoa, 9-10ths is shipped to France, the United Kingdom, and the United States. Cocoanuts, almost exclusively to the United States. Most of the ginger to the United Kingdom and United States, in the proportion of about two to one.

Taking each of the four classes under which imports are now arranged, live animals, food, drink, and narcotics were valued at £676,383, as against £674,094 in 1898-99. Among animals, it is interesting to note in connection with bee keeping, a rising industry which the Jamaica Agricultural Society has taken great pains to foster, that bees to the value of £2,664 were imported, as against £1,082 in the previous year, while there were no importations in 1897-98. The placing of bees on the free list two years ago has evidently given a stimulus to the industry.

Importations of stock, especially of sheep, have decreased considerably, owing probably to the heavy duty now laid upon them.

Farinaceous foods, especially wheat and other meal, also peas and beans, showed a fair improvement over last year, while less salt fish and more salt beef and pork was imported, also a smaller quantity of alcoholic liquors. Importations of manufactured tobacco fell off from 128,429 lbs. to 43,609 lbs., and from £11,239 to £2,180 in value, whilst those of tea slightly increased. There was, on the whole, a diminution in the importations of luxuries and an increase in those of necessaries, not locally produced or else not in sufficient quantity.

Raw materials imported were valued at £75,944, as against £63,286, an increase of £12,658. Over £10,000 of this is due to the increased importations of coal, which made up £60,369 out of the total of £75,944. Coal for the past two years has been imported in greater quantity from the United States than from the United Kingdom, owing to the advantages both in cost and freight offered by the former market.

The quantity bought from the United States was 37,500 tons in 1899-1900, as against 24,400 from the Mother Country.

Of manufactured articles, textiles were imported to the value of £417,454, as against £408,675 in 1898-99.

In none of the items are there such increases or decreases as to call for special reference. The influx of cheaper descriptions of cotton goods from the United States brought to notice by the Collector-General as a characteristic of the previous year, was increased in 1899–00. Thus, cottons from the States, including hosiery, were valued at £40,829 in 1898–99, and £49,879 in 1899–00. It should be noted, however, that importations of textiles from the United States were at about the same figure in 1895-96, and apparently only declined for a few years.

Metals imported were valued at £153,125, against £230,056 in 1898-99, showing the large decrease of £76,931, chiefly due to the completion and equipment of the electric car system at Kingston. Other large decreases are those of about £27,000 under tubes and pipes, and £16,000 for railroad materials, including rolling stock. Importations for purely private purposes do not show any considerable differences.

Under "other manufactures" the increase is £16,203, on a total importation of £394,657.

Lumber imports diminished greatly both in quality and value, pitch pine and white pine being valued together £34,847, as against £42,206 in 1898-99, indicating restricted building operations. On the other hand, the value of shooks (the materials for casks, barrels, and boxes for sugar, rum, oranges, &c.) increased from £26,053 to £41,778.

Oils, of which kerosine is the chief, increased in imported value from £27,961 to £35,450.

The following figures give the respective proportions in which imports were obtained from the different countries named in the past five years :—

—	1895–96.	1896–97.	1897–98.	1898–99.	1899–00.
United Kingdom	48·1	49·9	47·2	44·7	47·2
United States	41·8	39·4	43·0	45·1	43·0
Canada	7·5	8·2	7·1	7·1	7·1
Other countries	2·6	2·5	2·7	3·1	2·7

(B.) MINES, MANUFACTURES, AND FISHERIES.

There are no mines at present in working in Jamaica.

The Blue Book returns for 1899–1900 give particulars of 82 local manufactories, as against 76 in 1898–99.

The most numerous are tanneries 26, cigar and cigarette factories 18, breweries 11, and aerated water factories 7. There are also factories for producing ice, soap, and bricks, a match factory and establishment for coffee pulping and sorting, and for extraction of lime juice and essential oil from limes, corn, meal and rice mills, and a large factory for the production of logwood extracts. These establishments are usually small; the match and soap factories hold their own only in consequence of the high import duties on the articles which they produce. An excise duty, partially countervailing this protection, has recently been imposed on soap manufactured in the Island.

The returns, however, hardly give an adequate idea of the manufactories of the Colony; they do not include the works on the several sugar estates, which are really manufactories of sugar and rum. The total export value of these products in 1899–1900 was £325,872. A large quantity of rum is also manufactured for home consumption, the duty on such rum during the year at 5*s.* the proof gallon having yielded £102,741. Each coffee or cocoa plantation has also its apparatus for preparing and curing those products.

Fish is caught off the coast and to a small extent in the rivers for Island consumption. The fish is carried long distances inland for sale. A sea-fishing company has lately been established at Kingston, and retails fish at lower rates than formerly prevailed. The river fisheries are preserved by a close season.

(C.) AGRICULTURAL INDUSTRIES AND BOTANICAL STATIONS.

Agriculture.

The returns for the year show a total acreage of land in cultivation and pasture of 693,574, against 660,491 in 1898–99, an increase of 33,083 acres. Of this increase 13,300 acres represents cultivation and 19,700 pasture. The principal products to which increased attention has been given are ground provisions, as represented by an addition of 8,476 acres, coffee 3,000, bananas 1,779, cocoanuts 880, and minor products 260 acres. The area in sugar cane has decreased by 1,000 acres and in tobacco 124. It must be stated that the returns of cultivated lands are unreliable; there can be no doubt that the ingivings by owners are in many cases understated for the purpose of evading taxation. Upwards of 200,000 acres of land of various kinds appear to be unaccounted for by the tax returns. The Government has not at present the means of checking this leakage.

Methods of cultivation amongst the bulk of the population are still crude, but the distribution of the journal of the Agricultural Society, the formation of many branch societies, and the lectures and demonstrations which have been given by an officer of the Public Gardens Department in various parts of the country, have aroused their interest, and there is now a greater desire for instruction and more willingness to adopt improved methods than have prevailed hitherto. With the object of extending practical instruction, a Board of Agriculture has been formed to control the various agencies now at work and to administer experiment stations. The Education Code has been amended so as to enable agricultural teaching to be commenced in the Elementary Schools, and a selected class of teachers has gone through a course of instruction at the experiment station at Hope Gardens.

Botanical Department.

The department of public gardens and plantations at present controls the undermentioned institutions :—

I.—The Botanical Gardens and Experiment Station at Hope, five miles from Kingston, and 700 feet above the sea.

II.—The Hill Gardens, formerly called "The Cinchona Plantation," with the experimental orange cultivation at Resource, from 3,500 to 5,000 feet above the sea.

III.—The Botanical Gardens at Castleton, 20 miles from Kingston, in the Parish of St. Mary, and about 400 feet above the sea.

IV.—The Botanical Gardens at Bath, in the Parish of St. Thomas.

V.—The garden and grounds of King's House, the residence of the Governor, and

VI.—The Parade Garden in the town of Kingston.

I.—The Botanical Garden at Hope extends to about 220 acres. A considerable part of this area has not yet been brought under cultivation, but there are large nurseries containing between 70,000 and 80,000 plants. In addition to flowering plants and ornamental shrubs there is a large assortment of economic plants, such as rubber, orange, cocoa, nutmeg, clove, vanilla, kola, sarsaparilla, Liberian coffee, etc. There is a steady demand for plants of this description.

The appearance of the nursery has been improved during the year by the substitution of wire for wooden rails for forming the plant-beds, while several trees which threw too much shade have

been removed. The plants continued to do well during the year. Several experiments in grafting have been successfully carried out. The sweet orange has been successfully grafted on lime stocks, and the trees are growing well and fruiting. Success has for the first time been attained in budding from a female nutmeg tree on strong healthy seedlings. Six youths have been trained at Hope to do this budding and can now each graft 100 per day.

As a distributing station the Hope Gardens are most useful and helpful, and should play an important part in promoting the advance of the Island as an agricultural and fruit-producing country.

It may be added that the plants distributed from the Hope Gardens during the year under review numbered 132,104, of which no less than 115,839 were economic plants. The mean temperature for the year at Hope was 77·1 Fahr. The rainfall was over 80 inches.

II.—The Hill Garden is situated in what are usually called the "Port Royal Mountains." It occupies a magnificent site 5,000 feet above the sea. The average mean temperature is 62·6 Fahr., while the average rainfall (for 29 years) is no less than 104·08 inches. During the year 1899–1900, however, the rainfall was 138·54 inches.

The gardens are not now of great value except as exhibiting the luxuriance to which English flowers attain in this climate at a considerable altitude. Phlox, dianthus, mignonette, verbenas, etc., all thrive well and flower freely.

There was much dry weather in the middle of 1899, from which the garden suffered. This was followed by exceedingly heavy rains in October and November which did much damage.

Attached to the Hill Garden is Resource, where orange cultivation is carried on. The land is hilly, and in some parts so steep that it has been found necessary to plant grasses of various kinds to prevent the heavy wash by storm rains which are frequent in the locality. Citrus plants do fairly well at this place, and experiments are carried out with various imported descriptions of the orange, lemon, grape, fruit, etc. During the year, which owing to climatic conditions was an unusually trying one, this station distributed 55,564 plants, of which only a very small proportion were ornamental plants.

III.—The gardens at Castleton are situated in a narrow valley through which runs the Agua Alta (or Wag Water) river forming the border of the garden on the east side. Of all the Botanical stations Castleton is the most typically tropical, with its graceful clumps of bamboo on the river bank, and its palms of every description.

The annual rainfall is considerable, it was 140 inches in 1899-1900.

These gardens suffered, as did the other stations from the heavy floods of October and November. Two acres of land which had been cleaned and a number of economic plants were washed away.

IV.—The Bath Gardens is the old Botanical Garden of Jamaica. It was established in 1779. It contains one very fine palm and some other interesting trees, but it is no longer of any importance, and the Government has decided to discontinue expenditure for its maintenance.

V.—The Botanical Department is still in charge of the gardens and grounds of the Official residence of the Governor. The cultivation has been maintained during the year but not extended. The usual gardening operations have continued in the grounds immediately surrounding the house, and the outlying pastures were thoroughly cleaned during the year by boys from Stony Hill Reformatory.

VI.—The Parade Garden in Kingston occupies what was formerly an unsightly open square, ankle deep in sand, with no properly made road through it. This space is now enclosed with a handsome iron railing, and is planted with large shady trees and laid out in grass, traversed by gravelled walks properly constructed and drained. A fountain occupies the centre of the garden, while comfortable seats are provided in every convenient place. The garden is now a favourite resort of the inhabitants of Kingston, while some of the specimens of the Rubber tree growing there are worth inspection. The garden has been maintained in excellent order throughout the year.

No part of the work of the Botanical Department is of more practical utility than the lectures and demonstrations given in the country districts by its Officers. The Superintendent of Hope Gardens from time to time travels in various districts of the Island, and lectures to the peasantry in an informal manner on the correct methods of cultivating their coffee, oranges or other products.

Notice of his coming is given beforehand in the district, and a convenient place selected for the lecture. Practical demonstrations are given in the open fields, showing the methods to be adopted, and the difference in result of the scientific as compared with the crude methods of cultivation hitherto in vogue is explained.

These demonstrations and lectures have already produced good results in many districts, and arrangements are being made for extending this class of work and engaging more officers of the department in it. The Agricultural Society, which receives a grant of £1,500 a year from public funds, has set aside £120 a

year for the past two years to pay the cost of providing assistance at Hope during the Superintendent's absence on lecturing tours. In this as in many other ways the Society has co-operated with the Department. The Journal of the Society has a large circulation and forms an excellent means of diffusing knowledge of and interest in Agricultural subjects, an object which is much furthered by the local agricultural shows promoted by the branches of the society.

(D.) LAND GRANTS, SALES, &c.

Grants.

A patent of 329½ acres of land was granted to the West India Improvement Company under the provisions of the Railway Law 12 of 1889, making a total of 73,723 acres granted (as part of the consideration for the construction of the railway) to the company, which is now in liquidation and which is making no use of the land. About 3,000 acres still remain to be granted.

Sales.

Sales to small settlers under the system of payment by instalments, introduced in 1897 by Sir Henry Blake, continue to progress satisfactorily. During the year 418 applications were received for 4,263¾ acres, and 260 lots, aggregating 4,589½ acres, were surveyed and allotted, 10,888 acres were applied for and 9,574 allotted between the 1st January, 1897, and the 31st March, 1900, the purchase money paid being £3,200. Unfortunately considerable difficulty is experienced in obtaining the annual instalments of purchase money, and 12 lots have been forfeited to the Crown owing to non-payment. About 1,200 acres of the land sold appear to be under cultivation, which is to some extent retarded by want of good roads into the settlements.

Leases.

Ninety-five leases of Crown property were effected during the year, at an aggregate annual rental of £404 16*s.* 0*d.* More than half this amount was obtained from town residences. Most of the leases are of small lots near Kingston, in most cases at a rental of £1 per annum. The Healthshire lands, about 10,000 acres, chiefly of mountainous rocky land, were leased for £50 per annum.

Forfeitures.

3,908½ acres of land, situated in eleven of the fourteen parishes, were forfeited to the Crown for non-payment of quit rent and land tax.

The receipts of the department during the year from sales and rents were £3,104 3*s.* 4*d.*, an increase of £557 10*s.* 6*d.* over those of the previous year. Expenditure was diminished by £321 0*s.* 8*d.*, compared with 1898-99.

It is unfortunate that the lands which by forfeiture to the Crown have become or are likely to become available for sale to new settlers are in most cases remote from established centres and lines of traffic and difficult of access. These circumstances, even where the land is good, re-act upon the success of the cultivation, for lack of market; they also withdraw available labour from estates which might contribute to the exports of the Colony, which these new settlements do not to any appreciable extent. Moreover the children are withdrawn from educational and other civilising influences.

(E.) SHIPPING.

Following a considerable increase in shipping operations in 1898-99, as shown by the returns of vessels entered and cleared, there was a decrease in the year now under review. The Collector-General attributed the increase in the previous year chiefly to the stimulation of trade with Cuba after the war, in which many small vessels were temporarily engaged, and partly also to the expansion of the fruit industry. Owing to the settlement of affairs in Cuba, there is now less demand for cattle and provisions from Jamaica, and the number of vessels trading between the two islands has accordingly diminished. The severe check to the fruit industry caused by the storms of October, 1899, led to the withdrawal of some fruit steamers.

JAMAICA, 1899–1900.

The following is a comparative summary of vessels, tonnage, and crews for the past five years :—

Year.	Reported.			Cleared.		
	Vessels.	Tonnage.	Crews.	Vessels.	Tonnage.	Crews.
1895–96	Sailing, 472	106,408	3,611	470	110,467	3,663
	Steam, 702	697,294	24,308	698	693,178	24,199
	1,174	803,702	27,919	1,168	803,645	27,862
1896-97	Sailing, 343	66,447	2,522	361	70,557	2,675
	Steam, 688	672,955	23,686	694	678,946	23,724
	1,031	739,402	26,208	1,055	749,503	26,399
1897–98	Sailing, 348	70,238	2,596	346	71,388	2,641
	Steam, 712	710,623	24,554	709	708,695	24,503
	1,060	780,861	27,150	1,055	780,083	27,144
1898–99	Sailing, 445	71,058	3,365	457	76,218	3,535
	Steam, 975	839,391	31,938	972	841,052	31,809
	1,420	910,449	35,303	1,429	917,270	35,344
1899–00	Sailing, 394	64,425	3,073	389	64,172	3,027
	Steam, 793	832,636	29,263	793	832,278	29,348
	1,187	897,061	32,336	1,182	896,450	32,375

The figures it will be observed are higher than in any of the other years compared, except 1898-99.

The majority of vessels trading with Jamaica are British or from British Possessions. Of sailing vessels, there were 295 British out of a total of 394. Only eight of the British sailing vessels were from the United Kingdom, the remainder being from British Possessions. In 1898-99, there were 319 British out of a total of 445.

Of steamers, there were 427 British out of 793 for all nations, as against 514 in 1898-99 out of 975, the figures exhibiting a considerable decrease. There were thus, in 1899-1900, 722 British vessels and 465 Foreign vessels entered at ports in this island. The average tonnage of British sailing vessels, the great majority of which are owned in the West Indies, is very small compared with that of those of Foreign nations, but the converse holds for steamers. Thus, of sailing vessels entered, there were :—

British 295, with a tonnage of 23,155, or an average of about 80 tons each ;

Foreign 99, with a tonnage of 41,270, or an average of about 417 tons each.

But of steamers :—

British 427, with a tonnage of 528,109, or an average of about 1,236 tons each ;

Foreign 366, with a tonnage of 304,527, or an average of about 832 tons each.

The greater number of Foreign vessels were Norwegian and American. Of the former, there were 221, of which 29 were sailing vessels, and of the latter there were 150, of which 40 were sailing vessels.

DIVISION III.

LEGISLATION.

Of the laws which were passed by the Legislative Council during the Session of 1899, the following were the most important :—

Law 1, of 1899, providing for the temporary working of any portion of an authorised tramway, pending the completion of the entire works. This law enabled the West India Electric Company, then laying down a system of electric tramways in the

town of Kingston and the surrounding districts, to obtain a licence for each section of the system as completed, and to legally work these sections.

Law 2, of 1899, which increases the proportion of the cost of return passages to India, payable by Indian immigrants who have completed their term of engagement in the Colony. It is provided that the rights of immigrants indentured previous to the passing of the law shall not be affected by it.

Law 5, of 1899. The District Constables Law, which abolishes the rural police and substitutes therefor a force of district constables, who are paid only when called upon for duty.

Law 6, of 1899. A Law to Consolidate and Amend the Gunpowder and Firearms Laws. This law repeals and consolidates certain portions of the laws on the subject of gunpowder, explosives, and firearms, and substitutes the resident magistrate for the custos of the parish, and a special session of justices of the peace as the licensing authority. Formerly, considerable difficulty often arose in getting together a sufficient number of justices to form a quorum and constitute the special session. Under this law the resident magistrate of a parish may grant licences at any time on application being made to him. Provision is also made in the law for regulating the storage, packing, &c., of gunpowder and dangerous explosives.

Law 7, of 1899. The Succession Duty Amendment Law, which exempts property situate in the United Kingdom from payment of succession duty in the Colony.

Law 12, of 1899, which authorises the acquisition of any lands by the Kingston General Commissioners for the purpose of any undertaking authorised by them.

Law 13, of 1899. This law authorises the Kingston General Commissioners to borrow from the Government—and the Government to lend the Commissioners—a sum of £40,000 for the purpose of improving the water supply of Kingston and the Liguanea Plains of St. Andrew, whilst Law 15 empowers the Government to borrow that amount for the purpose of lending it to the Commissioners.

Law 20, of 1899. The Tariff Law. This law consolidates and amends the laws of the Colony levying duties on imports. By this statute all unenumerated goods are subjected to an *ad valorem* duty on importation of £16 13*s.* 4*d.* per £100, the rate having previously been 12½ per cent. The schedules embody a list of goods on which special rates of import duty are leviable, and a list of goods to be admitted free. The effect of the law is to substantially increase the taxation on imported goods.

Law 22, of 1899. The Stamp Duty Law. This law was passed with the object of increasing the revenue by imposing

higher stamp duties on certain documents, and making certificates of naturalization and passports issued by the Governor liable to stamp duty.

Law 23, of 1899. The Elementary Education Amending Law. This law limits the status of the Board of Education to that of an advisory body, and transfers to the Governor in Council the power to make alterations in the Education Code. It also shortens the period within which a child may be taught in a public elementary school, by raising the age of admission from five to six years. The first change will enable the Government to more effectually control expenditure, and the effect of limiting the period during which a child may attend an elementary school will, it is expected, be an annual saving of some thousands of pounds.

Law 26, of 1899, provides fuller facilities for marriage by the civil form of contract.

Law 28, of 1899, authorises the Governor to borrow on debentures repayable within fourteen years a sum not exceeding £50,000, and to advance the same to the Kingston General Commissioners for the purpose of completing the connection of private houses with the main sewers of Kingston.

Law 34, of 1899, provides for vesting in the Governor of Jamaica, so soon as the final decree should have been made for the transfer of the Jamaica railway and all property belonging thereto, all the rights and powers possessed by the Directors of the Jamaica Railway Company.

During that portion of the Session of 1900 which fell within the financial year ending on the 31st March, four laws were passed, the more important being—

Law 1, of 1900. The Railway Loan (Imperial) Law, which gives the Governor power to borrow £198,000 from the Imperial Treasury at 2¾ per cent. interest, for improving the Jamaica railway, for purchasing rolling stock, etc., and paying arrears of interest due to holders of first mortgage bonds of the Railway Company.

Law 2, of 1900, which gives the Governor power to borrow £105,000 from the Imperial Treasury at 3½ per cent. interest, for the purpose of repaying to the Treasurer of Jamaica or the Crown Agents for the Colonies moneys advanced to the Kingston General Commissioners, and make the payment of an annuity for the interest and repayment of the loan a charge upon the funds of the Commissioners.

DIVISION IV.

EDUCATION.

ELEMENTARY SCHOOLS.

Comparative Statistical Table:—

Year.	Schools on Annual Grant List.	Schools Inspected.	Scholars on Books.	Scholars in Average Attendance at Inspection.	Average Attendance from Monthly Returns.	Percentage in Average Attendance of Number on Books.	First Class Schools.	Second Class Schools.	Third Class Schools.	Total Payments to Elementary Schools and Teachers.
										£
1898-99 ...	893	876	97,091	57,508	54,041	59·23	176	397	267	51,561
1899-1900 ...	746	776	98,598	61,219	51,470	62·08	187	357	219	47,240

The most noticeable feature in the above return is the diminution in the number of schools, owing to the closing or combination of many small, superfluous and inefficient establishments, in accordance with the recommendations of the recent Education Commission. The difficult duty of deciding from what schools Government aid should be withdrawn has been exercised with great care and deliberation. A list of schools to

be closed was prepared by a special Committee, was revised by a Committee of the Legislative Council, and then approved by the Board of Education. In the end, the original list was somewhat reduced, future amalgamation being determined on instead of immediate closure in certain cases.

Schools Insvected.

The number of schools returned as inspected is greater than the number on the grant list, some schools having been inspected which were subsequently closed. It appears that in the early months of the year there was a considerable increase in average attendance, and in the later months a notable decrease, the net decrease being 10,639 scholars. The decrease is accounted for, in the opinion of the Inspectors reporting, partly by the exceptional weather of the last quarter of the year 1899, partly by the raising of the limit for admission to Elementary schools from 5 to 6 years of age, and partly by the non-recognition of Infant schools, except those conducted by well qualified Kindergarten teachers, and the raising of the lower limit for admission to such schools from three to four years of age.

In effect, from the 30th June, 1899, when the changes came into force, children of three, four and five years of age ceased generally to attend school, the exceptions being those of four and five years in a few Infant schools specially sanctioned.

The closing and amalgamation of schools was principally carried out at the end of September, 1899. During the first three months which followed, the average attendance was 39,827, during the following three months 51,029. The Superintending Inspector of Schools thinks it probable that after the closing of schools those parents who only sent their children fitfully to school when it was near their door, discontinued sending them altogether. In some instances, private schools, unfortunately with little efficiency or prospect of permanency, have taken the place of closed Government Schools.

The principal cause of the decreased numbers and percentage of third-class schools is the fact that nearly all the schools closed were of the lower classes. Notwithstanding the educational changes of the year, the number and percentage of 1st class schools, which are in increasing ratio to lower class schools, were the highest yet attained.

The decrease in "Total payments to elementary schools and teachers," is partly due to the closing of schools and partly to changes under the Education Code of 1899, viz.—the diminution of the special grant hitherto given to 1st and 2nd class schools with an attendance of over 80, the withdrawal of the bonus grant to certificated teachers in charge of third class schools and its reduction for the higher class schools, and the material reduction of the sewing grant. These reductions in

JAMAICA 1899-1900.

grants, rendered necessary by the financial difficulties under which the Colonial Government is labouring, have affected the incomes of a large number of teachers who have, it is gratifying to report, endured this loss of emolument in a manner most creditable to their loyalty and public spirit.

The total amount expended on Education in 1899-1900 was £60,000, against £66,123 in 1898-99. The decreases took place almost entirely under the heads of schools grants and aid to Training Colleges, though economy was also effected in the administrative branch, by a decrease in the number of Inspectors. The female Training college at Shortwood was removed from the list of Institutions managed by the Government, and placed, from the 1st April, 1899, under a Board of Directors, consisting principally of leading Ministers of the several religious denominations. This Board has succeeded so far in carrying on the college in a satisfactory manner and at a reduced cost. Other decreases under this head are due to the closing of the Moravian Training College at Fairfield in Manchester, and the reduction in the number of students for whom a maintenance grant is allowed. The third year students from Fairfield College have been transferred to the Mico Institution; and Calabar College, a Baptist Institution in Kingston, received a grant for 1899-1900, for its third year students only, but will not receive any further grant. Most useful work has been done both at Fairfield and Calabar in the training of elementary teachers, and the discontinuance of the maintenance grants implied no disparagement of those Institutions, but was decided on on the ground that the Mico Training College, having extensive grounds and easy access to the Kingston Manual Training School, affords greater facilities for giving training in methods of agricultural and manual teaching. Moreover, not only can the Mico Institution accommodate a greater number of students than those already transferred to it (including 12 from the late Mico Training college at Antigua), but there is space for its extension to provide for any future increase in the number of young men to be trained as teachers of elementary schools.

Much improvement was shown in the work of the Training colleges. Compared with the preceding year the percentage of passes was 91·3 as against 70·9, and of passes in honours 18·3 as against 12·3.

The total numbers of candidates presented and passed were:—

Students.

Year.	Presented.	Passed.	Honours.
1898-99	179	127	22
1899-1900 ...	150	137	29

Teachers.

Year.	Presented.	Passed.	Honours.
1898–99	18	6	—
1899–1900 ...	9	3	—

The lack of success of teachers as compared with students at these examinations is probably attributable to teachers not keeping up their knowledge after leaving college, and perhaps also to many teachers having received an inferior training to that now enjoyed by students.

Subjoined is a comparative table of examinations of pupil teachers and of candidates for trade and other scholarships for admission to training colleges and for exhibitions at other schools.

Year.	Presented.		Passed.	
	Pupil Teachers.	Voluntary Candidates.	Pupil Teachers.	Voluntary Candidates.
1898–99	533	1,099	212	183
1899–1900... ...	480	662	259	190

As in the case of examinations of Training colleges and teachers, the numbers presented were less, and the passes more. There is a marked inferiority in both years in the voluntary candidates compared with the pupil teachers. The examination was held in July, 1899.

The Superintending inspector reported that the percentage of passes, while considerably in excess of those in 1898, was almost the same as in 1897, and a little below those of 1896.

It is regrettable that Training college candidates, who will hereafter be teachers, chiefly failed in the papers on school management, and showed a reliance mainly on book work, indicating that their past training as pupil teachers had not been of much benefit to them in this respect. It is not surprising therefore to learn that the pupil teachers showed at the

examination but little advance in the art of teaching. The new code of 1900 compels teachers and pupil teachers to devote more attention to this art.

Most Inspectors report improvement this year in the teaching staff, leading to corresponding improvement in the quality of the work done. In one district a decline is reported, owing largely, the Inspector believes, to certain teachers having too much divided their attention between private undertakings and their school work.

In many schools additional women teachers are now being employed, their services being preferred to those of pupil teachers.

The increased employment of women teachers is one of the greatest needs in the educational system of the Island. Male teachers have, however, this advantage among others, in the preference of the managers that they can and generally do give considerable assistance in ecclesiastical functions.

Regretfully I feel bound to refer to the observations made in the inspectors' reports on dishonesty and immorality among the male teachers. No doubt a large proportion, if not the majority, of the schoolmasters are men of unexceptional character and a credit to their profession, but many instances of falsification of registers and of their careless and illegal posting are stated to have come to light during the year. A return made this spring to the legislative council of the numbers of teachers dismissed within a recent period, and the causes, revealed a most startling and deplorable prevalence of unchaste conduct on the part of schoolmasters. That return has an important bearing on the controversies respecting our educational system and expenditure which have filled the last two years. A study of the report and evidence published nearly two years ago by the very important commission appointed to enquire into the system of education in Jamaica produces the impression that there has prevailed in this Island a tendency to suppose that an expenditure of money on schools and schoolmasters is synonymous with an expenditure on education. If it means, as for want of better material in Jamaica it has evidently in a number of cases meant, the bringing of boys and girls under the influence of tricky and unscrupulous persons, it may be education of a sort, but the children are better without it. If it means nothing worse than that a number of inefficient schools and teachers have been fostered out of the taxes, those critics of the Government would still be very far from the point who have charged it with opposition to education because it has cut down the Education vote. It cannot, I think, be questioned that the labours of the Board of Education, arising out of the Education Commission report, and resulting in the new codes of this year, for elementary schools and for Training colleges, are bringing it about that more true education is being given now in the Island

for much less money than was being given three years ago. This process and this aim can be pushed further and as in the Parochial Administration, so in the educational there is room for a better return of value to the community at a less cost in taxation. No visitor to country schools in Jamaica can fail to be struck with the brightness, docility, musical talent and pleasant demeanour of the children, nor, too often, with the parrot-fashion of the instruction. Unless real justice can be done to this material of human life when we get it into the schools, it will very easily do better for itself outside of them.

It is hoped that the important changes introduced by the new codes above referred to will rapidly further improvements. These changes include an increase of marks for the principal subjects, with a large increase for agricultural science and for organisation and discipline, with greater attention to manual training and practical work in gardening and agriculture.

In elementary schools, the simpler elements of these will be taught, while certain subjects will be curtailed, and the full curriculum will only be required in first-class schools.

To allow of more thorough training in the art of teaching in Training colleges as well as in manual training and agricultural science with demonstrations, former requirements in mathematics, geography, history, and music have been curtailed.

The appliances of education in schools will be more carefully looked after. An appliance grant for infant schools and in part for elementary schools, grants for libraries for schools and training colleges. For training college examinations, school management and general and agricultural science have been made primary subjects; students are required to serve for six years as teachers. Pupil teachers will have to pass a more rigid examination in the art of teaching. The curriculum for teachers seeking registration has been made more rigid, the raising of the standard being now possible, owing to the diminution in the number of schools, including the closing of low grade schools.

Special provision has been made for courses in agricultural instruction for teachers.

Secondary Education.

Schools under the regulation of the Jamaica Schools Commission.

The Jamaica Schools Commission is a body appointed under Law 34 of 1879, to have the general superintendence and control of secondary education and particularly of the Jamaica High School, which was specially established under that law for the promotion of higher education. Since the passing of the law, University College has been founded and is also under the

JAMAICA, 1899-1900.

control of the Commission. This college aims at giving something analogous to University education, and arrangements are made for holding the pass examinations for the University of London for the degrees of B.A. and LL.D. in the colony.

The Schools Commission regulates the management of the several endowed schools of the colony, most of which derive their income from the payment by the Government of the perpetual annuities set forth in the schedule annexed to the Act 28 Vic. c. 23, and interest on deposits made under 27 Vic. c. 19, in consideration of their endowments having been taken over by the Government.

The number of boys at the Jamaica High School varied during the year between 43 and 49, the latter being the number on the 31st March, 1900. At the Cambridge local examination the school received an excellent report. All the candidates who entered, passed. Of the five senior candidates, 4 obtained Honours, one of them being second among distinguished candidates at this examination throughout the Empire in arithmetic and also in pure mathematics. Of the 17 junior candidates, 10 obtained Honours, 1 gaining four marks of distinction.

Three students were in residence in University College.

The endowed schools under the control of the Schools Commission are :—

School.	Locality.
Wolmers Schools	Kingston.
Titchfield School	Port Antonio.
Secondary School	Montego Bay.
(Under Guthrie Davidson's bequest 4 scholars at this school are elected by the Parochial Board of St. James.)	
Ruseas Trust Schools	Lucea.
Mannings School	Savanna la Mar.
Munro and Dickenson's Schools ...	In Mountains of St. Elizabeth.
Middle Grade School	Mandeville.
Vere Trust Schools	Vere District in lower Clarendon.
Beckford and Smiths School ...	Spanish Town.

The Jamaica High School, previously mentioned, is situated in St. Andrew, five miles from Kingston. The Trust Fund of Walton School in St. Ann was incorporated with it by Law 34 of 1879, and provision made for the education of a certain number of foundationers from St. Ann. Thus provision is specially made for the higher education of the Colony in 11 of the 14 parishes, the endowed schools being so distributed throughout the Colony that there is little difficulty in parents anywhere taking advantage of them to obtain a sound education for their children at a moderate cost or as foundationers.

The number of pupils at each school were :—

Wolmers.

Boys at beginning of year, 131 ;	at end	...	... 118
Girls „ 86 ;	„	...	... 129

Titchfield Secondary School.

Average of 13, or 1 more than last year.

Elementary School.

Boys, 106 ; Girls, 84 ; Infants, 101		...	... 291
Average attendance ...	...	...	... 187

Rusea Schools (no girls).

Boys at beginning of year, 27 ;	at end of year	... 23

Mannings School.

Boys, 36 ; Girls, 31	... 67

Munro and Dickenson's.

Boys	... 58
Girls	... 61

Manchester Middle Grade School.

Average	... 23

Vere Schools (7) (Elementary).

Total average attendance	... 759

(These are elementary schools, but 3 scholarships at the High School are provided for in connection with them).

Beckford and Smiths School (Boys).

No. at end of year	... 23

The Cambridge local examination is the test examination for these schools. At this examination the results for most of the schools were very favourable. For example, at Wolmers, of 40 boys who entered for this examination, 35 passed : 8 in honours, 7 gained distinctions ; of 32 girls who entered, 22 passed : 2 in honours and 4 gained distinctions.

JAMAICA, 1899-1900.

At the Munro and Dickenson's school for boys, of 22 who entered, 7 gained first-class and 7 second and third-class honours. At the girls' school, of 16 who entered, 3 seniors took second-class honours and 1 junior third-class. Other schools also showed creditable results generally.

Besides the above-mentioned institutions, there are five training colleges for teachers, two undenominational (the Mico and Shortwood), with St. Joseph's (Roman Catholic), Calabar (Baptist), and Bethlehem (Moravian). St. Joseph's, Shortwood, and Bethlehem are for females, and trained in 1899–1900, 6, 30, and 19 students respectively; the Calabar and Mico trained 12 and 80 respectively. Fairfield, a Moravian college for males, was closed on the 31st December 1899.

The Government grants annually one scholarship of £200 a year for three years, tenable during university or professional study in the United Kingdom, two of £60, tenable for three years in Jamaica, four of £15 a year for boys and one for girls, and eight of £10 for boys and two for girls tenable for one year at schools in the Island.

INDUSTRIAL SCHOOLS.

The following summary shows the principal particulars regarding the industrial schools of the Colony during this, as compared with the preceding, year, viz :—

—	Hope.	Shortwood.	Alpha Cottage.		Belmont.
	Under control of

	162

Total :—

Boys, 1899-1900	79
Girls „	71
	150

At Hope School the bigger boys do field and garden work, housework, limewashing quarters, and receive Agricultural training daily at Hope Gardens. Small boys keep the grounds and roads in order.

At the other schools, boys do work as at Hope School, but do not receive any instruction from the Botanical Department.

At Alpha Cottage, boys cook as well as girls. Girls do some field and garden work, but are chiefly engaged in needlework, washing and cooking. They also make hats and baskets.

School is kept in all. The marks gained in 1899-1900 have only been reported from Alpha Cottage, where both boys and girls' schools attained the First Class.

Nearly all the children discharged are reported to have obtained employment, and to be giving satisfaction. Most of the boys from Hope are engaged in horticulture, while those from Alpha Cottage have been chiefly apprenticed to tradesmen.

DIVISION V.

V.—GOVERNMENT INSTITUTIONS.

(A.) HOSPITALS.

Public Hospital, Kingston.

3448 patients were treated in the Hospital during the year; the number treated in 1898-99 was 3561; 3392 were refused admission for want of room and other causes. Of the number treated 2504 were cured, 375 were relieved, 124 were not, while 257 died, and 190 remained in hospital at the close of the

JAMAICA, 1890–1900.

period. Of the patients that died, more than one-fourth were admitted to the Institution in a moribund condition, but, notwithstanding this fact, the death rate of 7·45 per cent. was almost identical with that of the preceding year.

There were 1062 operations, with 16 deaths, a percentage of 1·5. 751 out-door patients with tickets from the Inspector of Poor were treated, and 6,768 prescriptions dispensed for them —959 for Constables, and 382 for the Maternity Hospital,— while 6,768 casualties were attended to.

The Chief Medical Officer and Director of the Hospital states that the satisfactory results attained during the period under review were mainly due to the skill and attention of the medical officers and the devotion of the nursing staff.

Dr. C. W. M. Castle was appointed Senior Medical Officer of the Institution in June, to fill the vacancy caused by the death of Dr. Boyd.

The financial statistics given below for the financial year ended 31st March, 1900, show that there has been a decrease of £849 in the expenditure of the Institution since 1897–98, thus reducing the annual cost per bed from £43 0*s*. 2¾*d*. to £38 3*s*. 10*d*.

This reduction is a satisfactory indication that greater economy is being observed in the administration of the Hospital, although the cost per head is still considerably higher than in other kindred Institutions. At the same time it must not be forgotten that a very large amount of time and attention is given by the staff to out-door patients, which is not taken into account in the tables.

The amount of refunds to the Treasury by paying patients shows a reduction, only totalling £205 16*s*. 2*d*. against £278 2*s*. 8*d*. in 1897–98.

Return showing the Cost of each Patient in Public Hospital for the years ended 31st March, 1898, 1899, and 1900 :—

1899–00	Personal Emoluments.	3,956	15	6	203	2	1	38	3	10	3,448	2	4	11½	205	16	2	7,547	3	10	2	0¼	37	3	6¾	2	3	9
	Other Charges	3,796	4	6																									

Maternity Hospital, Kingston.

581 patients were admitted for treatment during the year, as compared with 500 for the previous year 1898-99, including an infant found at the gate of the Institution.

36 cases were refused admission owing to want of accommodation, and on several occasions it was found necessary to provide for serious cases on the floor of the ward. To avoid overcrowding, admission is now restricted to holders of tickets previously obtained from the matron, but two beds are always reserved for complicated cases unforeseen.

There were 560 births, 66 of which were still-born, while there were 11 cases of twins. 9 deaths occurred among the patients.

Nine pupil teachers completed their training and ten entered the Institution during the period under review.

The chief medical officer and director bears high testimony to the zeal and interest displayed by the staff, who he states have worked at high pressure throughout the year. Medical visitors from abroad have also expressed their appreciation of the Institution, notably the medical officer of the Boston Lying-in Hospital, who stated that he found the hospital to be in every respect the equal of his own institution.

The following table of expenditure for the financial year ended 31st March, 1900, shows that the annual cost of each unit in the institution has been reduced from £46 3*s.* 2½*d.* in 1897-98 to £39 1*s.* 9¼*d.* in 1899-1900. This however appears to be due to the fact that the pay of the visiting surgeon is now included in his salary as medical officer of the General Penitentiary.

It will also be observed that the amount of dues paid into the Treasury has increased from £99 18*s.* 6*d.* in 1897-98 to £159 17*s.* 0*d.* in 1899-1900.

Return showing the Cost of each Patient in the Victoria Jubilee Lying-in Hospital for the years ended 31st March, 1898, 1899, and 1900.

Year.	Gross expenditure for the year.	£ s. d.	Average daily number of beds occupied.	Daily cost of each patient and pupil nurse. s. d.	Annual cost of each patient and pupil nurse. £ s. d. Public General Hospitals.

There were 9,426 new admissions to the 19 Public General Hospitals of the Island during the nine months ended 31st December, 1899. Altogether 9,775 patients were treated, as follows :—

Constables	533
Paupers	24
Poor persons admitted without charge ...	3,525
Indentured Coolie labourers	5,507
Paying patients	167
Prisoners	19
Total	9775

The newly arrived Coolie immigrants, not having become acclimatized, were responsible for more than half the admissions.

The death rate averaged only 2·62 per cent. for all the hospitals, or a fraction less than the previous year. The rates ranged from nil in one hospital and between 1 and 2 per cent. in seven hospitals, to 2, 3, 4, 5, and 8 per cent. in the others, the highest being 9·52 per cent.

The prevailing diseases were malarial fevers, rheumatism, diseases of the respiratory and nervous systems, skin affections, dysentery, syphilis, and urinary affections, the first-named being most noticeable after the heavy rainfall in the last quarter of the year. The mortality was highest in cases of enteric and pernicious fevers, which, however, were few, and as a rule the most prevalent diseases were of a benign type. The record of recoveries after operations is generally extremely good throughout the Island, exhibiting the general healthiness of the hospitals in this climate.

The hospitals are periodically inspected by the Superintending Medical Officer and every effort is made to combine economy and efficiency in the administration. Not only having regard to the recent curtailment of ways and means, but absolutely, the hospitals as a whole produce a most creditable and satisfactory impression.

(B.) ASYLUMS.

(i.) *Lunatic Asylum.*

During the year 956 persons were under treatment in the Lunatic Asylum, at a total cost of £13,559 10*s.* 1*d.*, of which

£11,514 19*s.* 3*d.* was contributed out of the parochial poor rates, and £454 9*s.* 1*d.* was reimbursed by paying patients. The average daily number of patients was 789 against 775 in 1898-99, and the number remaining in the Institution at the close of the year was 819, an increase of 52 on the previous year.

The weekly cost of maintenance chargeable to the parishes, after deducting the reimbursements of paying patients, was at the rate of 6*s.* 4*d.* per head against 6*s.* 7*d.* in the previous year. The nett average cost for the year was £16 11*s.* 6½*d.* per head, and the gross average cost £17 3*s.* 1*d.*

There were 189 admissions during the year, against 168 in the previous year; discharges 69 against 123; and deaths, 68 against 63, but the death rate of 7 per cent., although somewhat in excess of the previous year, is still below the average of the past 10 years.

The crowded condition of the Institution may be partly responsible for the slight increase of the death rate, and it is to be regretted that the finances of the Colony do not at present admit of the completion and equipment of the new buildings recently erected. The obstacle to making use of these buildings is not only the immediate cost of finishing and furnishing them, but the circumstance that, owing to their design and extent, a considerable increase of staff will be required to control them.

On the 17th October, 1899, there occurred the death of Dr. M. P. Cormac McCormack, who had been for 20 years Senior Assistant Medical Officer of the Institution and had rendered valuable service.

The fact that the expenditure of the year amounted to £13,559 10*s.* 1*d.* as against £13,651 4*s.* 1*d.* in the previous year, whilst the average daily number of patients rose from 775 to 789, is evidence that increased economy is being exercised in the administration of the Institution. Considering the great disadvantages under which the work is conducted, the administration of this Institution must be considered remarkably efficient, and creditable to the responsible staff.

(ii.) *Lepers' Home.*

There were 118 patients in the Asylum at the beginning of the year, 30 were admitted during the year, 3 discharged, 2 absconded, 20 died, leaving 123 inmates at the close of the year.

The continued decrease in the admissions as compared with the average of former years, indicates, in the opinion of the

JAMAICA, 1899–1900.

medical attendant, that leprosy is declining in Jamaica. The death rate of 13·5 per cent. is normal as compared with former years.

Of the 3 discharges, 2 patients were found to be suffering from other diseases than leprosy, and the other gave security for his private treatment.

The behaviour of the inmates has been good. They are now employed, under a system of awards which has worked admirably, in useful work about the Institution.

All the mattresses required for the patients have been made by the inmates, who have also done painting, masonry and whitewashing in the wards, effecting a saving in the expenditure.

During the year four acres of land adjoining the Institution were cleared and enclosed and put into cultivation by the inmates, greatly to the improvement of the sanitary surroundings of the Home, and also to the better contentment of the patients. More ground is now required for the same purpose.

The Institution has been efficiently administered under the supervision of the Medical Attendant, Dr. W. D. Neish, who devotes much attention to the study of leprosy, and has been selected as one of the collaborators in an International Magazine (*Lepra*), which it is proposed to establish for the discussion of this subject.

(C.) Poor Houses and Poor Relief.

The report of the Board of Supervision for the relief of the poor, which superintends the administration by the Parochial Boards of the system of poor relief in the Colony, shows that on the 1st April, 1900, there were 4,534 paupers in the Island against 4,497 on the 1st April, 1899, an increase of 37. Of these 3,723 were outdoor and 811 indoor poor in 1900, as against 3,797 and 700 in 1899.

The total number of paupers varies little from those of previous years. The average per 1,000 of the population for the year was 6·1, against 6·7, 6·6, and 6·2 in the three preceding years, so that there has been a slight decrease in the last three years of six paupers in every 10,000 of the population.

The average 0·6 per cent. compares favourably with England 2·6, Scotland 1·5, Ireland 2·2, Barbados 1·4, and British Guiana 1·0.

The total number of cases of registered poor during 1899–1900 was 5,323, of casual poor 1,461, and of orphans and deserted children, 276 ; as compared with 5,337, 2,058, and 347, respectively, in 1898–1899.

The total pauper expenditure for the year amounted to £40,495. The expenditure of last year was £43,228.

£12,182 of this year's expenditure was for the maintenance of pauper lunatics in the Asylum, and £3,365 for the maintenance of children committed to Industrial Schools. These figures show a slight decrease from those of the previous year.

The efficiency of the administration of the Poor Law varies considerably as between the different parishes, and in some cases leaves much to be desired in regard to method, efficiency and economy. The Board of Supervision is composed of gentlemen whose character, ability and position in the Island well qualify them for the duties of the Board, which they perform gratuitously. Their function is not the less valuable because it is inconspicuous and somewhat thankless, and inevitably brings them into some antagonism with the Parochial authorities whom they have to advise and correct. If they have not effected more of what is desirable in the improvement of the administration of of the Poor Law, it has, I believe, been not so much because they have not clearly grasped and inculcated sound principles, as because successive Governors, when their recommendations have been resisted by the Parochial Boards, have thought it advisable not to endeavour to force their acceptance upon the Parishes. This policy has, as I apprehend, been deliberate, and inseparable from the general policy of those experienced and successful administrators, of endeavouring to educate the parishes in self-government by leaving large responsibility to the Boards. It cannot, however, but be of value towards this process to have a body, such as this Board, composed of unofficial persons, themselves in some instances members of parochial Boards, to hold up a proper standard to the community in these matters, even if their advice is not always immediately followed.

The most important defect, perhaps, to which their report calls attention, is the failure on the part of the parishes in certain cases to use the poor houses efficiently and in accordance with the intention of their institution, and the laxity of the distribution of out-door relief. If the poor houses could be put in efficient order (which would involve expenditure unfortunately impossible at this moment, though it has not been impossible in the past, when the Board of Supervision has pressed it) and the Parochial Boards could be induced to recognise the defects of their methods, there is, I am of opinion, no parish which would not be able by efficient administration to reduce its pauper expenditure and lighten its rates.

The burden of the House Tax, which furnishes the bulk of the poor funds, and the difficulty of maintaining the solvency of those funds, have been much complained of lately, but certainly in one case the insolvency and the necessity of increasing the taxes has arisen from the palpable and persistent maladministration of the Parochial Board. Unfortunately the bulk of the

JAMAICA, 1899–1900.

taxpayers do not appear to realise that the greater part of the House Tax, of which they complain, is levied for and administered by the Parochial Boards which they elect; they regard it as a Government tax and seem to have little conception that its burden can be lessened by good administration on the part of their immediate representatives.

I think that the legislation of this year giving the Government greater supervision over details of expenditure and the power of effectual suspension of an inefficient Board, in the last resort, affords all the means of which the Government could advantageously make use at the present time for the improvement of Poor Law administration, and that this must and can only be effected by continuous attention to defects in detail and constant and patient pressure in support of the objects of the Board of Supervision.

D. REFORMATORIES.

Stony Hill Reformatory.

The following are the more important statistics of this Institution for 1899–1900, as compared with 1898–99 :—

GENERAL.	1st April, 1899.	1st April, 1900.	1898–99.	1899–00.
Boys in reformatory section	110	97		
" industrial school "	66	—		
	176	97	176	97
Daily average number of boys			187	163
Discharged			55	42
Percentage of boys discharged during the three years from April 1st, 1897–1900, respectively, who were reconvicted.			2·38	4·54
On licence during the year			1	22
Deaths			1	2

FINANCIAL.	1898–99.	1899–1900.	1898–99.	1899–1900.
	£ s. d.	£ s. d.	£ s d.	£ s. d.
Gross expenditure	—	—	3,412 11 2	3,102 10 7
Less earning by labour and sale of articles.	462 14 7	325 19 2	—	—

Average earnings of each boy			7 1 11	6 18 5¾
Rewards			44 6 9	32 11 6

Most of the boys in the Institution are of ages between 12 and 16. During the year 22 boys were licensed as apprentices to the United Fruit Company, to work on their irrigated banana estates at great Salt Pond in St. Catherine. Of this number 5 were discharged soon after licence and the other 17 returned to the Reformatory. The experiment was not successful, the boys suffered considerably in health, owing to the malarious situation of the estate, and the arrangements for their control and supervision did not prove efficient; similar previous experiments in the licence system have as a rule failed equally.

The girls reformatory at Admiral's Pen having been closed, arrangements were made for receiving girls in a portion of the premises of the Boys' Reformatory at Stony Hill. The space is restricted and the arrangement undesirable and unsatisfactory. Ten girls were under charge here during the year.

The boys at the Reformatory are employed as usual in garden and field work, and as carpenters, blacksmiths, masons, bakers and tailors; and the girls in sewing, washing, and mending clothing for the Institution. The value of work done during the year for which no money return was obtained is estimated at £907.

Several cases of fever occurred during the year among the inmates, especially among the boys, who had been employed as apprentices at Salt Ponds, and a few cases of influenza of a mild nature.

The sanitary condition of the institution was good throughout the year.

There is a tendency to diminution in the number of boys at the Reformatory and Industrial Schools, owing apparently to the increasing reluctance of magistrates to send boys to these Institutions on account of the expense imposed upon the parishes by doing so.

This diminution results in an increase in the cost of management *per caput*, as the expense of the staff cannot be reduced proportionately and less return is obtained through the value of work done by the boys.

(E.) SAVINGS BANK.

The following is a comparative statement of the chief transactions of the Government Savings Bank during the past five years :—

Year.	No. of Depositors.	Amount of Deposits.	Amount of Withdrawals.
		£	£
1895-96	28,385	240,543	242,251
1896-97	29,719	227,562	234,462
1897-98	30,660	216,309	229,774
1898-99	31,870	225,431	212,689
1899-1900	32,860	218,415	254,665

The number of depositors may be subdivided as follows :—

Year.	Private depositors.			Government Deposits.	Total.
	£5 and under.	Above £5.	Suspense Ledger.		
1895–96... ...	19,929	7,437	678	341	28,385
1896–97... ...	21,402	7,260	673	384	29,719
1897–98... ...	19,518	7,066	3,641*	435	30,660
1898–99... ...	20,523	7,162	3,707	478	31,870
1899–1900 ...	21,485	7,264	2,641	470	32,860

Accounts of £5 and under average two-thirds of the total, showing that advantage is taken of the Savings Bank by the poorer classes, for whom it was principally intended. It will be seen that while depositors have increased in number, deposits have diminished since 1895–96, and that in 4 of the 5 years withdrawals exceed deposits. The sum of deposits for the quinquennium is £1,128,260 and of withdrawals £1,173,841 and an excess in the latter over the former of £45,581. As the interest now allowed to depositors is 2½ per cent. per annum, whereas before 1897 it was 3 per cent., it appears that profits for the five years and previous savings have had to be drawn upon by depositors during the present period of depression.

Comparing particularly the years 1898–99 and 1899–1900, deposits have decreased by £7,016, and withdrawals have increased by £41,976. The diminution has, however, been mainly in "Government Deposits," these are not in reality Savings Bank Accounts but deposits at call awaiting orders of the courts or the closing of insolvent estates, or estates in the hands of the Administrator-General. This class of deposits decreased in 1899–1900 by £12,781, while withdrawals increased by £30,576, a combined loss of £43,357. On the other hand, ordinary deposits increased by £5,661, any decreases occurring chiefly in fruit-growing parishes in the eastern and north-eastern portions of the island, which suffered severely from the storms in the autumn of 1899. Ordinary withdrawals increased by £11,400.

The assets of the Bank on the 31st March, 1899, were £493,795, and on 31st March, 1900, £468,616, a diminution of £25,179.

* *Increase due to transfer to suspense ledger of many accounts not operated on for years, chiefly those of £5 and under.*

JAMAICA, 1899-1900.

These assets were distributed in both years as follows :—

—	1898-99.	1899-1900.
SECURITIES HELD :—	£	£
Consols, 2¾ per cent....	20,405	20,405
Inscribed Stock } average interest 3¾ per cent.	213,501	213,501
Debentures } average interest 3¾ per cent.	218,028	218,028
	£451,934	£451,934
Government of Jamaica	41,817	16,367
	44	315
Total	£493,795	£468,616

The comparatively small amount to which the uninvested balance, for which the treasurer was accountable, had been reduced on the 31st March last will be noticed, being less than three and one-third per cent. of the whole deposits.

After payment of interest to depositors and the expense of management for the year, there remained a balance of £2,997 profit, to be carried to general revenue. The profits so earned during the 30 years of the bank's existence amount to £34,160.

There were 13 branches of the Savings Bank open every business day during the year, and 15 sub-branches open, some of them daily and some one or more days in the week.

DIVISION VI.

JUDICIAL STATISTICS.

(A.) POLICE.

The allowed strength of the police during the year was 777, being 76 less than in the preceding year, and the actual strength 770. The actual strength was made up of 17 officers, 135 sub-officers, and 618 constables, against 19 officers, 131 sub-officers, and 638 constables during 1898-99. The strength of the district constabulary (a force which has replaced the old rural police) was 744 on the 31st March, 1900, which, added to the regular constabulary (including officers), gave an effective police force on that day of 1,521 of all ranks, against 1,661 on the 31st March, 1899.

The principal duties, besides patrolling and attendance at Courts, performed by the Constabulary during the past five years are shown in the following return :—

—	1895–96.	1896–97.	1897–98.	1898–99.	1899–00.
Number of persons arrested on view and on information	8,775	8,351	7,330	7,183	8,669
Number of persons apprehended on warrants		1,780	1,629	1,264	1,375
Number of search warrants executed	151	142	148	188	188
Number of persons summoned	20,279	19,537	17,785	17,084	20,248
Number of persons subpœnaed	31,058	27,161	27,161	25,784	26,073
Number of prisoners escorted	9,911	11,542	12,081	8,912	8,175
Number of seizures under revenue laws	649	309	854	605	745
Number of post-mortems ordered	610	641	703	527	550

JAMAICA, 1899–1900.

There has been of late a marked improvement in the discipline and efficiency of the police; good reports are also received of the working of the new district constabulary. Increased attention is paid, and with good results, to the instruction of the men in their civil duties, and the local supervision of the inspectors and sub-inspectors has been made more continuous and efficient.

(B.) PRISONS.

—	Year ended 31st March.	
	1899.	1900.
Daily average number of prisoners in custody.	1,102	1,088
Number on last day of year	984	1,237
Commitments—		
To prison	3,818	3,624
To lock-ups	894	932
Total	4,712	4,556
Reconvictions	1,364	1,305
Deaths	31	34
Executions	—	—
FINANCIAL.		
	£ s. d.	£ s. d.
Gross expenditure	18,780 12 4¼	18,340 18 8½
Gross earnings in cash	6,275 2 1½	4,584 15 0½
Net cost of maintaining prisons ...	15,505 10 2¾	13,756 3 8
Cost per prisoner	11 6 11¾	12 12 10¼
Estimated value of labour yielding no pecuniary return.	6,401 19 8	8,499 8 9½
Estimated value of bricks, lime, &c., manufactured and stone quarried (General Penitentiary).	4,141 15 9	3,847 7 8

Of the prisoners in custody on 31st March, 1900, 1,098 were males and 139 females, in all 1,237, or an increase of 253 as compared with the preceding year. The committals to prisons and lock-ups were lower than in 1898-99 and in the four previous years.

The state of health of the General Penitentiary during the first three quarters of the year was excellent, but I regret to say that during the last quarter it was unsatisfactory. Of the 1,235 prisoners admitted to the institution during the year, 573 were males and 662 females. The surgeon reports that 9·77 per cent. of the males and 2·56 per cent. of the females were found on admission to be in feeble health; and of the 1,148 discharged, 8·49 per cent. were males and 2·26 per cent. females in feeble health. Continuous attention has been devoted to the problem of diminishing possible causes of ill-health in this institution, and substantial expense has been incurred on the recommendations of the medical department.

(C.) Criminal Statistics.

The following table shows an abstract of the criminal statistics of the past five years.

Offences as classified in Police Reports.	Apprehensions.					Convictions.				
	1895–96.	1896–97.	1897–98.	1898–99.	1899–00.	1895–96.	1896–97.	1897–98.	1898–99.	1899–00.
I. Offences against the person	7,040	6,653	6,500	5,389	5,693	3,309	3,140	3,008	2,410	2,432
II. Offences against property committed with violence.	429	394	350	313	335	245	264	229	206	217
III. Offences against property committed without violence.	5,004	5,700	5,488	4,226	4,262	2,586	3,021	2,995	2,270	2,424
IV. Malicious offences against property.	137	169	162	244	156	57	43	39	70	59
V. Forgery and offences against the currency.	48	25	25	33	26	29	9	8	17	17
VI. Other offences	16,477	16,201	14,329	13,573	15,712	10,473	10,188	8,969	8,639	10,630
Totals	29,135	29,142	26,854	23,778	26,184	16,699	16,665	15,248	13,612	15,779

Principal offences under above heads :—										
I. Murder, including infanticide.	12	16	13	6	6	5	1	7	1	—
Manslaughter	20	17	12	14	9	16	5	4	1	5
Cutting and wounding ...	847	835	861	600	450	302	449	476	349	235
Common assault	5,326	4,928	4,688	3,955	4,369	2,547	2,238	2,029	1,614	1,687
II. Burglary housebreaking, shopbreaking, &c.	417	375	339	292	314	239	253	224	201	213
III. Simple larceny	2,017	2,264	2,143	1,870	1,933	914	1,073	1,013	917	1,038
Praedial larceny	1,560	2,171	2,147	1,493	1,360	889	1,277	1,309	920	825
IV. Arson	18	29	29	29	26	1	3	5	6	7
VI. Disorderly conduct ...	4,728	5,097	4,098	3,816	4,377	3,474	3,658	2,826	2,752	3,332
Obscene and abusive language	3,805	3,585	2,869	3,070	3,060	2,058	2,035	1,584	1,774	1,868
Trespass	941	973	883	604	855	467	482	471	325	458

JAMAICA, 1899-1900.

The number of apprehensions was higher than in 1898-99 but lower than in 1895-6, 1896-7, and 1897-8. The convictions were also more numerous than in the two preceding years but fewer than in 1895-6 and 1896-7.

The tables show increases on 1898-9 in convictions for common assault, burglary, larceny, disorderly conduct and language, and trespass. It will be observed that disorderly conduct and obscene or abusive language furnish the largest numbers of any class of cases, and that the amount of serious crime is comparatively very small. Of the six arrests for murder, five cases were abandoned in the Superior Courts and one remained undisposed of at the close of the year under review. Five convictions were recorded out of the nine cases of manslaughter. Convictions for prædial larceny show a decrease of 133. This is, however, probably due to many cases of the offence not having been brought before the Courts, and not, I fear, to a diminution of the offence which is still the subject of much complaint throughout the Island. I am informed (and if it is true it is a most healthy and hopeful sign) that in an increasing number of cases aggrieved parties, when they have evidence against a prædial thief, are settling the matter themselves by exacting from him compensation instead of taking him before the Courts. This would indicate and must promote a growing strength of public opinion and vigilance against this form of crime, towards which the public is, in general, too tolerant and sympathetic.

DIVISION VII.

VITAL STATISTICS.

(A.) Population, compared with Figures of Last Census.

The population of the Colony on the 31st March, 1900, is estimated to have nnmbered 745,100 persons (males 360,600 and females 384,500) or an increase of 14,380 (males 7,380, females 7,000) on the estimated population on the 31st March, 1899.

According to these estimates and those of foregoing years, the population has increased since the Census of 1891 by 54,655 males and 50,958 females, or a total of 105,613.

The figures have, as usual, been obtained by adding the excess of births over deaths since 1891 to the actual population in that year, and are, therefore, only approximate.

The mean population for 1899–1900 is estimated by the Registrar-General at 740,171, and is calculated to the middle of the year. The marriage, birth, and death rates are based on this estimate.

From the 1st April, 1899, to the 31st March, 1900, there were 3,767 marriages, being a rate of 5·0 per 1,000 of population, and an increase of 405 on the number celebrated in 1898–1899.

The rate of marriages per 1,000 of population was in 1891–92 5·2, this rate was with slight variation maintained until the year 1895–96, when it was only 4·6, and thence decreased until in 1897-98 it was as low as 3·7. Last year it rose to 4·6, and this year's rate continues the upward tendency.

The number of births registered during the year was 31,259; this gives a rate of 42·2 per 1,000 of the estimated mean population, and is an increase of 3,611 on the number registered in 1898–99.

Of the births registered, 19,913 or 63·7 per cent. were illegitimate. The per centage of illegitimate births in the Registrar's returns has steadily increased each year since 1891.

The number of deaths recorded was 16,880, or 22·8 per 1,000 of the estimated mean population. The number recorded in 1898-99 was 15,290, or 1,590 less.

Of the deaths recorded during the year, 5,327, or 31·6 per cent., were those of children under one year old, and 7,619 or 45·1 per cent. of the number were children under five years old.

These figures show that of every 100 children born, 17·0 die before they reach the age of one year, and 24·3 die under five years old.

The mortality of legitimate and illegitimate infants under the age of one year is stated by the Registrar-General to have been respectively 12·78 per cent. and 19·46 per cent. This tends to show to what extent illegitimacy is responsible for the large loss of infant life.

Of the 16,880 deaths recorded, 13,395 or 79·3 per cent. were not medically certified. Thus a large proportion of persons appear to have died in the Colony during this period without medical aid in their last illness.

(B.) Public Health, General State of.

During the first six months of the year under review, the general health of the Colony appears to have been good; the latter half was, however, marked by a good deal of fever, chiefly malarial, due, it is supposed, to the abnormally heavy rains which occurred in October, 1899.

Local epidemics occurred of mumps, measles, influenza, and vomiting, and, in one district, typhoid fever. In some districts,

too, where the water supply is not plentiful, there were in the first three months of the year, in which there was comparatively little rain, a large number of cases of bowel complaints caused by the drying up and stagnation of the pools from which the drinking water in those districts is, as a rule, obtained by the peasants, who will not take the trouble to boil it before use.

There was much sickness among children in certain parts of the Island during the early months of 1900, owing principally to chills acting upon ill clad and ill fed bodies. Sickness among children continues prevalent, and their death-rate is generally high owing to the ignorance and negligence of parents in feeding and clothing them, and in some degree to parents' inability, through poverty, to obtain proper food and clothing.

Vaccination of infants seem to have been generally carried out. There is practically no re-vaccination.

Loose habits are responsible for a good deal of disease in this community, and the medical officers generally report that there is no decrease in the prevalence of cases of syphilis and gonorrhœa throughout the Island.

Yaws appears to be, however, slowly decreasing; this is a matter for some congratulation, as the Medical Department experiences no little difficulty in dealing with this disease, owing to the action of parents in exposing their children to infection, in the ignorant belief that sooner or later they must be attacked by this ailment.

The Superintending Medical Officer reports that leprosy, too, is slowly on the decrease.

(C.) SANITATION.

The Superintending Medical Officer reports favourably of the general condition of the Colony in regard to sanitary administration. In some of the chief towns of the Island, however, there is still need for improvement, and steps have been taken to bring the defects which are commented on by the District Medical Officers to the attention of the Parochial Boards, which are the sanitary authorities for their several districts. As a rule these bodies devote a good deal of care to sanitary matters; and whilst it may be said, generally, that some of the insanitary districts, owing to natural causes, such as the proximity of swamps, etc., could not be effectually dealt with except by the expenditure of large sums of money quite beyond the resources of the Boards, this is perhaps in a special degree the case in regard to Kingston, where a very great amount of improvement has been effected of late years, but much remains to be done which cannot be undertaken for lack of ways and means.

In fact the vital statistics of the capital remain, from a variety of causes, some recognisable and some perplexing and obscure, unsatisfactory and disappointing in view of the efforts that have of late been put forth and the expense that has been incnrred in the interests of the public health.

By a law of the session of 1900 the Town of Port Royal, formerly part of the parish of Kingston, has been made a separate parish, with its own Parochial Board, of which the Commodore on the Station is ex-officio Chairman. Regard for the health of the Garrison of Port Royal and the crews of Her Majesty's ships on the station made it desirable that special attention should be paid to the sanitary condition of the town. and it was judged that a Municipal Board, partly composed of military and naval officers, would best secure this object. A liberal contribution will be made from imperial funds towards the annual expenditure of the Board.

The Parochial Boards are, as stated above, the local Sanitary Authorities. There is also a Central Board of Health, appointed by the Governor, but which exercises no direct control over the local Boards beyond advising the Governor when referred to, and revising the rules framed from time to time. The Central Board has power to appoint Superintending Inspectors, but as no provision is made in the law for their payment this power is seldom exercised, and, except for a short time in 1897–98, the services of such an officer have not been at the disposal of the Board. The District Medical Officers are ex-officio Sanitary advisers to the Parochial Boards, but in Kingston a Health Officer is employed by the Mayor and Council, and the Boards throughout the Island employ Sanitary Inspectors. In Kingston, the sewerage works, the water and gas supply, the markets and slaughter house, are under the control of a Board of General Commissioners appointed by the Governor.

(D.) CLIMATE.

Rainfall, Temperature, Direction and Force of Wind.

On account of the conformation of the Island, which is intersected by a high range of hills running from east to west, the climate is very varied and the rainfall very unequal in the different districts.

In the month of January, the temperature in the plains ranges from a maximum of 85° to 87° Fahrenheit to a minimum of 62° to 65°, while in June the maximum would be 88° to 90° and the minimum 67° to 70°. At the Hill Gardens in January the maximum is about 65° and the minimum 55°, and in June about 70° and 57°.

For computing the rainfall, the Island is divided into four parts, corresponding with fair accuracy to the variations of the severity of the seasons in each. The North-eastern Division

JAMAICA, 1899-1900

comprises the parish of Portland and portions of St. Thomas, St. Andrew, St. Mary and St. Ann; the Northern includes parts of Hanover, St. James, Trelawny, St. Ann and St. Mary; the West Central (and Central sub-division) include parts of Clarendon, Manchester, Trelawny, St. Elizabeth, St. James, Westmoreland, Hanover and St. Catherine; and the Southern, parts of St. Thomas, St. Andrew, St. Catherine, Clarendon, Manchester, St. Elizabeth and Westmoreland. The highest hills attract the greatest number of rainclouds, and the hills themselves and any plains lying in the immediate vicinity to the northward or eastward experience the most frequent rainfall, because for ten months of the year the wind is either E., E.N.E., or N.E., while in the months of October and November it is variable. In October the fall rains, which are the heaviest and most general, come from the South-east.

During 1899 the rainfall in the different divisions was :—

Division.	Inches.
North Eastern ...	103·89
Northern	58·44
West Central ...	103·26
Southern	74·16
Mean	84·94

but for the last three decades it has been for the whole Island :—

Years.	Inches.
1870–9	67·41
1880–9	66·54
1890–9	76·15

The variations in rainfall according to locality will be better appreciated when it is stated that at Moore Town in Portland in 1898 the fall was 268·26 inches, while at the Lunatic Asylum in Kingston it was 30·7, and at Rose Hall in St. James 29·72 inches.

The year just passed was one of drought and flood. The spring rains (May) were only half the average, while in October and November 23·72 and 14·99 inches fell.

How severe the floods were in the North-eastern District may be judged from the fact that at Moore Town in October, November and December, the fall was 30·86, 62·27 and 36·20, or a total of 129·33 inches for the quarter.

DIVISION VIII.

POSTAL, TELEGRAPH AND TELEPHONE SERVICES.

The following tables show the comparison of the revenue and expenditure for postal and telegraph services during the three years ended 31st March 1900 :—

REVENUE.

Year.	Postages.			Commission on Money Orders.	Commission on Postal Orders.	Miscellaneous.	Total Postal Revenue.	Telegraph Revenue.	Grand Total.

It appears from the above that postal revenue in 1899–1900 was less by £1,254 6*s.* 5¼*d.* than that of the preceding year, and that telegraph revenue was less by £471 12*s.* 0*d.* The decrease in postal revenue occurred almost entirely under the head of "Packet" or ocean mail postage, inland postage having fallen off by only £128 11*s.* 7¼*d.* The decrease on packet postages was no doubt due to the reduction of foreign postage from 2½*d.* to 1*d.* per half ounce. The fact that the decrease on this item has only been £1,200 shows that there has been a considerable increase in the number of letters sent away from Jamaica. It may be mentioned in this connection that the Imperial Post Office estimated that the loss to Jamaica on the adoption of the Imperial Penny Postage Scheme would be £1,500.

The total revenue for the Post Office for the year was less by £1,722 18*s.* 8*d.* or about 6 per cent less than that for 1898–99.

The expenditure for the year under review shows a decrease of £1,269 6*s.* 6*d.*, which is accounted for partly under the head of Inland mail conveyance and partly under the head of "Services."

The decrease in the cost of conveyance of the Island Mails has been principally due to the discontinuance of contracts and the assumption by the Public Works Department of the work of carrying mails.

The statements also show that for the last three years there has been an annual excess of expenditure over revenue of about £10,000. This is due partly to the fact that the contribution paid by the Colony to the cost of the Royal Mail Service under the contract for the conveyance of the mails is in excess of the actual receipts for postage on ocean-going letters, and partly to the fact that all official correspondence, which used to bring in to the Post Office a revenue of £2,500 is now passed free. There is of course a corresponding decrease in the expenditure of other departments.

It must also be remembered that in a country like Jamaica, sparsely populated, and where much of the carriage of mails has to be done for long distances by road, whilst the Government has aimed at maintaining good and constant postal facilities on grounds of general policy and advantage, there must be great difficulty in keeping expenditure within the limits of revenue. Further efforts must, however, in present circumstances be made towards this end.

The number of letters and postcards received and despatched during the year under review was 5,073,350 or 82,627 in excess of the year before.

The number of registered letters dealt with during the same period was 202,467 or 12,946 in excess of the year before.

JAMAICA, 1899–1900.

It is gratifying to note that although in the last two years nearly half a million registered letters were dealt with, there was not a single case of miscarriage or loss.

The public have not to any great extent taken advantage of the scheme for the insurance of ocean-going letters. The Postmaster reports that from November, 1899, to the 31st March, 1900, there were only 11 letters with declared value of £504 19*s.* 0*d.*, despatched, and 9 letters with declared value of £211 19*s.* 0*d.*, were received.

The number of parcels received and despatched during the year was 15,978, of which 11,864 were received.

This number was an increase of nearly 600 over the preceding year, and the increase was no doubt in some measure due to the introduction of the new simplified scale of postage.

The number of ocean mails despatched and received was 3,468, as against 3,300 received and despatched during the preceding year.

It will be noticed that every year the opportunities for the despatch of ocean mails are greater. There are now two lines of steamers, the "Atlas" and the "United Fruit Company's" boats, which carry mails regularly (for there are many casual opportunities of sending a mail) to and from the United States, and these afford opportunities of communicating with Europe. There are also the usual fortnightly contract mails conveyed by steamer of the Royal Mail Steam Packet Company with great regularity to England.

There was a falling off in the number and amount of money orders issued between Jamaica and the United States of America, and Jamaica and Canada. The money order transactions show that the issue of orders in Jamaica on other countries was less by the sum of £3,240 17*s.* 5*d.* than that of the previous year, while the issues of other countries on this Colony were in excess by the sum of £37 19*s.* 8*d.*

The net commissions which accrued to the Colony as a result of the money order transactions detailed above, was £378 18*s.* 10*d.*, as against £392 9*s.* 11*d.* for the year 1898–99.

There was an excess of £1,792 4*s.* 0*d.* in the value of postal orders issued in 1899–1900 over those issued in 1898–99.

The Postmaster states that the electric car service is of great utility for carrying post office letter carriers and telegraph messengers. £100 is paid annually to the West India Electric Company for this convenience.

The receipts from the telegraphs have already been given in the tabulated statement at the beginning of this report. The number of messages sent during the year under review was 93,812, as against 97,368 in the preceding year.

The number of telegraph stations in existence at the end of the year was 70, there having been one new one opened during the year.

Telephones.

There are no Government telephone services in the island, but several telephone lines are maintained by private companies in Kingston and other principal towns.

DIVISION IX.

MILITARY FORCES AND EXPENDITURE.

(A.) REGULAR FORCES.

At the close of the year 1899-1900, there were in this Colony three officers on the General Staff and a strength of 1,726 of all ranks belonging to the regular forces. The total expenditure for the year on these forces was £127,609 8*s.* 2*d.*, which was defrayed from Imperial funds.

(B.) MILITIA.

On 31st March, 1900, the numbers of officers, non-commissioned officers and men on the strength of the Jamaica Militia, were :—

Kingston Artillery Militia	..	...	165
Kingston Infantry Militia	...	...	605

a total for both arms of 770. From the 1st April, 1899, to the 31st March, 1900, there were enrolled in the artillery 21, in the iufantry 65, and during the same period there were discharged from the artillery 24, and from the infantry 79.

The annual training of both artillery and infantry took place in January last, and was in every way satisfactory. The artillery proceeded as usual to Port Royal, where there are batteries of heavy guns. While at Port Royal the corps is regarded as part of the garrison, and the men are treated in every respect as are the regulars.

The infantry were encamped at Up Park Camp, on the open plain surrounding the War Department buildings. In this corps it has hitherto been the practice to pay the men the ration allow-

ance of 7*d.* per day, and allow them to provide their own food. This year, however, the men were rationed precisely as if they were in the field. Cooking was done in field kitchens, constructed on the regulation pattern, and rations served out daily to messes. The result was satisfactory in every way.

The progress of both corps in knowledge of professional duties and in general efficiency has been very favourably reported on by the Officer Commanding the troops, who has stated that he considers the militia to be now capable of rendering valuable aid to the regular troops in time of need.

(C.) CONSTABULARY.

The police (*see* Division VI., *A. supra*), numbering 17 officers, 135 sub-officers, and 618 constables, are drilled and trained in military exercises and in shooting. They are armed with Martini-Enfield carbine and sword bayonet.

DIVISION X.

GENERAL OBSERVATIONS.

The year 1899-1900 was, on the whole, a year of improvement and promise in the material prosperity of Jamaica, and although the experience of the latter months of the period were most disappointing, it cannot be said that the community did not in its course make substantial advance towards escape from the continued depression and anxieties of the three preceding years or at any rate improve its prospects of so doing.

A recapitulation of the totals of revenue and exports discussed above will support this conclusion, viz. :—

Years.	Exports.	Revenue.
	£	£
1895-1896	1,873,105	646,103
1896-1897	1,470,241	591,864
1897-1898	1,448,443	540,509
1898-1899	1,662,543	600,271
1899-1900	1,868,079	624,623

The island was in fact recovering its lost ground, although the export trade had only regained that year the level of the average of the preceding five years period, which was £1,857,701. A steady increase of investment in the planting of fruit was proceeding, the extensive new plantations of orange and grape fruit were maturing, and cattle pens were shaking off the effects of drought and disease. This sound foundation for increase in future prosperity remains, but the community as a whole had been drained of its available ready money and resources by the preceding series of lean years.

In the parishes of Clarendon and Trelawny the advantages of the rise in sugar prices were discounted by withering droughts in the season of the spring rains; the autumn season brought, on the 29th of October, a rainy day of exceptional severity, 20 ins., more or less, of downpour, accompanied by violent winds, caused widespread destruction throughout the island, and especially in the fine Banana districts of the north-east and east. Great damage was also done by this storm to the provision grounds of the peasantry, a mischief that only fully revealed itself when the crops came to be reaped. The immediate and direct loss caused by this storm is partially indicated by the exports, which for the first six months of the year 1900, were upwards of £250,000 less than in the corresponding half of the year 1899, and by the Customs and Excise revenue which very soon afterwards fell off, and still fail to come up to the rate of their yield last year. The total loss by the storm and by the drought of the preceding spring was, of course, very much more than is shown by their mere effect on the exports. The bulk of the population living from hand to mouth, any such calamity instantly shows its effect in a sudden arrest of spending power, and "scarcity of money" the prevailing phrase at such periods in discussions on the condition of the island is a literally true phrase at such times, although, owing to the bounties of soil and climate, it may not indicate prevalence of poverty of a painful or distressing character, except among those classes that are unable to profit by access to those bounties. More real distress is probably caused in Kingston than in the country districts by such conditions. The scarcity of money created throughout the island by the long period of depression, and renewed before the country had time to recover by the disaster of last October, is exemplified by the following list of remissions of parochial taxes recently granted, on proof that the householders liable had no property worth distraining on.

JAMAICA, 1899–1900.

Number of taxpayers relieved and amounts of taxes remitted by the Revenue Commissioner from the 1st April, 1899, to 31st July, 1900 :—

Parish.	No. of Taxpayers.	Amount remitted
		£
Kingston	1,367	2,274
St. Andrew	183	224
St. Thomas	128	160
Portland	76	89
St. Mary	49	53
St. Ann	109	89
Trelawny	599	833
St. James	220	121
Hanover	12	21
Westmoreland	553	826
*St. Elizabeth	374	235
Manchester	29	23
Clarendon	360	566
St. Catherine	516	684
Total	4,575	£6,198

A similar tale is told by the railway returns, as shown by the following comparative statement of goods and passenger traffic from October, 1899, to September, 1900, as and for the 12 months preceding :—

JAMAICA, 1899–1900.

Total, 1898–99, £124,495 3*s.* 4*d.*; 1899–1900, £96,789 12*s.* 7*d.* Decrease in traffic receipts, £27,705 10*s.* 9*d.* or about 22¼ per cent., exhibiting the enduring effects of the check which began to show themselves immediately after the end of October, 1899, in which month the traffic receipts were £3,766 7*s.* 1*d.* in excess of those of October, 1898, whereas for each subsequent month they have been far less than those of the preceding year.

The Government began the year in financial difficulties, and a report on the financial condition was being prepared by Sir David Barbour, K.C.S.I. His ultimate recommendations were :—

(*a.*) the passing of an Import Tariff Bill, which should give a revenue of £350,000 a year.

(*b.*) the increase of taxation on land.

(*c.*) the imposition of an Income tax at the rate of 6*d.* in the £.

(*d.*) the transfer to general revenue of quit rents, now reserved for the improvement of parochial roads, and of the licence duties for agricultural produce dealers, now carried to a special fund.

(*e.*) an excise duty on matches made in Jamacia.

(*f.*) the grant of assistance by the Home Government by loans, or by guaranteeing loans, to cover the floating deficit, to improve and equip the Jamaica railway and to cover the new debt of £150,000 which would be created when the railway should be vested in the Government on completion of the winding-up proceedings.

Sir D. Barbour's report was published in July, and about the same time there was published a report on the Railway by Mr. Elliott Cooper, an Engineer who had been specially employed to investigate its condition. Mr. Cooper estimated that an expenditure of not less than £110,000 would be required to put the Railway into good order and to equip it in such a manner as to enable it to earn a satisfactory profit.

It may be well to note further that the pending transfer of the Railway to the Colonial Government was to impose upon the Government the obligation of issuing £1,475,600 of 3½ per cent. inscribed stock, together with charges immediately payable, estimated to amount to £154,445, for arrears of interest due to Bondholders of the Railway, Stamp Duty and expenses on conversion of their Bonds into inscribed stock, and other charges of the transaction. These charges and obligations would take effect as soon as proceedings in the Supreme Court of Jamaica should be concluded.

On the meeting of the Legislative Council in March, and on the introduction of a new Tariff Bill to provide the amount of revenue mentioned above, there arose certain constitutional difficulties which extended into the year under report, but the bill eventually became law.

No further immediate action was taken on Sir D. Barbour's fiscal recommendations, but provision was made by the Imperial Parliament, in accordance with his suggestion, for lending £150,000 at 2¾ per cent. to the Colony to cover the floating deficit, £88,000 at 2¾ per cent., to pay arrears of interest due to the Railway Bondholders; £110,000 at 2¾ per cent. for Railway improvement and equipment; and £105,000 at 3½ per cent. to cover advances made to the Kingston General Commissioners for improvements and Sewerage Works in Kingston and for Water Works. No provision was made in aid of the Railway Inscribed Stock Loan of £1,475,600.

The proceedings for the winding up of the Jamaica Railway Company being still incomplete at the end of March, 1900, the railway remained in the hands of the trustees for the first mortgage bondholders. This continued interregnum further impaired the efficiency of the railway as regarded both administration and equipment, and deferred the prospects of the Government being able to render it a more serviceable instrument for the traffic of the Island. This appeared the more regrettable, because in the early months of the year 1900 a contract was negotiated by the Secretary of State for the Colonies with Messrs. Elder Dempster and Company for a direct service of steamers between Jamaica and England, specially designed to buy and carry fruit. The subsidy of £40,000 a year to be given to this line will be contributed in equal shares of £20,000 each by the Imperial and Colonial treasuries. The service is to commence in February, 1901, and will doubtless cause increasing calls upon the carrying capacity of the railway. In anticipation of the inception of this service, there has already been a great extension of the planting of bananas and other fruit throughout the country, and it is expected that the result of the new connexion will be a considerable increase in the trade of the Island. At the close, however, of the year under report and up to the date of writing, there was and continues a remarkable stagnation of trade, caused generally by the above-mentioned exhaustion of ready money throughout the community, combined with the high cost of cotton goods and other principal imports and the hesitation of merchants to place orders so long as the disorganisation of prices, freights and industries, arising directly or indirectly out of the war in South Africa, and the subsequent complications in China, continues unabated.

The experiences of the year show that any forecast as to the future prospects of trade must be highly speculative, but certain

JAMAICA, 1899–1900.

premises can be stated with assurance. There has been a considerable extension and some improvement of cultivation in the Island, and assuming that no calamity occurs there must be in the course of next year a very largely increased supply of bananas and citrus fruits available for export. Whether they will be profitably exported, and trade increased, will depend, first on whether good prices are offered by American buyers, who have lately been offering very poor prices; and secondly, on the development, the possibility of which has still to be proved, of a trade with the United Kingdom. It does not appear possible to expect much improvement in the profits from sugar and coffee, two older and really more reliable staples of the Colony, without an improvement in production which can only be effected by central factories for sugar and central curing establishments for settlers' coffee. There is now little inducement to a small settler to cure his small output well, because the wholesale buyer can only give him the price which the average quality of the settlers' crops, with which it must be sold, will justify, and this price is hardly remunerative, whereas well-cured coffee in a sufficiently large line could fetch double the price. On the other hand, the settler, not putting much value on his own time and labour, will hardly be persuaded to sell coffee to a factory in the berry for less than he can get for it cured in his own imperfect fashion. A careful study of the actual resources of Jamaica, whilst it gives an encouraging impression of the possibilities of comfortable maintenance for the inhabitants, impresses also with a sense of the limited and precarious character of the margin available for export at remunerative prices. Fruit, logwood, and pimento are exports which depend entirely for profit on prices and seasons which cannot be controlled. The prices of rum, coffee, cocoa, and to some extent those of sugar and other products, can be improved and their yield increased by attention, but this attention is likely to be diverted rather than stimulated by profitable seasons with other and less laborious crops. A very good season with good prices will cause an impression of prosperity, and this the more immediately because what is earned will be as promptly consumed, and, owing to the fact that it is hardly possible for any one to spend a "quattie" (1½*d.*) in Jamaica on anything except native grown food without contributing at least a farthing to the revenue, and that as soon as money is earned it is pretty sure to be spent, any spurt of prosperity will immediately reflect itself in an increase of revenue. The country has, however, very little reserve of internal industry producing commercial values. In a season that is favourable for the native-grown food supply, but not for exportable produce, the peasants are not much better furnished with purchasing power than they are in a season when ground provisions are scarce. The price of such provisions in such circumstances goes down to a ridiculous figure. Yams from Hanover are carried on mules or asses over the mountains and

sold in the plains of Westmoreland at 2*s.* 6*d.* per cwt. Because of the abundance of food, there is less inducement to take work at wages on estates producing a surplus for export, and consequently the buying of imported food falls off, and the revenue with it. The mainstay of the Customs revenue is the onerous duty on flour (about 50 per cent. ad valorem) and this is of course affected by local abundance. In times such as the Island has recently experienced, estates have not been able to offer for unskilled and unreliable labour a wage that can attract or retain the labourers. These accordingly, especially in depressed districts like St. Elizabeth, have drifted away from their old connexions and are not available for work if offered. They seek to take up grounds for themselves in the mountains or emigrate to Central America. The proprietors of estates producing on a large scale for export, whether of sugar or fruit, have more and more to rely upon imported Coolies, a costly form of labour, but on the whole very valuable to the Colony. 615 Indian immigrants were imported in June, 1899, for banana and sugar estates.

It has been necessary since the beginning of the present year 1900, to study very carefully the economy of the Colony, with special reference to the financial recommendations of Sir David Barbour and the new obligations that were falling on general revenue.

As was indicated above in the observations on the revenue and expenditure, there was a very large reduction of expenditure during the year, much of which was due to diminutions of the fixed establishment. Among the more important of these was the abolition of the offices of one district engineer and one superintendent in the Public Works Department, the amalgamation of the resident magistracies of St. James and Trelawny, the re-arrangement and reduction of medical districts, the abatement of the salary of the Inspector General of Police (on a new appointment), and the abolition of a first-class clerkship in his office and of two third-class Inspectorships, the abolition of one Inspectorship of schools and the reduction of the salary of the deputy keeper of the records. A scheme was also drawn up by a special committee for saving upwards of £1,700 a year by further reductions in the judicial establishment. Effect has been given to this scheme in regard to a considerable number of offices in the course of the current year.

It is evident that the financial administration of the Colony must continue for some time to be a matter of considerable difficulty and uncertainty. Whilst on the one hand it is essential to give all possible encouragement to agriculture and the investment of capital, the government is being forced towards the expedient of putting new taxes on cultivation and profits, at the same time it is compelled to retrench and to postpone expenditure on the maintenance and improvements of roads and to run into more debt in order to make the Island railway efficient.

A considerable amount of extraordinary expense was imposed upon the Public Works Department by the damages done to roads and bridges by the autumn storms, but notwithstanding this a rigid parsimony throughout the year kept down the total expenditure of this Department to a comparatively low figure.

Only £6,187 was spent on new works, £4,257 being for the new mountain road between Buff Bay and Hardware Gap. Of this amount £2,216 was paid for lands for portions of the road already completed. The cutting of the road was continued, and at the end of the financial year it was nearing completion, but a considerable amount of work remained to be done in the way of building retaining walls and culverts and in shaping and metalling.

£355 was expended out of the loan raised for bridges in Portland and for interior roads in St. Thomas.

£1,344 was spent on the enlargement (by prison labour) of the St. Catherine's district prison, but by the sale of stores and materials of an aggregate value of £1,093, the nett expenditure for the year was reduced to £251. The completion of this work will enable the Middlesex and Surrey County gaol to be closed.

A further payment of £1,494 was made to the architect employed to design the proposed new public offices for Kingston, making the total cost of plans, and specifications to date, £5,366 19*s.* 8*d.*

There is no early prospect or possibility of the construction of these buildings being undertaken.

The Rio Cobre Irrigation Works in St. Catherine extended their usefulness and increased their profits during the year. The nett earnings have increased from £1,154 in 1890-91, to £4,266 in 1899-1900, and there are now 10,578 acres under irrigation, of which 5,325 is returned as banana cultivation. Progress was made with the arrangements for guaranteeing by agreements with the landowners, the interest and sinking fund of this approved loan for irrigation in Vere, and shortly after the close of the year it was found possible to take steps for beginning the laying out of the canal.

The special attention of the Government is and must be increasingly devoted to the improvement of the Colony's agriculture. The creation of an Agricultural Department, the modification of the functions of the existing department of Public Gardens and Plantations so as better to serve the practical needs of the Island, the appointment of an agricultural lecturer under the Imperial Department of Agriculture centred at Barbados, and of an agricultural chemist, the increased provision by the new code for grounding elementary scholars in understanding of agriculture, the arrangements for training

teachers, show altogether a considerable degree of real progress in this direction.

At the same time, the year has been notable for attempts to prepare the way for improved trade, both by the arrangements above mentioned for the direct line to England, and by the negotiation of a reciprocity convention with the Government of the United States of America, to secure, in return for certain abatements in the duties levied here on imports coming chiefly from that country reductions of the United States duties on sugar, citrus fruits, pineapples and other Jamaica produce, and the maintenance of the free importation of bananas. This convention, however, is not yet ratified.

TURKS AND CAICOS ISLANDS.

(For Report for 1899, *see* No. 297.)

GOVERNOR SIR A. W. L. HEMMING to MR. CHAMBERLAIN.

King's House,
Jamaica,
25th June, 1901.

SIR,

I HAVE the honour to transmit to you herewith a copy of the Blue Book of the Turks and Caicos Islands for the year 1900, together with a Report thereon by the Acting Commissioner.

I have, &c.,

AUGUSTUS W. L. HEMMING,
Governor.

9564—875—7/1901 Wt 25152 D & S—5

TURKS AND CAICOS ISLANDS, 1900.

REPORT ON THE BLUE BOOK OF THE TURKS AND CAICOS ISLANDS FOR THE YEAR 1900.

I.—FINANCIAL.

(A.) General Revenue and Expenditure.

The following comparative statement and table give the heads of revenue and expenditure, and the amounts received under those heads, for the years 1899 and 1900, as well as the total revenue and expenditure for the last five years 1896–1900 :—

Revenue.

—	1899.		1900.	
	£ s. d.	£ s. d.	£ s. d.	£ s. d.
Import Duties	—	3,205 15 9	—	3,280 0 2

Public Works:—				
Department	332 11 3	—	397 9 5	—
Recurrent	328 9 2	—	746 3 9	—
Extraordinary	359 0 2	—	39 17 3	—
		1,020 0 7		1,183 10 5
Drawbacks and Refunds ..	—	—	—	42 4 3
Total	—	7,644 9 7	—	8,052 15 8

Total Revenue and Expenditure for five years, 1896–1900.

—	1896.	1897.	1898.	1899.	1900.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
Revenue ...	9,706 19 2	9,477 7 4	7,232 6 8	8,032 15 3	9,190 2 9
Expenditure...	7,382 10 10	8,384 9 2	8,061 4 5	7,644 9 7	8,052 15 8

The total of the revenue for 1900 exceeds by £1,157 7*s.* 6*d.* the similar total for 1899. This result is principally due to the issue, towards the end of the year, of a new set of postage stamps. The old issue was bought up by speculators, and there was also a fair demand for the new issue.

The expenditure of 1900 exceeded that of 1899 by £408 6*s.* 1*d.*, the difference being due to a greater outlay on public works and to expenses incurred in plates and dies for the new postage stamps.

The surplus on the year's working was £1,137 7*s.* 1*d.*, which is to be added to the existing surplus balance from previous years of over £7,500.

(B.) TAXATION.

No changes took place during the year under review.

(C.) ASSETS AND LIABILITIES.

There was a balance of assets over liabilities on the 31st December, 1900, of £8,654 8*s.* 11*d.*, as set out in the annexed table :—

	£ s. d.	£ s. d.

(D.) PUBLIC DEBT.

The Dependency has no public debt.

(E.) CURRENCY.

American and British gold, an occasional Bank of England note, with British silver and Jamaica nickel coinage, constitute the currency of the Dependency. American silver dollars, half dollars, and quarter dollars circulate to a large extent, and are accepted at the Treasury at the rate of 4*s.* to the dollar.

(F. AND G.) FINANCES OF MUNICIPALITIES OR PUBLIC BOARDS.

There is no municipality, and no public board which levies rates or has sole control of any funds.

II.—TRADE, AGRICULTURE, AND INDUSTRIES.

(A.) Imports and Exports.

The dutiable articles imported into the Dependency which contribute over £100 per annum to the Customs revenue are shown in the following comparative table :—

Articles.	Quantity.		Value.		Duty.	
	1899.	1900.	1899.	1900.	1899.	1900.
			£ s. d.	£ s. d.	£ s. d.	£ s. d.
Flour, wheat...	2,738 barrels	2,421½ barrels	2,190 1 4	1,963 5 1	513 7 8	454 0 8
Lard	49,680 lbs.	46,960 lbs.	602 17 5	687 6 2	103 10 0	97 16 8
Meat, salt	131,040 "	127,072 "	1,712 16 6	1,905 17 6	273 0 0	264 14 8
Spirits	2,579¾ gallons	3,539½ gallons	340 11 8	534 3 1	585 3 6	609 12 11
Sugar	148,697 lbs.	146,568 lbs.	1,170 1 6	1,227 4 6	414 10 5	386 2 7
Tinned provisions	1,568 packages	1,717 packages	1,082 3 4	1,210 3 4	108 4 4	121 0 4
Textile fabrics	772 "	816 "	4,419 6 8	4,869 9 2	441 18 8	487 8 11

The following table comprises the chief articles of import on which no duty is payable :—

Articles.	Quantity.		Value.					
	1899.	1900.	1899.			1900.		
			£	s.	d.	£	s.	d.
Beans and peas - -	945 bushels	724 bushels	389	7	3	312	18	6
Bran and oats - -	2,529 packages	2,614 packages	751	9	9	705	17	5
Coffee - - - -	6,035 lbs.	7,809 lbs.	68	16	11	97	10	10

Cordage - - - -	119 coils	133 coils	188	9	6	204	18	3
Corn - - - -	2,609 bushels	1,721 bushels	331	9	9	184	3	9
Crockery and glassware -	202 packages	157 packages	172	9	3	266	6	2
Fish, salt - - -	26,300 lbs.	26,300 lbs.	249	9	8	235	8	4
Fruit and vegetables -	2,176 lots	1,658 lots	1,757	16	8	1,206	12	5
Government stores - -	419 packages	298 packages	188	11	1	331	16	7
Hay - - - -	717 bales	1,786 bales	87	4	9	245	7	6
Hominy and samp - -	675 packages	741 packages	342	10	9	389	9	3
Jewellery, &c.- - -	23 ,,	30 ,,	36	14	4	52	11	9
Machinery - - -	36 ,,	150 ,,	75	18	9	1,644	0	8
Meal, corn - - -	871 barrels	810 barrels	393	2	0	381	0	0
Molasses, syrup, &c. -	5,263 gallons	3,288 gallons	289	13	7	185	19	2
Mules - - - -	4	5	60	0	0	130	15	0
Stationery, &c. - -	77 packages	203 packages	121	12	3	209	19	8

The chief article of export is salt, of which there was exported :—

—	Quantity.	Value.			Royalty Paid.		
		£	s.	d.	£	s.	d.
In 1899	1,821,490 bushels	21,138	8	7	2,656	8	2
In 1900	1,806,274 ,,	23,491	11	3	2,634	4	7

The quantity of salt exported was 1,806,274 bushels, which is some 15,000 less than in 1899, but still about 200,000 above the average. Although the quantity of salt exported was less than

that for the previous year, yet the value was greater, being £23,491 11*s.* 3*d.*, as against £21,138 8*s.* 7*d.* for 1899, in consequence of the increased price offered.

The export of "sisal grass" was valued at £5,080 15*s.* 5*d.*, as against £7,493 12*s.* 9*d.* last year. These figures might seem to indicate that the fibre industry is decreasing, but this is not the case. The area under cultivation is increasing, and there has in reality been a much larger output of fibre this past year than in previous years, but the prices ruled somewhat lower, and there was some difficulty in getting the fibre shipped before the close of the year.

The sponge export direct to the United States—which covers only those sponges which are gathered and shipped by local enterprise, as opposed to those which are taken away from these waters by Bahamas fishermen without affording any profit to the Dependency—was valued at £1,800, as against £1,100 last year, about treble the average of the last ten years.

It is highly satisfactory to note the growth of the fibre and sponge industries, as they not only afford fair prospects of good returns from the capital which has been laid out in them, but they also assist in materially improving the condition of the inhabitants of the Caicos Islands, which would, without these industries, be very miserable.

The import duties show an increase of nearly £75 over 1899, which is chiefly owing to a larger importation of lumber and spirits.

The total value of the imports and exports for the last five years is as follows :—

—	1896.			1897.			1898.			1899.			1900.		
	£	*s.*	*d.*	£	*s.*	*d.*	£	*s.*	*d.*	£	*s.*	*d.*	£	*s.*	*d.*
Imports - -	30,245	4	4	33,239	2	7	27,066	16	0	25,707	11	3	29,564	2	4
Exports - -	31,497	14	5	43,308	15	5	24,810	12	4	31,909	19	2	34,584	1	0

(B.) MANUFACTURES.

The chief or main industry is the production of salt from sea water by solar evaporation. The price was maintained at six cents during the whole year, as the result of a mutual arrangement entered into between the local producers and the dealers in the United States, by whom the trade is apparently controlled. The only other two industries worthy of noting are the extracting of fibre from the sisal grass and the curing of sponges. These industries are in the hands of enterprising companies and merchants, and have a successful future before them. One of the fibre companies is laying down tramways, which will enable them to handle their fibre more economically.

(C.) AGRICULTURAL INDUSTRIES, &c.

Agriculture in the Dependency is practically confined to a few scanty provision fields in the Caicos Islands and a few patches of guinea corn, grown chiefly for the fodder afforded by the stalks. The barren nature of the soil, coupled with the absence of rainfall, makes anything else impossible.

(D.) LAND GRANTS AND GENERAL VALUE OF LAND.

Twenty-one grants were made in 1900 under the Crown Lands Ordinance of 1896, comprising 169 acres.

The value of land, other than town lots, is very small.

(E.) SHIPPING.

A table is annexed of the steam and sailing vessels inward and outward during the past two years. The steamers are those of the Clyde line from New York to Dominican ports, at uncertain dates, but about tri-weekly, which touch at Grand Turk, both on the outward and homeward voyages, taking labourers for the Dominican trip to work the cargo, and landing them on return. There is also the monthly steamer of Messrs. Pickford and Black's line from Halifax to Jamaica, which is under contract with this Government to convey the Turks Islands' mails :—

Sailing Vessels.

Nationality.	1899.				1900.			
	Inwards.		Outwards.		Inwards.		Outwards.

A comparative statement of total shipping for the last five years is also annexed :—

—	1896.	1897.	1898.	1899.	1900.
	Tons.	Tons.	Tons.	Tons.	Tons.
Inwards ...	131,106	164,751	120,278	119,032	146,029
Outwards ...	130,572	163,623	122,829	118,872	144,610
Total ...	261,678	328,374	243,107	237,904	290,639

These figures do not include men-of-war which have called at the Dependency.

III.—LEGISLATION.

The principal measures passed during the year were :—

Ordinance No. 2 of 1900.—To impose other duties of Customs on imports than those now payable.

By this ordinance, which will take the place of the present tariff ordinance when brought into force, the existing tariff is somewhat modified. It was passed in consequence of a reciprocity treaty with the United States, by which, if ratified, the Dependency is to obtain a reduction of the duty levied on salt, and certain other advantages, in consideration of reciprocal concessions in the duties on imports of United States origin. The Governor-in-Chief's assent to the ordinance will not be given until the treaty is ratified. The time for the ratification of the treaty by the United States Government has been extended to March, 1902.

Ordinance No. 6 of 1900.—For granting certain privileges to vessels calling at the ports of the Dependency for orders, or for taking on board provisions, water, or fuel for consumption on board of such vessels.

This ordinance was passed in order to induce vessels to make this Dependency a port of call for orders. To such vessels the Dependency is absolutely a free port, and should the master of any such vessel engage a pilot, which is optional, he can do so on

payment of half the ordinary fees. The main object of the ordinance is to induce vessels to frequent the port, and thereby enable salt proprietors to obtain a charter for the shipment of their salt on better terms than could probably be secured were a vessel not near at hand. The ordinance has already shown satisfactory results.

IV.—EDUCATION.

(A.) Primary Education.

A sum of £600 per annum is set aside by ordinance for the work of education in the Dependency.

There are six schools, of which four are in the Caicos Islands.

Education is not compulsory, and the main difficulty that has to be contended with is the irregular attendance of children.

The majority of the teachers are trained men from Jamaica and an inspection is held once in two years by an officer of the Jamaica Education Department when possible to make such arrangements.

(B.) Secondary Education.

There is no provision for secondary education. The children of the better class usually obtain their education in Jamaica, the United States, or Canada.

(C.) Industrial, Technical, and Agricultural Schools.

Nil.

V.—GOVERNMENT INSTITUTIONS.

(A., B., C., D.) Hospitals, Asylums, Poor Houses, Reformatories.

There are no institutions of this class in the Dependency at the present time, but a portion of the old poor house has been set aside as a place where any infectious disease or serious case for operation or otherwise may be placed under the care of an attendant, temporarily engaged It is very rarely required.

Lunatics are sent to the asylum in Jamaica.

(E.) SAVINGS BANKS.

The Government Savings Bank was opened in 1890. The attached statement shows its condition at the present time :—

Bank.	Number of Depositors.		Deposited.		Withdrawn.		To Credit.	
	1899.	1900.	1899.	1900.	1899.	1900.	1899.	1900.
			£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
Grand Turk	115	119	210 8 8	221 7 2	352 13 8	257 15 4	605 6 4	568 18 2
Salt Cay	44	38	12 4 11	118 7 2	13 14 2	61 16 3	48 10 5	105 1 4
Cockburn Harbour ...	27	29	100 6 10	94 9 1	59 3 9	58 9 0	340 8 11	376 9 0
Total	186	186	323 0 5	434 3 5	425 11 7	378 0 7	994 5 8	1,050 8 6

VI.—JUDICIAL STATISTICS.

(A.) POLICE.

The police force consists of :—

At Grand Turk—a corporal, four constables, and two district constables.

Salt Cay—one constable and one district constable.

Cockburn Harbour—one constable and one district constable.

The other Caicos Islands—eight district constables.

The total cost of the upkeep of the force in 1900 was £486 10*s.* 3*d.*

(B.) PRISONS.

The one prison of the Dependency is at Grand Turk. The daily average in prison in 1900 was two. Long-sentence prisoners are usually sent to serve their time at Jamaica, but fortunately there are rarely any prisoners of this class.

(C.) CRIMINAL STATISTICS.

The total number of offences reported to the police or to the magistrates in 1900 was 131, against 176 in 1899.

Of the offences reported in 1900, 40 were for offences against the person; six were for prædial larceny; 15 were for offences against property other than prædial larceny; 70 were for other offences.

The total number of convictions in the inferior courts in 1900 was 103, against 130 in 1899.

These convictions are classified as follows:—30 for offences against the person; six for prædial larceny; 10 for offences against property, other than prædial larceny; 57 for other offences.

The convictions in the Supreme Court were as follows:—Two for offences against the person; 10 for other offences.

The acquittals were as follows:—In the inferior courts, 22; in the Supreme Court, 3.

VII.—VITAL STATISTICS.

(A.) POPULATION.

The total population, as shown by the census just taken (1901), was 5,350, being an increase of over 600 since the census of 1891.

(B.) PUBLIC HEALTH.

The general state of the public health during 1900 was good, but, towards the close of the year, there was a slight epidemic of measles and whooping cough in the Caicos Islands, which was generally supposed to have been imported from Hayti and San Domingo.

(C.) SANITATION.

The Towns and Public Health Ordinance of 1895 gives power to deal with nuisances generally, and provides for the exercise of precautions in case of epidemics, for the cleaning of streets, the regulating of slaughter yards, and other kindred matters.

Refuse can, without difficulty, be deposited in the sea, and the soil is of a nature that readily absorbs impurities.

(D.) CLIMATE.

(1.) The rainfall is small, averaging about 26 inches during the year.

(2.) Th temperature is not excessive, and is rarely unpleasantly hot, owing to the strong and constant sea breeze. During the so called "winter months" the climate would compare favourably with that enjoyed in any other portion of the globe.

During the month of June a station of observation was established at Grand Turk by the Weather Bureau of the Department of Agriculture of the United States, for the purpose of improving the Bureau's West Indian hurricane service. This will prove of great benefit to the community in foretelling the approach of storms.

Tables of rainfall and temperature are attached. The readings at Grand Turk from July are taken from the Weather Bureau observations. The temperature readings before July are somewhat misleading, as they are observations of temperature taken at 10 a.m., and not of the lowest or highest temperature recorded during 24 hours :—

(3.) The wind is usually equable and blows strongly, the prevailing direction being from the south-east.

VIII.—POSTAL, TELEGRAPH, AND TELEPHONE SERVICES.

The mails are brought to, and despatched from, the Dependency by a monthly steamer from Halifax, Nova Scotia, under contract, and also by the steamers of the Clyde line from New York tri-weekly. These latter, unfortunately, do not sail on

schedule time, so that it is not possible to arrange for a regular despatch from the United Kingdom by that route, but letters that arrive at Halifax soon after the departure of the monthly boat are sent on to New York, and thus usually arrive here some days earlier than they would if they waited at Halifax for the next monthly steamer. By far the larger portion of the mails for the United Kingdom go north by the New York steamers; letters so despatched get to their destination in a shorter time by a week or more than they would by the longer Halifax route.

The island of Grand Turk is in telegraphic connection with Bermuda and Jamaica by the cables of the Direct West India Cable Company, which opened its Grand Turk station in January of 1898.

There is no telephone service.

IX.—MILITARY FORCES AND EXPENDITURE.

Nil.

X.—GENERAL OBSERVATIONS.

1. The general condition of the Dependency is brighter at the present time than has been the case during the last few years, owing to the steady demand and the better price that obtains for its staple commodity, salt. This has been brought about by an arrangement entered into between the local producers and the dealers in the United States. Certain dealers in the States have agreed to take all the salt our local producers can produce, at a minimum price of six cents a bushel, on the understanding that the producers sell to no other dealers in the States. This agreement is not in writing, and of course may be broken through at any time, being in the nature of an arrangement for mutual accommodation only. The arrangement does not affect transactions with dealers outside the United States. It is hoped that a still better price may be obtained when the reciprocity treaty entered into by the Dependency with the United States is ratified. Six cents is an improvement on the five cents obtained in 1899, but at the same time it leaves but a small margin of profit, and little or nothing for improvements. The salt proprietor's life is a hard and anxious one, and he has to guard all his expenses most carefully to maintain his balance on the credit side.

2. The sisal hemp industries at East and West Caicos appear to be doing very well. The areas under cultivation have been greatly increased during the last year.

3. Mr. E. J. Cameron, the Commissioner, was absent from the Dependency from the 30th April to the 23rd May, on vacation leave, and from the 11th August until the close of the year on vacation and half-pay leave. During those periods his duties were performed by the Judge of the Supreme Court, who holds a dormant commission to administer the Government in the absence of the Commissioner.

GOVERNOR SIR A. W. L. HEMMING to MR. CHAMBERLAIN.

King's House,
Jamaica,
31st December, 1901.

SIR,

I HAVE the honour to transmit herewith my report on the Blue Book of this Colony for the year 1900-1901.

2. I regret that shortness of staff and pressure of important current work in the Colonial Secretary's office have unavoidably delayed the completion of this report.

I have, &c.,

AUGUSTUS W. L. HEMMING,
Governor.

X. GENERAL REMARKS.

I. FINANCE.

GENERAL REVENUE AND EXPENDITURE.

At the beginning of the financial year on the 1st April, 1900, the deficit on the General Revenue Account of the Colony stood at £123,027.

The year's revenue amounted to £760,387 and the expenditure to £763,662, showing a deficit on the year's transactions of £3,275, and increasing the standing deficit to £126,302 on the 31st March, 1901.

The following is a comparative statement of the revenue for the two years :—

Heads of Revenue.	1900–1901.	1899–1900.	Increase.	Decrease.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.
Customs	337,416 11 4½	353,765 1 3	—	16,348 9 10

Imperial Loan in aid of expenses of conversion of Railway Debt.	631 10 0	—	631 10 0	—
Total for General Revenue Account...	760,386 18 10	625,131 14 8	135,255 4 2	—

Revenue.

The most conspicuous feature in the Revenue returns is the failure of the yield of taxation.

Customs Duties yielded £16,348 9*s.* 11*d* less than in the previous year and £22,583 8*s.* 8*d.* less than the estimate.

Port Harbour and Light House Dues £139 15*s.* 4*d.* more than in 1899-1900, but £823 4*s.* 8*d.* less than the estimate.

JAMAICA, 1900-1901

License, Excise, and General Internal Revenue £17,215 0*s.* 3½*d.* less than in the previous year, and £19,914 less than estimate.

Fees of Office, Stamp Duties, &c., £2,486 2*s.* 7¼*d.* less than estimate, although £4,754 14*s.* 9*d.* more than received in the previous year, partly owing to increase of duties.

Thus, under these four heads, which include practically all the Tax Revenue, there was received altogether £28,669 less than in the year 1899-1900 and £45,807 9*s.* less than the estimate for 1900-1901.

The railway became the property of the Government on the 16th August, 1900. The estimate of receipts for 12 months, on the assumption that it would be handed over before the year began, had been £125,000. The proportion of this amount for seven and a half months would be £78,125; but the receipts brought to account within the period amounted to only £71,153 7*s.* 2*d.*, a shortage of £ 6,971 12*s.* 10*d.* The Cash balances taken over with the railway from the Colonial Bank and the Trustees of the First Mortgage Bondholders amounted to £48,701 3*s.*, instead of £55,000 as had been anticipated. The difference of £6,298 17*s.* was largely due to special expenditure by the railway company for the repair of storm damages in the first half of the year 1900 in excess of receipts. On the other hand stores to the value of £15,097 15*s.* were also taken over of which no estimate had been made.

£20,000 was brought to the credit of General Revenue Account by an instalment of the loan of £150,000 authorised by the Imperial Government to cover outstanding deficit previously accrued.

A further sum of £631 10*s* was brought to credit of General Revenue Account, being part of the Imperial Loan of £88,000 for the payment of interest due on the First Mortgage Bonds of the Jamaica Railway, in excess of the amount required for this purpose. This surplus was transferred in aid of the expenses of redeeming the First Mortgage Bonds and issuing three and a half per cent. Inscribed Stock in exchange, towards which £9,128 13*s.* 4*d.* was also appropriated by transfer from surplus of Quit Rents standing to credit of the Parochial Road Reserve Fund.

Excluding the three items last mentioned as not being actual revenue receipts of the year, the revenue amounted to £730,627, against an estimate of £765,886, a shortage of £35,259, and excluding, for parity of comparison, the other railway receipts, the revenue for 1900-1901 amounted to £595,675, or £29,457 less than the foregoing year's corresponding revenue of £625,132.

Nett increase	—	—	169,735 4 2¼	—

The great addition to Debt Charges is noticeable, the total for the year being £221,323 10*s.* 7*d.*, against £111,692 5*s.* 5*d.* in the previous year, besides which £87,368 10*s.* was paid to First Mortgage Bondholders of the railway out of borrowed moneys for arrears of interest due on their 4% Bonds. The same Bondholders received £48,706 for arrears of interest on the three and a half per cent. Inscribed Stock issued to them, a sum which was balanced with curious exactitude by the £48,701 taken over as railway balances, and which is included in the Debt Charges paid out of General Revenue this year, as well as £9,760 3*s.* 4*d.* paid for expenses for conversion of Railway Debt. Excluding these last two items, the Debt Charges belonging to the year amounted to £162,857 7*s.* 3*d.*, showing an increase in normal Debt Charges of about £51,165, which is due to the three and a half per cent. Railway Inscribed Stock, and to which a further charge of nearly £15,000 for Sinking Fund on that Debt will be added in the financial year 1901-1902.

A saving of £8,578 7*s.* 3*d.* was effected on the estimate of Debt Charges by postponing the raising of loans authorised for Railway Equipment and in aid of deficit.

Most of the Departmental accounts show excesses of expenditure over estimate and over their totals of the preceding year. This is owing in almost every case to the payment of thirteen months' salaries within the year, the March salaries having been previously paid and brought to account in April.

The excess over the estimate for the Registration of Titles was due to the writing back to the credit of the "Assurance Fund" of £620 7*s.* erroneously charged against the funds for plans and diagrams since the year 1891.

The estimate of the expenditure of the railway for the whole twelve months was £90,000, besides £2,364 18*s.* falling due to be paid for certain debts under the order of the Supreme Court on its transfer to the Government. The proportional estimate for the period of seven and a half months, during which it was in the hands of the Government, is £56,250; but the actual expenditure for that period was kept down to £47,366 3*s.* 1½*d.*, saving £8,883 16*s.* 10½*d.*

The original railway estimates for the twelve months had anticipated an excess of £35,000 in receipts over expenditure. The actual excess of general receipts over expenditure brought to account in the seven and a half months appears as £23,787 4*s.*, which is at the rate of more than £35,000 a year.

As stated above, the Government also paid altogether £145,834 13*s.* 4*d.* for charges and interest due on the transfer of the railway, and it has incurred permanent charges of £66,400 a year for interest and Sinking Fund of new debt in addition to those of the pre-existing Railway Debt.

There was a saving of £1,093 6*s.* 11*d.* on the estimate, and of £646 11*s.* 1*d.* on the previous year's expenditure for the staff of

JAMAICA, 1900–1901.

the Public Works Department, due to rigidly parsimonious administration and the vacation of several offices.

On the estimates for Public Works and Buildings for the year there was a saving of £10,611 19*s.* 1*d.*, and on the expenditure of the previous year of £4,688 17*s.* 8*d.*, representing the severe retrenchment rendered necessary by the failure of the Revenue.

On the other hand there were written off against the accounts for Public Works and Buildings the following amounts not expended in the year but standing hitherto to the debit of certain loan or advance accounts.

(1.) Depreciation of stores and expenses of working of P.W. Store Department, £1,726 0*s.* 9*d.*

(2.) Spanish Town Waterworks.—Balance outstanding from loan from General Revenue Account £1,525 7*s.* 3*d.* (These Waterworks having become the property of the Government no purpose was served by keeping this account open.)

(3.) Preliminary expenses, plans, estimates and specifications for new public offices, hitherto standing debited against the account of a loan to be raised for the buildings, now postponed indefinitely, £5,366 18*s.* 8*d.*

(4.) Part cost of brick kiln at General Penitentiary, hitherto standing as an advance to the Kingston General Commissioners, total, £9,444 1*s.* 8½*d.*, written off from credit balances.

A balance of £2,450 14*s.* 9*d.* on the Negril Point Light House Advance Account was similarly written off.

Excluding these amounts so written off, with the £620 7*s.* written back to the Land Titles Assurance Fund and the £9,760 3*s.* 4*d.* spent for Railway Conversion charges, the expenditure amounted to £741,297 1*s.* 1¼*d.*, against an estimate of £752,855 13*s.* 1*d.*, showing a saving of £11,558 12*s.* on the estimate, or about £23,688 if allowance is made for the payment of thirteen months' salaries in the year.

Excluding from the revenue the £20,000 Imperial Loan, the excess of the expenditure over revenue was £23,275 9*s.* But, as has been explained, £12,605 4*s.* of the amount brought to account as expenditure was merely a writing off of imaginary credits in the ledger and not actual expenditure of the year, whilst about £12,130 may be accounted for by the bringing of the March salary payments to account within the year, at the close of which their amount would otherwise have been actually a liability of the Government. And, in fact, had not sound accountancy demanded these corrections, the actual revenue of the year would have appeared as exceeding the actual expenditure.

It follows that the financial position of the General Revenue Account has not really deteriorated during the year, but may be regarded as having improved by about £1,460, although the balance of liabilities as shown in the statement of Liabilities and Assets has increased by £3,275, and £20,000 has been borrowed in aid of deficit.

II. TRADE, AGRICULTURE AND INDUSTRIES.

(A.) Imports and Exports.

The following table shows the values of imports and exports in the past five years, as assessed by the Customs Department :—

Year.	Exports.				Imports		
	Island Products and Manufactures.	British and Foreign Products and Manufactures.	Coin and Bullion.	Total Exports.	For Home Consumption.	Coin and Bullion.	Total for Home, including Specie.
	£	£	£	£	£	£	£
1896–97	1,384,278	16,411	69,552	1,470,241	1,836,849	27,763	1,864,612
1897–98	1,377,826	20,246	50,371	1,448,443	1,658,632	15,749	1,674,381
1898–99	1,532,378	34,302	95,863	1,662,543	1,770,768	17,664	1,788,432
1899–1900	1,797,996	26,245	43,838	1,868,079	1,733,666	73,199	1,806,865
1900–1901	1,738,523	20,820	37,733	1,797,076	1,621,794	30,883	1,652,677
Total	7,831,001	118,024	297,357	8,246,382	8,621,709	165,258	8,786,967
Average	1,566,200	23,605	59,471	1,649,276	1,724,342	33,051	1,757,393

JAMAICA, 1900-1901.

The total value of exports in 1900-1901 was noticeably lower than in the preceding year but still higher than in any other year of the last five, while the imports were the lowest of the period.

The estimated value of products of the Island exported was less by £59,473 than in 1899-1900, and that of articles imported for home consumption was less by £111,872.

The year 1889-1900 was the first since 1886-1887 in which exports exceeded imports, and the proportion of the excess increased in 1900-1901.

The explanation of this course of trade is probably to be found in the fact that the investments of borrowed capital in railway extensions and other public works and private undertakings has come to an end, whilst increased debt charges on the borrowings, public and private, of recent years have now to be paid for by the excess of exports. Whilst the free expenditure of borrowed money was proceeding, the distribution of wages both stimulated the importations of foreign goods and withdrew industry from the production of exportable goods. Under this influence and that of concurrent low prices, sugar cultivation fell off and much of the established coffee cultivation was neglected. The taxation necessary to pay for increased debt charges has now consequently to be levied on partially diminished resources and the purchasing power of the community bears a less proportion to its exports than formerly. There are, however, as shown by the following return, some healthy and encouraging indications of a substantial increase both in quantity and price of exports.

TABLE EXHIBITING THE INCREASES OR DECREASES IN QUANTITY, VALUE, AND PRICE OF THE TEN PRINCIPAL EXPORTS.

The following table exhibits the increases or decreases in

Article.	Quantity.		Value.		Increase or Decrease (as shown by + or —) on 1899–1900.

+ 17·7	+ 26·5	1899-00: 54 0 „ ton. 1900-01: 58 0 „ „	Value 1900-01 between a third and a quarter of 10 to 12 years ago. Price 100s. in 1893-94; declined, but seems to be brightening. 1898-99, 52s. 6d. per ton.
— 18·9	— 36·3	1899-00: 28 0 „ cwt. 1900-01: 22 0 „ „	Value 1899-00 exceptional, 1900-01 about double that of 10 to 12 years ago. Price 1900-01 about average formerly. 1898-99, 32s. 9d., abnormal.
— 10·5	+ 16·4	1899-00: 1 8 „ gallon. 1900-01: 2 2 „ „	Value 1900-01 about three-fifth that of 10 to 12 years ago. Price 1900-01 far beyond that of late years, and approximates that formerly obtained. 1898-99, 1s. 4d. per gallon.
— 24·4	— 15	1899-00: 10 0 „ cwt. 1900-01: 11 0 „ „	Value 1900-01 little more than half that of 10 to 12 years ago. Price which had declined greatly, appreciably improved. 1898-99, 8s. 4d. per cwt.
—	— 3·1	—	—
—	— 5·1	—	—
—	— 3·3	—	—

JAMAICA, 1900-1901.

The falling off in quantity of pimento, rum and sugar was due to short crops resulting from unfavourable seasons. The price of pimento, moreover, fell from 28*s.* to 22*s.* per cwt. Rum and sugar realised improved prices, that of rum resulting, notwithstanding the short output, in an increase of value by £21,478.

The general purchasing power of the labouring class, so far as it depends on these industries, is, however, far more affected by the bulk of the crop than by the price it ultimately fetches.

Logwood shows an increase in quantity, price, and total value, the last by £20,647. Logwood extract was valued at £31,599, in place of £15,881 in 1899-1900.

The exports of tobacco also showed a decided improvement, native-made cigars, cigarettes, and leaf-tobacco totalling—

—	1900-1901.			1899-1900.			Increase.		
	£	*s.*	*d.*	£	*s.*	*d.*	£	*s.*	*d.*
Cigarettes	1,957	19	0	311	12	0	1,646	7	0
Cigars	15,634	0	3	11,530	0	10	4,103	19	5
Leaf tobacco	5,067	10	0	1,404	10	0	3,663	0	0
Total	22,659	9	3	13,246	2	5	9,413	6	10

altogether £9,413 more than in 1899-1900.

Capital and skill appear to be now employed in the tobacco industry with improving results.

The bee-keeping industry, which is almost entirely in the hands of persons of limited means, shows remarkable improvement, honey having increased in value in five years from £1,891 to £10,739. This fact indicates the exercise of increased intelligence and industry.

The export of bananas suffered considerably from the effects of violent storms of rain and wind in the autumn of 1899, otherwise, no doubt, this staple would have shown a far greater increase. Great interest attached to the endeavour of Messrs. Elder, Dempster & Co. to establish a market for bananas in England. Their steamers receiving a subsidy of £40,000 a year (£20,000 from the Imperial Government and £20,000 from the Government of Jamaica) took their first two fortnightly cargoes at the close of the year under review. They are under contract to buy and ship not less than 20,000 bunches by each fortnightly steamer, but the venture can only be successful, or, indeed, of appreciable importance to this branch of the trade of the Island, if it is found possible to establish an export of much greater volume. This it is the hope and expectation of the contractors to be able to do.

The export of cattle, sheep, and fowls, and of yams and other ground provisions to Cuba, which developed during and after the late war in that Island, has now practically ceased with the establishment of good government and renewal of cultivation there. Thus, the value of exported cattle fell from £24,881 to £4,791, and that of yams from £3,220 to £1,201.

The exports of the last five years have been distributed as shown in the following table:—

Destination.	1896-97.	1897-98.	1898-99	1899-1900	1900-01.
United Kingdom	27·4	22·0	20·6	19·2	18·8
United States	56·6	62·3	59·1	63·6	63·8
Canada	1·2	1·4	1·4	1·6	1·8
Other countries	14·8	14·3	18·9	15·6	15·6

The decrease in exportations to the United Kingdom and the corresponding increase in those to the United States are attributable to the fact that about 45 per cent. of the exports now consists of fruit, a highly perishable article, much of which it has hitherto been impossible to ship to England.

The effect of the institution of the direct line of steamers in stimulating British trade with Jamaica will be anxiously watched.

The following table shows the relative proportion of the chief items of export in the last five years:—

—	1896-97.	1897-98.	1898-99.	1899-1900	1900-01.
Sugar	10·1	8·3	9·8	10·8	9·5
Rum	8·4	6·3	6·1	7·2	8·8
Coffee	14·4	11·4	10·5	7·8	9·1
Dyewoods	11·6	8·9	8·8	4·8	6·2
Fruit	34·3	42·8	41·4	45·0	45·2
Pimento	5·2	3·6	8·3	9·7	6·4
Minor products ...	16·1	18·7	15·1	14·7	14·8

Sugar, fruit, and cocoanuts are shipped almost entirely to the United States; the proportion of the first staple which went to the United Kingdom in 1900-1901 was only about one-fourteenth. 38,880 bunches of bananas went by the new direct line to England. Rum still finds its principal market in the United Kingdom. In 1900-1901 three-fourths of the coffee

JAMAICA, 1900–1901.

went to France and the United States, the remaining fourth almost entirely to the United Kingdom. The United States and Russia took most of the logwood; the United States and United Kingdom three-fourths of the pimento, and most of the ginger; France shares with both in cocoa as well as coffee; Germany in pimento.

Imports.

As already stated, these, excluding specie, decreased by £111,872. Decreases occurred under all heads of any importance. The principal decrease was in manufactured articles, on which alone it was £97,540, a shrinkage of nearly 10 per cent. on the previous year's figure. The shrinkage on raw materials was £7,820, or over 10 per cent., while that on live animals, food, &c., was only £6,514, or less than 1 per cent. The importation of live cattle diminished under the restrictions of the cattle quarantine laws and the continued effect of the heavy import duty. All kinds of alcoholic beverages, except whisky, show a falling off, as did bread, biscuit, butter and butter substitutes, corn, provisions, and flour. The decrease in the value of flour by £18,683 was, however, accompanied by an increase in quantity of 4,276 lbs. Salted beef, pork, and fish of all descriptions showed an increase in value by about £15,000, due generally to higher prices.

The imports of condensed milk and rice rose in value by £6,708 and £3,269 respectively. The steady increase for many years past in importations of condensed milk in a country so favourable for milch cattle is not a satisfactory sign. Importations of chemical and natural manures appreciably increased, the latter totalling £6,628.

Among the manufactured articles, the greatest decreases in textiles are on wearing apparel and slops £12,036, cotton piece goods £20,543, and woollen unmixed £13,990, the last being partially set off by mixed woollens £10,499. Boots and shoes show a decline of £10,168, and wooden building materials, both lumber and shingles, of £10,593. There has been a very noticeable curtailment in building operations in the Island within the last two or three years. The imports of agricultural machinery show a satisfactory increase of £21,318.

The following table shows the respective proportions in which imports were obtained from various countries in the past five years:—

Country.	1896–97.	1897–98.	1898–99.	1899–1900	1900–01.
United Kingdom	49·9	47·2	44·7	47·2	45·4
United States	39·4	43·0	45·1	43·0	43·0
Canada	8·2	7·1	7·1	7·1	8·4
Other countries	2·5	2·7	3·1	2·7	3·2

(B.) MINES, MANUFACTURES, AND FISHERIES.

No mines have been worked in Jamaica for many years past. Several copper mining enterprises were embarked on in former times, but the quantity of ore extracted has not repaid the cost of working. Small quantities of gold, silver, platinum, and other metals have occasionally been found.

The principal manufactories of the Island are the sugar works and the rum distilleries attached to them. The coffee and cocoa curing works may also be regarded as factories. The Blue Book Returns for the year enumerated 80 other minor manufactories, as against 83 in 1899-1900 and 76 in 1898-1899. These establishments are of small importance, mostly employing but two or three hands. The greatest number of persons are employed by the Kingston match factory and by a factory in Saint Ann's for extracting essential oil from limes.

Amongst establishments of this class there were:—

—	1899-1900.	1900-1901.
Tanneries	26	24
Cigar and cigarette factories	18	19
Breweries	11	9
Aerated water factories	7	7

Ice, soap, bricks, cornmeal, and rice, logwood extracts, cocoanut oil and cocoanut butter are also manufactured to a small extent in this Island.

Fishing is carried on by more or less primitive methods for Island consumption, to a considerable extent off the coasts and to a moderate extent in the rivers. The river fisheries are preserved by a close season and by provisions of law forbidding the use of explosives and of nets with too fine a mesh.

(C.) DEPARTMENT OF PUBLIC GARDENS AND PLANTATIONS.

From Hope Gardens, its head station and principal distributing centre, the Botanic Department sold in 1900-1901 75,037 plants and 578 cocoa pods (for seed), and gave away 7,521 plants. The total number of plants distributed was 76,847 economic and 5,711 ornamental plants; total, 82,558 plants. In the previous year 115,839 economic and 16,265 ornamental plants, total, 132,104, were distributed from Hope. In 1899-1900, 2,605 plants, nearly all economic, were distributed from Castleton; and in 1900-1901, 4,825.

JAMAICA, 1900-1901.

Budded citrus and pineapple plants and cocoa pods are occasionally obtained from planters for applicants, and it is now the general policy of the Department not to compete with private growers when they are able to supply demands for young plants. Sometimes applicants are referred direct to a private grower, in other cases, where the applicant lives a long way off from the grower, the Department obtains the plants or pods and packs and distributes them free of charge.

15,494 citrus plants were distributed during the year by the Department. Two or three years ago the demand was chiefly for citrus. The nursery work at Hope is regarded as the most important business of the Department, it being necessary to keep large numbers of plants in stock to meet possible demands. 90,000 plants are now available for distribution. Among economic plants, besides cocoa and citrus, rubber plants, nutmegs, coffee, kola, grape-vines, cane tops, timber trees, &c., were in demand in 1900-1901.

The gardens at Hope are made attractive to visitors by well-kept lawns and beds of ornamental plants. The new orchid house, erected during 1900-1901, is stocked mainly by interchanging Jamaica orchids with exotic species obtained from noted nurseries abroad. The Commissioner of Agriculture for the West Indies considers it to be the most beautiful collection in the West Indies. Whilst it has become necessary to keep down expenditure to the lowest figure consistent with efficiency, the Director points out that experts in the work undertaken by the Department are astonished at the results obtained with the amount available.

With a view to economy and to enable increased attention to be paid by the Department to the interests of agriculture, a rearrangement of the expenditure of the Department was effected this year on the recommendation of the Board of Agriculture. The grant for labour at Castleton Gardens was reduced by one-third, and the Superintendent of the Hill Gardens was transferred to Hope Gardens, and the former Superintendent of Hill Gardens, Mr. Cradwick, who has proved a very efficient agricultural instructor, has been enabled to devote his whole time to agricultural lectures and demonstrations throughout the Island. A larger appropriation was also thus made available for carrying on the agricultural experiment station at Hope Gordens, under the supervision of a committee subsidiary to the Board of Agriculture, with the Director of Public Gardens as Chairman. At this station elementary school teachers and training college students have received annual courses of instruction from Mr. Buttenshaw, the Imperial lecturer on agriculture, and Mr. T. J. Harris, of the Botanical Department.

1,784 copies of the Bulletin of this Department are distributed monthly, 1,244 of which are sent abroad, whilst other copies are sent to enquirers for information. In 1900 articles were published on agricultural principles, the chemical composition of

bananas and plantains, on fibres, fodder, medicinal, rubber and spice plants, diseases and insect pests of plants, manures, &c. Eleven works were obtained for the library.

The following are brief notes of the botanical work done with a view of providing the proper cultivation or treatment for exportation of the chief economic plants grown in the Colony.

Bananas.

A conference was held in December, 1900, and the discussion has resulted, the Director of Public Gardens considers, in some advance in knowledge and also in changes in methods of cultivation. Twenty-three varieties of banana are being experimentally cultivated at Hope Gardens. The planting of cocoa with bananas, to succeed them as a permanent crop, has been strongly advocated by the Board of Agriculture and by the officers of the Botanical Department, and the travelling agricultural instructor has induced many planters to adopt this culvation.

Citrus Fruit.

The best stocks for budding for navel oranges are found to be the rough lemon and sour oranges, and for grape fruit the sour lemon. Navel oranges and grape fruit in Jamaica thrive well in hot dry plains, but require systematic irrigation.

Grapes.

Grapes were cultivated largely for many years at Hope, but, though the vines grow vigorously, it has been found impossible there to rely on weather both warm enough and sufficiently dry for them to ripen. A few plants are now cultivated to give instruction in pruning, thinning bunches, &c. But grapes thrive and ripen well and have proved a profitable crop in and about Kingston, near the sea. Apprentices trained at Hope are sent out at the proper season, on application, to prune vines.

The black "Barbarossa" is found in Jamaica to be the heaviest cropper with the handsomest appearance.

Coffee.

561 plants of the Liberian variety were distributed. All the varieties are thriving. The agricultural instructor makes a point of instructing small settlers how to secure good full berries, an important point as, with the low prices current consequent on the immense production in Brazil, only fine coffee is worth cultivating.

Kola.

509 seedlings distributed. The Director of the Botanic Gardens, Cameroons, states that the variety of kola grown here (*Cola vera*) is the best edible variety, and the trees grown are much finer than any he has seen in West Africa.

Mangoes.

An experiment was made in shipping mangoes. They were picked when just full, handled very tenderly, packed about twelve together in small boxes with large holes for ventilation, and were successfully exported. Mango trees grow luxuriantly in Jamaica, and bear immense crops of this delicious fruit, which might, with care in shipping, be made an important article of export.

Nutmegs.

1,214 seedlings distributed. The important experiments in grafting with a view to the propagation of female trees were continued.

Pineapples.

The agricultural instructor advises that large tracts of land in Vere and St. Elizabeth appear to be suited for this fruit.

Rubber

2,704 plants were distributed; all the varieties are doing well.

Sugar cane.

Three and a quarter acres are planted out with 62 varieties from all parts of the world; 36 new varieties were obtained from Demerara and 8 from Barbados. 15,103 tops were distributed. There is a large demand now for new seedling canes.

Tobacco.

Four acres have been planted out for investigation into the proper methods of cultivation and curing, and the help of a Cuban tobacco planter secured for the latter.

(D.) LAND GRANTS, SALES, &c.

Grants.

Two patents of forfeited land, amounting together to 710 acres, were conveyed to the West India Improvement Company during the year under the provisions of the Railway Law 12 of 1889, making a total of 74,433 acres granted to this Company as part of the consideration for the extensions of the railway provided by them. Over 2,000 acres still remain to be granted.

The Company has not made any use whatever of the lands acquired by it and is now in liquidation, the interests in this land being in dispute between several parties. It is much to be regretted that so large a portion of the best lands in the Island should thus remain useless and unprofitable, but the Government are helpless in the matter, being bound by the provisions of the railway contract and of the law.

The Vigas plantation, amounting to 240 acres, which had been leased by the Directors of the Milk River Bath, was conveyed to the directors in fee simple, for the nominal consideration of a payment of ten shillings, to be held in trust for the purposes of the Bath.

Sales and Leases.

Sixteen parcels of Crown land, all of small extent, were sold during the year, exclusive of sales to small settlers, on the instalment purchase system. 66 leases of land were effected at a total rental of £200 19*s*; 56 of these were of small lots in the neighbourhood of Kingston.

Sales under the Instalment Purchase System.

588 applications to purchase land under the system were received, and 442 lots aggregating 3,879½ acres were surveyed and assigned. Since the year 1896 the Government has been selling Crown land in holdings not exceeding 50 acres to purchasers who are permitted to pay for the land and the cost of surveying by instalments distributed over ten years. If within this period the purchaser brings one-fifth of his holding into bearing in permanent crops, one-fifth of the purchase money is remitted. In the year 1900-1901 the Surveyor General reported that he experienced increasing difficulties in collecting the instalments of purchase money. Payment is generally delayed till the point of forfeiture is reached; this remissness imposes much trouble and cost on the Department. The ability of the settlers to pay for these lands in the moderate instalments required is, however, evidenced by the fact that out of 1,177 lots sold during the period of over four years in which the scheme has been in operation only 16 have had to be actually taken back owing to lot holders failing to pay their instalments. The greater part of this area consisted of abandoned estates recovered to the Crown by forfeiture for non-payment of Quit Rents, and occupied by squatters who paid rent only when absolutely forced to do so, and whose cultivation had no permanent value.

Forfeitable and Forfeited Lands.

Notifications have been published during the year of 20,669½ acres liable to forfeiture for non-payment of quit rent and land tax, while 10,969 acres have been finally forfeited.

The forfeitures last year aggregated 3,908½ acres.

(E.) SHIPPING.

There was a considerable and general decrease in the number and tonnage of vessels visiting the Island during the year. The number of vessels entered decreased by 150, and the tonnage by 25,055 tons. This decrease was principally in visits of small vessels; sailing vessels were 113 fewer and steamers 37 fewer. This falling off was chiefly due to the decrease in the trade which sprang up with Cuba during and after the war in that Island.

The Island is merely a port of call for most of the lines of steamers which visit it, and the shrinkage therefore is of less moment to trade than it might appear at first sight.

The following is a comparative summary of vessels and tonnage for the past five years:—

Year.	Reported.		Cleared.	
	Vessels.	Tonnage.	Vessels.	Tonnage.
1896–97	Sailing, 343	66,447	361	70,557
	Steam, 688	672,955	694	678,946
	1,031	739,402	1,055	749,503
1897–98	Sailing, 348	70,238	346	71,388
	Steam, 712	710,623	709	708,695
	1,060	780,861	1,055	780,083
1898–99	Sailing, 445	71,058	457	76,218
	Steam, 975	839,391	972	841,052
	1,420	910,449	1,429	917,270
1899–1900	Sailing, 394	64,425	387	64,172
	Steam, 793	832,636	793	832,278
	1,187	897,061	1,182	896,450
1900–01	Sailing, 281	49,076	276	48,448
	Steam, 756	822,930	754	821,770
	1,037	872,006	1,030	870,218

There was a notable decrease in the entries of British tonnage at the close of the year, two lines of steamers being transferred to foreign flags, involving so far as this Island is concerned a loss to British tonnage of 160,456 tons distributed between 104 vessels. On the other hand, the inauguration of the Imperial Direct West India Mail Service in February, 1901, is calculated to add to our inward British tonnage a minimum average of 49,270 tons devoted entirely to the interests of the Island.

The loss to British tonnage and gain to foreign for steamers during the year was:—

—	1899-1900.		1900-1901.		Loss.	Gain.
	No.	Tons.	No.	Tons.	Tons.	Tons.
British steamers ...	1,427	570,317	315	452,613	117,704	—
Foreign steamers...	366	304,527	441	370,317	—	65,790

The average tonnage of British steam vessels considerably exceeded that of foreign, thus:—

—	1899-1900.	1900-1901.
	Tons.	Tons.
British steamers ...	1,236	1,437
Foreign steamers ...	832	839

The British sailing trade with Jamaica is mostly carried on by small inter-colonial vessels, many being from the Cayman Islands.

The greater number of foreign vessels trading with Jamaica are Norwegian and American. In 1900-1901 259 of the former entered, and 174 of the latter, against 221 and 150 respectively in 1899-1900.

III. LEGISLATION.

The following are the more important laws passed during the session of 1900 which were assented to during the year under review, viz.:—

Law 6 of 1900.—This law amends the Succession Duty Law 20 of 1898. It makes accrual by survivorship of joint property

JAMAICA, 1900-1901.

a succession, provides for various cases of dispositions of property, &c.

Law 7 of 1900—The Criminal Law Appeal Law, 1900.—This law amends the law regulating appeals from the judgments of Resident Magistrates sitting in the Resident Magistrates' Court in criminal cases.

Law 8 of 1900—The Coast and Harbour Lights Law, 1900—vests lighthouses and harbour lights in the Colonial Secretary, and the care and management of lighthouses in the Director of Public Works and of harbour lights in the Marine Board. It provides for the payment by ships (except ships of war) and by pleasure yachts of dues not exceeding 3*d*. per ton registered tonnage, the rate to be fixed in Privy Council and the proceeds to be carried to General Revenue.

Law 11 of 1900 consolidates the law relating to coroners.

Law 13 of 1900.—This law constitutes the town of Port Royal, and the strip of land called the Palisadoes on which it is situated at the entrance to Kingston harbour, a separate parish, except for elections to the Legislative Council. It also constitutes a Parochial Board of five members, viz., the senior naval officer at Port Royal, chairman, an Admiralty or navy officer, and an army officer, both nominated members; and two members, elected by the townsfolk triennally. The War Department and Admiralty property are exempted from rates leviable by the Board in consideration of fixed annual contributions to the revenue of the parish.

Law 14 of 1900—The Town Police Law, 1900—enables the provisions of the Kingston Police Laws to be applied to such other towns not being in that parish as the Governor in Privy Council may think fit.

Law 16 of 1900 enables moneys received from Quit Rents, and standing to the credit of the Parochial Board Reserved Fund, to be applied to such purposes and in such amounts as may from time to time be authorised by resolution of the Legislative Council.

Law 17 of 1900—The Landlords' Bailiffs Law, 1900.—This law limits the privilege of appointment as landlords' bailiffs to such persons as may be recommended by two Justices of their parish, after certain enquiries by the chief police officer of the parish. The law also fixes a schedule of fees and enables rules to be made for regulating the bailiffs' duties.

Law 18 of 1900 provides for certain actions at law arising from contract or tort for amounts exceeding £15 or such other minimum amounts as the Governor in Privy Council may fix, which were formerly disposed of in the Resident Magistrates' Court for Kingston, being tried instead by a Puisne Judge of the Supreme Court, the object being to relieve the lower Court of such proportion of its civil work as would enable certain

economies to be effected in the establishment of Resident Magistrates' Courts.

Law 19 of 1900 enables the Director of Public Works to relieve any Parochial Board at its request and with the approval of the Governor in Privy Council, for such period as may by circumstances be determined, of the care and management of any system of water supply.

Law 21 of 1900—The Tax Collection Law, 1900.—This law changes the date of commencement of the tax collecting year from the 1st August to the 1st April, being the date of the commencement of the official financial year of the Government. It also enables assessed taxes, exceeding in amount eight shillings per annum, to be paid in four equal quarterly instalments, provided payment be made in the first month of the quarter concerned.

Law 23 of 1900 enables the Governor in Privy Council to make bye-laws for the regulation of land used for an artillery or rifle range, a school of gunnery or like purpose.

Law 26 of 1900—The Soap Excise Duty Law, 1900.—This law imposes an excise duty of tenpence per box of soap weighing 56 lbs., or less or more duty proportionately to the contents, and license duty of £1 for each soap manufactory; it also provides for the giving of returns, inspection of factories, &c. The import duty of 3*s.* 1*d.* per box of soap of 56 lbs., equal to about 50 per cent. of the cost of imported soap, acted as a high protective duty in favour of local manufacturers of soap who paid only the usual *ad valorem* duty of 16⅔ per cent. on raw materials.

Law 27 of 1900 repeals former Marine Board Laws and consolidates and amends their provisions.

Law 28 of 1900—The Tobacco Duty Law, 1900.—This law repeals the Cigar and Cigarettes Duty Law, 1897, except as to rights, liabilities, &c., incurred thereunder.

The requirements of the former law were found onerous and difficult to enforce in many respects. The new law applies only to manufacturers, and requires any person making cigars, whether for sale or not, to take out a license of 5*s.* per 10,000 cigars, or fractional part; and any person making cigarettes and pipe tobacco (except "rope" tobacco) to take out one of 5*s.* It also imposes a duty of 1*s.* per 100 cigars, 1*d.* per 100 cigarettes, and 6*d.* per lb. tobacco. The keeping of stock books, Government inspection, &c., is further provided for.

Law 30 of 1900 amends the Spirit License Law of 1896 by allowing the sale of spirits on passenger coastal steamers, and also relaxes the provisions of the former law as to the process for renewing license, obtaining transfers where licensed, dimensions of premises, &c. It adds a penalty for a retailer failing to keep a stock book.

JAMAICA, 1900-1901.

Law 33 of 1900 repeals former provisions of law regarding arbitration, provides for reference to a single arbitrator unless otherwise specified, for appointment by two arbitrators of an umpire, &c.

Law 34 of 1900—The Parochial Finance Law, 1900.—This law simplifies the keeping of parochial accounts, consolidates the Poor, Sanitary and General Purposes Funds and Rates into one general fund and rate for each parish, and allows of separate local rates being levied for purposes benefitting a particular town or district of any parish.

Law 35 of 1900 enables Parochial Boards to appoint inspectors of food offered for sale, and makes better provision for preventing the sale of unwholesome food.

Law 36 of 1900 enables the Governor to borrow from the Imperial Treasury, to meet the deficit in the Colony's assets, a sum or sums not exceeding in all £150,000, in accordance with the provisions of the Colonial Loans Act, 1899.

Law 37 of 1900 provides for meeting from Jamaica funds one half of the subsidy payable by this Government to the contractors for the direct steamer service with the United Kingdom.

Laws passed during the Session of 1901, *before the* 31*st March.*

Law 1 of 1901—The Jamaica Railway Vesting Law, 1901.—The law confirms the First Mortgage Bondholders of the Jamaica railway in their position as holders of Inscribed Stock, and prescribes the steps to be taken for securing the payment of interest due to them. It formally vests the railway in the Government, which assumes liabilities of the railway company with those of the trustees of First Mortgage Bondholders and releases the trustees absolutely.

Law 2 of 1901 places constables on probation for three months after enlistment, so as to enable their services, when not likely to be useful, to be dispensed with, instead of only for misconduct or on a medical certificate as in the former law.

Law 4 of 1901 repeals the Patent Law so far as it makes forfeitable patent rights not brought into operation within two years.

Law 5 of 1901.—As calcium carbide was coming into use for lighting purposes, this law brings the substance, as a dangerous explosive, into a similar category to petroleum as to its storage and sale, requires licenses to be taken out, &c.

Law 6 of 1901 appropriates quit rents and produce protection duties to general revenue, except so far as proceeds of quit rents are required to pay moieties of the salaries of superintendents of Parochial Boards.

Law 7 of 1901 makes persons in possession of unoccupied houses in Kingston liable to a rate of 9½*d.* in the pound in 1900-1901, and in subsequent years to a rate not to exceed one-fourth of the general rate (*see* under Law 34 of 1900).

Law 9 of 1901—The Land Tax Law, 1901—provides additional revenue by imposing in place of those formerly leviable under various laws a new sliding scale of higher rates, generally based approximately on the different values estimated from the cutivation of different products, and ranging from one shilling per acre for banana, cane land, &c., to one halfpenny per acre on woodland and ruinate. It also increases generally the taxes on holdings above five acres.

Law 10 of 1901 consolidates former assessment laws applicable to Kingston and amends them by providing for the appointment of a committee consisting of three City Councillors appointed by the Mayor and three members of the Kingston General Commission, with an independent resident of Kingston appointed by the Governor. The committee's functions are to investigate into and supervise valuations made by assessors appointed by them.

Law 12 of 1901—The Match Excise Duty Law, 1901.—The high duty on imported matches had seriously affected imports of matches and receipts from Customs duty thereon to the profit of local manufacturers. To remedy this while allowing a fair profit to these manufacturers, Law 12 of 1901 imposes a duty of 3*d.* on every gross of boxes of matches manufactured in the Island containing 50 sticks or less, and the payment of a license duty of £1 in respect of each manufactory.

IV. EDUCATION.

(A.) Elementary Schools.

Year.	Schools on Annual Grant List.	Schools Inspected.	Scholars on Books.	Scholars in Average Attendance at Inspection.	Average Attendance from Monthly Returns.	Percentage on Average Attendance of Number on Books.	First Class Schools.	Second Class Schools.	Third Class Schools.	Total Payments to Elementary Schools and Teachers.
										£
1899–1900	746	776	98,598	61,219	51,470	62·08	187	357	219	47,240
1900–1901	720	717	86,491	50,978	47,441	58·94	198	326	185	42,482

JAMAICA, 1900-1901.

The above table shows decreases under all heads except that of the first class schools, whose increase in number out of a considerably diminished number of schools shows the tendency of the economies which have been put into force during the period. The same tendency was shown in 1899-1900 as compared with 1898-1899; the percentage of first class schools continues to increase, and that of third class schools to diminish, through the closing or amalgamation of the superfluous or inefficient, whilst that of the second class remains stationary.

A new Code was brought into force during the year, but most of the examinations were held under the provisions of the former Code. The results of the new Code cannot begin to be tested generally till next year, but improvement is already apparent in the best schools, which have made determined efforts to meet the requirements of the new Code. The good increase in first class schools, which now exceed for the first time the lowest class, shows apparently that the many changes in their work introduced by the Code have not had even a temporarily disorganising effect.

The closing and amalgamation of inefficient schools, together with the restriction of the age limit and the adoption of a stricter method of keeping the attendance register, are stated as the causes of the decrease in the number of names in the books. It is satisfactory that the result of amalgamations has generally been decidedly increased efficiency.

The falling off in average attendance since October 1st, 1899, which began when the new age limit came into force, excluding children below six years of age (except in a few infant schools able to teach by Kindergarten methods), has been somewhat arrested this year, an improvement being especially observable during the last six months. Parents in districts where schools had been closed or amalgamated at first refused to send their children to a school a little further away than the one they had been accustomed to, but are now beginning to see the unwisdom of this refusal.

With a diminution in the number of schools and teachers, the amount of the grants-in-aid diminished considerably, but the increase in population and continued improvement in the quality of schools will naturally, unless further closings and amalgamations of schools are deemed necessary for financial reasons, lead to a gradual rise in the total amount of these grants. Expenditure in aid of voluntary training colleges was reduced from £3,470 in 1899-1900 to £2,660 in 1900-1901. The diminution in the grants to training colleges and to elementary schools resulted in a decreased expenditure under the head of Education from £60,000 in 1899-1900 to £55,236 in 1900-1901.

Training Colleges.

At the training college examinations held in December, 1900, 130 students and 24 teachers presented themselves. 111 of the

former passed, 29 with honours. Of the teachers 13 passed, none with honours. The percentage of students who passed was 85·4, as against 91·3 in 1899-1900. The Superintending Inspector of Schools explains that the proportion last year was an exceptionally high one. 65 per cent. of the teachers passed, a number much above the average. The number of teachers who present themselves for examination is rapidly increasing, *e.g.*, 9 in 1898-1899, 18 in 1899-1900, and 24 in 1900-1901.

In August, 1900, a course of lectures on agriculture was given to teachers at the Jamaica High School, 30 of whom were boarded and lodged there for three weeks. These teachers had daily instruction and practice in elementary agricultural processes at Hope Gardens under the supervision of the officers of the Station, and theoretical instruction from the agricultural lecturer, whose services are paid for by the Imperial Government. Besides these lectures on agriculture in the morning by Mr. Buttenshaw, in the afternoon lectures on cognate subjects, such as the preparation of produce for the market, were given by gentlemen specially qualified to deal with them. Some results from these lectures are already showing themselves, as the examiner at the training college examinations held four months later noted that the papers on agriculture showed greatly increased intelligence and grasp of the subject. Papers on domestic ecomomy also showed marked improvement. Manual training was taught at the Mico College with very satisfactory results, while practice-teaching and reading at training colleges generally also showed improvement.

At the examinations of pupil teachers and of volunteer candidates for trade scholarships, for admission to training colleges and for exhibitions at other schools, 415 pupil teachers presented themselves, of whom 250 passed, as against 480 last year with 259 passes, the percentage of passes being 60·2 against 53·9 last year. 469 volunteer candidates presented themselves, of whom 210 passed, as against 662 last year with 190 passes, the percentages being 42·7 in this and 28·7 in the previous year. While these figures show, as did those of 1898-1899, the marked inferiority of the volunteer candidates compared with the pupil teachers, the figures for the three years evidence a more rapid improvement in the former class, due in some measure, the Superintending Inspector of Schools considers, to the raising of the admission fee to the volunteer examination, but also to the taking of greater pains in the preparation of candidates.

Elementary Schools.

Progress or otherwise in these schools may be briefly summarised as follows from the reports of the inspectors.

Reading and recitation are still in general very unsatisfactory, though the use of the tropical readers, which convey information about matters of daily interest, and the blackboard exercises and methods of teaching junior standards inculcated in the new Code have had good effects. More care is shown in writing and written composition, the improvement in the latter being largely due to the new Code. But the results are still disappointing. Some improvement is shown in writing, but little in mental arithmetic, or in sums requiring thought instead of mere knowledge of rule.

In elementary science, of which agriculture forms a considerable part of the teaching, little improvement is shown, though there is an increased tendency in teachers to use practical illustrations and simple experiments which must in the long run be of benefit.

Drawing shows generally a want of accuracy, though one inspector notes improvement under this head.

Needlework.

The reduction in the grant has led to sewing, in some of the schools without a female teacher, being no longer taught.

School appliances show improvement.

The school accommodation provided is sufficient in most places for the average attendance. A number of schools have raised by subscription the amount necessary to entitle them to grants for school libraries.

The services of a trained Kindergarten teacher were secured during the year at the Kingston Board School for the infant department, and a number of teachers have been instructed in Kindergarten methods.

Agricultural Grants.

The work done at some of the schools obtaining these, and teaching agriculture practically in school plots by raising vegetables, &c., is very satisfactory, but the expenditure generally exceeds the income from the Governments grants and sales of produce, and as manager or teacher must meet the deficiency, the number of these schools does not tend to increase.

The teaching staff is still, in the opinion of the Superintending Inspector, inadequate both in number and quality. The employment of additional women teachers continues to increase in favour, and the inspectors, as in previous years, comment favourably upon the results.

(B.) SECONDARY EDUCATION.

ENDOWED SCHOOLS under the REGULATION of the JAMAICA SCHOOLS COMMISSION.

University College, attached to the Jamaica High School, provides facilities for local study for degrees in arts and science at the London University. The work of the endowed secondary schools throughout the Island is tested annually under the Cambridge University local examination scheme.

JAMAICA, 1900–1901.

The results of the examination held in December, 1900, were satisfactory for nearly all the schools and highly creditable in the case of the Jamaica High School, Wolmers School, and the schools of the Munro and Dickenson's Trust. One of the High School students, Mr. J. C. Sharp, was placed first in the senior list among all the candidates from England and the Colonies. He gained six marks of distinction, and the High School 20 of such marks in all. Miss C. G. Pearman, the best candidate at the local examination among the senior girl students, gained not only the Cambridge University prize of £12, but also a scholarship of the value of £30 a year for three years at Girton College.

Provision is made at the High School for the practical training of scholars in agricultural science at the Government Botanic Gardens and agricultural experiment station, adjoining the school premises.

The Government agricultural lecturer, Mr. Buttenshaw, devoted during the year a few hours weekly to teaching agriculture to High School boys, and also gave lectures at University College to boys from any school, and to other students.

Drawing was added to the subjects at the High School. Wolmers School entered, for the first time, for the examinations of the Royal Drawing Society, with 69 candidates, of whom 52 passed, 19 with honours.

An examination of Titchfield Higher Grade School was conducted by an inspector of schools, who reported very favourably but recommended certain changes in the curriculum, rendering it more "commercial" than "classical." These recommendations were adopted by the Schools Commission. The curriculum of the Titchfield Elementary School was also reorganised in accordance with the inspector of schools' recommendation.

New schemes have been adopted for the Wolmers, Mannings, and Manchester and Vere Trust Schools. On the recommendation of the Schools Commission, the winner of the Jamaica Scholarship, hitherto a £200 scholarship, tenable for three years, has been allowed to elect in future to receive either £150 for four years or £120 for five years.

Shortwood Training College for Female Elementary School Teachers.

This College is now managed by a Board of Governors, who receive a Government grant of £1,200 a year. There were 30 students in training throughout the year, all of whom presented themselves for examination in December; 27 passed, 7 with honours.

The Manual Training School at Hanover Street, Kingston, which has been formally placed this year under the Board of Education, has classes in woodwork for boys, which are open to

other schools, and also for teachers. The girls' department of the school was closed at the end of 1900, as funds did not permit of work suitable for girls being arranged for. Kindergarten work is also taught.

Secondary School, Montego Bay.

Average number 29, as against 23 last year. A reduction in the scale of fees largely accounts for the increase. This school was very favourably reported on on examination.

In addition to the above schools and colleges are the Mico, St. Josephs, and Bethlehem Training Colleges for teachers, which are aided by Government grants, and numerous private schools, many of them furnishing a fair basis of education. 23 of the more prominent are noted in the Blue Book Return on Education.

(C.) INDUSTRIAL SCHOOLS.

The following summary gives the principal particulars regarding the Industrial Schools of the Colony for the year under review as compared with the preceding :—

—	Under control of Government, with Board of Visitors (advisory).		Under control of the Roman Catholic Church.		Under control of Church of England.	Total Boys in Industrial Schools.	Total Girls in Industrial Schools.	Total Industrial School Children.
	Hope (Boys).	Shortwood (Girls).	Alpha Cottage.		Belmont (Girls).			
			Boys.	Girls.				
Inmates :—								
31st March, 1900... ...	39	35	40	30	6	79	71	150
31st March, 1901... ...	40	31	39	33	10	79	74	153
Health	Good.	Good, except for epidemic of influenza.	Excellent.	Excellent.	Good.	—	—	—
Cost per child	10·792*d.* per diem.	—	—	—	—	—	—	—

At Hope School the older boys receive practical training in cultivation, nursery garden routine, application of insecticides, &c., and instruction in agriculture from the Superintendent of Hope Gardens. Younger boys attend to domestic duties and keep grounds and roads in order. Twelve of the oldest boys are constantly employed at the Hope Experiment Station. Of six boys discharged as time expired, five are now employed at the public gardens and one by an employer to whom he had been previously licensed. The boys at Alpha Cottage do field and garden work, also attend to horses and poultry, cook, and paint and colour-wash the buildings. The girls at Alpha Cottage also do garden

work four hours daily, wash, make and repair clothes, cook, bake, &c. Girls at Belmont in addition to these duties make hats, baskets, brooms, and mats. Basket-making is also carried on at Shortwood, with other elementary industries.

Elementary education is imparted at each school. The marks gained are only reported for Alpha Cottage and Belmont, showing that these schools were graded as first class. Religious instruction is given at all.

V.—GOVERNMENT INSTITUTIONS.

(A.) Hospitals.

(1.) *Public Hospital, Kingston.*

Year.	Number refused admission for want of room, &c.	Indoor Patients.								Outdoor Patients.		
		Number treated.	Cured.	Relieved.	Not relieved.	Deaths and percentage to cases.	In hospital at end of year.	Operations.	Deaths, persons operated on, and percentage.	Number of poor treated.	Casualties attended to.	Prescriptions dispensed.
1898–1899...	4,419	3,758	2,420	771	106	272 7·23	189	1,924	10 ·52	864	8,962	22,264
1899–1900...	3,392	3,448	2,504	375	124	257 7·45	190	1,062	16 1·5	751	6,768	15,504
1900–1901...	3,170	3,142	2,258	297	132	258 8·21	197	1,041	18 1·7	794	5,141	11,618

JAMAICA, 1900–1901.

The above table shows that the services rendered by the hospital have been reduced during the three years, both as regards indoor and outdoor patients, and that the death rate among all patients and among patients operated on has increased, in the latter case considerably. This is owing to the more rigorous exclusion of other than urgent cases. Many patients are received in a moribund condition. Of the 258 deaths in 1900-1901, 70 occurred within 72 hours after admission. The study of economy has not diminished the efficiency of the treatment of those admitted, but the cases treated were on the whole of a more serious nature than in the previous year.

The most noteworthy diseases treated during the year were:—

Diseases.	Cases.	Deaths.	Remarks.
Enteric fever ...	28	9	Very severe type.
Tubercle	69	27	Death rate much higher than last year.
Malarial fevers ...	561	29	Severer type than last year and higher mortality.
Influenza	26	1	Mild type.
Venereal	200	5	

Cases of venereal disease treated were far more numerous than last year, those of the other diseases named considerably less, but generally of a severer type. The Superintending Medical Officer attributes the marked decrease in enteric fever to the improved sanitary condition of Kingston, and considers that the lessening of malarial fever was influenced by the small rainfall.

The daily average of beds occupied during 1900-1901 was 201. Whilst the extension of the hospital accommodation must for the present be delayed from want of funds, patients have now, in some cases, the Superintending Medical Officer reports, to be discharged before they are thoroughly convalescent so as to make room for the more pressing cases.

The financial statistics for the three years ended 31st March, 1901, given below show a considerable increase over the preceding year in amounts received from paying patients, a slight decrease in total expenditure after deducting these amounts, and a slight increase in the annual cost of each patient.

That cost is, however, appreciably less than in 1898-1899, and markedly less than in 1897-1898, when it was £43 0*s.* 2¾*d.*, or £5 15*s.* 11¾*d.* more per patient annually.

Financial Return—Public Hospital, Kingston.

Return showing the cost of each patient after deducting the several amounts passed to the credit of the hospital for the years ending 31st March, 1899, 1900, and 1901 :—

Year.	Daily number of beds.	Gross expenditure for the year.	Amount of dues paid into the Treasury.	Actual expenditure after deducting amounts passed to credit of the hospital.	Annual cost of each patient.	Daily cost of each patient.	Number of patients treated.	Average cost of each patient treated per annum after deducting amounts passed to credit of the hospital.
		£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.		£ s. d.
1898–1899... ...	205	8,375 13 5½	274 14 5	8,100 19 0½	39 10 4	0 2 1¾	3,758	2 3 1¼
1899–1900... ...	203	7,753 0 0	205 16 2	7,547 3 10	37 3 6¾	0 2 0¼	3,448	2 3 9
1900–1901... ...	201	7,846 7 11	366 10 10	7,479 17 1	37 4 3	0 2 0½	3,142	2 7 7¼

(2.) *Maternity Hospital, Kingston.*

The following table gives particulars other than financial of this hospital for the year 1900-1901, compared with the two preceding years:—

Year.	Patients.			Infants.		Pupil Nurses.	
	Number Admitted.	Number of Deaths.	Number of Operations.	Number of Births.	Number of Still-born.	Entered.	Completed Terms.
1898–1899	500	7	60	502	60	11	10
1899–1900	580	9	—	560	66	10	9
1900–1901	483	9	42	468	42	8	9

The ages of patients admitted ranged from 14 years to 40, about one-fifth of the number being under 20 years. The medical officer of the institution calls attention to the small average size of most of the infants at birth, the greater number weighing less than seven pounds. Poverty of physique appears to be indicated as prevailing among those who avail themselves of the Maternity Hospital.

(3.) *Public General Hospitals.*

There were 12,215 admissions to Public General Hospitals during 1900-1901, classified as follows:—

Indentured immigrants	8,257
Poor persons admitted without charge	3,132
Constables	553
Paupers	38
Paying patients	135
	12,115

The out-patients were 19,426, of whom 15,787 were indigent poor, the remainder being constables and prisoners. 75 midwifery cases were also treated.

It will be seen that East Indian immigrants contributed two-thirds of the cases admitted. The present Immigration Law requires an immigrant to be either at work or in hospital, otherwise many might be treated as out-patients. Further, about 75 per cent. of the immigrants are stated to pass through the

hospitals within the first year of their indenture, when they are becoming acclimatised.

The deaths in the hospitals were only 299, being 2·46 of the 12,215 admissions. The highest rate was 6·77 at May Pen, and the lowest 1·06 at Lionel Town Hospital. There were 1,162 operations, the mortality rate being only ·66. 507 beds were occupied in the 19 hospitals, an average of 26 beds to each. Admissions are restricted owing to the financial state of the Colony, and there is space for many more patients than are admitted.

The total expenditure on the hospitals for the year (not including the salaries of the district medical officers who control them) was £12,986, being on an average from £25 to £26 for each bed.

The most prevalent diseases were fevers, skin affections, venereal and other diseases of the urinary and generative system, diseases of the digestive system, local injuries, and rheumatic and respiratory affections. Of 12,637 cases recorded as treated, malarial fevers, mostly of a mild character, numbered no less than 4,179, and skin affections 2,334, the latter largely occurring among East Indian patients. The venereal cases treated, 449 in number, are reported to be unfortunately only a fraction of the whole number requiring treatment. In these cases, as also in rheumatic affections (425 hospital cases), sufferers too frequently neglect to seek admission till their ailments have become chronic.

(B.) ASYLUMS.

(1.) *Lunatic Asylum.*

Year.	Number of Persons under Treatment during the Year.	Number in Asylum on 31st March.	Average Number Resident.	Admitted during the Year.	Discharged.	Recovered.	Died.
1898–1899	953	767	775	168	123	119	63
1899–1900	956	819	789	189	69	64	68
1900–1901	1,019	868	844	92	92	92	59

Notwithstanding the increase in admissions and in the average number in residence, the deaths were less than in either of the two preceding years, and the number of recoveries amongst those admitted greater in proportion. The death-rate, 5·79 per cent., was lower than that of last year, 7 per cent. (which is approximately the rate in England), and still lower than the average of the last ten years, 7·22 per cent.

The increase in the number of persons treated has been marked of late years; twenty-five years ago (1876–77) the number was 429, as against 1,019 in 1900–01, and 10 years ago (1891–92) it was 704.

The following are the financial particulars for the three years under comparison:—

Year.	Expenditure.				Minor Funds.	Weekly Cost per Head.
	Met from Poor Rates.	Met by Paying Patients.	Met from General Revenue.	Total Expenditure.		
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1898–1899...	11,767 0 9	359 10 8	1,524 12 8	13,651 4 1	1,356 16 5½	0 6 7
1899–1900...	11,514 19 3	454 9 1	1,590 1 9	13,559 10 1	1,380 1 4	0 6 4
1900–1901...	12,333 1 8½	525 8 5	1,510 9 6	14,368 19 7½	1,369 19 2½	0 6 3

The total expenditure in 1900–1901 is necessarily greater owing to the considerable increase of 63 patients treated over the number last year, but the cost per head has diminished in each of the three years under comparison.

(2.) *Lepers' Home.*

Year.	Admissions.	Discharged and Absconded.	Deaths.	Death-rate per 100.	Remaining at end of Year.	Re-admission. of Lepers.
1898–1899	22	11	20	13·6	118	5
1899–1900	30	5	20	13·5	123	6
1900–1901	22	8	15	10·3	122	1

Of the admissions 2, 3, and 3 in each year respectively were non-lepers.

That the care and treatment of the lepers proper is not becoming less successful would appear from the fact that the average death-rate of the five years 1890-1896 was 12·3 per cent., while that of the period 1896-1901 was 11·77 per cent. The death-rate in 1900-1901, 10 per cent., was lower than in any of the ten years, except 1895-1896 and 1897-1898, when it was 8·62 and 8·96 respectively.

Four persons were discharged during the year, two being found to be non-lepers, and two because bond had been given for their proper treatment in private seclusion. Four persons absconded.

The Medical Superintendent notes that the number of admissions is decreasing yearly; he considers there is not much concealment of the disease among the poorer classes, and that the evidence at hand shows a steady decrease in the disease in this community due to the institution of the Lepers' Home, and, in his opinion, increasing knowledge of sanitary matters among the peasantry.

Treatment by subcutaneous injections of a soluble salt of mercury, of anti-strepto-coccic serum or of chaulmoogra oil has been tried with beneficial results, but the greatest obstacle to the effectual treatment of leprosy has been that the afflicted as a rule do not seek admission until the disease is far advanced.

(C.) POOR HOUSES AND POOR RELIEF.

The following statement shows the principal pauper statistics for the year 1900-1901 as compared with 1899-1900 :—

Year.	Estimated population.	Registered poor, casual poor, and orphans and deserted children.	Number of paupers.			Percentage of paupers to population.	Pauper expenditure, excluding charges for lunatics and industrial school children.	Charge per head of population.	Cost of each pauper for year.	Ratio of paupers to population.
			Outdoor.	Indoor.	Total.					
							£	d.	£ s. d.	
1899–1900 ...	745,100	7,198	3,723	811	4,534	·61	24,948	8·04	5 10 0	1:164
1900–1901 ...	758,000	7,465	3,887	806	4,693	·62	26,260	8·31	5 11 9	1:161

Particulars for the several parishes for the year 1900–1901.

Parish.	Estimated population.	Registered poor, casual poor, and orphans and deserted children.	Number of paupers.			Percentage of paupers to population of parish.	Ratio of paupers to population of parish.	Pauper expenditure, excluding charges for lunatics and industrial school children.	Charge per head of population of parish.	Cost of each pauper during the year.

St. Elizabeth	74,000	341	150	31	181	·24	1:408	1,130	3·7	6 4 10¼
Manchester...	66,000	891	511	—	511	·77	1:129	1,790	6·2	3 6 10½
Clarendon ...	68,000	477	220	64	284	·42	1:239	1,665	5·9	5 17 3
St. Catherine	70,000	670	344	103	447	·57	1:174	2,801	8·6	6 5 3¾

The numbers of registered poor, &c., and of paupers, increased in 1900–01, both positively and in proportion to population. The percentage of paupers, 6·2 per 1,000, instead of 6·1 in 1899–00, was nevertheless below the average, 6·36, for the five years ended 31st March, 1901.

Expenditure on paupers was £26,260 against £24,948 in the previous year, and showed a slightly increased charge per head of population and greater cost of each pauper.

JAMAICA, 1900–1901.

The table giving details in respect to the several parishes shows wide differences in the ratio of paupers to population and in relative cost. The ratio varies from 1 in 48 in Kingston to 1 in 408 in St. Elizabeth. This parish, with St. Mary, where the ratio is 1 in 337, has the lowest number of paupers to support, but each spends more per head than any of the others. Per head of population the charge is lowest in St. Elizabeth, viz., 3·7*d.*, and highest in Kingston, 2*s.* 4·9*d.*

In Kingston the increase of pauperism is a serious social and economic problem. The estimated population is about one-thirteenth that of the Island, but the number of paupers and expenditure thereon is about one-fourth of the totals for the Island. The number has doubled within the last fourteen to fifteen years from 580 on 1st January, 1887, to 1,195 on 1st April, 1901. In the other thirteen parishes on the contrary, notwithstanding the increase of population, the aggregate number of paupers had decreased during the same period from 3,984 to 3,498.

Notwithstanding certain instances in which defective pauper administration was brought to light by the Board of Supervision, there is good reason to believe that the majority of the Parochial Boards are successfully endeavouring to improve their administration of poor relief and to reduce its cost to the community as far as possible.

(D.) REFORMATORIES.

Stony Hill Reformatory.

—	31st March, 1900.	31st March, 1901.	1899–00.	1900–01.

Net cost to general revenue			1,784 1 1	1,813 2 3
Valuation of work bringing in no return in money			907 0 1	931 13 10
Gross cost per head, per diem			1*s.* 0·51*d*	11·73*d.*
Gross cost of superintendence and instruction in school, trades, &c., per head, per diem.			5·77*d.*	5·77*d.*
Gross cost of diet per head, per diem			3·08*d.*	3·99*d.*
Average earnings of each boy			6 18 0¾	6 12 3

Four-fifths of the inmates are of ages between 12 and 16.

The boys were employed as usual in gardening and field work, also as carpenters, blacksmiths, masons, tailors, and bakers, the girls in washing, mending, and sewing. There are 33 acres of land under cultivation by the boys.

The health of the inmates was good. Twenty cases of mild influenza occurred in April, 1900. There was one death from cerebral degeneration.

(E.) SAVINGS BANK.

The following table shows a comparative statement of the chief transactions of the Government Savings Bank during the past five years:—

Year.	No. of Depositors.	Amount of Deposits, including Interest.		Amount of Withdrawals.	
		Government.	Ordinary.	Government.	Ordinary.
		£	£	£	£
1896–97...	29,719	35,923	204,613	25,284	209,178
1897–98...	30,660	45,026	183,759	34,023	195,751
1898–99...	31,870	47,084	189,480	29,345	183,344
1899–00...	32,880	34,302	195,141	59,921	194,744
1900–01...	33,659	42,420	177,964	40,041	198,135
		204,755	950,957	188,614	981,152
		1,155,712		1,169,766	

The number of ordinary deposit accounts in 1900-1901 was 33,177. The table shows that, while depositors have increased steadily in number, deposits show a tendency to decline; while in three of the five years ordinary withdrawals exceed ordinary deposits, the total of withdrawals, £981,152, exceeding the total of deposits (together with interest), £950,957, by £30,195.

The fact that before 1897 interest at the rate of 3 per cent. was allowed whereas only 2½ per cent. has since been given, may partly explain this decrease.

The deposits, without interest, were less in 1900-1901 than in any year since 1888-1889 inclusive, while withdrawals were more than in any previous year. Deposits which had been generally rising in amount up to 1895-1896, shrank markedly in 1896-1897, concurrently with a marked decline in the value of exports in that year. The number of private depositors of small sums apparently fell in 1897-1898, not from a decline in deposits, the total of which exceeded those of 1896-1897, but from the transfer of nearly 3,000 accounts, chiefly of small sums which had not been operated on for years, to the "Suspense Ledger."

The number rose again in the following year and has since increased steadily, as the following table shows, notwithstanding a steady decrease in deposits as shown in the previous table:—

Year.	Private Deposits.			Government Deposits.	Total.
	£5 and under.	Above £5.	Suspense Ledger.		
1896–97... ...	21,402	7,260	673	384	29,719
1897–98... ...	19,518	7,066	3,641	435	30,660
1898–99... ...	20,523	7,162	3,707	478	31,970
1899–00... ...	21,485	7,264	3,641	470	32,860
1900–01... ...	22,471	7,113	3,593	482	33,659

It may be remarked on comparing increase of deposits of £5 and under with decrease of the total sum deposited (*see* previous table) that the poorest class in this Colony have practically no means of investing their savings except in the Savings Bank, and to a smaller extent in building societies (whose operations are now considerably less than a few years ago), and in Friendly Societies. This class will apparently continue to make as much use as formerly of the Savings Bank. An analysis of a classified return of deposits during ten years, furnished in the report of the manager of the Savings Bank for 1900-1901, shows further that, along with a steady increase in the number of small deposits, there is no marked decrease of larger ones, indeed there is an increase in deposits ranging between certain amounts until those exceeding £200 are reached.

There has, however, in the five years under comparison been a decrease in number of most of the accounts above £5, and in all classes of accounts above £50.

Deposits increased during the year only in the parishes of Clarendon and St. Andrew, and decreased in the other twelve parishes, principally in Kingston (among "ordinary" deposits). There were heavy decreases also in Westmoreland, Portland, St. Elizabeth, and St. Thomas, in the order named.

The assets of the bank on the 31st March, 1901, were £450,868, as against £468,616 on the 31st March, 1900, a decrease of £17,748. The decrease in 1900 compared with 1899 was £25,179.

These assets were distributed in the two years as follows:—

Securities held.	1899-1900.	1900-01.
	£	£
Consols, 2¾ per cent.	20,405	20,405
Inscribed Stock	227,201	231,601
Debentures	204,328	176,128
	£451,934	£428,134
Government of Jamaica	16,367	22,654
Cash in hand	315	80
Total	£468,616	£450,868

The uninvested amount (Government of Jamaica and cash in hand) for which the Treasurer was accountable was, it will be seen, about 5 per cent. of the total.

After payment of interest to depositors and the expense of management for the year, there remained a balance of £3,434 profit to be carried to General Revenue, as against £2,997 in the previous year. The profits so earned during the 31 years of the bank's existence have been £37,594.

There were 13 branches of the Savings Bank open during the year, the same number as in 1899-1900. Fifteen sub-branches were open on the 31st March, 1901, six having to be closed during the year. The branches are open daily, and also those sub-branches which are worked by officers of the Postal and Telegraph Department.

Other sub-branches are opened one or more days in the week.

VI. JUDICIAL STATISTICS.

(A.) POLICE.

The allowed strength of the police on the 31st March, 1901, was 775, two less than on the corresponding date in the preceding year; the actual strength 770, as in the preceding year. There were also 761 district constables, making an effective strength for both branches of the force of 1,531, as against 1,521 on the 31st March, 1900.

The principal duties, besides patrolling and attendance at Courts, performed by the Constabulary during the past five years are indicated in the following return :—

—	1896–97.	1897–98.	1898–99.	1899–00.	1900–01.
Number of persons arrested on view and on information	8,351	7,330	7,183	8,669	7,504
Number of persons apprehended on warrants	1,780	1,629	1,264	1,375	1,557
Number of search warrants executed	142	148	188	119	151
Number of persons summoned	19,537	17,785	17,084	20,248	18,087
Number of persons subpœnaed	27,161	27,161	25,784	26,073	29,668
Number of prisoners escorted	11,542	12,081	8,912	8,175	9,053
Number of seizures under revenue laws	309	854	605	745	908
Number of post-mortem investigations ordered	641	703	527	550	395

By means of systematic patrolling of sugar estates and the outlying districts of country parishes, many offences against the Rum Duty Law have been detected, often at great risk, and sometimes injury to the constables affecting arrests. The detective force has also done excellent work, though numerically not strong enough to cope fully with the crime of the Island. In Kingston, for example, with 55 miles of streets, the available force of detectives and other constables is only sufficient to maintain proper supervision over 10 miles of streets, patrolling by mounted orderlies having to take the place in the suburbs of regular beat duty. In the present state of the public finances, however, no increase in the strength can be provided for. A good report is given of the conduct and discipline of the force.

(B.) PRISONS.

—	Year ended 31st March.					
	1900.			1901.		
Daily average number of prisoners in custody.	1,088			1,265		
Number on last day of year	1,237			1,233		
Commitments—						
To prisons	3,624			4,237		
To lock-ups	932			1,021		
Total	4,556			5,258		
Reconvictions	1,305			1,548		
Deaths	34			58		
Executions	—			2		
FINANCIAL.	£	s.	d.	£	s.	d.
Gross expenditure	18,340	18	8½	18,803	7	3¼
Gross earnings in cash	4,584	15	0½	4,106	4	8
Net cost of maintaining prisons ...	13,756	3	8	14,697	2	7¼

Estimated value of bricks, lime, &c., manufactured and stone quarried (General Penitentiary).	3,847	7	8	3,237	7	7½

The prisoners in custody on the 31st March, 1901, were 1,233, exclusive of those in local lock-ups. This number was 103 in excess of the average (1,130) on the last day of the five years ended on 31st March, 1901.

2. The state of health at the General Penitentiary improved as compared with the last quarter of the preceding year. The daily average number of prisoners in custody was 695 (547 males and 148 females). The deaths were 25, or, proportionately to the daily average number, 35·97 per thousand. There were 740 cases of sickness, 575 being of influenza and 48 of malarial fever. The 25 deaths occurred exclusively among sufferers from the remaining 117 cases of sickness, 6 being from Bright's disease and 4 from senile decay.

The enlargement of the St. Catherine district prison having been completed by prison labour, the Middlesex and Surrey County gaol was closed on the 31st January, 1901. The large number of prisoners habitually in custody at the St. Catherine prison renders the task of providing hard labour for the prisoners very difficult. It has, however, been found possible to extend the employment of prisoners in cultivating land by using ground adjacent to the railway station, which came this year into the possession of the Government. Endeavours are being made to arrange for the increased employment of prisoners in agricultural labour, both as a means of discipline and training and for the supply of food for the prison.

(C.) CRIMINAL STATISTICS.

Trespass	973	883	604	855	743	482	471	325	458	414

JAMAICA, 1900-1901.

This table shows that the total number of offences has but slightly varied from that for the preceding year. Offences against the person have diminished under most heads, while those against property committed without violence have increased considerably under the head of simple larceny, and particularly under that of prædial larceny, although they have diminished under nearly every other head. The reason given by the inspectors of police for the increase in simple larceny is that of poverty. In many instances the accused are women with infants who have been deserted by the fathers of their children. In the case of prædial larceny, poverty is stated to be the principal cause only in certain districts. In St. Mary, for instance, where the convictions more than trebled those of the previous year, and were in nearly every instance for larceny of bananas, many of the thieves themselves possess flourishing plantations. There appears reason to conclude, however, that in times of depression owners of property are more disposed to prosecute, and that the number of cases is swelled by prosecutions for trifling larcenies; thus, it is reported that in some parishes the majority of cases consisted in the pilfering of a sugar cane or two. The cases of disorderly conduct and indecent language, whilst they have decreased throughout the Island generally, continue to increase in Kingston.

VII. VITAL STATISTICS.

(A.) Population compared with Figures of Last Census.

The population of the Colony on the 31st March, 1901, is computed to have numbered 755,730 persons (males, 366,058; females, 389,672), an increase on the number on the 31st March, 1900, of 10,626 (males, 5,455; females, 5,171), a much smaller accretion than in any of the preceding five years.

During the ten years following the Census of 1891, the population is estimated to have increased by 60,110 males and 56,129 females, or a total of 116,239 persons.

The state of the public finances precluded the taking of a Census in 1901.

In its absence, the increase of registered births over deaths may be presumed to give a fairly accurate indication of the true population, when corrected by reference to the number of persons migrating to and from the Colony.

The arrivals and departures of passengers at Kingston and Port Antonio (the port at which by far the greatest number of vessels call) during the ten years ended 31st March, 1901, have been tabulated and show an excess of arrivals of 8,785 persons.

This number does not include soldiers and East Indian immigrants. In the absence of information as to the countries contributing to the excess of arrivals, the Registrar General offers the conjecture that it is due to persons who emigrated to Central America more than ten years ago having returned to their homes.

The mean population for 1900-1901 is estimated at 750,413 persons. The birth, death, and marriage rates are based on this estimate.

The following table shows that in the year 1900-1901 births, deaths, and marriages decreased compared with 1899-1900. The rates per thousand on the mean population are given in italics:—

Year.	Births.	Deaths.	Marriages.
1899–1900	31,259	16,880	3,767
	42·2	*22·8*	*5·0*
1900–1901	26,869	16,243	3,221
	35·7	*21·6*	*4·2*
Decreases	4,390	637	546
	6·5	*1·2*	*0·8*

The five years ended 31st March, 1901, show the following comparisons in number and in rates per thousand with the preceding five years:—

	Births.	Deaths.	Marriages.	Illegitimate Births.
Five years ended 1895–96	128,724	73,350	17,359	78,065
Average	25,745	14,670	3,472	15,613
Do. rate per 1,000...	*38·4*	*21·9*	*5·1*	*60·6°/*
Five years ended 1900–01.	141,287	80,422	16·037	88,527
Average	28,257	16,034	3,207	17,705
Do. rate per 1,000...	*38·8*	*22·1*	*4·4*	*62·3°/₀*

JAMAICA, 1900-1901.

It will be seen that, comparing the second quinquennium with the first, there has been a slight increase in the birth and death rates per thousand, but a noticeable decrease in the rate of marriage and increase in the rate of illegitimacy. For the first five years the births aggregate 128,724, made up of 50,659 registered as legitimate and 78,065 as illegitimate. For the next five years the total is 141,287, of which the births registered as legitimate contribute 52,760, a slight increase as compared with the previous quinquennium, and the illegitimate 88,527. During the quinquennium the Registrar General has computed the differences in percentage rates of mortality among infants under one year of age, and finds it far less among those born in wedlock, the average of which is 13·68, whilst that of illegitimates is 19·89.

The records of the May Pen Cemetery, Kingston, also show that a small percentage only of the still-born children buried there are the offspring of married persons.

(B.) Public Health, General State of.

The public health of the Island was generally satisfactory throughout the year. Except in May and June the average mortality was less than in the previous year and considerably below the recorded average of the last two decades. There were no epidemics. There were few cases of the acute gastric ailments which prevailed in certain districts last year, and there was a diminution in the number and severity of malarial fevers, owing presumably to a decrease of rainfall in some districts. Bowel complaints and other diseases of the digestive system occurred with some frequency, owing principally to the use of unwholesome food and impure water. The water supply of the towns is usually good, but the country districts pond water, contaminated by surface refuse, is the chief source of supply in the dry seasons.

Considering the salubrity of the Colony, the death rate is rather high. The present estimated population is about 756,000. The births during the year were 26,869, or 35·54 per thousand; the deaths 16,243, or 21·48 per thousand. A large percentage of these deaths occur among infants. In Kingston the mortality in 1900-1901 of infants under one year of age was 358 out of 1,379 recorded deaths at all ages, and it is heavy throughout the Colony.

The prevalence of sickness and death is promoted by the improvident and insanitary habits of the people, who show as a rule an utter disregard of the simplest hygienic laws. The overcrowding of small huts without ventilation, and the habit of sleeping on earthen floors, conduce to the spread of skin affections, tuberculosis and other respiratory diseases, and rheumatism; while venereal diseases, ulcers, &c., frequently become

incurable through neglect to invoke proper medical aid till the malady has thoroughly established itself in the system.

In Kingston the medical officer reports an improvement on the conditions of last year. There were no cases of small-pox, yellow fever, whooping cough, or scarlet fever, and only three of measles. Influenza both here and in the country districts prevailed at times, but in a mild form, being at its worst in May, when there were 13 deaths attributed to it in Kingston. There was a marked decrease of zymotic diseases under some heads, which is ascribed to the construction of sewerage works and also to the energy of the "health officer" and sanitary officers of Kingston in isolating cases as far as possible.

The death-rate of Kingston, estimated at 29·5 per thousand, that of the Island generally being 21·61, is considered in excess of what local surroundings might be expected to induce, and is swelled by the influx of diseased to Kingston for treatment as in or out-patients of the Public Hospital, &c. It is noted also that 28·5 per cent. of the deaths occur in that hospital, the lunatic asylum, or other institutions whose patients come to a very great extent from country districts. The death-rate in Kingston shows remarkable fluctuation according to the period of the year; with an average of 29·5, the maximum in May, usually an unhealthy month, was 48·2; that in September only 15·9 per thousand. The data for ascertaining the general causes of this fluctuation are not yet complete, though it is observed that the hot dry months show usually the less amount of sickness. 16,474 persons were vaccinated as compared with 10,268 in 1899-1900. 15,488 vaccinations were successful. The cases are almost all those of infants, as re-vaccination is rarely resorted to for young persons or adults.

The prevalence of yaws in the outlying districts was considerably reduced during the year. This loathsome disease yields readily to treatment, but is propagated by the prevalence of the idea among parents and guardians that all young persons must undergo the complaint.

(C.) Sanitation.

The Superintending Medical Officer reports favourably on the efforts of Parochial Boards generally to effect sanitary improvements in their respective districts during the year.

(D.) Climate.

(1) *Rainfall;* (2) *Temperature;* (3) *Direction and Force of Wind.*

Jamaica being a mountainous Island, with numerous ranges of hills rising in the extreme eastern portion to 7,423 feet in the Blue Mountain Peak, and averaging from 2,000 to 3,000 feet in the central and western portions, has a considerable variety of

JAMAICA, 1900–1901.

rainfall and temperature. For purposes of meteorological record the Island is dealt with in four divisions.

The mountainous north-eastern division is comparatively cold and rainy, with isolated districts where the rainfall is from 180 to 220 inches annually.

The west central region comes next in elevation, coolness, and rainfall. The northern is largely an elevated undulating tableland, intersected by limestone ridges; the southern portion contains the principal plains in the Island. The two last-mentioned divisions are comparatively dry. The prevailing winds are generally east, east-north-east, and north-east, except on the southern sea-coast, where they blow from the south-east; the rain-clouds discharge chiefly along the lofty north-eastern and central ranges trending west. North-easterly and northerly winds also bring rains to the extreme west.

The north central and the southern divisions are the driest, and possess a real tropical temperature over large areas near the sea, especially in the dry plains on the southern sea-board. Although Jamaica is between 17 and 18 degrees of north latitude, the temperature over two-thirds of its area, owing to the high elevation, is, except in the middle of the day and from July to September, balmy and somewhat similar to that of southern California in the moderate temperature and absence of great variations throughout the year.

The rainfall varies remarkably comparing one year, or even one decade, with another.

In last year's report the averages for three decades ending with the calendar year 1899 were given as 67·41, 66·54, and 76·15 inches. In 1900 the average rainfall for the whole Island was 69·65 inches, and for each division compared with 1899 it was as follows:—

Division.	1900.	1899.
	Inches.	Inches.
North-eastern ...	96·91	103·89
West Central ...	79·84	103·26
Northern	50·67	58·44
Southern	51·15	74·16
Whole Island ...	69·65	84·94

The rainfall of 1900 was fairly normal, that of 1899 exceptional.

The following are the rainfall and temperature of a few localities:—

(I.) LOWLANDS NEAR SEA-LEVEL.

a. Negril Point lighthouse (in the extreme west).
Rainfall 1900 ... ... 40·20 inches.
Mean temperature... ... 79·5° F.
Highest temp., Sept., 1900, 88°; lowest, Feb., 69·8°.

b. Kingston Public Garden.
Average rainfall in 29 years, 35·1 inches.
Average mean temperature in 29 years, 79·1° F.

c. King's House Garden, four miles from Kingston, elevation 400 feet.
Average rainfall for 21 years, 48·24 inches.
Average mean temperature for 21 years, 78·1° F.
Max. temp., Aug., 1900, 90·9°; min., Dec., 60·6°.

d. Hope Gardens, at the foot of the hills 5½ miles from Kingston, elevation 700 feet.
Average rainfall for 20 years, 53·75 inches.
Average mean temperature for 20 years, 72·8° F.
Max. temp., Aug., 1900, 89·9°; min., Feb., 63·1°.

(The three last preceding stations, being all on the Liguanea plain, illustrate the changes with varying elevations towards the hills.)

(II.) BLUE MOUNTAIN RANGE.

a. Orange Garden (Resource, near Cinchona), elevation 3,700 feet.
Rainfall in 1899 ... ... 94·58 inches.
Rainfall in 1900 ... ... 67·58 „
(No official particulars as to temperature.)

b. Hill Gardens (Cinchona), elevation 4,907 feet.
Average rainfall in 30 years, 103·75 inches.
Average mean temperature in 30 years. 62·9° F.
Max. temp., Aug., 1900, 72·5°; min., March 53·9°.

c. Blue Mountain Peak, elevation 7,423 feet.
Rainfall in 1899, 171·28 inches; in 1900, 219·09 inches.
Mean temp., 1899, 56·75° F.; in 1900, 57·47° F.

The maximum recorded temperature at the Blue Mountain Peak in 1900 was 72·9° in April, May, and September; the minimum, 36·8° in January. The temperatures have been taken on one day in each month by an officer of the Botanical Department.

VIII.—POST OFFICES AND TELEGRAPH SERVICE.

The following tables show respectively the revenue and expenditure for postal and telegraph services in each of the three years ended 31st March, 1899, 1900, and 1901.

REVENUE.

Year.	Postages. Packet.	Postages. Inland.	Postages. Total.	Commission on Money Orders.	Commission on Postal Orders.	Miscellaneous.	Total Postal Revenue.	Telegraph Revenue.	Grand Total.

* Includes expenditure on maintenance of Telegraph Lines by the Public Works Department.

Revenue.

The total revenue of the year 1900-1901 was almost exactly that of the preceding year, a falling off in Telegraph Revenue of £915 1*s.* 9*d.* being slightly exceeded by an increase in the Postal Revenue of £915 15*s.* 5*d.*, leaving a net comparative balance in favour of 1900-1901 of £ 13*s.* 8*d.* The decrease in Telegraph Revenue is attributed by the Postmaster to the continued depression in business and in general spending power.

Expenditure.

There was a net decrease of £461 5*s.* 9*d* on postal and of £128 19*s.* 4½*d.* on telegraph expenditure, making together £590 5*s.* 1½*d.* The considerable saving of £1,316 6*s.* 4½*d.* was effected in the cost of Inland Mails conveyance, following upon one in the preceding year of £825 0*s.* 2½*d.*, making a total in the two years of £2,141 6*s.* 7*d.* saved under this head. This has been effected by the transfer to the Public Works Department of the duty of conveying a considerable number of the Inland Mails formerly carried by private contractors. A reduction of £158 10*s* 3*d.* was effected in the maintenance of telegraph lines by the Public Works Department. The total expenditure of the Department exceeded total revenue by £10,055 9*s.* 8*d.*, £3,877 10*s.* 4*d.* of which was the loss on telegraph service. The excess of the cost of Ocean Mails over postage received for foreign letters accounts for the greater part of the balance. The Postmaster estimates that were official correspondence and telegrams charged for an additional revenue of about £2,500 would be credited to the Department.

The new direct mail service between Kingston and Bristol by the steamers of the Imperial Direct Line (Messrs. Elder, Dempster and Company) was begun on the 16th February, 1901. These steamers arrive at and leave Kingston in the weeks alternating with those of the arrival of the Royal Mail Steam Packet Company's steamers, and make the passage in about twelve and a half days.

Postal Business.

The following statement shows the total estimated number of letters and post cards passing outward and inward through the General Post Office during the three years under comparison:—

—	Outwards.			Inwards.		
	1898–99.	1899–00.	1900–01.	1898–99.	1899–00.	1900–01
Inland Mails	1,379,565	1,444,242	1,458,832	1,677,673	1,569,122	1,599,019
Ocean Mails	400,076	421,304	475,150	443,238	492,346	523,609
	1,779,641	1,865,546	1,933,982	2,120,911	2,061,468	2,122,628

Adding the above outward and inward mails and mails recorded at district post offices, which are not so distinguished, we find:—

—	1898-1899.	1899-1900.	1900-1901.
Through General Post Office ...	3,900,552	3,927,014	4,056,610
Through District Post Offices ...	1,080,071	1,146,336	1,182,573
	4,980,623	5,073,350	5,239,083

The numbers of parcels from abroad dealt with in 1900-1901, 17,544, exceeded those of 1889-1900, viz., 15,878, by 1,566; and those of 1898-1899, 14,901, by 2,643. The increase in letters, postcards, and parcels during the year is particularly noticeable in correspondence with other countries. Thus on Inland letters and postcards passing through the General Post Office the increase was 44,487 in a total of 3,057,851, whereas on correspondence with other countries the increase was 85,109 in a total of 998,759. A large increase in foreign correspondence also occurred in 1899-1900, compared with 1898-1899. These large increases in foreign correspondence are no doubt due to the reduction in the rates for letters posted to the United Kingdom and British possessions from 2½*d.* to 1*d.* per half ounce, and in the case of parcels to the adoption on the 1st November, 1899, of the triple scale of postage.

Telegraphs.

The business of this branch declined greatly during the year, only 85,052 messages having been sent and received, as against 96,812 in 1899-1900, a decrease of 11,760. Since the resumption by the Government of the railway, several local post offices have been transferred to the railways stations, thus increasing the use made of the services of the station agents, who have much time on their hands, and serving the convenience of travellers. This policy will be extended as opportunities present themselves. Posting boxes are now provided also on passenger trains.

Mail Coaches.

Subsidized by the Postal Department, and carrying passengers as well as parcels, and mail carts, furnished by the Public Works Department, and carrying parcels only, earned £1,059 19*s.* 9*d.*, or £359 18*s.* 9*d.* less than in 1899-1900, owing chiefly to the discontinuance of some of the passenger services.

Money Orders.

11,431 money orders, of a total value of £32,216 4*s.* 3*d.*, were issued on other countries, as against 11,835 for £39,242 7*s.* in 1899-1900. Other countries issued on Jamaica 3,498 for £9,36[illegible], against 3,240 for £8,408 7*s.* 2*d.* The principal decrease in issues from Jamaica occurred in those on the United Kingdom, which were less by £4,935 3*s.* 6*d.* This decrease in such orders has been pretty continuous for many years past, and is attributed generally to diminished trade with the mother country, but it was observable last year in the transactions with other countries also, except British Guiana, and is attributed by the Postmaster to the effect on trade of the increase in the *ad valorem* duty on manufactured and many other kinds of goods from twelve and a half to sixteen and two-thirds per cent. A new money order exchange with Bermuda was established during the year.

Postal Orders.

192,174 orders, with a face value of £30,194 4*s.* 6*d.*, were issued as against 197,255 for £31,198 15*s.* in 1899-1900.

IX. MILITARY FORCES AND EXPENDITURE.

(A.) Regular Forces.

At the close of the year 1900-1901 there were in the Island three officers on the general staff and a strength of 1,726 of all ranks belonging to His Majesty's regular forces. The strength in 1899-1900 was the same. The expenditure from the Imperial Funds in the Colony for these forces during the year was £119,430, as against £127,609 in the previous year. The sum of the allowances granted from the General Revenue of the Colony to officers, non-commissioned officers, and men in compensation for import duty, also of the amount paid as lodging allowance to certain officers formerly accommodated at buildings now transferred to the Colonial Government, was £7,016 13*s.* 6*d.*, as against £7,329 2*s.* 4½*d.* in 1899-1900.

(B.) Militia.

On the 31st March, 1901, the militia numbered 687 of all ranks, 135 belonging to the garrison artillery and 547 to the infantry.

These forces are drawn entirely from Kingston and the immediate neighbourhood.

The annual training took place in January last. The artillery practised at Port Royal, where there are batteries of heavy guns; the infantry were under canvas at Up Park Camp.

The General Officer Commanding reported very favourably on the results of his observations of the force, not only at the annual inspection but on other occasions where he had an opportunity of seeing the corps engaged in practice. He considered that the artillery would in time constitute a valuable aid to the defence of the Colony, and that the result of the year's training of the infantry militia was most satisfactory both in parade drill and in field duties.

(C.) CONSTABULARY OR SEMI-MILITARY COLONIAL FORCE.

The police (*see* Division VI. (A) *supra*), with an actual total strength of 770 officers, sub-officers, and constables, are drilled and trained in military exercises and in shooting. They are armed with Martini Enfield carbines and sword bayonets.

X. GENERAL REMARKS.

I have but little to add to the exhaustive information furnished in the foregoing statements. Though I fear it cannot be said that the Island made any decided progress towards improved prosperity during the year under review, I think it may fairly be maintained that there was no further decline. The marked increase in the value of exports over those of the years 1896-1899, though they did not equal those of 1899-1900, may be taken as an encouraging sign.

The failure of the revenue from taxes to meet expectations was unfortunate, and caused the Government much anxiety and perplexity, but the exercise of the most rigid economy and the carrying out of retrenchment in every branch of administration, where it could be effected without impairing efficiency, made up for much of the loss incurred, and under normal conditions the balance between revenue and expenditure would probably have been on the right side.

The dead weight of "charges for debt," which so enormously increased during the year, principally in consequence of the heavy payments arising out of the unfortunate railway contract, is the incubus which weighs down the Colony, and renders the task of establishing a financial equilibrium so difficult and burdensome.

The Government have striven and are striving to do their best to avoid any additional taxation, which they feel the people can with difficulty bear, but with this "millstone about their necks" their position is a painful and perplexing one.

The resources of Jamaica are, however, great, and with the incentive to increased cultivation and, therefore, larger exports, which it is hoped will be afforded by the establishment of the direct line to England, I trust the time may soon arrive when the present difficulties and depression may pass away, and an era of hopefulness and prosperity dawn upon this, at present, unfortunate Colony.

TURKS AND CAICOS ISLANDS.

(For Report for 1900, *see* No. 328.)

ACTING GOVERNOR OLIVIER to MR. CHAMBERLAIN.

King's House, Jamaica,
25th July, 1902.

SIR,

I HAVE the honour to transmit herewith one copy of the Blue Book of the Turks and Caicos Islands for the year 1901, together with a copy of the Commissioner's report.

I have, &c.,

SYDNEY OLIVIER,
Administering the Government.

---

p12484—875—8/1902 Wt 28616 D & S—5 A 2

REPORT ON THE BLUE BOOK OF THE TURKS AND CAICOS ISLANDS FOR THE YEAR 1901.

FINANCIAL.

The revenue of the Dependency for the year 1901 amounted to £9,030, which is less by £160 than the revenue of the previous year, but which compared with the average annual revenue of the five years 1895-99 shows an increase of £675.

2. The Customs duties yielded £3,537, an increase of over £275 on the previous year and on the average receipts from Customs of the five preceding years.

3. There was also an increase on the previous year of nearly £300 under the head of Revenue from Government Property. This is due to the payment of the balance of £300 on the sum of £1,350 for the purchase of 3,768 acres of land at West Caicos purchased for the purpose of fibre cultivation.

4. The receipts from interest were £133 less during the past year, the explanation being that the interest on investments for the latter half of the year was paid and brought to account in January of this year, and not taken credit for and brought to account before payment, as was done in the accounts of 1900.

5. The most marked drop in the revenue for the year compared with the revenue of the previous year will be found under the head of Post Office, and is due to a decrease of receipts from stamp speculators.

6. In 1900 a rush was made on the introduction of a new issue of postage stamps to purchase the remaining stock of the old issue, with the result that the receipts under the head "Post Office" increased from the annual average of the previous five years of £622 to £1,282 for the year. The sale of the new issue of stamps was not so great in 1901 and Post Office receipts fell to £868. For the current year the sales of postage stamps to collectors promise to be still less.

7. The following statement shows the several heads of revenue collected in 1901, compared with the year 1900 and the annual average for the preceding five years:—

Revenue.

—	1901.			1900.			Annual average, five years 1895 to 1899.		
	£	s.	d.	£	s.	d.	£	s.	d.
Import Duties	3,557	9	3	3,280	0	2	3,270	5	4
Royalty on Salt exported ...	2,517	16	4	2,634	4	7	2,532	19	5
Port Dues	774	13	8	824	3	10	789	6	6
Licences and Internal Revenue	222	13	2	247	7	6	300	2	9
Payments for Specific Services	432	18	1	461	5	8	408	19	5
Post Office	868	18	7	1,282	17	1	622	15	4
Revenue from Government Property.	474	16	6	180	5	10	234	9	3
Interest	126	15	4	260	9	10	176	3	7
Miscellaneous Receipts ...	54	0	5	19	8	3	17	5	11
Total	9,030	1	4	9,190	2	9	8,352	7	6

8. The expenditure amounted to £7,989, leaving a balance of revenue over expenditure of £1,040.

9. There are no points of special interest to be noticed in the expenditure of 1901. The expenditure was of a normal character, and, although some £180 above the average annual expenditure of the years 1895-99, was under that of 1900.

10. Summarized, the expenditure of each of the years 1900 and 1901 was:—

—	1900.	1901.
	£	£
Pensions	400	413
Personal Emoluments	4,092	3,922
Other Charges	2,358	2,058
Public Works...	806	1,141
Miscellaneous...	396	455
Total	8,052	7,989

11. The expenditure of 1901 under the several items, compared with the expenditure of 1900 and the average expenditure of the preceding five years, may be seen on reference to the following statement:—

Expenditure.

—	1901.			1900.			Average, five years 1895 to 1899.		
	£	s.	d.	£	s.	d.	£	s.	d.
Pensions	413	0	0	400	5	11	467	10	6
Commissioner's Department ...	2,196	18	11	2,347	9	10	2,290	3	4
Judicial	530	14	3	553	5	6	554	18	7
Police	476	18	2	486	10	3	458	0	7
Prisons	182	19	4	181	5	6	210	5	10
Medical	467	8	3	544	8	2	419	0	5
Paupers	339	7	0	307	12	11	288	13	6
Education	600	0	0	600	0	0	575	1	4
Registration and Vaccination ...	21	15	6	24	5	5	28	17	5
Public Market	21	0	0	40	17	3	21	0	0
Library	50	0	0	50	0	0	50	0	0
Miscellaneous	404	6	7	346	7	0	307	2	11
Post Office	532	11	9	749	2	0	535	10	8
Lighthouse Department	279	16	4	237	15	6	280	10	11
Public Works Department ...	331	4	9	397	9	5	219	9	7
Do. Recurrent... ...	770	4	11	746	3	9	664	13	6
Do. Extraordinary ...	371	1	1	39	17	3	432	19	10
Total	7,989	6	10	8,052	15	8	7,803	18	11

12. The following table shows the total revenue and expenditure for 1901 and each of the previous five years:—

—	1901.	1900.	1899.	1898.	1897.	1896.
	£	£	£	£	£	£
Revenue	9,030	9,190	8,032	7,232	9,477	9,706
Expenditure ...	7,989	8,052	7,644	8,061	8,384	7,382

13. No changes were made in taxation during the year. The inhabitants enjoy a freedom from direct taxes. The Customs Tariff, which has remained unaltered since the year 1884, is not a heavy one, the "Free" list being about the longest of any British Colony in the West Indies.

14. The Dependency has added to its assets during the year, by excess of revenue over expenditure, the sum of £1,040, which added to the balance of the previous year gives a total balance of assets on the 31st December, 1901, of £9,695.

Of this sum, £6,900 is invested in:

1. Queensland 3½ per cent. stock ... £1,000
2. Victoria 4 per cent. stock ... 1,500
3. South Australian Debentures ... 1,000

4. Jamaica 4 per cent. stock ...	£400	
5. Jamaica Savings Bank	1,000	
6. Cash lent against scrip unissued Lagos loan	1,000	
7. Ditto ditto Sierra Leone loan	1,000	
		£6,900
And lent out at interest by Crown Agents		1,000
Making a total of ...		£7,900

profitably placed.

15. Of its available balances the Dependency had in 1891 out at interest the sum of £1,000, which in 1896 had been increased to £4,500, and which last year had reached the sum of £7,900. These figures show that the financial position is being slowly but surely strengthened.

16. The several items forming the assets and liabilities of the Dependency on the 31st December, 1901, may be seen on perusal of the following statement:—

Liabilities.	£	s.	d.
Salt Pond Maintenance and Improvement Fund ...	260	1	9
Board of Education	106	9	7
Deposits	25	11	0
Money Orders—			
United Kingdom	91	13	8
Jamaica	696	9	0
Savings Bank Funds	1,178	11	4
	2,358	16	4
Balance of Assets	9,695	3	5
	£12,053	19	9

Assets.	£	s.	d.
In Colonial Chest	843	14	4
Cash—			
Crown Agents	702	19	8
New York Agents	393	7	3
Jamaica Treasurer	511	1	5
Remittances maturing and in transit	282	0	0
Bonds for Import Duties	207	12	2
Invested Funds—			
Government	7,900	0	0
Savings Bank	1,213	4	11
	£12,053	19	9

17. The Colony is free from public debt.

18. The currency is composed of British gold and silver coins of all values. American gold is also a legal tender, the double eagle, $20 (£4 3*s*. 4*d*.), passing for £4 2*s*., the eagle, $10(£2 1*s*.8*d*.), for £2 1*s*., and the half eagle, $5 (£1 0*s*. 10*d*.), for £1 0*s*. 6*d*. American silver dollars, half dollars, and quarter dollars are also in circulation at 4*s*. to the dollar. Smaller coinage is supplied by the Jamaica nickel tokens 1*d*., ½*d*., and ¼*d*. Gold is scarce, and, as there is no paper currency and no limit to the tender of silver coins, nearly the whole of the cash transactions of the place are made in silver.

19. There are no municipalities. The public streets in the towns of Grand Turk, Salt Cay, and Cockburn Harbour are maintained by the Government out of general revenue.

TRADE, AGRICULTURE, AND INDUSTRIES.

20. The trade returns for the past year are satisfactory as compared with previous years. The total imports were valued at £30,817, an increase of £1,200 on the value of the imports of 1900 and on the average of the previous five years.

21. The total exports were valued at £40,148, an increase of £5,500 on the exports of 1900.

22. Of the total exports, produce and manufacture of the Colony represented £39,751, an increase of £6,362 on the year 1900 and £9,863 on the average of the previous five years.

23. As regards the imports of 1901, there is nothing very special to note in considering the details, beyond small increases on the previous year under food and textile fabrics and an increase, equal to a third, on spirits. The duty collected on spirits in 1901 was £817, an increase of £208 on the duty collected under this head during the previous year.

24. Of the total value of imports, £3,110 came from the United Kingdom, £4,092 from British Colonies, and £23,614 from foreign countries.

25. The imports from the United Kingdom were made up of textile fabrics £1,644, gin £267, crockery and earthenware £50, paint £75, electrical apparatus £55, and straw hats £99. The value of the remaining articles imported from the United Kingdom were less than £50 in each case.

26. Of the imports from British Colonies, articles to the value of £2,046 came from Jamaica and £1,341 from Canada. The imports from Jamaica of £50 and over in value were made up of aerated waters £62, ale and porter £53, rum £340, cigars £61, cotton textiles £143, sugar £397, Government stores £145, lumber £209, and shingles £50. Canada supplied us with bread and biscuit £100, butter £53, vegetables and fresh fruit £126, hay, oats, and bran £233, cotton textiles £61, sheep £137, galvanized

roofing £54, codfish £100, cured fish £80, flour £58, lumber and shingles £73, and sugar £52.

27. Of the imports from foreign countries, £21,605—70 per cent. of the total imports of the Dependency—came from the United States of America. It seems accordingly unnecessary to specify particularly the imports from that country, more especially as a reference to the following tables will afford ready data respecting the details of the chief articles imported and at the same time show the principal imports upon which the bulk of our Customs duties are collected:—

CHIEF ARTICLES OF IMPORT.

—	1900.		1901.		Rate of Duty.
	Value.	Duty.	Value.	Duty.	
	£	£	£	£	
Books and Stationery	363	—	214	—	Free.

		3,124		3,385	
Total Customs Revenue for the year.	...	3,280	...	3,557	

28. The total value of imports for the year 1901 and the previous five years may be gathered from the following table:—

Year.	Value of Imports from			Total Value of Imports.
	United Kingdom.	British Colonies.	Foreign Countries.	
	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1896 ...	3,284 8 3	2,935 1 9	24,025 14 4	30,245 4 4
1897 ...	3,478 7 10	4,443 10 8	25,317 4 1	33,239 2 7
1898 ...	3,305 9 1	3,155 13 6	20,605 13 5	27,066 16 0
1899 ...	2,684 18 2	3,289 3 6	19,733 9 7	25,707 11 3
1900 ...	3,385 1 11	3,939 10 4	22,239 10 1	29,564 2 4
1901 ...	3,110 15 6	4,092 2 1	23,614 5 11	30,817 3 6

29. As regards details of exports, there was a decrease from 1,806,274 bushels of salt, valued at £23,491, exported in 1900, to 1,726,245 bushels, valued at £22,782, exported in 1901. Taking the average of the previous five years, the export of salt in 1901 showed a decrease of 30,627 bushels, but it may be said a larger quantity of salt would have been exported in 1901 had it not been for the want of suitable freight towards the end of the year.

30. Our salt was shipped during the years 1900 and 1901 to the following markets:—

—	1900.		1901.	
	Bushels.	Value.	Bushels.	Value.
		£		£
Canada	238,438	3,738	203,765	3,334
St. Pierre	34,853	566	45,957	733
Bermuda	3,590	45	190	2
Jamaica	62,275	790	59,254	745
Hayti	11,534	145	5,388	67
St. Domingo	20,110	256	10,710	133
Cuba	—	—	2,176	27
United States	1,432,458	17,898	1,398,755	17,737
South America	—	—	50	under £1
Newfoundland	3,016	50	—	—

31. The salt shipped to the American market obtained six cents a bushel for "coarse" and eight cents for "fishery," a price in each case fixed upon by the dealers in New York with the principal salt proprietors here on the understanding that all salt from the Turks and Caicos Islands for the markets in the United States passed through their hands.

32. There was an increase in the export of fibre from 349,482 lbs., valued at £5,080, exported in 1900, to 461,183 lbs., valued at £6,551, exported last year. Of the fibre exported last year 46,704 lbs., valued at £653, was shipped to Halifax and 414,479 lbs., valued at £5,898, to the United States.

33. The sponge industry has also had a successful year, and shows the substantial increase from £3,950, the value of sponge exported in 1900, to £9,277, the value of sponge exported in 1901.

34. This is an industry that unfortunately is not carried on wholly by the people of this place. Of the value of £9,277 of sponge exported last year, £6,615 was shipped to the Bahamas, and may be said to represent the gatherings taken from the Caicos Banks by the schooners from the Bahama Islands, leaving only £2,662 as the result of local enterprise. The sponge collected by the people of the place was done up in 1,051 bales and shipped to the United States.

35. Of the export of turtle shell, 120 lbs., valued at £120, represents the catch of the people of the Turks and Caicos Islands and was shipped at Jamaica. The Bahamas schooners carried off from these waters 899 lbs. of shell, valued at £817.

36. The following table shows the several exports, produce and manufacture, of the Colony, during the years 1900 and 1901:—

EXPORTS, PRODUCE AND MANUFACTURE, OF THE COLONY.

—	1900.				1901.			
	Quantities.	Value.			Quantities.	Value.		
		£	s.	d.		£	s.	d.
Cotton ...	—	—			lbs. 2,250	14	1	8

Turtle Shell ...	669	652	4	0	1,019	937	0	0
		33,389	15	8		39,751	9	7

In 1899 the value of salt exported amounted to £21,138, and sponge to £2,004—in both instances below the exports of last

year. On the other hand the fibre industry had a very good year and returned an export of £7,493, the highest value since the industry was started.

37. The total value of exports of the Colony for the year 1901 and the previous five years is given in the following table:—

Year.	Value of Exports, Produce and Manufacture, of Turks and Caicos Islands, to—			Total Value of Exports.
	United Kingdom	British Colonies.	Foreign Countries.	
	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1896 ...	240 0 0	6,850 12 9	24 300 0 10	31,497 14 5
1897 ...	—	11,374 6 0	29,790 18 1	43,303 15 5
1898 ...	—	6,608 11 9	16,930 5 7	24,810 12 4
1899 ...	—	4,650 8 1	26,871 4 10	31,909 19 2
1900 ...	291 4 0	7,384 1 1	25,714 10 7	34 584 1 0
1901 ...	—	12,290 0 6	27,461 9 1	40,148 17 1

38. Enjoying no direct line of communication with the United Kingdom, exports from this Dependency intended ultimately for the London market have been sent to Halifax or New York for re-shipment to England. This accounts for no exports being shown, with the exception of two small amounts in 1896 and 1900, as having been made to the United Kingdom. The fibre exported last year to Halifax, valued at £653, was shipped for the home market.

39. A temporary arrangement has been made by which the fibre crop of the present season of the West Caicos Plantation is being taken direct to London by the monthly steamer of the Royal Mail Steam Packet Company from Jamaica, calling at West Caicos on her way home.

40. There were 23 grants of small plots of land, comprising in all 190 acres, made during the year. Of these 17 were by purchase at an average price of six shillings and sixpence an acre. There was also one grant of 3,768 acres by completed purchase at seven shillings and a penny an acre at West Caicos. Of this land about 1,800 acres are under sisal (fibre) cultivation and new land is being planted out.

41. The shipping, steamers and sailing vessels, entered inwards and outwards at the ports of this Dependency may be seen from the following table:—

Steamers.

Nationality.	1900.				1901.			
	Inwards.		Outwards.		Inwards.		Outwards.	
	Vessels.	Tons.	Vessels.	Tons.	Vessels.	Tons.	Vessels.	Tons.

United States	46	24,514	44	23,124	35	23,077	40	25,478
Total	295	43,999	296	42,580	251	40,085	248	41,615

With one exception the steamers entering and clearing during the year 1901 were the subsidized steamers of the Pickford and Black line from and to Halifax once a month, and the steamers of the Clyde line from and to New York at intervals of from 10 to 18 days according to the season of the year.

42. The following table gives a comparative statement of total shipping, omitting ships of war, inwards and outwards for the last five years:—

Year.	Inwards.			Outwards.		
	Steam.	Sail.	Total.	Steam.	Sail.	Total.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.

1901 ...	111,658	40,085	151,743	111,658	41,615	153,273

LEGISLATION.

43. Nine ordinances were passed during the year, the principal being No. 3, "To consolidate, define, and amend the Law of Evidence," and No. 9, "To repeal the existing law on the subject of education and to make further and other provisions in lieu thereof."

44. The Evidence Ordinance is adopted from the Indian Evidence Act. The chief alteration from the law as it existed is that in all criminal proceedings the accused and the husband and wife of the accused are made competent witnesses.

45. The object of the new Education Ordinance is referred to in the next paragraph.

EDUCATION.

46. The primary education of the Dependency is under the care and management of a Board, the Government making an annual grant of £600 for the purpose. Out of this grant six Government schools, with teachers in charge on fixed salaries varying from £40 to £90 a year, are maintained, and assistance given to two private schools in the sparsely populated districts of "the Bight" and "Five Cays" in the Caicos Islands. These schools are the venture of two widows who receive an allowance of ten shillings a month each to keep them going.

47. No fees are charged at the Government schools. At the two private schools a charge is made by the schoolmistress of 1½*d.* a week for each child. When two or more children of the same family attend the fees for each child are slightly reduced.

48. The average number of children on the books of the Government schools during the year 1901 was 548 with an average attendance of 302. The cost of each school with the number of pupils on the roll may be seen from the following table:—

Government School at	Number of Pupils on Roll.	Average Attendance.	Cost during 1901.
Principal Settlements.			£
Grand Turk	163	79	95
Salt Cay	49	31	66
Cockburn Harbour	100	68	86
Caicos Islands.			
Kew	74	49	65
Blue Hills	79	34	62
Lorimers	83	41	72

49. The average number attending the two private assisted schools was about fifteen at each school.

50. It is a general complaint with the teachers that they cannot get the parents to send their children regularly to school. In the three principal settlements of Grand Turk, Salt Cay, and Cockburn Harbour the excuse given is the want of decent clothes. In the Caicos Islands the same excuse is at times made, but more frequently it is that the children are wanted to assist their parents in cultivating the family field or plantation.

51. In the Caicos Islands the attendances compare well with the attendances at the schools in the principal settlements. This goes much to the credit of the parents of the children and the children themselves, as in some instances the distances from the

homestead to the school are great and the condition of life quite different to that in the principal settlements. In these outlying Caicos Islands the head of a family has, as a rule, his plantation of ten acres or more to cultivate. It is to his plantation that he looks in a great measure for the daily bread of his family. Should his cultivation be neglected and his crop fail him he lacks other sources of any more secured nature for the support of his wife and children. Education has done much for the people of the Caicos, but it has not as yet tutored them to provide against a rainy day. They cultivate only for their immediate wants, and they live as they reap.

52. To improve the attendances at the schools in the three principal settlements of Grand Turk, Salt Cay, and Cockburn Harbour, an ordinance was passed last year to enforce regular attendance. The principles of the compulsory sections of the ordinance have been taken from the law of Bermuda. Under the ordinance the parent or guardian of every child over six and under thirteen years of age living within a mile and a half of the Government school is liable to the payment of a school rate of ten shillings for each half year. To be relieved from the payment of this school rate the Board of Education must be satisfied—

(1) That the child has attended school at least four days out of every five days on which the school had been open during the half year.

(2) That if the attendances have not been regular, the absences are due to sickness or infirmity, or to some other reasonable cause satisfactory to the Board.

(3) That if not a pupil at the Government school, the child has been receiving during the half year sufficient education by private tuition; or

(4) That the child has reached the age of ten years and has been granted a certificate by the Board of his ability to read and write and of a knowledge of elementary arithmetic.

The result of this legislation is awaited with interest. The ordinance has not been in operation for a sufficient time to comment on its working.

53. The total expenditure from the Education grant of £600 last year amounted to £578, leaving a balance of some £21 to be carried forward to the credit of the Education fund for this year.

54. The census taken last year showed that of the total population of 5,287, there were 2,409 who could read and write and 706 whose attainments did not extend beyond being able to read.

GOVERNMENT INSTITUTIONS.

55. There are no hospitals, asylums, or reformatories in the Dependency. The population is too small and scattered throughout the several islands of the Dependency for the establishment of such institutions at any centre, if even the necessity for such institutions were felt. The hospital that was established some years ago at Grand Turk was closed after being opened several years, as it was found that it was not wanted. The inhabitants generally speaking are a strong healthy race of African descent comparatively free from zymotic and febrile diseases. At Grand Turk accommodation is provided in a separate and convenient building for the treatment of infectious diseases. This accommodation has not been required for the past seven years and then only for two cases of yellow fever landed from a vessel in harbour.

56. Any person of unsound mind not likely to recover and requiring trained care and treatment is sent to the lunatic asylum at Jamaica, at the cost of this Dependency, for maintenance in the asylum. The paupers are given out-door relief, which amounted last year to £214, a rate of about £5 16*s.* per annum to each pauper on the list.

57. To turn from the unfortunate to the more fortunate. The total sum standing to the credit of 186 depositors in the Government Savings Bank on the 31st December, 1900, was £1,050. By deposits during 1901 of £600 and withdrawals of £462, 183 depositors had standing to their credit at the end of the year the sum of £1,187.

58. The following statement of assets and liabilities on 31st December, 1901, is satisfactory, showing as it does that the liabilities of the Savings Bank are fully covered by moneys invested in the name of the Bank.

Liabilities.	£	s.	d.	Assets.	£	s.	d.
Due Depositors, including Interest.	1,187	19	3	Invested in Jamaica Government Debentures.	200	0	0
Cash due Public Chest	37	1	1				
Assets in excess of Liabilities.	23	16	3	In Jamaica Government Savings Bank.	1,048	16	7
	£1,248	16	7		£1,248	16	7

JUDICIAL STATISTICS.

59. There has been no change in the strength of the police force during the past year. The force consists of a corporal, six constables, and twelve district constables.

The cost of the police in 1901 was £476, compared with £486 in the previous year.

60. The prison, which has separate cell accommodation for ten male and four female prisoners, is at Grand Turk. The daily average in prison during 1901 was 1½ compared with 2 the average for the previous year. The cost for the year was, for prison staff £150, for other charges £32 19*s.* 4*d.*

The total number of offences reported to the magistrates was 69, made up of 21 cases against the person, 11 against property other than praedial larceny, and 37 other offences. Of these, 14 cases were dismissed by the magistrate, 54 summarily convicted, and one referred for trial in the Supreme Court.

61. Of the 54 summarily convicted, 41 were fined, one went to prison in lieu of fine or surety, 3 were sentenced to peremptory imprisonment, and 9 bound over. The one criminal case before the Supreme Court for the year resulted in an acquittal.

62. The following comparative table shows the number of offences, apprehensions, convictions, and acquittals in the Courts of this Dependency for the last five years:—

—	1897.	1898	1899	1900.	1901.
Offences reported to Police ...	181	195	176	131	69
Persons apprehended or summoned	176	184	175	128	69
Summary Convictions—					
Offences against the person ...	34	30	51	30	16
Prædial larceny...	5	3	7	6	—
Offences against property ...	17	5	7	10	7
Other offences	66	83	65	57	31
Convictions in Supreme Court—					
Offences against the person ...	2	1	2	2	—
Prædial larceny...	—	—	—	—	—
Offences against property ...	4	3	1	—	—
Other offences	—	—	—	10	—
Persons acquitted—					
Magistrates' Courts	43	58	38	22	14
Supreme Court	5	2	4	3	1

63. The greatly reduced number of offences reported to the police during 1901 compared with previous years may be attributed to fewer complaints of a trivial nature having been made.

VITAL STATISTICS.

64. The census taken on the 1st April, 1901, returned the total population of the Turks and Caicos Islands on that date at 5,350 persons. Of these 63 were on board vessels in the harbour not belonging to the Dependency. Deducting the 63 the population proper of the Dependency was 2,204 in the Turks Islands and 3,083 in the Caicos Islands, in all 5,287. There were 2,714 children of 15 years and under, leaving only 2,573 persons of more mature age. Of the total population of 5,287, 4,991 (2,263 males and 2,728 females) were natives of the Turks and Caicos Islands.

65. The returns of 1901 give an increase of 543 on the population taken by the census of 1891, but there has been no very marked increase in the last 40 years, as may be seen on reference to the following table:—

Year.	Males.	Females.	Total.
1861	2,128	2,244	4,372
1871	2,274	2,449	4,723
1881	2,232	2,500	4,732
1891	2,211	2,533	4,744
1901	2,408	2,879	5,287

66. With an average annual birth rate for the decade of 38 per thousand and death rate 20 per thousand—an increase of three per thousand in the birth rate and a decrease of four per thousand in the death rate compared with the rates given for the previous ten years—the small increase of the population in the last ten years and the excess in the number of children up to 15 years of age over the rest of the population may be accounted for by emigration to Hayti, St. Domingo, and Cuba, where employment is readily found by the natives of this place.

67. The population of 1901 was composed of

—	Males.	Females.	Total
White	150	192	342
Coloured	572	791	1,363
Black	1,686	1,896	3,582
Total	2,408	2,879	5,287

and the occupation given as

—	Males.	Females.	Total.
Professional	49	30	79
Domestic	17	153	170
Commercial	100	25	125
Agricultural	160	273	433
Industrial	1,016	789	1,805
Indefinite and non-productive ...	1,066	1,609	2,675
Total	2,408	2,879	5,287

68. Touching the civil condition of the people, 748 males and 803 females were married. There were 70 widowers and 241 widows, leaving 3,424—1,590 males and 1,834 females—unmarried.

For the year 1901 there were 218 births and 163 deaths compared with 198 births and 133 deaths in 1900.

69. The general state of the public health of the Dependency may be viewed as good. At Grand Turk during the period March to August, 1901, there were, however, several cases of whooping cough resulting in 26 deaths, chiefly of infants of two years and under, out of a total of 57 deaths for the year. There were also a few cases of measles and influenza at Grand Turk and Cockburn Harbour; otherwise the Dependency was free from diseases of zymotic type.

The porous nature of the sandy soil of these low-lying flat islands leaves little to be done by man in the way of drainage. In his report for last year the Government Medical Officer wrote: "There is no system of draining off rainfall and waste water; nature disposes of these in an admirable rapid way, by means of the hot sun, strong winds, and porous soil."

70. The climate of these Islands is healthy, but as relaxing as most tropical climates for persons of European descent. The scarcity of fresh meat, fruit, and vegetables, and the frequent resort to "canned" provisions, make, however, the conditions of life in the Turks and Caicos Islands yet more enervating to such persons.

71. The rainfall during the past year recorded each day at the United States Weather Bureau Station at Grand Turk,—Latitude 21.21 N., Longitude 71.07 W., height above mean sea level 11.3 feet,—was 29.52 inches, about five inches more than the average of the previous ten years. Rain fell on 154 days, the heaviest fall in the 24 hours being recorded on the 26th August, when 3.30 inches fell. On that day the wind from the south-east measured 36 miles an hour, the maximum force for the year.

72. The maximum heat registered was 94 degrees in the shade on 25th September, and the minimum temperature 53 degrees on

the 21st February. On that day the wind was from the north-west and reached the velocity of 34 miles an hour.

73. The following table gives the mean readings for each month of the year of the Barometer, the Thermometer, and the Anemometer, and the total rainfall for each month:—

Month.	Means.				Actual Rainfall recorded.
	Barometer 7.30 a.m.	Air Temperature.		Wind Force. Miles per hour.	
		Max.	Min.		
January ...	30·06	81	68	11	1·84
February ...	30·06	82	69	9	·22
March	30·09	83	71	14	·79
April	30·01	84	72	9	·38
May	29·99	86	74	10	·98
June	30·03	90	78	13	·70
July	30·01	88	75	13	4·83
August	30·02	89	77	12	5·05
September ...	29·97	90	77	10	·95
October ...	29·91	88	74	8	4·86
November ...	29·99	82	70	11	5·19
December ...	30·03	82	70	11	3·73

The direction of the wind was observed from the north on 24 days, the north-east on 46, the east on 124, the south-east on 116, the south on 23, the south-west on 8, the west on 4, and the north-west on 20 days.

POSTAL, TELEGRAPH, AND TELEPHONE.

74. We have no internal postal, telegraph, or telephone service. Our mails are brought by the subsidized steamer of the Pickford and Black line leaving Halifax about the 15th of each month for Jamaica calling at Bermuda and Grand Turk en route. The subsidy paid by this Dependency is £500 a year, half of which is contributed by the Imperial Government. The length of the voyage from Halifax to Grand Turk is seven days. The steamer leaves Jamaica on her return journey about the 27th of each month, and two days later calls at Grank Turk, proceeding via Bermuda to Halifax. The bulk of our mails are, however, carried to and from New York direct by the steamers of the Clyde line, which sail at intervals of from 10 to 18 days and make the voyage between the two places in five days. By these steamers letters from this Dependency, transhipped at New York, have been delivered in London on the fourteenth day after leaving here.

75. The revenue of the Post Office for the year 1901 was £868, made up of

Receipts.			
Sale of Stamps		£262	
Commission on Money Orders		44	
Sale of Stamps to Collectors		562	
			£868
Expenditure.			
Local		25	
Conveyance of Mails	£507		
Less Contribution from Imperial Government	250	257	282
Net Revenue Post Office			£586

76. The estimated number of letters and postal matter beyond the seas dealt with by the local post office during the year 1901 may be seen on reference to the following table:—

—	United Kingdom.		Other Places.		Total.
	From.	To.	From	To.	
Letters	2,500	2,600	11,500	12,500	29,100
Postcards	90	100	100	112	402
Newspapers	7,000	728	12,000	4,000	23,728
Book packets	160	38	175	30	403
Parcels	157	20	113	53	343

77. Money orders to the value of £1,567 were issued in the Dependency during the year 1901 on the United Kingdom, and orders for £361 drawn in the United Kingdom paid in the Colony. The money order transactions with other places abroad amounted to £1,247 issued and £45 paid in the Dependency. The bulk of these transactions was with Jamaica.

78. The cable of the Direct West India Cable Company between Halifax, Bermuda, and Jamaica is landed at Grand Turk. The Company supply a news bulletin daily, in respect of which an annual grant of £120 is made to them by the Dependency. The telegraph rate to England is 3*s.* a word, to Halifax 2*s.*, and to Jamaica 1*s.*

GENERAL.

79. A brief comparison of the condition of these islands fifty years ago with their state to-day may here find a suitable place. In 1852, with a population of 3,260, the total revenue of the Government, from all sources, was £10,690 and the expenditure £10,370. The imports were valued at £29,460, and the exports

produce and manufacture, of the Colony at £22,166. Of the exports 1,061,776 bushels of salt alone represented £22,034.

80. During the succeeding twenty-five years the population had increased to 4,723. The revenue of the Government reduced to £7,500 with an expenditure of £7,100. This was due to retrenchment consequent on the annexation in 1873 of the Turks and Caicos Islands to the Colony of Jamaica, a move brought about by the people of the Islands themselves, as they considered their separate administration was costing them too dearly. The value of imports at that time fell to £22,900, while the value of the exports had increased to £26,700. Of this sum £23,000 represented the value of 1,641,384 bushels of salt exported.

81. To-day, viewing the trade of the place generally, the position is satisfactory. Without increase of taxation, indeed it can be said with a reduced tariff, the annual revenue has increased to £9,000 with an expenditure of £8,000 and the value of the imports has increased to £30,800 and exports to £39,700. Of these exports 1,726,245 bushels of salt represent £22,780. Practically speaking our markets remain unchanged, the United States still doing the bulk of our trade.

82. It results therefore that while the market price of salt has fallen off, and salt no longer forms 99 per cent. of the exports, the production of salt has increased and the total value exported has remained unchanged during the last fifty years

83. Although it is to the salt industry of these islands that we owe, and ever will owe, our existence, yet the growth within recent years of two other industries has helped to cement the satisfactory financial position of the Dependency to-day. I refer to the sponge industry and to the fibre industry—more especially to the fibre industry.

84. A quarter of a century ago sponge gathering afforded but little employment for the people. The value of sponge exported from these islands averaged about £100 annually. Ten years ago, *i.e.*, in fifteen years, the industry had increased its export to £600. Last year the value of sponge exported amounted to £9,277. There are at present three sponge establishments working in the Caicos Islands where the sponge is gathered on the banks. The sponge is not of the quality of the Mediterranean sponge, but it finds a ready sale in the United States market at a fair price.

85. It is only within the last twelve years that fibre growing has been attempted. The first exportation of fibre was made in 1890 when £49 worth was shipped. Five years later, in 1895, 95,788 lbs. of fibre, valued at £620, were shipped. Last year 461,183 lbs. were exported, valued at £6,551.

86. With regard to the agricultural resources of the Dependency there is little to say in respect of the cultivation of the

Turks Islands, where salt produced from sea water by solar evaporation is the sole industry, and where the climatic conditions are favourable to its production. The absence of rain for weeks at a time, with a hot dry wind—by which alone the salt is produced—and a sandy soil, make cultivation of any sort next to impossible and but little is consequently attempted. According to the census of last year there were 9 male and 15 female agricultural labourers in the Turks Islands. Even these, or some of these, may have been on a visit from the Caicos Islands at the time of taking the census, so small is the attempt at cultivation.

87. In the Caicos Islands the soil is somewhat less sandy and the climatic conditions better suited to crop growing. The annual rainfall in those islands is about 35 inches compared with an average of 24 inches in the Turks Islands. But even here, unfortunately, cultivation is an uphill task and the people grow but little beyond their own wants. Fruit and vegetables are imported from Hayti and St. Domingo for the Turks Islands market. It is in the Caicos Islands that the two fibre plantations are situated and working successfully—one at East Caicos and the other at West Caicos. They have about 2,200 and 1,800 acres of land under cultivation respectively, and are each extending their areas of cultivation. On the East Caicos there are four, and on the West Caicos plantation two, fibre cleaning machines worked by either steam or oil. Each machine is capable of turning out 1,000 lbs. of fibre a day.

88. There are several thousand acres of vacant land in the Caicos Islands suitable for fibre growing, which, if properly planted out, would give, in from three to four years—should the present price of fibre, 5*d.* to 5½*d.* a pound, be maintained—a fair return for money invested.

DOUGLAS YOUNG,

Commissioner,

Turks and Caicos Islands.

JAMAICA.

(For Report for 1900–1901, *see* No. 351.)

ACTING-GOVERNOR OLIVIER to MR. CHAMBERLAIN.

King's House,
Jamaica, September 30th, 1902.

SIR,

I HAVE the honour to submit, in accordance with standing instructions, the following observations in regard to the statistical returns of this Government embodied in the Blue Book of the Colony for the year ended on the 31st March, 1902.

I.—FINANCIAL.

(A.) GENERAL REVENUE AND EXPENDITURE.

2. Annexed (Tables I. and II.) are returns of the General Revenue and Expenditure of the Government for the year of report (1901-1902) compared with those of the preceding year 1900-1901.

General Revenue Account. Revenue and Expenditure.

3. On the 1st of April, 1901, there was a deficit on the General Revenue Account of £126,302. Omitting fractions of a pound sterling, the total amount brought to account as General Revenue during the ensuing twelve months now under review was £774,837, and the amount brought to account as Expenditure £751,699, showing a surplus of £23,138 and reducing the deficit to £103,164 at the close of the period.

4. Of the amount shown as Revenue, however, £12,456 is accounted for by transfers made, with the authority of the Legislature, from the credit of certain funds accumulated in

former years and hitherto held in reserve for special purposes. The actual pecuniary receipts of the year might accordingly be properly stated as £762,381.

Tax Revenue.

5. Of this total, the sum of £535,791 was the proceeds of taxation, comparing with £499,692 drawn from corresponding sources in the previous year, and showing an increase of £36,099, or 7·2 per cent., in the Tax Revenue. Part of this increase was due to the improved yield of established taxes, part to better collection and the recovery of arrears, and part to additional taxation.

Improved Yield of Taxes.

6. Of the taxes in the rates of which there had been no change the following may be specially noted as having yielded increased amounts:—

	£
Customs Duties, increase	7,489
Rum Duty	1,810
Port and Harbour dues	605

Increase in Shipping.

The addition to the receipts from Port and Harbour Dues is owing to increase in the number of steamers that called at the Island. The significance of this increase (172 vessels, with a tonnage of 136,337) will be further analysed in the course of this Report. It reflected the growth of the fruit trade and a moderate but appreciable improvement in general business, which began to exhibit itself in the last months of the year in an increase in the consumption of imported and excisable goods, and also, it may be mentioned, in the Returns of Railway Traffic. Until after the close of the year 1901, however, the Revenue Returns showed practically no elasticity.

Import Duties.

6. The final yield of Customs Duties, improved as it was, still remained £8,860 below the amount (£353,765) received in the year 1899-1900 on the same tariff, and the Collector General considers that in a year of average prosperity, according to the past experience of the Island, this tariff ought to produce not less than £360,000. By this test the year under review is exhibited as one of continued depression. The estimate of Customs receipts for the year now current has, in accordance with the conditions prevailing when the estimates were framed, been placed at £350,000.

7. Customs Duties furnished last year about two-thirds of the total Tax Revenue. The most noticeable fluctuations in the yield from specific commodities were:—

Decreases.

	£
On salt fish	1,612
On salt pork	2,229
On rice	1,746
On cornmeal	345

Increases.

On salt	649
On flour	2,179
On soap	1,517
On unspecified merchandise (16⅔ per cent. *ad valorem*)	8,462

The Collector General suggests that these figures indicate a substitution of native for imported fish and pork in consumption, and of wheaten flour for cornmeal and rice. The rise in the *ad valorem* duties shows increased general spending power on textile and other manufactured goods.

Excise—Rum Duty. Methods of Rum Distilleries.

8. The increase in the yield of the excise duty on rum reflects the slight improvement in prosperity mentioned above as experienced towards the close of the year, though the total was no less than £10,234, or just ten per cent. below that of the year 1899-1900. A certain amount of Revenue due under this head is believed to be lost, chiefly during crop-time, in consequence of the consideration that has been shown to rum-distillers in the desire not to hamper their industry by excessive restrictions. The regulations in force do not furnish the Revenue Department with the power of ensuring accurate record of the amounts of spirit distilled, the methods of the majority of still-houses are lax, unscientific and conducive to waste, and the pilfering and consumption of undutied rum by employés are widely prevalent, and are admittedly in many cases winked at by the distillers and book-keepers. It has hitherto been judged, however, that the introduction of effectual mechanical precautions to prevent the stealing of rum would be impossible without introducing a risk of impairing the special qualities of the more valuable Jamaica rums, and that some possible loss of excise Revenue would be the lesser of two evils to the community. Mr. J. Steele, C.B., a highly experienced officer of the Imperial Inland Revenue Department, spent some time in the Island during March and April, 1902, investigating the

conditions of distillation on behalf of His Majesty's Government, and I am under the impression that he will be able to make some suggestions in regard to the management of distilleries that may be of advantage both to the proprietors and to the public Revenue.

Match Duty.

9. An excise duty, at the rate of 6*d.* per gross of boxes of fifty sticks, was imposed during the year on matches manufactured in this Island, intended as a partial set-off to the Customs duty levied on those imported. The absence of any internal duty had practically extinguished the Customs revenue from this article, the high import duty acting as a prohibitive protection. The new duty yielded £583 10*s.* This yield will no doubt be considerably higher in future years seeing that a large amount of stock had been put out in anticipation of the duty. The Customs duty on imported matches shows an improvement of £81 7*s.* in this year.

Soap Duty.

10. A similar excise duty on soap imposed in the course of the previous year yielded £298, whilst the Customs Import Duty on soap increased under its influence by £1,517.

Stamp Duties.

11. The net yield of Stamp Duties showed an increase of £4,698. The duties had in some instances been augmented, but the increase in the total yield would have been accounted for by the death duties received on a single large estate.

Agricultural Produce Dealers' License Duties.

12. The proceeds (£1,924) of the duties on licenses required to be taken out by dealers in Agricultural Produce (for police purposes and to check the stealing of produce), although not a new tax, were carried this year for the first time to the credit of General Revenue instead of as heretofore to a special fund. The accumulated balance (£11,305) of the fund was likewise taken over.

Taxes Increased and Better Collected Land Taxes.

13. The yield of the three taxes now levied on land in aid of General Revenue shows a large increase. Part of this was due to improved collection and the ingathering of arrears, part to increases in the rates, imposed for the purpose of meeting, in part, the newly assumed charges for the Railway Debt and the subsidy to the Direct Imperial Steamship Line.

Change of Tax Year.

14. Comparison is to some degree, moreover, affected by the fact that the period of the year of assessment for these branches

of Revenue was altered in 1900. In order to bring it into correspondence with the financial year, as established for the accounts of this Government in all other respects, the assessed tax year which, by a survival from former custom, began on the 1st August, 1900, was terminated on the 31st March, 1901, and the amounts leviable in that period were assessed as for two-thirds of a year only.

Quit Rents.

15. The effects of this alteration and of better collection and recovery of arrears are indicated by the returns from Quit Rents. These are a uniform tax of one penny per acre on land (except where the tax has been redeemed). In the year 1900-1901 they yielded £6,567, which was paid into the Parochial Road Reserve Fund. In the year under review they yielded £8,220, of which £1,636 was employed for the payment of Superintendents of Parochial Roads and Works through the above-mentioned fund, and the balance, £6,584, transferred to General Revenue Account, to which the nett proceeds of this tax, after providing for these salaries, are now by law appropriated. The total improvement in collection was thus £1,653, or more than 25 per cent.

Holding Tax.

16. The Holding Tax is a direct tax on land, assessed on the area of holdings, but decreasing in its average rate per acre as the size of the holding increases. Prior to the year of account it was payable at the following rates:—

	£	s.	d.
For every holding not exceeding 5 acres	0	2	0
For every holding exceeding 5 and not exceeding 10 acres.	0	3	4
For every holding exceeding 10 and not exceeding 20 acres.	0	4	8
For every holding exceeding 20 and not exceeding 50 acres.	0	5	4
For every holding exceeding 50 and not exceeding 100 acres.	0	6	8
For every holding exceeding 100 and not exceeding 200 acres.	0	10	0
For every holding exceeding 200 and not exceeding 500 acres.	1	0	0
For every holding exceeding 500 and not exceeding 800 acres.	1	10	0
For every holding exceeding 800 and not exceeding 1,000 acres.	1	16	8
For every holding exceeding 1,000 and not exceeding 1,500 acres.	2	13	4
For every holding exceeding 1,500 acres	3	0	0

17. For the year under review the rates of the Holding Tax were altered to the following:—

	£	s.	d.
For every holding not exceeding 5 acres	0	2	0
For every holding exceeding 5 and not exceeding 10 acres.	0	3	4
For every holding exceeding 10 and not exceeding 15 acres.	0	4	8
For every holding exceeding 15 and not exceeding 20 acres.	0	6	0
For every holding exceeding 20 and not exceeding 30 acres.	0	8	6
For every holding exceeding 30 and not exceeding 50 acres.	0	13	6
For every holding exceeding 50 and not exceeding 75 acres.	1	0	0
For every holding exceeding 75 and not exceeding 100 acres.	1	6	0
For every holding exceeding 100 and not exceeding 150 acres.	1	15	0
For every holding exceeding 150 and not exceeding 200 acres.	2	8	0
For every holding exceeding 200 and not exceeding 300 acres.	3	2	0
For every holding exceeding 300 and not exceeding 400 acres.	4	0	0
For every holding exceeding 400 and not exceeding 500 acres.	4	16	0
For every holding exceeding 500 and not exceeding 600 acres.	5	10	0
For every holding exceeding 600 and not exceeding 750 acres.	6	5	0
For every holding exceeding 750 and not exceeding 1,000 acres.	7	0	0
For every holding exceeding 1,000 and not exceeding 1,500 acres.	8	0	0
For every holding exceeding 1,500 acres	10	0	0

The rates on holdings not exceeding fifteen acres thus remained unaltered, whilst those on larger holdings were raised on an increasing proportion, not so far, however, as to bring the tax to a uniform rate per acre.

18. The net amount yielded was £24,539, against £13,384 brought to account in the previous twelve months, an improvement of £11,154 10*s*. Part of this remarkable increase is accounted for by the curtailment of the previous tax year to eight months; but much of it is due to greater efficiency in collection. No less than £5,444 is the amount of arrears of previous years recovered, £7,957 is computed to be due to the increase in the rates of the tax (the estimate was £7,721), and about £11,138 to be the amount that would have been collected

of the tax due for the year on the old rates. The amounts collected within the year in the four previous complete tax years have, however, only averaged £10,389. The tax this year was collected on 72,010 holdings, the average number on which it had been collected in the four preceding complete years having been only 63,138; whilst arrears were collected from 28,097 holdings, the average number on which arrears had been collected in the four preceding complete years having been 13,943.

19. The statement of these figures can hardly fail, I think, to arrest attention, and may justify a brief digression in explanation, and in exposition of some interesting points in the recent history of direct taxation in this Island, which I shall offer when I come to deal with the subject of local taxation.

Property Tax on Cultivated Lands.

20. Taxation on land was also increased for the year 1901-1902 by the imposition of special rates per acre on land, according to the manner of its employment, in aid of General Revenue, in addition to the rates of the same character levied (under the name of Property Tax) for Parochial Road Revenue, and for General Revenue on lands planted in bananas and cocoanuts. The following table shows the total rates in force for the year as compared with the rates previously in force for the Parochial Property Tax:—

—	Previous Rate.		Rate during Year reviewed.
	To Parochial Road Funds.	To General Revenue.	
	d.	*d.*	*s. d.*
For every acre or part of an acre—			
In arrowroot, canes cocoa, coffee, ginger, tobacco.	3	—	1 0
In bananas and cocoanuts ...	—	3	1 0
In corn, ground nuts, cotton, tobacco, vegetables, or ground provisions.	3	—	3
In Guinea grass, or Para grass	1	—	3
In common pasture, pimento common pasture, and pimento.	¾	—	2
In wood and ruinate	¼	—	½

21. The total amount yielded in the year by the increased tax was £14,023. Out of this £5,394 was paid to Parochial Road Funds in lieu of the former Property Tax, leaving £8,629 to the credit of General Revenue Account. Allowing for the amount which, approximately, would have been received for General Revenue from the old tax on banana and cocoanut plantations, the yield of the additional taxation is computed to

have been £7,609. The estimate was £6,714. There are doubtless still some arrears to be gathered in. The total amount received from taxes on lands in Jamaica in this year (arrears included) was £46,782, of which £39,752 was for General Revenue and £7,030 for Parochial Funds. The Land Taxes, therefore, amount this year to about 7·4 per cent. of the total General Tax Revenue.

22. The gross total increase in the yield of the Quit Rents, the Holding Tax, and the taxes on cultivated lands carried to General Revenue over that of the previous year was £20,976, of which, apparently, £15,566 was due to increase of taxation and the remaining £5,676 to improved collections and the effects of the change of the tax year.

Education Tax (not increased).

23. The Education Tax, which is a limited rate on houses ranging from 2*s.* to 12*s.*, in aid of the expenses of Public Education, yielded £11,229 against £9,658 in the previous year, owing partly to the above-mentioned change in the tax year and partly to better collection of current dues and arrears. The total public expenditure for education for this year, I may observe, was:—

		£
Provided by law (Secondary Schools)	...	5,569
Voted on estimates	...	54,249
Total	...	59,818

The Education Tax pays less than one-fourth of the total of the grants-in-aid of elementary schools.

24. The revenue from sources other than taxation, and excluding the transfers of £12,456 from accumulated special funds, amounted to £226,590, the principal item being that of Railway Receipts, £118,215. This item might appear to show a falling off from last year's railway figures, £134,952, but the basis of comparison needs explanation.

Railway.

The Government took over the Jamaica Railway from the trustees of the bondholders of the late Jamaica Railway Company on the 16th August, 1900, with £48,701 to its credit in cash, and £15,098 in stores, &c. From the 16th August till the 31st March, 1901, the Railway Revenue brought to account by the Treasurer was £71,153, making, with the above-mentioned balances, £134,952 of receipts, as shown. But the gross revenue earned by the railway during the whole of the twelve months ended 31st March, 1901, was only £109,728 against £118,215 received in the year 1901-1902, which thus shows an improvement in gross revenue of £8,487, or about 7¾ per cent. I will

deal presently with the railway as an investment of capital, in which aspect it shows a heavy annual financial loss, but I may here observe that the revenue in 1901-1902 exceeded the working expenses by £40,253. In 1900-1901 the excess, for the whole of the corresponding twelve months, was only £20,788, although from the seven and a half months of that period during which the railway was in the hands of the Colonial Government the excess of receipts over expenditure was £21,725, that is to say at a rate very little short of £35,000 a year.

Post Office and Telegraphs. Irrigation Receipts.

25. There is a satisfactory increase of £2,146—more than 8 per cent.—in the receipts through the Post Office, the factors of which will be indicated when I some to deal with the report on that Department; and an advance of £639 in the proceeds of the sale of the water from the Rio Cobre Irrigation Canal. This increase is, however, partly accounted for by the better recovery of dues and arrears.

General Expenditure. Transfers in Account.

26. The total of General Expenditure (£751,699) included, under the head of Public Works and Buildings, sums amounting to £1,979 expended in previous years which had been charged to suspense accounts in anticipation of repayment from loans or otherwise. In order to clear the Colony's balance sheet, without recourse to further borrowing, these amounts were written off as expenditure.

Actual Expenditure.

27. The actual expenditure incurred during the year might accordingly be properly stated as £749,720, or £12,661 less than the amount of the actual revenue as similarly corrected above.

Debt Charges.

28. A decrease of £11,963 is shown in the total expenditure as compared with that of the previous year. The permanent charges of debt were swelled by the addition of £10,984 for annuities on Imperial Loans for Railway Expenses and in aid of deficit, and by the expenses of management on the new issue of £1,493,400 Railway 3½ per cent. Inscribed Stock. There is, however, an apparent nett diminution of £29,860 in Debt Charges, owing to the circumstance that in 1900-1901 special payments amounting to £48,706 had to be made on the transfer of the railway for arrears of interest due to the recipients of the 3½ per cent. Inscribed Stock to which the bondholders of the defunct railway company became entitled.

Increases of Expenditure.

29. There were increases of expenditure under twelve other heads of Appropriation, amounting to £53,749, the principal being under—

	£
Railway	26,673
Direct Imperial Mail Subsidy	18,329
Pensions	1,981
Real Property Valuation	1,772
Agricultural Services	1,545

Decreases.

The second and third of these items represent permanent increases of expenditure, but on the other hand there were decreases under thirty-three other heads of Appropriation, amounting altogether to £34,452, and representing to a large extent the results of careful economy and retrenchment.

30. The apparent increase in Railway Expenditure (from £51,288 to £77,961) is by comparison with only seven and a half months' expenditure in the previous year. The Railway Expenditure for the whole of the twelve months of that year, by the trustees and the Government together, was £88,940, or £10,979 more than the total of 1901-1902, which thus shows a reduction of 12½ per cent. in working expenses combined with an increase as mentioned above of 7¾ per cent. in receipts.

Direct Line.

31. This was the first year of the new Direct Imperial Mail Service for the carriage of mails and fruit, for which Messrs. Elder, Dempster and Company receive a subsidy of £40,000 per annum paid in equal shares by the Imperial Government and the Colony. The contract is for ten years from February, 1901. The full amount of the subsidy was not brought to account within the year.

Valuation of Real Property.

32. The expenditure for the valuation of Real Property was incurred, under circumstances which will be more fully explained in due course, for the purpose of providing a basis for the reform and consolidation of the taxes on houses and lands.

General Results.

33. The financial results of the year were, on the whole, satisfactory, but they have not been attained without difficulty and anxiety. The Revenue (£762,381, excluding transfers) exceeded that of the previous year (which with the exclusion of similar items was £730,627) by £31,754, but fell short of the estimate by £7,115. A deficit was only avoided by the economies which

kept the expenditure £16,804 below the total appropriations, notwithstanding the inclusion of charges amounting to £4,902 not provided for on the estimate, for expenses of the Railway Loan Conversion, the Valuation of Real Property and the transfer from Suspense Accounts above-mentioned. The last two months of the year, with their marked improvement in revenue from Customs, excise, and railway alone converted the bare equilibrium which would have been effected by the rigid control of expenditure into the moderate but very acceptable surplus above recorded.

34. At the date of writing this I am able to record that the above-mentioned improvement in the Revenue has been and is being steadily maintained, and I will, in my concluding general observations, comment briefly on the latest aspect of the financial positions of this Government, reverting now to the returns for the financial year completed on the 31st March last.

The Public Debt.

35. Charges of Debt made up so large a proportion—nearly one quarter—of the total expenditure, that a somewhat close examination of the composition of the Public Debt may be of some interest. On the 31st March, 1902, this was as shown in the appended table. (See Table III.)

In this table, Division I. represents obligations established by law to pay certain annuities and interest on funds borrowed or deposited.

Division II. represents the Public Debt of the Colony in the ordinary sense of the term, being the amounts borrowed on negotiable securities or from the Imperial Government.

Division III. represents amounts borrowed by the Government and lent to the Kingston General Commissioners, who repay the annual charges to General Revenue Account.

Division IV. represents amounts borrowed directly by the Kingston General Commissioners and the Vere Irrigation Commissioners under the guarantee of the Government. The charges are met from the Revenues of the Commissioners.

Division V. represents amounts borrowed at interest by Parochial Boards from the Island Treasury.

Divisions I. and II., therefore, indicate the total annual debt charges falling on General Revenue. The charge under Division I. (ii.) is subject to fluctuation, those under Division I. (i.) and Division II. are constant and remain so until new debt is incurred or the redemption of old loans completed by the maturing of Sinking Funds.

37. With regard to Division II. it must be observed that the Government is liable to be called on to issue 3½ per cent. Inscribed Stock to the further amount of £44,100 so soon as the title thereto, now in litigation, or not established, is decided, and also

that further debt to the amount of £44,000 is being incurred for the improvement of the railway, by borrowing from the Imperial Government on an annuity to repay principal and interest in twenty years, interest being charged at the rate of 2¾ per cent. These two additions to the debt will respectively increase the annual charges by £1,985 and £2,889, bringing them to a total of £171,309 under this Division and increasing the total nett annual charge on General Revenue (Divisions I. and II.) to £185,105.

Borrowing Powers in Suspense.

38. There is, moreover, legal authority for the raising of further loans for Public Buildings and Mountain Roads to the amount of £176,000 on Inscribed Stock, but there is no intention at present to incur this additional debt.

Recent Debt Charges.

39. Out of the total annual charge of £171,309 above-mentioned, no less than £82,521 will have been imposed upon the Treasury since the 1st April, 1900, £80,206 per annum having accrued through the obligation of the Colonial Government to pay off the bondholders of the railway and to put the line in efficient working order, and £2,315 to pay off a loan of £20,000 in aid of the deficit on General Revenue Account.

Old Consolidated Debt.

40. The Public Debts of the Colony have from time to time undergone consolidation, more or less complete, effecting reductions of interest in consideration of extensions of period. These processes render any analysis of the investments represented by the existing debt rather difficult, and I will not attempt to go back beyond the consolidation effected in the year 1869, when a number of old 6 per cent. debts were consolidated by an issue of 5 per cent. debentures.

Further Consolidation and Conversion.

41. In the year 1882 a fresh consolidation was effected by the issue of 4 per cent. Debentures to the amount of £400,700. Of these Debentures, Stock to the amount of £114,260 was applied to redeeming the 5 per cent. Debentures of 1869, £102,680 to redeeming Debentures issued by the Kingston Commissioners (this amount will be found in Division III.), £95,653 to redeeming Irrigation Debt, £44,100 for Rio Cobre Irrigation Debentures, and the balance to redeem Debentures issued at various times for the construction and improvement of main roads, telegraphs, and public and parochial buildings.

42. Of this Consolidation Debenture Loan, £20,800 was paid off, £319,300 was converted by later operations into £316,147 10*s*. Four per cent. Inscribed Stock, local and English issues, and £60,600 remains at Debenture Debt in Division III. It appears that by the effect of these successive conversions some parts of the Island's debt will have attained a very venerable age by the time they are finally extinguished.

Investments Represented by Present Debt.

43. The General Public Debt as it stands may be analysed into the following abstract of investments:—

Loans for	Amount.	Annual Charges.
	£	£
Railway outstanding	2,389,700	117,159
(To be added	88,100	4,874)
	2,477,800	122,033
Bridges and Roads (£100 unexpended) ...	40,720	19,720
Rio Cobre Irrigation Works	120,076	6,278
Coolie Immigration	95,653	4,783
Public Buildings (£37,000 unexpended) ...	107,804	4,390
Hotels	63,475	4,795
Kingston Improvements	24,560	1,228
Telegraphs	14,972	748
Deficit (Imperial Loan)	18,235	2,315
Old Consolidated Debts, &c. (balances outstanding).	99,763	5,019
Total Outstanding	3,343,958	166,435
Add for New Railway Debt ...	88,100	4,874
Total incurred	3,432,058	171,309

The Railway Investments.

Railway Debt on Old Government Railway.

44. For the purchase, equipment, and extension of the old Jamaica Railway the Colonial Government borrowed in all, under five different Debenture Loans, £833,100.

45. Of the sum of these Debentures £44,400 has been paid off out of General Revenue and £625,200 has been converted for Inscribed Stock, £619,979 at 4 per cent. and £8,000 at 3½ per cent. The annual charge on these stocks for interest and Sinking Fund is £31,359.

46. £6,000 remains due on Debentures at 4½ per cent. and £157,500 at 4 per cent., altogether causing a constant annual charge of £10,468, of which in the current year 1902-1903 £6,558 will be paid for interest and £3,910 for redemption of Debentures.

47. The total now outstanding on account of debts incurred for the railway before it was sold in 1890 is accordingly £791,478 10*s*., which is being annually reduced by the difference between an annuity of £10,468 and the interest payable on the amount of Debentures left outstanding each year.

Sale of Old Railway.

48. When the Jamaica Railway was sold under Law 22 of 1889, the Colonial Government received from the promoters of the Jamaica Railway Company £100,000 in cash and Second Mortgage Debentures for £700,000 to bear interest after interest should have been paid on the First Mortgage Debentures, on which £1,500,000 for developing the railway was to be borrowed. The Second Mortgage Bonds are now valueless.

Payments for Lands for New Track. Grants of Crown Lands.

49. On the other hand, out of the £100,000 received in cash, the Colonial Government has had up to date to pay £90,919 for the purchase of lands for the railway extension tracks and has conveyed to the promoters 76,800 acres of Crown Lands in part consideration for the extensions

New Debt Incurred.

50. On the failure of the Jamaica Railway Company, the Colonial Government became liable to issue to the bondholders Inscribed Stock to the nett amount of £1,493,400, to bear interest at 3½ per cent. Up to the 31st March, 1902, such stock to the amount of £1,449,300 had been issued, two bonds for £100 each had been repaid by the Government, and the balance, £44,100, is held for assignment to the parties who may be entitled to it; the title to £38,000 of it is in litigation and the remainder has not yet been claimed. When the whole of it has been assigned the annual charge, as stated above, will be £67,203 on this part of the Railway Debt. The amount of the liability accrued up to date on this account has been charged as expenditure and carried to a Reserve Account for disbursement when claimed.

Imperial Loans for Arrears of Interest and Equipment.

51. On taking over the railway the Government also borrowed from the Imperial Government £88,000 to pay off the arrears of interest due to the First Mortgage bondholders, and obtained power to borrow £110,000 to put the railway in a proper working condition. Up to the 31st March, 1902, £66,000 had been borrowed for the latter purpose; the remaining £44,000 will probably be borrowed in the course of the present year.

52. These loans, which bear interest at 2¾ per cent., are repayable in twenty years by an annuity of £65 13*s.* 6*d.* per £1,000 to cover interest and repayment. As the annuity had begun to be paid in 1901-1902 on the amount then borrowed the capital debt outstanding on the 31st March appears as £148,961.

The full annual charge when the railway improvements are completed will be at the rate of £13,003.

Summary.

53. The Railway Debt Charges may accordingly be thus summarised:—

—	Interest.	Repayment.	Total.
Old Railway Debt—	£	£	£
Debentures	6,558	3,910	10,468
Inscribed Stock	25,080	6,279	31,359
	31,638	10,189	41,827
New Railway Debt—			
Inscribed Stock	52,269	14,934	67,203
Imperial Loan	4,445	8,558	13,003
	56,714	23,592	80,206
Total.	88,352	33,681	122,033

Nett Profit and Loss.

54. The receipts of the railway in 1901-1902 exceeded the expenditure (as has been stated) by £40,253. This rate of profit will doubtless be increased during the current and future years, but at such a rate a deficiency of £48,100 a year for interest alone, or of £81,780 a year for total Debt Charges, is imposed on the tax payers by the railway.

55. The old railway was a sound and advantageous investment. The returns from the extensions made by the Jamaica Railway Company cannot as yet be compared with their cost to the tax payers. It can hardly, I think, now be questioned that a continuance of the former policy of gradual progressive extensions of the Government railway would have proved more profitable than its sale and extension under the arrangements made in 1889.

Bridges and Roads (Roads and Bridges Debt.)

56. In addition to £16,100 included in the Consolidation Loan under Law 17 of 1890 and subsequently converted into 4 per cent. Inscribed Stock, the amount of £400,000 altogether has been borrowed, principally during the course of the last ten years, for the construction and improvement of bridges and roads, and applied as shown below:—

—	Borrowed to 31st March, 1902.	Expended to 31st March, 1902.
	£	£
St. Thomas and Portland Bridges ...	120,000	119,409
Bridges – Law 20 of 1892.	100,000	97,338
Parochial Road Reconstruction ...	146,000	138,879
Main Roads	34,000	44,278
Total	400,000	399,903

Portland and St. Thomas.

57. Of the loan for Saint Thomas and Portland bridges, £61,400 was issued on Debentures at 4 per cent. interest. Debentures for £6,200 have been redeemed, and Debentures for £4,500 converted into £4,320 Inscribed Stock at 4 per cent. £43,740 was borrowed on Inscribed Stock at 4 per cent., and £14,860 at 3½ per cent. The liability now outstanding for this loan is accordingly £113,620. The annual charge for interest on the whole loan issued is £4,470, and for Sinking Funds, £1,445.

Island Bridges.

58. The £100,000 for Jamaica bridges was borrowed on Inscribed Stock, £34,000 at 4 per cent. and £66,000 at 3 per cent. interest, and 1 per cent. Sinking Fund.

New Main Roads.

59. The Parochial Road Reconstruction Loan was borrowed on Inscribed Stock, £140,000 at 4 per cent.

60. Out of a total contemplated loan of £100,000, £34,000 has been borrowed for mountain roads on Inscribed Stock at 3 per cent. interest. The amount of £10,278 spent in excess of this amount may be regarded as having been provided for out of the proceeds of the other loans, the accounts of which had on the 31st March unexpended balances to their credit amounting to £10,374.

61. The annual charges referable to the amount of these investments, according to the amounts actually spent up to date, may be abstracted, in round figures, as follows:—

—	Expenditure.	Interest.	Repayments	Total.
	£	£	£	£
St. Thomas and Portland Bridges (Debentures at 4 per cent. Inscribed Stock at 4 per cent. and 3 per cent.)	119,400	4,470	1,445	5,915
(Credit 5 per cent. on £600 unexpended.)	—	24	6	30
	—	4,446	1,439	5,885
Jamacia Bridges Loan (66,000 at 3 per cent. and £34,000 at 4 per cent.)	97,350	3,234	973	4,207
Parochial Main Roads...	138,900	5,556	1,389	6,945
Inscribed Stock: Mountain Roads (34,000 at 3 per cent. and £10,250 at 4 per cent.)	44,250	1,430	1,443	1,873
Old Main Road Debt (Consolidated.)	16,100	644	161	805
Unexpended (in Treasury)	100	4	1	5
Total...	416,100	15,314	4,406	19,720

Profit and Loss.

62. I think that it is generally recognised that the money spent on bridges and main roads has on the whole been well invested. Some parts of the new roads and some of the bridges, perhaps, may not yet appear to justify their construction, but the greater part of the work must be recognised to have been absolutely indispensable to the maintenance of the Colony. Without these works the fruit industry could never have been developed as it has been, and the Island must have fallen into deeper depression than it has ever had to experience. But beyond this advantage, I think that it would be hard to deny that the expenditure of the profits on the increased traffic made possible probably repays to the Revenue, in customs and excise duties, the full amount of the interest and sinking funds on these debts. It must indeed be borne in mind that the new roads and bridges have added considerably also to the expenditure of the Public Works Department for annual maintenance. I believe, however, that further improvement and reconstruction of roads, as funds become available, is not only advisable, but indispensable, for the increase of the prosperity of the Island. All progress in this regard has been practically suspended under the financial difficulties of the last few years.

63. I regret that I cannot claim that the construction of the only mountain road that has been completed has been the most

economically advantageous investment possible. The money might even, I think, with more immediate profit, have been spent on other roads included in the mountain road scheme, and still more advantageously, in my judgment, on certain lowland roads.

The road, however, from Gordon Town as far as Newcastle, is of appreciable and increasing value. From Newcastle into the Buff Bay River Valley it is at present only an interesting demonstration of the ability of the Public Works Department.

Rio Cobre Irrigation Works (Irrigation Debt).

64. The total amount borrowed for this undertaking was £126,600. Of this, £6,300 has been repaid, £44,100 was included in the 4 per cent. Consolidation Debenture Loan of 1880 (Law 19), and subsequently again converted for Inscribed 4 per cent. Stock; £13,600 was converted directly from Debentures into £13,376 Inscribed Stock, £5,376 at 4 per cent. and £8,000 at 3½ per cent. £62,600 remains due on Debentures at 4 per cent. interest. The total debt outstanding is thus £120,076.

65. The annual charges for interest and Sinking Fund on the Inscribed Stock amount to £2,833 and on the Debentures outstanding to £3,445, altogether £6,278.

Irrigation Revenue and Expenditure.

66. The receipts from the works exceeded the working expenditure in 1901-1902 by £5,810, being a deficiency of £468 on the total actual payments by the Government, but more than providing for interest, which at 4 per cent. on the original capital would be £5,064, or on the outstanding unredeemed capital £4,803. The receipts, it may be observed, were exceptionally high owing to the more effectual collection of arrears. The earnings for the year were £6,936, being £129 less than in the preceding year, but the collections amounted to £7,553. The sale of logwood from the canal banks provided £123.

67. Apart from the balance of the amount of these works with General Revenue as an investment they have proved of essential importance in the development of the banana industry in Saint Catherine's Parish.

Coolie Immigration Debt (Old Immigration Fund).

68. This amount, which was included in the Consolidation Loan under Law 19 of 1880 and subsequently converted into 4 per cent. Inscribed Stock, represents the extent of the insolvency of the old Immigration Fund the liabilities of which were assumed by General Revenue Account.

Public Buildings.

69. In the Consolidation Loan under Law 19 of 1880 there was included provision for £7,804 borrowed for the erection and

repairs of Public and Parochial Buildings. This Stock was subsequently converted into Inscribed 4 per cent. Stock.

70. In the year 1897, £100,000 was borrowed on Inscribed Stock at 3 per cent. for the extension of Public Buildings under the Public Buildings Loan Laws No. 6 of 1893 and No. 4 of 1894, which authorised the following amounts to be borrowed:—

	£
For Prisons	30,000
For Lunatic Asylum	40,000
For the Public General Hospital, Kingston	40,000

Of this amount, to the 31st March, 1902, £63,014 had been expended, leaving £36,986 to the credit of the Loan Account with the Treasurer. The progress of the works at the charge of this account, with the exception of the buildings of the Saint Catherine District Prison, has been practically suspended for some years, the unexpended balance of the loan having been employed in support of the Treasury balances in lieu of borrowing from the Imperial Government on account of the deficit on General Revenue Account. Such works as are considered most pressing and expedient will be proceeded with as the condition of the Treasury balances renders it convenient and advisable.

71. The present state of the account may be analysed in round figures, as below:—

—	Expenditure.	Interest.	Repayment.	Total.
	£	£	£	£
Old Public Buildings Debt...	7,804	312	78	390
New Public Buildings Debt	63,000	1,890	630	2,520
Unexpended in Treasury ...	37,000	1,010	370	1,480
Total	107,804	3,312	1,078	4,390

Jamaica Hotels.

72. This debt represents the amount of Debentures at 3 per cent. issued by the Government of Jamaica in aid of the erection of the under-mentioned hotels:—

—	Debt.	Interest.
	£	£
Myrtle Bank	33,900	1,017
Constant Spring	14,800	444
Rio Cobre	7,775	233
Moneague	7,000	210
Total	63,475	1,904

In addition to the interest an annuity of £12,891 is invested to repay the Debentures at maturity.

73. The Myrtle Bank Hotel is now let to a company in connection with the Direct Line Steamers, at a rent of £500 and with the option of purchase for £15,000.

The Constant Spring Hotel is let to the same company rent free for three years on condition of £3,000 being spent in improvements within that period, and with an option of purchase for £10,000. Much more than £3,000 has already been spent by the company. The other hotels are still in the possession of the companies which founded them but which do not repay to the Government the amount of the Debenture interest, and these hotels are therefore liable to forfeiture at the option of the Government.

Guaranteed Debt.

74. The local debt guaranteed by the Public Treasury was increased during the year by £16,500 borrowed on Debentures issued by the Vere Irrigation Commissioners who are expending £35,000 on the construction of a canal and reservoir for the irrigation of sugar estates in Lower Clarendon. An account of this undertaking will be given in dealing with the work of the Public Works Department for the year.

Parochial Debt.

75. The debts of the Parochial Boards to the Treasury, for loans at 4 per cent. for water works, markets, and other public improvements were reduced during the year from £87,873 to £73,023, an abatement of £14,850.

Loan Expenditure.

76. The amount of expenditure charged during the year against Public General Loan Funds was as follows:—

	£	s.	d.
Railway.			
Jamaica Railway—			
Interest	504	0	0
Equipment	40,447	18	2
Public Works.			
Bridges—			
Law 20 of 1892	2,382	12	7½
Public Buildings—			
Laws 6 of 1893 and 40 of 1894 ...	769	2	11
Mountain Roads—			
Law 13 of 1895	257	2	10
	£44,360	16	6½

Kingston Streets.

77. There was expended by the Kingston General Commissioners from Loan Funds—

Kingston Street Reconstruction—
Law 31 of 1890 ... ... £962 7 0

Vere Irrigation.

78. The Vere Irrigation Commissioners spent £14,266 out of the proceeds of Debentures issued under the Vere Irrigation Law. 1897, for survey and construction of their works, an account of which will be found in the paragraph dealing with the Public Works of the year.

(C.) LOCAL FINANCE.

79. The Revenues and Expenditure of the local Administrative Bodies during the year were as shown below:—

—	Revenue.	Expenditure.	Surplus.	Deficit.
Kingston—	£	£	£	£
General Commissioners..	38,690	36,433	2,257	
Mayor and Council General Fund.	25,661	25,653	8	
Road Fund	5,123	5,007	116	
Other Parochial Boards—				
General Funds	61,313	64,847	—	3,534
Road Funds	37,148	34,156	2,992	
Total	167,935	166,096	1,839 Nett.	

80. The total balances to the credit of the Kingston General Commissioners and the Parochial Boards at the Treasury on the 31st March, 1902, were:—

	£
Kingston General Commissioners ...	11,660
Parochial Boards (including Kingston) ...	30,053

Parochial Finance Law.

81. This was the first complete year during which the Parochial Finance Law 34 of 1900 was in full effect. By that law accounts and rating were simplified by consolidating the Poor Funds, the Sanitary Fund, the General Purposes Fund and the Surplus Fund of the parishes into a single General Fund for each parish, and the several rates into a General Rate, and the expenditure of parochial funds was made subject to the approval of the Governor on detailed estimates framed in the same manner as the General Estimates.

Rise of Parish Rates.

82. In 1886-1887, the first year of the existence of parochial Boards under their present constitution, the average of the total rates for all purposes in Kingston and the thirteen country parishes was 1*s.* 10*d.* in the pound of assessed value of houses, the Poor Rate averaging 1*s.* 7¼*d.* For the eight months, 1900-1901 when the consolidation of rates and extended control came into force, the rates in the same parishes averaged 2*s.* 7¼*d.*, showing an average increase of 42 per cent. in the rate of the House Tax during the period. The average amount of the Poor Rate (included in this) had increased to 1*s.* 11½*d.*, a rise of slightly over 22 per cent. I may observe that the rates for the current year 1902-1903 show a decreased average, viz., 2*s.* 6½*d.*, which there is reason to hope may indicate a turning of the tide.

83. In connection with the comments I made in paragraph 18 on the subject of the yield of the Holdings Tax the following observations may be of interest.

84. In the year 1886-1887 the average of the House Tax for all purposes was, as stated, 1*s.* 10*d.*

In that year the tax for the year was collected on 77,269 houses and yielded altogether £55,428.

85. Ten years later, in 1896-1897, the average rate was 2*s.* 3*d.* It was collected for the year on 66,313 houses, and arrears were collected on 6,532, yielding altogether £54,898. In the following year, 1897-1898, the collection of House Tax touched its lowest level, a rate averaging 2*s.* 8*d.* was collected on 58,664 houses and with arrears collected on 9,187 yielded only £52,886.

86. In 1899-1900, a rate averaging 2*s.* 6¾*d.* was collected from 56,372 houses, the lowest number recorded as paying their dues within any year, but arrears were paid on 13,362, and the total yield was £61,726.

Improvement in Collection 1900-1901.

87. In the eight months' period of 1900-1901, the current rate of 2*s.* 7¼*d.* was collected from 55,745 houses, and arrears from 12,944, that is to say very nearly as many receipts were given as in the previous 12 months, and the total yield was £52,996.

88. In 1901-1902 a rate averaging the same amount was collected within the year on 64,346 houses, and arrears on 17,312 houses, yielding altogether £62,858. The total number of receipts given for House Tax was no less than 81,658, being higher than in any year since 1895-1896, when it was 82,547.

89. The course of these collections, like that of the collections of Holding Tax shows conspicuously a great increase in energy and efficiency of collection during the last two years. I shall

return presently to the bearing of these figures on questions of the incidence of taxation which have occupied much attention during late years.

90. In any criticism of parochial finance with regard to the increase of rates to which I have called attention it must be borne in mind that, so far as the Poor Rate is concerned, the parochial expenditure has been swelled, beyond the possibility of control, by the increase in the cost of maintenance of pauper lunatics, which in 1886-1887 was £4,971, and 1901-1902 £12,333.

Parochial Road Funds.

91. The Road Funds of the parishes are dependent upon the Road Tax, levied on wheels and stock used on the roads, and the Property Tax to which reference has already been made. In certain parishes, notably St. Mary's Parish, where the soil is very unfavourable for road making and road maintenance, but very favourable for the growth of bananas, the great recent increase of traffic has rendered the local road funds inadequate for the proper maintenance of the parochial roads, and proposals have been made for an increase of the local Road Taxes.

(D.) Direct Taxation.

An Ever-burning Question.

92. A seemingly disproportionate amount of discussion and complaint, both verbal and in the Press, of official correspondence and of unrecognised labour by public servants, continually arises about the subject of the petty direct taxation on houses and lands in this Island for local or general purposes. It seems disproportionate because, although in some cases the sums involved are no doubt considerable in proportion to the immediate means of those liable, the whole amount of these direct taxes is but a small fraction of the taxation which is paid without complaint and collected with no corresponding trouble and friction. I have mentioned that last year when the Property Taxes for general revenue had been increased by 50 per cent., they were only 7 per cent., say one-fourteenth part of the whole tax revenue; but there was certainly far more than fourteen times as much fuss made about them as about the whole of the rest. The parochial House and Property Taxes during the six years following the imposition of the Holdings Tax averaged nearly three times the amounts of the Quit Rents and Holdings Tax together. Since 1896, when the Education Tax was added for General Revenue, the parochial taxes on property have averaged about twice the amount of those for General Revenue. The parochial taxes form, therefore, the heaviest part of the burden of direct taxation on property, and, consisting as they do almost entirely of the House Tax, it is they that are the principal source of complaint and difficulty.

93. I append certain tables (Tables IV., V. and VI.) illustrative of the history of this class of taxation in Jamaica during recent years. The amounts involved may not appear considerable, but the matters they cover bulk very large in our local politics and greatly affect the temper of our community.

94. Table IV. gives an abstract of the returns from direct taxation in houses and lands since 1886.

Table V., a summary of the returns from the Holdings Tax only since its enactment, showing the number of holdings on which the tax was collected for each year, and the arrears.

Table VI. shows the total yield of the House Tax for all purposes, the number of houses paid on, and the average per house paid in each year on the houses that did pay.

95. I make the following observations on these returns; they are open to qualifications and exceptions, but I believe them on the whole to be true.

96. The average Jamaican peasant-householder, although he cannot be said to be indigent, and is not on the whole politically averse to paying his taxes, but rather the contrary, finds great difficulty, partly external and economic, partly characteristic and temperamental, in getting together the money to pay them when due. When pressed to do so, he is more sorry for himself, and complains more loudly, than the representatives of his class, far worse off, in most other countries.

97. Moreover, in Jamaica as elsewhere, the tax-gatherer is traditionally regarded as a cruel and extortionate person, and as it is not possible to employ men of very exalted character or intelligence as bailiffs or runners when legal process has to be resorted to, there are no doubt occasionally cases of hardship in connection with levies for taxes. These are made a great deal of, and quite reasonably so; but in general great care and consideration are exercised by the Collector-General's Department in their proceedings.

98. Thirdly, the class to which the peasant-proprietor has chiefly to look for sympathy and advice is that of the Ministers of religion of all denominations; and though these no doubt, as a rule, encourage him to recognise his duties of citizenship, still they are themselves in direct competition with the tax-gatherer for his contributions, by which their ministrations are chiefly supported, the regular fee for church membership being threepence weekly. It would not be human nature that when they find the householder is behindhand with his Church Dues they should not express a somewhat excessive sympathy with his grievances about the taxes, and should not in the Press or the Legislature make the most of his complaints of "oppression." And as they are the class that next to the Government chiefly

works and speaks in behalf of the inarticulate peasant class, there is a tendency for the difficulty of paying taxes to obtain an exaggerated public expression.

99. So much, I hope, may be stated without offence or injustice.

Increased Taxes.

100. In the year 1890-1891 there was added to the existing direct taxes the Holdings Tax, and in 1896-1897 the Education Tax. These taxes (which for the bulk of the taxpayers are at the rate of 2*s*. per holding and 2*s*. per house, respectively) were imposed with practically the general consent of the population, the former to pay for a great extension of country roads, the latter in consideration of the abolition of fees in all elementary schools.

Diminishing Yield.

101. In each case, however, the effect of the imposition of the new tax was to diminish the number of persons who paid their taxes due within the year; that is to say that, although the added burden was small and reasonable, it overweighted the means and goodwill of a certain number, and, although the total yield of taxation increased, it did not (as Table IV. shows) increase by the full amount yielded by the new tax. There was a considerable loss on the others, and arrears began to assume heavy proportions.

Depressed Times.

102. When, in addition to these direct results of the increase of taxation with which the Collector-General's Department did not find itself immediately able to cope, there supervened a depression in trade and industry, due to bad seasons and fall in prices, the difficulty increased, and the taxes were in many cases a really oppressive burden. But the law provides that in all cases of genuine inability to pay the Parochial Board concerned may remit the taxes due, and this power has at all times been freely exercised.

Crippling of the Collector General's Department.

103. In the spring of 1897, with the purpose, presumably, of effecting economy in General Expenditure and relieving the pressure of taxation upon their constituents (in accordance with election promises) the elected members of the Legislature adopted the extraordinary step of striking off from the Collector-General's vote for the year the provision for the pay of the "runners" whose business is to serve notices of assessment for taxes and otherwise to carry out the arrangements prescribed for their collection.

Abolition of Surcharge.

104. Moreover, in 1893, the penalty of "surcharge" for failing to make an ingiving of property taxable had been abolished. This surcharge, it must be understood, was not a penalty for non-payment of taxes, but for not making an ingiving to the Collector, whereby he is put to the necessity of sending out a runner to serve an assessment. The surcharge was to cover the costs thus imposed by those who neglected their legal duty upon their fellow citizens who did not neglect it. By making an ingiving, whether the taxes were paid or not, the surcharge could be avoided.

Threatened Insolvency of Parochial Funds.

105. The Collector-General's Department was thus temporarily crippled, and the payment of direct taxes became, to a large extent, a voluntary obligation. The result was an increase of arrears, and of burdens upon those who continued to pay, and a condition of parochial finance which led Sir D. Barbour to form the opinion that the Parochial Boards were insolvent. The General Revenue taxes, being fixed, did not increase, but the Parochial House Tax was bound to, and did, go up.

Insolvency Averted.

106. Sir D. Barbour's apprehension, I am glad to say, has been proved mistaken. The proper way to relieve rates is not to retrench in the machinery for levying them but in the expenditure which they are levied to defray, and at the same time to insist rigorously on their payment by all who can pay them.

Improved Position.

107. This policy has been followed out by the Government in legislation and in administration during the last two years. The provision for surcharges for not making the ingiving has been restored and facilities for the payment of taxes by quarterly instalments have been given. The result has been that even in a period of continued depression the current taxes have been better collected and a larger amount of arrears recovered than for years previously, and this with no proportionate amount of hardship to the payers. Complaints have been made, and many, though not deemed entitled to remission, have no doubt found a difficulty in paying, but the great bulk of the recovery has been made from persons who could well manage to pay and who, under the laxity of collection that had been temporarily rendered inevitable, would have evaded payment and thrown the burden on their neighbours.

The Parochial Boards for the most part now recognise the need for retrenchment. The growth of parochial expenditure in proportion to the rateable values, has, I hope, been

checked; the rise of the rates in certain parishes has reached a turning point, the parochial exchequer is in a sounder position than it has been for a long time, and the improvement in collection, for which the Collector-General's Department deserves the greatest credit, having effected it in a year in which it had the added burden thrown upon it of making a valuation of all real property in the Island, cannot fail, I trust, to enable still further reduction of rates to be effected in the next few years.

Need of Reform of Direct Property Taxes.

108. At the same time, it appears unquestionable, and the Government has adopted the view, that the total burden of the present direct taxes on the poorest class of property-holders is onerous and unfair, especially that of House Tax, houses alone bearing practically the whole of the local expenditure other than that on roads. A readjustment is needed, not only on grounds of equity, but, because as matter of practice it is better to have a low tax that can be collected upon the poorest class than a tax that must either be remitted or collected at the cost of unquestionable hardship to the taxpayers and excessive expense to the Government.

TRADE, AGRICULTURE AND INDUSTRIES.

(A.) Imports and Exports.

109. Annexed is a table (VII.) showing the values of the imports and exports in the last five years as assessed by the Customs Department.

Increase of Exports.

110. The value of the Island produce and manufactures exported during the twelve months of 1901-1902 was assessed at £1,823,684, an increase of £85,161, or about 5 per cent. on the amount of last year's returns. British and foreign products and manufactures to the value of £38,727 and £76,731 in coin or bullion were also exported, making a total of £1,939,142, to compare with last year's total of £1,797,076, a gross increase of £142,066.

Increase of Imports.

111. The value of all imports was £1,699,525, an increase of £46,858 over last year's total, £1,652,677. The imports included £30,135 in coin or bullion.

Export Trade.

112. The exports of Island products (although I feel bound to say that I think the values under certain items are probably somewhat over-estimated, and in other cases perhaps under-estimated) show a substantial and satisfactory increase and, on the whole, a continuous progress during the five years for which the figures are given. This year's total is £165,597, or 10 per cent., above the annual average of the period, £1,658,087.

Excess of Exports.

The excess of the value of exports over imports, £239,617, or upwards of 14 per cent., was noticed last year and commented on as follows in last year's Blue Book Report:—

"The explanation of this course of trade is probably to be found in the fact that the investments of borrowed capital in railway extensions and other public works and private undertakings has come to an end, whilst increased debt charges on the borrowings, public and private, of recent years have now to be paid for by the excess of the exports. Whilst the free expenditure of borrowed money was proceeding, the distribution of wages both stimulated the importations of foreign commodities and withdrew industry from the production of exportable goods. Under this influence and that of current low prices, sugar cultivation fell off, and much of the established coffee cultivation was neglected. The taxation necessary to pay for increased debt charges has now consequently to be levied on partially diminished resources, and the foreign purchasing power of the community bears a less proportion to its exports than formerly."

Heavy Remittances (Foreign Profits).

113. I may add that the Colonial Government alone has to remit more than £200,000 a year to England for debt charges, shipping and telegraph subsidies and other public expenditure. A considerable amount of the value of the fruit exports must remain in the United States as profits of the United Fruit Company, and the claims of other creditors and investors may well be presumed sufficient to account for the balance of this excess, which I shall expect to prove to be normal so long as we do not resume the borrowing of large amounts of capital from abroad for expenditure in the Island.

Principal Staples of Export.

Table VIII. gives particulars of the exports this year and last of the ten leading products of the Island. It will be observed that bananas head the list, with a value of £825,288,

nearly 45 per cent. of the total value of exports for the year. By adding the value of other fresh fruit, viz.:—

	£
Oranges	102,780
Grape fruit	7,671
Limes	441
Mangoes	726
Pineapples	2,361

we get a total of £939,167 as the value of perishable fruit exported—more than half the total.

Banana Trade (Trade with England by Direct Line).

114. The banana trade showed an improvement of one-third in amount and value. The number of stems exported rose from eight and a quarter millions to eleven millions. This improvement was to be expected having regard to the great increase in the area planted during the last few years, and would have been realised earlier but for the disastrous storm of October, 1899. Cold weather and continuous heavy rains in the autumn of 1901 also somewhat retarded the maturing of the spring fruit of 1902 and impaired its size, but on the whole the year 1901-1902 has been a good and profitable year for the banana industry. In Sir A. Hemming's Report on the Blue Book of last year the institution of the Direct Imperial Line of Steamers was referred to as a good augury for the fruit trade. These steamers began their service in February, 1901, being under contract to carry 20,000 bunches of bananas to England every fortnight. The following statement shows the total amounts and values of fresh fruit carried to England by this line during the 12 months of 1901-1902. The similar exports by the Royal Mail Line are shown for comparison:—

—	Direct Line.				Royal Mail.			
	Quantity.	Value.			Quantity.	Value.		
		£	s.	d.		£	s.	d
Bananas, bunches...	643,846	48,288	9	0	9,401	605	1	6
Oranges, No. ...	5,610,850	7,294	2	0	2,794,075	3,632	6	0
Pines, dozen ...	5,733	1,146	17	8	1,214	242	13	8
Mangoes, packages	1,525	331	1	8	346	108	8	4
Fruit, other kinds...	—	2,013	19	8	—	935	1	1
Total	—	59,074	10	0	—	5,524	0	7

So far as the actual addition made to the volume of the fruit trade is concerned, the effect of this experiment might not appear considerable. The quantity of bananas carried is less than one

quarter of the mere increase in the export of that staple for the year, and had the fruit not been sent to England it would doubtless have gone, though possibly at some loss of price, to the United States. Important results have, however, been achieved, in regard to the development and prospects of the fruit growing industry. It has been proved that bananas can be carried to England in a marketable condition. It has been proved that a large demand for them may be expected at a paying price, and an independent company has been formed to run, without a subsidy, a second fortnightly service for the purchase of from 30,000 to 40,000 bunches each trip. It is recognised by all concerned that if such ventures are to be successful the volume of the trade must be multiplied by a large factor, and those who have invested large capital in the enterprise are well qualified and determined to effect this. As yet, however, the value of the fruit exported to England is little more than 6 per cent. of the total. For the sale of the balance we have still to rely entirely on the American market.

Experiment by the Royal Mail S. P. Company.

115. A very regrettable check to the enterprise of the Royal Mail Steam Packet Company in connection with the promotion of the fruit trade occurred during the year. This Company had allowed one of their vessels, the "Para," to be fitted with a large compartment for the transport of fruit under the safeguard of what was known as the Lawton process, whereby the maturing of fruit was to be suspended by the exhaustion of oxygen from the chamber. Mr. Lawton, the inventor of the process, in concert with the United Fruit Company, prepared a shipment of bananas for transport to England, but on the second day of the voyage an explosion occurred in the fruit hold, Mr. Lawton and two of his assistants were killed, and the experiment was summarily concluded.

Orange Trade.

116. The quantity and value of the oranges exported showed a decline. This is not, in my opinion, altogether to be regretted. The orange trade has still to be put on a proper basis, and it appears that only the discipline of failure will teach some Jamaica shippers how alone this can be done. In the years 1899 and 1900, when great quantities were shipped, much harm was done to the reputation of Jamaica oranges by wholesale consignments of undersized and immature fruit and of other stuff rendered worthless by careless picking and bad packing. The trade can, I believe, by careful handling be made more valuable to the Island than it has ever yet been, but this can be effected only by repairing and fostering the good name of Jamaica fruit in the markets of the United States and Great Britain. Proposals for a bill to control the quality of exported fruit have

been formulated by a committee of the Agricultural Society representative of the orange trade, but the proposals have not altogether commended themselves to some of the principal shippers. A steadily increasing quantity of fine oranges of selected varieties is now coming into the market from planted groves, the produce from which, even if not in all cases superior to the native "wild" fruit, is less liable to be injured in picking and can be packed to greater advantage. The export of grape-fruit, which shows little recent advance in value, may be expected to increase before long in like manner.

Dependence on Fruit Precarious.

117. However acceptable may be the development of the fruit trade it cannot be regarded as quite satisfactory that the Island should only have been saved from a decline in the value of its exports by the increase in the production of bananas, the most perishable and precarious of its staples. The increase in the value of this export appears at £206,652, and I think that it is probably over-estimated by the rating of 1*s.* 6*d.* a stem adopted by the Collector of Customs. This rate, however, is the same as that followed in the statistics of the last two previous years, and as there has not been any fall may fairly serve for comparison. The price of the full-sized bunch (nine hands and upwards) at the shipping place ranges from 1*s.* to 2*s.* 6*d.* according to season, and is highest at the busiest time. But the bunches are by no means all of them full-sized, and four eight-hand bunches are paid for as three, four seven-hand bunches as two full-sized bunches. Unless, therefore, the proportion of full-sized bunches is high, it seems doubtful whether the average price for the whole year would prove to have been as high as 1*s.* 6*d.* per stem exported.

118. The only other exports that are credited with substantial increase in value are cocoanuts (£20,473), cocoa (£18,436), logwood (£5,176), and fustic (£7,637).

Cocoanuts and Cocoa.

119. Improved prices and demand for cocoanuts increased the quantity exported by 30 per cent. in total amount, and in value by nearly 50 per cent. The quantity of cocoa exported rose by no less than 70 per cent., notwithstanding a fall in price of from 10*s.* to 15*s.* per cwt., and realised 30 per cent. more in total amount. This increase is among the most satisfactory features in the year's economy. It may be taken to indicate that a considerable amount of young cocoa has been planted among bananas as a permanent crop and otherwise, and is beginning to come into bearing. The cocoa crop of the Island is, however, as yet insignificant in importance compared with what it might, should, and I hope shortly will be. Great attention has been

paid by the Agricultural Department to the encouragement of this cultivation.

Logwood (Course of Trade in Logwood.)

120. The export of logwood shows an increase of 20·8 per cent. in quantity and a little over 5 per cent. in value. Price was lower, but it still pays those who have logwood on their properties to cut and ship. Upwards of 5,000 tons were consumed in this Island by the West India Chemical Works, which exported logwood extract valued at £26,145. The following statistics furnished to me by Mr. C. E. De Mercado, of Kingston, of the arrivals of Jamaica logwood and roots at the ports of Hamburg, Havre, and of the United Kingdom for the years 1897 to 1901 are of interest. The trade with the United Kingdom, it will be noticed, has fallen from 11,589 tons in 1897 to 1,765 tons in 1901:—

—	1901.	1900.	1899.	1898.	1897.
	Tons.	Tons.	Tons.	Tons	Tons.
Imports into Hamburg—					
Straight	500	180	170	200	500
Roots	650	1 250	900	1,800	3,100
Imports into Havre—					
Straight	4,785	4,995	6,875	2,845	4,560
Roots	1,795	3,990	4,545	2 820	3,605
Imports into United Kingdom—					
Straight and Roots ...	1,765	733	1,476	4,988	11,589

121. The place of Jamaica wood and roots has been largely taken by Haitian roots. Formerly these roots used not to be dug in Haiti, but of recent years they have been dug there largely. Moreover, the high rate of exchange that has been ruling in Haiti has enabled the exporters of the wood to accept comparatively low prices in gold, thus keeping down the price of Jamaica wood.

122. The comparative survival of the Havre trade will be noticed. This is probably due, in part at least, to the protective shipping policy of the French Government. The effect of their *sur-taxe d'entrepôt* is to draw consignments direct to Havre for orders.

Fustic.

123. There has been a marked increase in the price and demand for fustic during the past year, which still continues. I have been informed that this has been due to the brisk market for khaki dye-stuffs, and especially to changes in the uniform in the German Army.

Coffee.

124. The quantity of coffee exported increased by 17,219 cwt., or more than 20 per cent., but the value fell from £157,484 to £152,091, or 3·4 per cent. The Island crop was abundant, but the return disappointing.

The enormous crops produced in the Brazils have kept the price very low. In the autumn of 1901, on its being reported that there would be a smaller crop there, the prices showed a considerable improvement, equal, in Jamaica ordinary sorts, to from 6*s*. to 7*s*. per cwt., but later came information that there would not be such a falling off in the Brazil crop as had been anticipated, and that even if there were the accumulated stocks would be sufficient to keep prices down, and the markets again receded.

Low Price due to Bad Curing.

125. There can be no doubt, however, that the principal falling off has been in the ordinary sorts which are roughly cured by drying the cherry in its double skin and removing this by pounding in a mortar, and that the washed kinds, whilst much lower than they were in former years, obtain much better prices in comparison. Despite the low prices, if in those districts where the coffee is not pulped and washed the settlers who grow the bulk of our ordinary coffee were to combine, as they have done in some instances, to obtain pulping machines and hulling mills and to cure their coffee properly, there can be no doubt that the export value of our coffee would be increased by about 25 per cent. Indeed, this is a moderate estimate. During the fluctuations of the last two years the prices of these better cured coffees have kept comparatively steady, although, of course, steady at lower prices than formerly. Another circumstance which has been pointed out to me by Mr. De Mercado is that whilst at times it has been almost impossible to sell the ordinary grades of Jamaica coffee, the grades of Jamaica washed coffee have invariably met with a ready sale.

Unfortunately, the lack of water in Manchester and other limestone coffee districts renders the proper washing of coffee a matter of difficulty for a population who will not be persuaded to build tanks even for their domestic supply.

Rum.

126. The export of rum increased by 17,605 gallons, but decreased in value by £27,818, owing to a fall in prices. The companion export, sugar, shows similar ill-fortune. The crop was good, the export increased by 26,653 cwt., but the value fell by £29,237.

Sugar, Great Fall in Price.

During the year under review the prices of sugar have ranged extremely low, there being a fall as between the first month

of the financial year, viz., April, 1901, and the last month of the financial year, March, 1902, of £2 10*s.* per ton. Comparing the first quarter of the year 1901-1902 with the first quarter of the year 1900-1901, we find that there has been a drop in price of about £1 7*s.* 6*d.* per ton. Comparing the second quarters of these years, there is also a marked falling off in the comparative average values, probably amounting to £2 per ton. The third quarter of 1900-1901 showed a difference in value of about £2 5*s.* per ton, and the last quarter a difference in value of about £3 5*s.* per ton.

127. The netting value in the Island on the 31st March, 1900, of muscavado testing 89° was £10 5*s.* per ton; its netting value on the 31st March, 1901, was £8 per ton, and on the 31st March, 1902, £5 17*s.*, a drop of 43 per cent in two years.

Precarious State of the Sugar Industry.

128. These are conditions under which it is impossible for any but a few sugar estates to pay their way. The future of the industry depends on the results of the abolition of bounties under the Brussels International Sugar Convention of this year, which are still uncertain. It is doubtful how many estates can hold out until those results are established.

Pimento.

129. The exports of pimento fell off by about 28 per cent. in amount and value, the decline in value being £31,314. The crop of the year 1901 which would in ordinary conditions govern the statistics of the year 1901-1902 was some 30,000 bags smaller than the previous crop, but for the reason that it came after two very large crops its shortness did not improve prices. It would appear, however, that during the past few years the growers have obtained better prices for pimento than they usually realised hitherto. There is reason to believe that the consumption of the article is somewhat on the increase, and Jamaica commands the supply.

Ginger.

130. The decline in the quantity and value of ginger appears to be due to decreased production of recent years, though the prices of the year showed a slight improvement.

Honey &c.

131. Honey and beeswax are products which promise well and are increasingly popular with enterprising managers of small properties in the Island. It is regrettable that an increase in the export of honey gave no increase in value. Intelligent attention is being given to this industry, and the recent formation of a strong Beekeepers' Association will probably do much

to maintain the standard of quality and the reputation of Jamaica produce, upon which the stability of prices will depend.

Annatto.

132. The export of Annatto fell in quantity by about 80 per cent. and in value from £5,800 to £1,643. This was owing to the cornering of the entire market by an American trust.

Relative Importance of Principal Exports.

133. The following statement shows the relative proportions of the chief exports of Island produce during the last five years:—

—	1897–98.	1898–99.	1899–1900	1900–01.	1901–02.
Sugar	8·3	9·8	10·8	9·5	7·0
Rum	6·3	6·1	7·2	8·8	6·4
Coffee	11·4	10·5	7·8	9·1	7·8
Dyewoods	8·9	8·8	4·8	6·2	6·2
Fruit	42·8	41·4	45·0	45·2	51·6
Pimento	3·6	8·3	9·7	6·4	4·0
Minor products ..	18·7	15·1	14·7	14·8	17·[illegible]

Imports.

134. Analysis of the imports into the three classes prescribed for the Board of Trade returns shows that

In Class 1, food, drink, and narcotics, there is a decrease this year of £24,269.

In Class 2, raw materials, an increase of £10,472, and

In Class 3, manufactured articles, an increase of £61,395.

135. The shrinkage in Class 1 is apparently due, as has been above suggested, to increased consumption of Island produce, the price of some imported foodstuffs having advanced, whilst seasons were favourable and local supplies abundant and cheap. The increase in raw materials and manufactured articles indicates an advance in general purchasing power and demand for commodities, especially wearing apparel and other soft goods, which increased by £52,074. The importations of wheaten flour (a commodity which here stands on the boundary line between necessity and luxury) increased by 9,103 barrels in quantity and £8,192 in value.

Destination and Sources of Exports and Imports.

136. There was a considerable increase (561 head) in the importation of sheep (which might have been bred in the

Island). The subjoined tables show the proportions in which the exports and imports of the year were divided between their several destinations and sources:—

Destination of Exports.	1897-98.	1898-99	1899-1900	1900-01.	1901-02.
United Kingdom	22·0	20·6	19·2	18·8	21·1
United States	62·3	59·1	63·6	63·8	65·6
Canada	1·4	1·4	1·6	1·8	1·6
Other countries	14·3	18·9	15·6	15·6	11·7

Survey of Imports.	1897-98.	1898-99.	1899-1900	1900-01.	1901-02.
United Kingdom	47·2	44·7	47·2	45·4	46·8
United States	43·0	45·1	43·0	43·0	43·3
Canada	7·1	7·1	7·1	8·4	7·0
Other countries	2·7	3·1	2·7	3·2	2·9

British Trade.

137. A small increase in the percentage of both branches of trade with the United Kingdom is observable. This is attributable, no doubt, to the improved facilities afforded by the new Direct Line and to the purchases of fruit for conveyance by it. The increase in imports was entirely in manufactured goods, of which the United Kingdom supplied 68 per cent. (value £642,994). Of raw materials, 85·1 per cent. came from the United States and only 13·1 per cent. from the United Kingdom, whereas in the two preceding years the proportions were as below:—

—	1899-1900.	1900-01.
	Per cent.	Per cent.
United Kingdom	33·2	20·3
United States	63·8	75·8
Other Countries...	3·0	3·9

Coal Trade.

138. The supply of coal is passing to the United States owing to differences both in freight and cost. The superiority of English steam coal is not sufficiently pronounced to countervail this tendency. Welsh coal has been recently imported for the Government railway, but the results have been unsatisfactory

and the experiment has proved too costly to be repeated, so long as American coal remains at its normal price.

(B.) Shipping.

Increase of Trade.

139. The returns of shipping for the year show 242 sailing vessels reported, against 281 in 1900-1901, a decrease of 39 in numbers and 5,109 in tonnage.

In steam vessels an increase is shown, from 756 to 928, 172 in numbers and 136,337 in tonnage.

106 more steamers entered at Port Antonio, 76 more at Kingston and 10 less at the other ports of the Island.

Nationality of Tonnage.

140. The number of British steamships reported was 15 less, and the decrease in British tonnage 11,636, notwithstanding the accession of the Imperial Direct Line. There was an increase of 187 in entries of foreign steamers, distributed as below:—

American	27
Cuban	12
German	56
Norwegian	72
Russian	20

During the year 105 steamers arrived from the United Kingdom, as against 81 in the previous year, an increase of 24; whilst 89 cleared for the United Kingdom against 61, an increase of 28. The increase was due to the regular fortnightly running of the steamers of the Imperial Direct Line, which began in February, 1901.

141. From the United States 634 vessels entered, against 468 in the previous year, 611 cleared for the United States against 488, increases of 166 and 123, respectively, corresponding with the advance in the fruit trade with the United States.

Causes affecting Nationality and Destination of Tonnage.

142. The decrease in British and increase in American tonnage is mainly due to the transfer to the Hamburg American Company of the steamers of the Atlas Line, formerly under the British flag, trading between New York, Kingston, and Central America. It may be pointed out that there is a continuous tendency for Island produce destined for Europe to be shipped direct to Havre or Hamburg, instead of as formerly by way of London. Even where goods are not sold direct to foreign countries a gradually increasing proportion is being sent to Havre for

orders, in consequence of the French surtax on Colonial produce coming into France by way of any foreign port. If a merchant sends his goods to London and the market there is not favourable he is unable to ship it to France, but if it is shipped first to Havre he has a better opening for the French market, and can, if this is unfavourable, ship thence to London or elsewhere. In illustration of the results of these conditions it may be noted that in addition to the steamers of the Hamburg-American Line which sail to Havre once a month from Kingston, the Royal Mail Company have found it advisable, besides their regular English-bound steamers, to put on a monthly steamer which goes direct to Havre first and thence to London.

(C.) Land Grants, Surveys and Crown Lands.

Surveys.

143. The Surveyor-General reports that 258 lineal miles of survey work have been done in the year, divided into 148 miles of forfeited lands and laying out of roads, and 110 miles on account of sales of lands. Several surveys of some importance have been undertaken, among them that of the Accompong Maroon lands in St. Elizabeth and Point Hill in St. Catherine. In the case of the Maroon lands the lines had been run 30 years ago, but the Maroons had cut down all the mark-trees, and when remonstrated with for trespassing on surrounding lands belonging to Government declared that they did not know the lines. It became necessary, therefore, to re-run and mark the lines. There was much opposition from the Maroons to the work, culminating at last in a disturbance. With police aid, however, the running of the lines was completed.

Grants of Land to Settlers.

144. The sale of land to small settlers continues to progress. During the year 347 applications were received for 2,516 acres, and 373 lots, aggregating 3,157 acres, were surveyed and allotted to the applicants. From 1st January, 1897, to 31st March, 1902, a total of 1,827 applications have been received covering 16,735 acres, of which 1,479 applications have been satisfied, covering 16,184 acres. The total amount paid to 31st March by small settlers on account of the purchase of land is £6,339 16*s*. Out of the 16,735 acres that have been allotted, only 323 acres have reverted to the Crown through failure of the purchasers to pay their instalments, and of these, 167 acres have been re-sold to fresh purchasers; the net forfeitures for non-payment of instalments during the past five years are, therefore, only 156 acres, or less than 1 per cent. of the lands allotted. These facts show that this method of selling land to purchasers is much more suitable to the character of the general population than the rental of small predial tenancies. The experience of the Department indicates that it would be well to do away with the renting of

land altogether and to substitute purchase in fee simple, the purchase money being payable by instalments. There is a good deal of trouble to get the purchasers to pay their instalments, most of them delaying payment to the point of forfeiture, but, on the other hand, many tenants do not pay at all, and it is impossible to recover the rent in any way.

Improvements of Lands Granted (Road Question).

145. Reports that have been received from the several bailiffs and observations by the surveyors show that progress is being made in the cultivation and settlement of the lands purchased; some of the lands that were sold five years ago have undergone great improvement in the building of houses and of cultivation. On other lands, again, little or nothing has been done. On all sides, however, it is represented that if roads were provided more would be done. These demands are receiving attention, and facilities of access will be improved as circumstances warrant. Owing, however, both to the necessity for economy in expenditure and also to certain conclusions of policy arrived at by the Governor in Privy Council, some check has been put on the alienation of Crown Lands in remote districts and the construction of roads to approach them. There can be no doubt that the mileage of roads already open in the Island is very large as compared with the area alienated from the Crown and cultivated. Including railways and main and parochial roads there are open to traffic in the Island 6,540 miles of road, and as there are 1,967,684 acres alienated and tax paid according to the Collector-General's returns, this gives an average of one mile of road to each 300 acres of alienated land. But of this, no less than 1,273,106 acres is in wood and ruinate, mostly uselessly and unproductively held, and contributing very little to the exportable produce of the Island. Of the alienated acreage, 694,580 acres are returned as in cultivation and pasture, and this gives an average of 105 acres to each mile of road. Omitting the pasture, the land in cultivation is returned at only 177,664 acres, which gives the surprisingly low average of only 27 acres of cultivation to each mile of road. These figures show that too large an area is unproductively held in proportion to the mileage of roads open, a fact that is obvious to anyone who travels in the Island. The low taxation on land that has hitherto ruled, and the readiness with which grants of land were made, by the Crown in past years on condition of payment of only one penny per acre quit rent has been a direct inducement to the population to spread itself over the land unproductively. The result has been that the more land that was taken up in past years the more roads have had to be made to give access to such land, until at last in some parishes the funds available for maintenance of roads are quite insufficient for the purpose, and much of the land already taken up is held so unproductively that it can yield little more in taxation to maintain them. The produc-

tion, therefore, from the small area of cultivated land is burdened with maintaining means of access to lands unproductively held.

146. Concentration would remedy this, and concentration could be accomplished by utilizing the areas already secured by roads and unproductively held for the settlement of the population before opening up fresh areas and making more roads.

147. The policy has accordingly been adopted of completing means of access to Crown lands already alienated, to which roads have been promised, before making roads elsewhere, and henceforward not to open Crown lands to settlement in remote and inaccessible districts so long as there are unalienated Crown lands fit for settlement to which special roads have already been made or promised or which are already accessible from old public roads. The propensity of settlers to flock to new lands is bound up with the wasteful and disastrous traditional methods of crop-growing which it is one of the most pressing interests of the Government to supersede by intelligent agriculture. The new districts are sought because there is old woodland to burn, and when their fertility is exhausted their occupiers are worse off because further from centres of civilisation, education and employment than they would be if they had taken up lands in old settled districts and cultivated them in a proper and permanent manner.

Lands Forfeited.

148. Lands to the extent of 7,347 acres have been forfeited to the Crown for non-payment of taxes during the past year, and 128,000 acres have been forfeited since 1894. This forfeiture of land is undoubtedly the most important and complicated work of the Lands Department, and gives the greatest amount of trouble and takes up the most time. To appreciate the position, it must be borne in mind that up to about 1820, nearly the whole Island had been granted out by Patent from the Crown subject only to payment of one penny per acre per annum quit rent. On the decline in the prosperity of the Island numbers of owners went away or died, or abandoned or sold their lands, and in process of time numerous small holders got into possesion either by purchase or by squatting, sometimes paying quit rents on portions of lands they were in possession of and sometimes not paying at all. On much of the lands that have been forfeited, or are being forfeited, or are to be forfeited to the Crown, there are numbers of these small holders, each one claiming and occupying two or three times as much land as he pays taxes on and in many cases not paying taxes at all. The claims are so complicated, and the possession so irregular, that much care and patience must be taken in dealing with these cases. Moreover, to effectively settle these cases, careful surveys are absolutely necessary to define the limits of the land tax-paid and belonging to holders, and the lands not paid on and forfeitable to the Crown. Without

survey work to actually mark off on the ground the lands vested in the Crown, forfeiture proceedings would be an utter waste of time and mere paper work. A very troublesome case in point was dealt with in Point Hill in St. Catherine in the year just closed. This is a property of 1,100 acres, of which only 500 acres was tax-paid. Yet the whole 1,100 acres was in possession of different parties and only a survey could disclose the limits of the lands tax-paid and non-tax-paid, and considerable difficulty was experienced in the work and much care and patience expended in it.

149. Much has been done in the past few years in this direction of defining the limits of forfeited lands, but a great deal more remains to be done which can only be accomplished by steady Survey work for years to come. It will undoubtedly pay well in the end as all these lands will, in time to come, as the population increases, be a valuable asset of the Government. To allow these lands to remain as they are would be bad both for the lands and the people occupying them.

Leases.

150. During the past year 58 leases have been effected at a rental of £447. The most important leases are those of the right to cut certain marketable woods on the Healthshire lands and Portland Ridge. Most of the other leases are of lands at Admiral's Pen, near Kingston, where quite a small township is now springing up, several neat cottages having been erected by the lessees. At this place and the North-West of Kingston, there are nearly 300 leases of town lots from the Government. As to the predial tenants holding small parcels of land in yearly tenancies subject to three months' notice, there are about 1,500 of these owing an average rent of 12*s.* per acre per annum. It follows, therefore, that they should have paid about £900 of rent. Less, however, than £600 was collected. It was found impossible to collect the rest in spite of the issue of some 200 levy warrants. In many cases it is impossible to collect the rent in any way. No rent is paid and there is nothing to levy on. The renting of land to small yearly tenants is in every way most unsatisfactory.

Expenditure and Receipts.

151. The total expenditure of the Department was £3,337 15*s.* 2*d.*, including £737 19*s.* 3*d.* spent in construction of roads to Crown lands.

The receipts for the year from sales and rents were £3,183 19*s.* 4*d.*

(D.) MINES, MANUFACTURES AND FISHERIES.

No Mines.

152. It has been customary to include in the Annual Reports on the Blue Book a section reporting on mines, manufactures

and fisheries. The fact is, however, that Jamaica is not a mining or manufacturing country and does not supply the demand of its own consumers of fish. Such factories as exist are occupied for the most part with the preparation in bulk of agricultural products for export, sugar, rum, coffee, cocoa, logwood extract, leather, cigars and cigarettes, and a little cocoanut oil.

Sugar Factories.

153. The principal manufacturing industry, that of sugar and rum has long been suffering from the effects of the European bounty system, which has practically excluded Jamaican sugar from the British market. The countervailing duties imposed by the United States of America have, however, preserved that market to our exporters. I have commented above on the enormous drop in price that has occurred during the last two years in consequence of fiscal efforts of European beet growers to make the most of the bounty system whilst it should last. Notwithstanding this discouragement, the remaining sugar estates of Jamaica have held their own with remarkable determination and enterprise. They have the advantages of soils and seasons very favourable to the growth of the cane; so much so, that there is no part of the West Indies where sugar cane can be grown at a less expense than in parts of Jamaica. They have also the advantage of a good name and price for their rums, and they convert a larger proportion of the total yield of their canes into rum and less into sugar than is the rule on the estates of other West Indian Colonies. There has been a good deal of improvement of late in the machinery of sugar works, and had it not been for the sudden and crippling fall in prices there would have been considerably more, while the acreage returned as in cultivation in sugar cane increased from 25,616 acres in 1900-1901 to 26,535 in 1901-1902.

Rum Surtax.

154. The long-standing grievance of West Indian producers of rum in regard to the surtax of fourpence per gallon (in excess of the Internal Excise Duty) imposed on spirits imported into the United Kindom has during the year been receiving the attention of the Imperial Government. The West Indian Royal Commissioners of 1897, in the course of their report on the condition and prospects of the sugar industry expressed their opinion that this surtax was an anomalous and unfair protective import duty and a grievance to the West Indian rum distillers, for which a remedy or compensation should be sought. I have mentioned that His Majesty's Government, with a view to ascertaining the conditions by which any attempt in this direction must proceed have in the course of this spring deputed Mr. John Steele, C.B., late of the British Inland Revenue Department, to visit the West Indies and examine the methods and processes

of rum-distillery and the character of the excise restrictions established in these Islands. Mr. Steele's report will be awaited with interest, not only in connection with the fiscal controversy out of which the mission arose, but also as a commentary on the methods of distilleries in this Island.

Rum Distillation.

155. In this connection I think it of interest to quote the following observations from a report addressed to the Government by Mr. H. H. Cousins, the Government Analytical and Agricultural Chemist.

"So long as a puncheon of Jamaica rum exceeds, equals, or even approximates in value to a ton of sugar, individual estates in Jamaica would be quite justified in adhering to their own manufactures rather than grow canes for a central factory. Improved milling and good still-house management should keep the present type of sugar estate in a sound position industrially.

"The records of still-houses in the Island show great variations in the yield as well as in the quality of the rum from apparently identical materials. I estimate from personal observations that an increased yield of fully twenty-five per cent. should be reasonably expected from intelligent and accurate control of the preliminary fermentation in the manufacture of common and medium quality rums. Mr. H. and others who have to do exclusively with the flavoured rums for the German market state that enormous sums are annually lost through defective still-house management in this branch of the industry.

"Although essentially an empirical process there is no reasonable doubt that chemical and mycological control could establish certain crucial data for securing reasonable certainty and uniformity in the manufacture of 'German' rum. Should the flavoured rum industry succumb to the insidious competition of the German Compound-ether-specialist, the only hope for Trelawny would be a revival of high-class drinking rums and an organised campaign to protect the trade mark 'Jamaica rum' in the home market."

156. In correspondence arising out of the report of the Government chemist from which the foregoing extracts are taken, I have recommended that a chemist specially qualified and experienced in the study of fermentation should be engaged by this Government to assist in the study and improvement of local processes of rum manufacture.

Commercial Agency.

157. Proposals have also been submitted to you with a view to the appointment of a special agency to protect the commercial interests of the Island in the manner suggested.

(E.) Agriculture and Agricultural Services.

Sugar Industry.

158. The growing of sugar cane, with its attendant industries of stock-keeping and estate maintenance, and its subsidiary industries of cattle and mule breeding is the most important and developed branch of agriculture subsisting in the Island. Though the value of fruit exported now far exceeds that of sugar and rum, the agriculture of the fruit industry and of the bulk of the small cultivation of other exports is elementary, undeveloped, or indeed positively retrogressive. The decay and extinction of the sugar industry in certain districts has so impaired all conceptions of agriculture, that the community has an immense task before it to establish and re-create the art in regard to the products that must take the place of sugar and rum if our exports are to be steadily maintained.

Old Agriculture.

159. The old agriculture of the Island may be said to have consisted of—

(1.) The agriculture of the sugar industry, with the largely subsidiary industry of pen-keeping.

(2.) The agriculture of the coffee industry and

(3.) The agriculture of the provision ground.

Most of the land-owners had also sources of income in their crops of pimento, logwood, or oranges, but these were all wild products, and the pimento and orange trees suffer rather than profit from such operations as are performed on them under traditional methods.

160. The agriculture of the coffee industry may be distinguished in to that of the large high-mountain and other estates, manufacturing high-priced coffee, and that of the small land-owners, producing low-priced "settlers' coffee."

Coffee.

161. Coffee generally has suffered heavily from low prices and many estates have gone out of cultivation, but the decline of the settlers' coffee production has been the most serious loss to the peasantry. Their agriculture was never what it might have been and has been in general deteriorating for many years past, and their curing processes were always primitive. The fall of prices has discouraged them from maintaining such agriculture as they had, and very many have ceased to attempt to cure their coffee in even their old unsatisfactory method. I have already referred to this state of things in dealing with the coffee export.

Provision Grounds (Fire-Stick Cultivation).

162. The agriculture of the provision ground is an art developed by the negroes in slavery time and brought within the

limits of its principles to a high level of successful result. But its principles are destructive and disastrous, being based upon the talisman of the fire stick. Moreover, it has always suffered from the blight of the inevitable "prædial larceny." It demands new ground, with forest growth to burn on it, remote from the haunts of pilferers. When the fertility of the accumulations of humus and the stimulus of the ashes of burnt bush are exhausted (in two or three years) new ground has to be sought.

163. There was and could be no stock-keeping in this system of cultivation. The provision grounds were remote from the house, hence stock could not be watched. The land therefore got no manure and the children of the labourer no milk. The foundation and type of the system was the slaves' provision ground on the back land or "mountain" of the estate where he lived and worked.

164. Jamaica is an Island where the evils of hunger and cold are seldom if ever pressing. Even in towns no one, except poor respectable white and coloured people, starve. If anyone in the country is ashamed to beg, he is not probably ashamed to steal, and food can always be stolen. A tolerably comfortable community might conceivably be maintained here with very little foreign trade. Money prices and wages could be nominal, and the clergy and professional classes would have to be paid in kind and in services. But if the population is to have clothes and hardware, education, police, law courts, and a public medical service it must not only be able to turn some of its products into money, but it must import commodities, and therefore, as its needs of this character increase, it must maintain and increase its exports. When sugar was failing, Jamaica had fortunately a stand-by in logwood, pimento and oranges, it also had its coffee, and certain minor products such as ginger and annatto. The great substitute for the sugar export, that of bananas, has only developed largely in a few parishes. The banana could no more take the place of sugar in certain districts than sugar could regain its former position. There is only a small proportion of the Island whose soil and climate promise it a permanent future. There is only a small proportion in which even central sugar factories could maintain the sugar industry. The agriculture of the banana, at first experimental, has had to be discovered, and is still being developed in large estates. Some capital is required, and the more we adopt bananas as a permanent staple crop the more will a proper system of agriculture needing capital be recognised as essential. It is fortunate that the planting of bananas, combined with that of cocoa and with attention to other staples hitherto classed as "minor products" offers an opening for the development of a class of small farmers with moderate capital but operating in a larger and more intelligent method than the "small settlers," that neither sugar planting nor pen-keeping

afforded. Cane farming as a source of supply to central factories may possibly in the future afford another opening to agriculturists of this class.

Agricultural Departments and Institutions.

Jamaica Agricultural Society.

165. The Government and the Jamaica Agricultural Society, an invaluable organisation founded in 1895 largely through the influence of Governor Sir Henry Blake, have during recent years been working in many directions to promote the evolution of the agriculture essential to the changed conditions of the Island. The amount of organisation effected has been very considerable, and although little effect on the wealth of the country could be expected to have been produced within the period, some results are beginning to be noticeable.

166. The Agricultural Society consists of the society proper with a large representative Board of Management, sub-committees for special purposes and a number of affiliated branch societies in different districts. The society receives an annual grant from General Revenue which has recently been at the rate of £1,200. It publishes a most useful and practical monthly journal which reaches every member of the society and its branches. On the public establishment of the Island there are four Departments concerned in a greater or less degree in promoting the interests of agriculture, the Department of Public Gardens and Plantations, the Department of the Island and Agricultural Chemist, the Education Department, and the Imperial Department of Agriculture for the West Indies, which furnishes an Agricultural Lecturer subordinate to the Commissioner of the Department (Dr. D. Morris, C.M.G.) whose office is at Barbados.

Board of Agriculture.

167. The work of these four agencies in agricultural matters is co-ordinated and controlled by the Board of Agriculture, of which, as Colonial Secretary, I have had the honour from its establishment to be Chairman. The Board includes, *ex officio*, the Imperial Commissioner of Agriculture for the West Indies, who, however, can but rarely take part in the proceedings, the Director of Public Gardens and Plantations and the Goverment Analytical and Agricultural Chemist, together with four members nominated by the Governor (including the Archbishop of the West Indies, who is Chairman of the Jamaica Schools Commission), and two appointed by him on the nomination of the Agricultural Society.

The Secretary of the Board is the Lecturer in Agriculture of the Imperial Department. There is thus close co-operation and adjustment of effort between the different public departments

concerned, and the co-operation with the Agricultural Society is strengthened by the Director of Public Gardens being the Deputy-Chairman of the Board of Management of that society and Chairman of all its special committees. All the members of the Board of Agriculture, moreover, are as it happens also members of the Board of Management of the society. This compound organisation attacks the task of maintaining by scientific development the old staple agricultural and pastoral industries of the Island, introducing new industries and revolutionising the small agriculture of the peasantry.

Work of Experiment Station (Sugar Cultivation).

168. To assist the sugar industry the Board of Agriculture, through the committee of its experiment station at Hope Gardens, which also supervises experimental work on estates throughout the Island, arranges and has conducted in the past year field trials of fertilisers and methods of cultivation of sugar cane, soil analyses and surveys, comparative field trials of seedling varietal canes and the raising of new canes from seed. It is hoped, as I have already explained, that it may be able as the result of observations made last year also to render valuable assistance to the distillery branch of the same industry.

Other Crops.

169. In the same direction of effort manurial experiments were conducted on estates with bananas, pines, coffee and tobacco. The general plans and management of these experiments were carried out by the staff of the laboratory; the plots were visited and supervised by the Agricultural Instructor of the Government in the course of his lecturing tours. About 18 tons of artificial manures were obtained and distributed by the Chemists' Department at a cost of from £2 to £4 per ton less than that quoted by a local firm for mixed fertilisers.

170. The Agricultural Society has always devoted special attention to the maintenance and improvement by importations of the quality of stock in the Island, especially of horse kind, pigs, goats, ducks and poultry. It has continuously endeavoured to promote and to assist to success the local Agricultural Shows of branch societies, at which the exhibition for prizes of minor products is always a leading feature. The society during the year under review has employed two agricultural instructors, one in Manchester and one in St. Ann, especially with a view of reviving the settlers' coffee industry in those districts, but also in furtherance of the more general purpose I have referred to of revolutionising the peasant agriculture of the Island. These instructors are directly superintended by the Director of Public Gardens and Plantations. The Government has also (under the Board of Agriculture) one agricultural instructor

who gives lectures, or rather practical demonstrations, in all parts of the Island, and a second officer (the Superintendent of Castleton Gardens), part of whose time has now been assigned to this same kind of work.

Agricultural Revolution Aimed at.

171. The revolution of small agriculture that is aimed at involves the abandonment of fire-stick cultivation, the abandonment of the nomadic renting and devastation of new ground, the attaching of cultivation to the house spot or accessible centres, where the children of the household can both learn how to make themselves useful and do so, the fencing of grounds, the respect for ownership, the keeping, folding, penning and stabling of stock both as a source of food and profit and for manure, the proper cultivation and pruning of coffee, cocoa, oranges and similar permanent crops, and the proper picking, curing and preparing them so as to fetch better prices than they do now; the demonstration that with proper care ground provisions can be grown as well in the settlement and at the homestead as on new ground in the mountains and at much less cost of labour and time.

Prizes for Holdings.

172. In order to promote this revolution the Agricultural Society, through its local instructors co-operating with the Government Agricultural Instructor, has offered prizes for competition in selected districts to be awarded (under three classes) to the best settlers' holdings, regard being had to the quality and appearance of the house, the cultivation, and the stock. This competition has aroused great interest in the districts affected and has been successful beyond expectation.

Educational Methods (Training of Teachers).

173. In pursuance of the same purpose, the new Education Code provides, as reported last year, for agricultural instruction in elementary schools. To qualify the elementary school teachers to give such instruction is the chief duty of the Agricultural Lecturer of the Imperial Department, the Secretary of the Board of Agriculture, who gives courses of lectures at the Training Colleges and occasionally to teachers at various centres about the country. Unfortunately, at present, the Inspectors of Schools have no special knowledge of the subject and cannot give as much guidance as is desirable to the teachers. The third year students at the Mico Training College attend at Hope Gardens every Saturday for lessons and lectures in agriculture and horticulture. Two batches of elementary school teachers received a month's course of agricultural training, both

practical and theoretical, one batch of 60 at Hope Gardens in July and another of 18 at Bethlehem in September. Those who attended at the former were boarded at the Mico Training College and supervised by the Superintendent of that Institution. A feature of this course was the giving of a series of afternoon lectures to the teachers by planters and other qualified persons on irrigation, bee-keeping, geology, the preparation of produce, botany, small stock, poultry, water, grape vines, insect pests, the teaching of elementary science, and "How to make small holdings pay without borrowing capital."

Apprentices.

174. Apprentices are attached to Hope Gardens for training in agriculture and the handling of fruit trees, tobacco, &c.

Instructors.

175. The scope of the activities of the agricultural instructor and its close connection with that of the agricultural societies is indicated by his report of his work for the year. Lectures and demonstrations were given in all the parishes of the Island except Portland, which had been visited just before the year began. The subjects treated of included cocoa, coffee, citrus fruit, kola, cocoanut, logwood, grapes, sugar cane, bananas, ground provisions, vegetables, tobacco, ploughing, forking, trenching, draining, subsoiling, manuring, mulching, liming, budding, grafting, propagation by cuttings, circumposition, layering, and other methods of propagation. The instructor enquired into and reported on diseases of logwood, cocoanuts, cocoa, coffee, and citrus plants; he assisted in arranging and judging at nine Agricultural Shows and in the formation of six new branch agricultural societies. He reports that his lectures and demonstrations were as a rule well attended, the best and most intelligent audiences being found in districts where the small peasant-owner predominates. The increase in Agricultural shows and the interest taken in them is marked and entirely satisfactory, but progress in the quality of the exhibits is not so marked. Great progress has been made with the curing of cocoa, less (for want of machinery) with that of coffee. With regard to citrus fruits, he is of opinion that the imported varieties are on the whole no improvement on those already native to the Island. His investigations of the cocoanut result in the distinction of at least five well-defined varieties, of which seeds have been planted at Hope Gardens with a view to ascertaining whether they hold their type or vary, and to improvement by selection. The grape industry offers promise and should be developed with profit to meet the demands of the tourist season. With this object vines will be pruned so as to make them bear in February. He has interesting observations to make of the effect of the wet autumn on the banana crop and the need for deep drainage and tillage.

176. The Superintendent of Castleton Gardens has also done useful work in the districts accessible from the Gardens.

Hope Experiment Station.

177. At the Hope Gardens the work of the experiment station presided over by the Director of Public Gardens and Plantations in concert with the Island chemist, was carried on under the general scheme adopted by the Board of Agriculture, which may be shortly summarised as follows:—

I. To provide opportunities for the study of the staple crops of the Island, the conditions under which they are grown, the results obtained by different methods of cultivation, manuring, and by the introduction of new varieties, the monetary value of such methods or varieties, the diseases and pests attacking them, the methods of preparing the products for the market, and the management of farm animals.

II. To give information on all such matters by publication of leaflets and bulletins, by instruction to boys in High Schools, boys from Elementary and Industrial Schools, apprentices, students in the Training Colleges, elementary school teachers, and generally by conferences amongst planters and pen-keepers.

178. At the Hope Experiment Station it was decided to deal with the following plants in the manner indicated:—

(a.) *Sugar Cane.*—To grow 12 stools of each variety, planting in the spring and again in the autumn for the purpose of having them tested by the chemist;

To raise seedlings from the canes grown at Hope, and to cultivate for trial the best varieties from elsewhere.

(b.) *Tobacco.*—To grow 4 acres and to cure it.

(c.) *Cocoa.*—To plant out an acre for the purpose of studying close and wide planting, the value of shade, pruning, manures, and different varieties.

(d.) *Bananas.*—To form a collection of varieties, to study the plant in its growth, and, if possible, to raise new varieties.

(e.) *Coffee.*—To compare the products of different varieties.

(f.) *Pine-apples.*—To form a collection of varieties and to raise new varieties.

(g.) *Citrus Plants.*—To form a collection of various stocks.

(h.) *Nutmeg, Rubber,* and other economic plants; methods of grafting and other problems.

Citrus Fruit Conference.

179. A conference of two days' duration was held for the discussion of the interests of the citrus fruit industry, resulting

in the drafting of a Bill for the regulation of the fruit trade. The Bill was introduced in the 1902 Session of the Legislative Council, but had not been carried through all its stages when the Council adjourned. Papers were also read at the Conference dealing with methods of cultivation, varieties, insect pests, and were published in the bulletin of the Department of Public Gardens and Plantations.

Botanic and Ornamental Gardens.

180. The work of the Department other than that devoted to the Hope Experiment Station is indicated in the following notes.

181. At Hope 25½ acres of ornamental grounds were maintained with plant houses, orchids, ferns, and other delicate plants. 90,722 plants were distributed; 65,708 economic and 15,438 ornamental sold, and 9,576 given away.

182. The Herbarium was maintained and added to.

183. The Hill Garden at Bell Vue (Cinchona) in the Blue Mountains was kept in order.

184. The orange trees at Resource (near Cinchona) were maintained; but this garden is not now cultivated, all the varieties having been brought down to Hope Gardens for propagation. Castleton Gardens have been maintained in good order at a reduced expenditure, as has also the Parade Gardens at Kingston. These gardens are of purely ornamental and botanic interest.

Barbados Agricultural Conference.

185. The Chairman of the Board of Agriculture, the Director of Public Gardens and Plantations, Mr. J. Shore, on behalf of the Agricultural Society, Mr. McFarlane, Superintendent of the Mico Training College, the Reverend W. Simms, Principal of the Jamaica College at Hope, and Mr. W. Buttenshaw, Lecturer in Agriculture, attended and took part in the Agricultural Conference held at Barbados in January, 1902, in connection with the Imperial Department of Agriculture.

Agricultural Education at the Laboratory.

186. Towards the close of the year a scheme was drawn up on the initiation of the Island chemist for giving at the Laboratory and Hope Gardens a thorough system of scientific and practical training in agriculture. This scheme will, it is hoped, be brought into operation in the autumn of 1902.

General Position

187. Taking into consideration the organised work reviewed in the foregoing survey, together with the arrangements for manual training which will be described in the section of this

Report dealing with Elementary Education, I think it may be claimed that this Island is, on the whole, well in advance of any other West Indian Colony, if not of any other British Colony not having responsible Government, in the extent and activity of its public organisation for the promotion of agricultural knowledge. Nor has the activity developed within recent years been devoid of effect. In all parts of the Island there is an awakened and increasing interest in and desire for information on agricultural questions concurrent with a remarkable and steady increase of cultivation and, to some extent, an improvement of methods. The harvest from this development has been delayed by unfavourable seasons and low prices; but the year under review was on the whole a year of abundant yield, and this current year promises to be even better. A few favourable years will immensely strengthen the progress of agricultural improvement by demonstrating its pecuniary value.

III.—LEGISLATION.

188. Table IX. is a Schedule of the Laws, twenty-five in number, of the Session of 1901, assented to or reserved by the Governor for the signification of His Majesty's pleasure.

189. Of these the following may be considered to deserve special notice:—

Fiscal.

190. Law 6.—The Quit Rents and Produce Protection Duties Appropriation Law.

Law 9.—A Law to impose additional taxation on lands in aid of General Revenue.

Law 12.—The Match Excise Duty Law.

Law 25.—The Stamp Duty Laws Amendment Law.

These four laws were fiscal measures in aid of General Revenue, and their effect has already been referred to in my comments on the finances of the year.

Reformatory.

191. Law 13.—The Reformatories and Industrial Schools Law, Amendment Law, gave the superintendents of such schools a certain power of tutelage and control over children discharged from such schools until they reach eighteen years of age.

Police.

192. Law 15.—The Produce Protection Laws, Amendment Law, and

Law 21.—A Law in aid of the Laws relating to Prædial Larceny, were, together with a Bill to amend the Vagrancy

Law which was drafted for the approval of the Secretary of State before introduction, designed to mitigate the prevalent curse of the thieving of growing produce which so gravely impedes the agricultural progress of the Island.

193. Law 15 revised the conditions for the licensing of persons to buy and sell agricultural produce, with a view to improving police control.

Praedial Larceny Bill.

194. Law 21 was a more controversial measure and met with considerable opposition in its passage through the Legislative Council. It provided that whenever any person should be found in possession of any article of agricultural produce of certain specified kinds under such circumstances as should cause any police officer, or constable, district constable, or other person properly authorised to act under the provisions of the Law, to suspect that such article had been stolen or had been received with knowledge that it had been stolen or had been in any other way dishonestly come by, it should be lawful for such constable or authorised person to arrest the suspected person without a warrant and to take him, with the suspected article, before a Justice of the Peace or a Clerk of the Courts; and that if, after enquiry, the Justice of the Peace or the Clerk of the Courts should be of opinion that the suspected person did not give a satisfactory account of the manner in which he had become possessed of the article, such person might be detained in custody or bound over to appear before the Resident Magistrate at his next convenient sitting:

That on the trial of such person before a Resident Magistrate the burden of proving that he became honestly possessed of the article suspected to have been stolen should be upon the person himself, and that if he should fail to satisfy the Resident Magistrate that his possession of the article was honest, it should be deemed *primâ facie* evidence of his guilt, and the Resident Magistrate might convict him of being unlawfully in possession of the article:

That any person so convicted might be sentenced to imprisonment with or without hard labour for a period not exceeding six months, and upon any subsequent conviction for a period not exceeding twelve months: that any convicted person might, on a first conviction, be sentenced to be whipped, with a number of strokes not exceeding twenty-four, and that upon any subsequent conviction within three years of the first offence it should be obligatory on the Resident Magistrate to order the convicted person to be so whipped.

195. This Law was disallowed by His Majesty on the advice of the Secretary of State.

Parochial.

196. Law 17.—"The Parochial Boards Laws Consolidation Law, 1901," was a useful measure, embodying the effect of recent reforms, and superseding nine laws previously in force or partially so, but introducing no innovations of any importance.

Agricultural.

197. Law 18.—"A Law to regulate the sale of Agricultural Fertilisers and Feeding Stuffs," provided for the protection of buyers of chemical manures and prepared foods for cattle, by requiring the composition of such substances to be certified by the Island chemist.

Law 22. The Valuation Law.

Defects of Present Property Taxes.

198. I have detailed above the somewhat bewildering series of small incoherent imposts out of which the present taxation on real property in this Island is built up.

Contemplated Reforms.

199. It has for many years been generally recognised that the established system of land and house taxes was unsatisfactory, and repeated proposals have been made, after careful consideration, for its improvement. These proposals have generally advocated the fair application of the principle of an assessment on the value of real property, and, as the indispensable foundation for such assessment, the making of a cadastral survey of the Island and the establishment of a valuation roll of properties have been contemplated. The project for a cadastral survey, which was provided for by Law 8 of 1891, was abandoned in consequence of the opposition of land-owners, ostensibly on the plea of expense, and the difficulty of the anticipated expense had hitherto stood in the way of any formulation of proposals for an assessment without survey. Moreover, it had been recognised that any projects that might be set on foot for reforming these taxes would certainly provoke opposition from those whose taxation was likely to be thereby increased, and that such opposition, accompanied as it was sure to be by misrepresentations and misunderstandings which would create unrest and suspicion among the mass of the simple-minded and ignorant peasantry, would make any such reform a matter of practical difficulty out of all proportion to the legitimate objections to which it might give rise and to which any scheme must be expected to be open.

200. I have also detailed how the rates of the House Tax in most of the parishes had increased in recent years until, combined with the School and Holdings Taxes, it became a sensible burden on the poorest class. Remissions of taxes and arrears in collection began to assume serious proportions, with the effect of making heavier the burden on those who continued to pay during a period of increasing depression. At the same time the financial position of the Government was creating a demand for increased taxation of land, to be levied on a fairer principle than that of the Quit Rent and the Holding and Property Taxes; and this demand was made the more pressing and reasonable by the assumption by the Colonial Government of the burden of the Railway Debt and of the subsidy to the Imperial Direct Line.

201. Sir David Barbour, in his report on the finances of Jamaica made in 1899, recommended that the long ventilated reform of the Land and House Taxes should be carried into effect without further delay. Later in the same year, a committee, specially appointed, reported proposals for effecting this, viz., that a Real Property Tax should be assessed on the capital value of all real property in supersession of all the then existing taxes except the Quit Rent. The principle of this proposal was approved by the Secretary of State for the Colonies in a despatch of the 20th February, 1900.

202. For reasons of which the two principal were that the Government had no data to work upon, and that in view of the political situation (all the elected members being absent from the Council) it was advisable to defer any attempt to recast so important a branch of the fiscal system, no action was taken in regard to this matter during the Session of 1900-1901. In the Session of 1901 two laws were passed, namely, Law 9, the temporary law above-mentioned to impose additional taxation on land in aid of General Revenue, and Law 22, a Valuation Law, to provide a basis for a permanent means of reform.

203. This law provided for the preparation of a Valuation Roll for the whole Island to show the value of all holdings of real property in each parish under three assessments, viz.:—

(1) The actual gross present value of the real property;

(2) The actual or presumable nett annual rental value of the real property; and

(3) The presumable nett value of the ground forming the site of the real property in a natural and unimproved condition in its present surroundings.

A Valuation Commissioner was appointed to direct, supervise and bring to completion the preparation of the Valuation Roll.

204. Every person in the possession of real property was required to make an ingiving of the value of his holding to the Collector of Taxes for his parish. If the Collector accepted the

valuation given in, it was entered on the roll; if he did not accept it and an agreement could not be come to, the value was to be finally settled by a Resident Magistrate. If no ingiving should be made, the Collector was to assess the value of the property, and in case of dispute the value was to be settled by the Resident Magistrate.

Results of Valuation.

205. The work of valuation imposed an immense amount of labour upon the Supervisor of Revenue Offices who was appointed to be the Valuation Commissioner, and upon the officers of the Collectorates, without any extra remuneration, and the work was most energetically and creditably carried out. The extent of the work may be estimated by the fact that no less than 121,756 separate holdings of real property in the country parishes and 8,335 in Kingston and Port Royal have been assessed and entered on the roll. The total values recorded are:—

—	Gross Value.	Rental Value.	Unimproved Value.
	£	£	£
Kingston and Port Royal ...	1,571,223	104,191	440,336
Country parishes	7,450,007	769,584	2,546,056

206. In reporting on the valuation, the Commissioner records his conclusion that with some few exceptions the larger properties have been fairly and equitably valued when it is remembered that the valuation has been made at a time of extreme depression; that the general tendency has been to under-estimate the gross value of small holdings, but that he does not think there is any reason to doubt that taking it as a whole the valuation may be relied on as furnishing the basis of a more equitable adjustment of taxation, if it is admitted that the principle of taxation according to value effects that end. He adds "Traversing the criticisms that have from time to time been directed at the valuation, I beg to say that in my opinion, and, considering the time and machinery at my disposal, the work has been as satisfactorily done as could have been anticipated; that cases of absurd over-valuation have been few, and these have been, or will be, in the ordinary course remedied; that cases of serious under-valuation have come under notice, but these, mostly by judicious correspondence, but in a few cases by adjudication by the Resident Magistrate, have been brought approximately in line with a fair standard; that difficulties have arisen by mixing up questions of the values of personal property with real property, but that the claims put forward that maturing crops of produce have been deliberately added to, and included with, the values of real property are untenable."

207. On the whole, I think it probable that the valuations do not represent the full value of the properties, but that the discount is general and fairly uniform, great care having been devoted by the Valuation Commissioner and his officers to preventing anomalies, so that as between one property and another the roll may be regarded as affording a satisfactory foundation for the assessment of rates on values.

208. The returns of valuation were not completed early enough to allow legislation on their basis to be brought to perfection in the Session of this spring, and the increased rates of Holdings Tax imposed in the Session of 1901 were re-enacted for one year by a law passed in April, 1902.

IV.—EDUCATION.

(A.) Elementary Schools.

Year.	Schools on Annual Grant List.	Schools Inspected.	Scholars on Books.	Average Attendance from Monthly Returns.	Percentage in Average Attendance of number on Books.	First Class Schools.	Second Class Schools.	Third Class Schools.	Total Payments to Elementary Schools and Teachers.
									£
1899–00	746	776	98,598	51,470	62·08	187	357	219	47,240
1900–01	735	717	88,625	47,441	58·99	202	329	183	42,482
1901–02	728	726	84,799	46,277	61·51	189	341	183	42,936

Diminution in Number of Schools and Attendance.

210. The table given above shows a continuance in the reduction of the number of Elementary Schools entitled to annual grants in pursuance of the policy of closing or amalgamating with other inefficient or superfluous schools. There is an accompanying reduction in the number of scholars on the books and in average attendance according to the monthly returns. The

falling off in the average attendance for the whole year is attributed, I think, to the following causes, namely—

(1) The closing of a certain number of schools;

(2) Want of means in the parents to provide clothing;

(3) The exceptional amount of rain and the number of rainy days between June 1st and December 31st, 1901, and

(4) The absence of compulsion or other effectual incentive to attendance.

Explanation.

211. With regard to (1) it may be explained that with a view to effecting economy and efficiency the number of Elementary Schools on the books of the Education Department has been reduced in the course of the last three years from 893 to 728, or by 18 per cent.; the schools struck off having either disappeared altogether or having been amalgamated with those of other denominations as Government or Undenominational Schools. On the 31st of March there were on the books of the Department 27 Government Schools and 35 (so-called) Undenominational Schools, the latter being schools which, whilst not classed as Government Schools, were under the management of Boards on which were ministers belonging to more than one religious denomination. There were 664 Denominational Schools. Notwithstanding these reductions, the Superintending Inspector of Schools in his report for the year expresses the view that, if it be not unreasonable to expect a few children to walk three or four miles in the cool of the morning and evening, the supply of public Elementary Schools approximates very closely to the present effective demand.

212. There can be no doubt that exclusive connection with a specific religious organisation conduces to the attendance at its Denominational School of the children of that congregation and of the immediate neighbourhood of the church or chapel, and that the influences which promote school attendance as a method of recruiting for the church congregation or as part of a corporate duty and a matter of sectional pride on the part of the parents are much weakened when the school is amalgamated, whether into a Government School or into a Voluntary School under joint management with that of other denominations. This has, I believe, been one reason why attendance has—unnecessarily and perhaps unreasonably—been temporarily impaired by amalgamation. So long as no Voluntary Schools are kept on the books that are not giving value for their money it does not appear that either frequency of attendance or financial economy are likely to be promoted by any extensive further conversion of Voluntary Schools into Government Schools.

213. Moreover, having in view the difficulty of resuscitating Voluntary Schools once closed and the higher comparative cost

that would be involved in establishing a new Government School when the need of the locality might again demand it, the Board of Education and the Government have been disposed to give grace to certain Voluntary Schools on the borderland of sufficient efficiency, and not to be hasty in closing them.

214. (2) Want of money for clothing has, in some districts especially, had some effect on the willingness of parents to send their children to school, but this cause was towards the end of the year losing in force. I have already referred to the increase in the importation of clothing materials towards the end of the year, showing increased purchasing power and disposition to purchase the requisites of school attendance. During the first three months of 1902 the attendance improved, probably owing both to better circumstances and to better weather. The average attendance in January, February and March was 55,347 against 54,347 in the corresponding three months of 1901, and 46,277 for the whole year, and the improvement on the monthly advances of 1901-1902 has continued in an even more marked degree since the close of that year.

Unpunctuality a Serious Evil.

215. The Superintending Inspector of Schools reports that "one of the most crying evils in our Elementary Schools is the fact that work is never, or hardly ever, really begun at the time fixed in the time-table. Very frequently the teacher is not there, and no attempt appears to be made to get the scholars in before the time fixed for roll call. In the neighbourhood of nearly every school in the Island groups of children may be seen, from half to three-quarters of an hour after the time fixed for the commencement of school, standing loafing about the roads. There are of course honourable exceptions, but unless the teachers of the Island as a body bestir themselves and put an end to this discreditable state of things the drastic remedy will have to be resorted to of requiring the roll to be called at the time fixed for the opening of school. The result would certainly be a great reduction in the average attendance, probably widespread evasion of the regulation, and many fines and other penalties, but unless there is some general improvement, such a regulation may become absolutely necessary."

Apprehensions of Retrogression in Education.

216. Some serious misgivings have been expressed by persons deeply interested in the promotion of sound education as to the prospects indicated by recent educational statistics. On the 17th July last a statement drawn up by the Archbishop of the West Indies was published on behalf of the Diocesan Council of the Church of England in Jamaica, from which I quote the following passages: "Attention needs to be called to the serious fact that while the population is increasing, the number of children attending school is diminishing, and the children are

not in school a sufficient number of days during their school life to reach a decent standard of knowledge even in reading, writing, and arithmetic; so that the education secured at present by the majority of children who attend school is intellectually less satisfactory than it was, in spite of the fact that the teachers are each year becoming more competent. Instead of being over-educated, as some people say, those who are on the books are under-educated, and large numbers are not on the books at all. The country must suffer terribly for this failure both immediately and in the future.

"I submitted this statement to Bishop Douet for his criticism and suggestions, and he has written as follows:—

"'By the report of the Education Board for the year ending 31st March, 1901, just published, it will be seen that the number of children in average attendance has fallen 16 per cent., and there is no doubt that the decrease in attendance will be found to be still greater when the returns are made up to 31st March, 1902. To this fact that only 50,987 children are in average attendance out of 120,000 who ought to be in school, is to be added what has been observed in many parts of the Island, a loss of interest in the education of their children on the part of parents. There is also a strong feeling abroad that, owing to the irregularity of attendance, children are compelled to leave school before they have acquired a sufficient education to be of any use to them in after life. Children who leave school in the third or fourth standard, as very large numbers of them do, cannot read intelligently, and are unable to write a simple English sentence, and will, within a year or two of leaving school, completely forget all they have learned.'

"Among the things urgently necessary to be done with as little delay as possible, is the gradual introduction, throughout the Island, of a system of compulsory attendance at Elementary Schools for a limited number of years, in the manner recommended in the Report of the last Education Commission. By making attendance compulsory, in the first year of its coming into force only on children six years old, and in the second year on children either six or seven years old, and in the third year on children either six, seven, or eight years old, and so on, the effect would be gradual, both as regards the demand it made upon parents to send their children to school, and as regards any extra cost to the Government due to an increase in numbers and need for further accommodation. If to this modified form of compulsion were added (until money is more plentiful) a relaxation of the present rule regarding space accommodation in schools (which though good in itself is not absolutely necessary in this country) an immediate large outlay for buildings would be avoided. We should then see the beginnings of a system which would prevent ultimate injury to the public through the up-growth of an ignorant population; for by these means every child would obtain, within a limited number of years, a definite, plain, useful education. This education would also, in the

case of many pupils, prove a stepping-stone to further advances in knowledge and practical power of serving themselves, their families and their country."

More Promising Signs.

217. These observations were written before the Educational returns for the year 1901-1902 were available for reference. It is true that there was in that year as a whole, as anticipated by Bishop Douet, a further reduction (though slight) in average attendance. On the other hand, the Superintending Inspector of Schools reports that there has been a great improvement in regularity of attendance and in the efficiency of the schools generally. This is especially the case in regard to the amalgamated schools. Whilst in some cases, though not in all, the total attendance has been diminished, the average marks per school have risen from 48 to 55, or by about 15 per cent. In one instance, instead of three average second class schools we have now one high first-class school, with very little falling-off in the total attendance. The Superintending Inspector of Schools thinks it likely that in the course of a year or two, when the situation is better understood the attendance may quite recover itself, and the amalgamations already carried out fully justify themselves on the score of attendance as they have done on that of efficiency and economy. I am, moreover, glad to be able to say that the facts of the situation do not appear to be altogether as apprehended by the Archbishop and Bishop Douet. The reports of the Inspectors of Schools do not bear out the impression that the education at present secured to those who attend is less satisfactory than it was, but represent the contrary, whilst in the four months, April to July, 1902, following the close of the year under report, there has been an increase of 10 per cent. in the school attendance. This will of itself cause an automatic increase in educational expenditure. The general introduction of compulsion would result in a further addition to this expenditure, for which the Public Revenue of the Island, according to recent experience, could not provide without a further increase of taxation.

Results of Year.

218. The teaching of the elementary subjects has yielded, according to the Inspector's reports, slightly improving results, but arithmetic, whilst more nearly on a par with reading and writing than formerly, is still in most instances the weakest of the three.

Under the New Code.

219. The year under review is the first in which nearly all the schools have been examined in accordance with the schedules of the Code of 1900. In the better schools, with trained and

competent teachers, laudable and fairly successful efforts have been made to meet the new requirements, not merely with slavish literalness but with a considerable amount of intelligence and power of adaptation. It is gratifying to find that the Inspectors generally report that the courses for the training of teachers in agricultural knowledge at the Hope Gardens and at the Mico Training College, and the lectures given at various country centres by the Lecturer in Agriculture provided by the Imperial Government, and the Agricultural Instructors of the Colonial Government, are bearing good fruit. The Superintending Inspector of Schools considers that, as already stated, the schools are improving in general efficiency and need not fear comparison with any others under similar conditions and disadvantages.

Improvements of System.

220. It may be said, generally, that within a few recent years an improved system of education and an improved method of training teachers has been established in Jamaica, and that the efforts of those who have promoted these changes are beginning to bear fruit. As regards primary education, the code has been amended so as to include, besides reading, recitation, writing, English, arithmetic and Scripture, regulations regarding manual training and agricultural science.

Manual and Technical Training.

221. I take the following account of the existing arrangements from "A Paper on Education in Jamaica in relation to skilled handicraft and Agricultural Work" written by the Archbishop of the West Indies at the request of and for publication by the Committee of Council on Education.

SECTION I.—MANUAL TRAINING AND AGRICULTURAL SCIENCE REQUIRED TO BE TAUGHT IN THE ELEMENTARY SCHOOLS IN JAMAICA.

"(1.) *Manual Training.*—The primary schools are divided for the purpose of drawing and manual occupations into three divisions, lower, middle, and upper. The manual occupations in each case are based on a drawing scheme. The drawing ranges from kindergarten drawing and simple mechanical drawing in the lower division, to freehand drawing, drawing to scale, and geometrical drawing in the upper Division. The manual occupations based on the above course of drawing include colour work, clay modelling, paper and card board modelling, and simple modelling in wood.

(2.) *Agriculture.*—The Schools are also divided into three divisions for this subject, which is intended not merely to insure that a certain amount of information is acquired, but more especially to train the children in observation and inference by actual close touch with the objects and life around them. In the lower division a course of thirty-six lessons is given in animal and plant life, dwelling especially on the animals and plants found in Jamaica. In the middle and upper divisions more advanced general science is taught, and also more agricultural science, including the formation of soils, plant food, manures, and common objects of cultivation in Jamaica. All schools are required to illustrate the teaching in elementary science, general and agricultural, by experiments carried on by means of plants grown in pots and boxes.

SECTION II.—ADVANCED COURSE IN ELEMENTARY SCHOOLS.

"(1.) *Manual Training.*—Workshops for the advanced course of manual training "woodwork" have been established at five town centres in the Island. The course includes mechanical drawing and advanced exercises in tool work. This is generally a two-year course for Standards V. and VI.

"(2.) *Agriculture and Horticulture.*—The advanced course for schools is a practical application, in out-door experiments, of the knowledge obtained in the schools. An experiment ground of not less than a quarter of an acre must be provided in which every boy above 11 years of age must be taught practical skill in all agricultural operations. The course is open to girls. An extra grant is given for proficiency in this course."

The above manual training and agricultural teaching is being introduced as rapidly as possible into the schools; but it cannot be pushed on very quickly, because teachers require to be trained to give the proper instruction in these subjects; and comparatively few of them have yet been so trained.

TRAINING OF PRIMARY SCHOOL TEACHERS.

9. The Education Code Syllabus for training colleges now requires (in addition to reading, writing, arithmetic, Euclid, grammar, geography, history and Scripture) that the following subjects be taught.

"(1.) *Manual Training.*—The first year students take a course including paper folding and designing, colour work, paper and card board modelling, clay modelling, simplified woodwork. Second and third year students take a more advanced course of drawing and manual training "woodwork" on the lines of English requirements in the same subjects. This course requires a thorough knowledge of orthographic and oblique projection drawing and the use of all the ordinary carpenter's tools.

"(2.) *Agriculture.*—In the first year, a course of elementary physics and chemistry, preparatory to the study of the life and food of plants, and to a knowledge of the composition of soils and manures, is laid down, This course is chiefly practical and experimental, but an intelligent knowledge of the Tropical Readers is also required. The Tropical Readers are two volumes, prepared and published at the instance of the Jamaica Board of Education, by Messrs. Blackie, for use in Jamaica schools, strongly recommended by Dr. Morris, the Imperial Commissioner of Agriculture for the West Indies, and now in use throughout the British West Indies.

"In the second year, agricultural science of a more advanced character is prescribed. This course includes a knowledge of the composition of the atmosphere and water and their action on plant life, the formation of soils, their cultivation, need for manures, structure of plants, plant life, germination and nutrition, together with a practical knowledge obtained in box-gardening and out-door cultivation with experiments and illustrations, as in the French Scheme of Agriculture for Elementary Schools.

"In the third year, the theory prescribed for the second year is amplified, and the instruction is mainly practical, the college lectures bearing upon this side of the subject. The course includes the knowledge of the proper use of agricultural tools, preparation of seed beds, sowing, transplanting, pruning, budding, grafting, destruction of insect pests, and the planting and care of common Jamaica crops."

The foregoing subjects are being thoroughly taught at the Mico College, which is practically the only one now in operation in the Island for the training of male teachers. The headmaster of the Kingston Manual Training School directs and assists the manual training at this College. The secretary of the college, an experienced practical botanist, directs the garden operations. The Imperial lecturer in agriculture shares in the teaching at this institution; and he also assists at the Shortwood and Bethlehem, and at the St. Joseph's (Roman Catholic) Training Colleges for girls, as it is deemed desirable for the female teachers to obtain as much of this instruction as possible.

The Manual Training School, Kingston.

10. *The Manual Training School Kingston*, is an institution established in 1897 by the Government, and managed by the Board of Education. It was established for two purposes:—namely, to provide a model elementary school on English lines; and to be the medium for introducing educational handwork into the educational system of Jamaica. The school consists of a boys' and kindergarten department with an aggregate average attendance of 450 pupils. A girls' department is in contemplation. A manual training "woodwork" department is a special feature of the school. The headmaster of the school is an English trained, certificated teacher, with special qualifications in manual training. He is assisted by an English trained kindergarten mistress, and a staff of native teachers. The curriculum of the school is that prescribed in the Jamaica Code for elementary schools. Special attention is given to educational handwork which is carried on throughout the school in the form of kindergarten occupations, manual occupations (drawing and colour-work), and manual training "woodwork." The latter is taken by all the boys in the school in Standard V. and upwards. Each boy receives two hours' instruction per week.

Classes for the training of teachers are held every week at the school. The subjects taken up are Kindergarten, drawing and manual occupation and manual training "woodwork." The latter class is affiliated with the City and Guilds of London Institute, and the Institute's examination in manual training "woodwork" was held locally each year 1899-1901. The work was sent to London to be examined. At the three examinations 21 native teachers passed the first year's examination, and 12 of these went on and passed the final, thus gaining the teacher's certificate granted by the institute. These teachers are being placed in charge of manual training centres as they are established. Four such centres have recently been opened.

---

11. All the young men under preparation to be teachers in the primary schools have now to pass through the training above specified. Provision is made also for teachers who had gone out from college before this training was commenced, to come to Kingston, and secure the benefits of a course of manual training. Provision has likewise been made for an annual assembly of old teachers for the purpose of giving them some training in agricultural and manual work. This takes place at the Mico College and the Agricultural Experiment Station near Kingston. The present is the third year for this annual assembly. It has done much already to help existing teachers who passed through the college before agriculture was taught there; and they are thereby enabled to understand enough of the subject to enable them to teach it both theoretically and practically.

Special Schools.

12. As regards special schools the following can be reported:—

Efforts at industrial and agricultural training have long been made, with some partial success, at the Boys' Reformatory and Industrial School, and the Girls' Reformatory at Stony Hill; the Boys' Industrial School at Hope

Gardens; the Girls' Industrial School at Shortwood; the Belmont Orphanage for girls; and the Alpha Cottage (Roman Catholic) Industrial School. Further efforts for promoting agricultural education have recently been planned on an extensive scale by Bishop Gordon (Roman Catholic); and a commencement has been made towards their realisation. In reply to my enquiries, Bishop Gordon has given me information of which the following is a summary.

"The work at present is in its tentative stage, the resources available being limited. The general purpose is to train boys who have no other definite prospects in life. First of all they are taught reading, writing, and arithmetic; and have as much of agricultural education as can be obtained on a banana farm which is located near Spanish Town. Moral and religious training are an essential part of the plan. The children here are young, and have the benefit of being under the care of the sisters who aid in the management of the institution. The cost of maintaining the fifty inmates is met by the labour of those of them who can work.

"At the age of from 12 to 14 years it is intended to transfer them to a pen in the parish of St. James, where they will be given the opportunity of acquiring a thorough knowledge of all that is done on Jamaica Pens; and the endeavour will be made to give them instruction in the most advanced methods of cultivating, harvesting and preparing for the market. [Pen in Jamaica means popularly, a grazing property and place for farming and small cultivation, as distinct from the large sugar or coffee properties.]

"The final stage of the plan is, their being transferred to land which has been secured in the parish of St. Mary. They are to work there on a co-operative system, which, however, is to give facilities for their becoming proprietors. The ultimate aim is to secure 'the formation of a God-fearing, hard-working, moral and religious, as well as intelligent peasantry, and to establish family life, which is the foundation of the morality, strength and happiness of a people. The first stage is accomplished, the second is struggling into existence, and the third is not begun.'"

It is to be hoped that this interesting experiment will secure a large measure of the success which the founder has in view.

---

13. The following projects have recently been initiated.

"(1.) The establishment of a farm school under the control of the Government, and largely meeting the needs of the better peasant class whose children will either win scholarships available at this farm school or will pay about twelve pounds a year. The plans for this are in shape, but are delayed for lack of funds.

"(2.) The establishment of a special section in connection with one of the principal schools in Vere, for manual training, and the teaching of agriculture. This will probably come into effective operation soon.

"(3.) Under the auspices of the Jamaica Board of Agriculture, which is an official administrative body, and also of the Jamaica Agricultural Society, which is a popular body, joint efforts are being made to give theoretical and practical agricultural instruction to adults and young people in numerous centres of the Island, by means of conversational lectures in the field with demonstrations and illustrations. Two specially trained men are thus working under the Board of Agriculture, and two others with large local general experience are giving partial services under the direction of the Agricultural Society. The aim is to popularise among the middle aged people and the younger folks who have passed out of the schools, the newer teaching and practice in all branches of agriculture. These lectures have proved very useful, and there is a growing interest in them. They effectively supplement the efforts made in the schools among the young."

ADVANCED TEACHING.

14. *Advanced Teaching.*—As regards more advanced teaching for the middle and upper classes, and for those from the lower classes, who may show special ability, there is the Experiment Station at the Hope Botanical and Agricultural Gardens, with a defined course of instruction in the laboratory under the highly qualified agricultural chemist. This institution is now getting into active operation. It has taken many years to secure that amount of popular interest and public support necessary to create it; but it will, before the close of this year, have methods in operation for giving (either free or at an almost nominal charge) complete technical training in agricultural chemistry and other subjects bearing on agriculture.

SECONDARY AND HIGHER EDUCATION.

15. *Secondary and Higher Education.*—The Jamaica College heretofore called "The Jamaica High School and University College" is a public Institution located close to the Experiment Station. It is a high class school of the ordinary kind, giving facilities for teaching in arts up to the standard of securing degrees from the University of London. But it has long aimed at developing a scientific side, with special reference to interesting boys in agriculture, and in the case of some (at the later stages of their education) securing for them special agricultural training at the Experiment Station now at last being established; and also to prepare some boys for taking the full technical course there. The Jamaica Schools Commission which manages this Institution, has also close relations of general supervision to a number of endowed schools in the Island, and is endeavouring to foster developments of scientific and practical teaching in all of them, with a view to the better fitting of the more advanced section of the community for higher technical training in Jamaica or elsewhere.

---

16. These various efforts for modifying the instruction given to the young people of Jamaica, of all classes, are now passing out of the controversial and tentative stage into the practical and effective. There are still some persons who condemn the education being given; but these are chiefly persons who are not aware of what has been done to modify the system in all schools and in all grades of education during the last three or four years; or else they are persons who think it possible to teach nothing but trades and farming in schools. The endeavour is being made to secure thorough development of the intelligence of the children generally, with special stress upon those parts of ordinary book learning that are likely to be of most use to working folks; and to add those mental and practical preparations which are possible to be given in ordinary schools whereby mental tastes and physical aptitudes will be developed, and an interest created in the subjects which the pupils have to take up and work at later on. It will be a more wholesome training than the mere book learning of the past; and there is only one reason why the actual attainments in book learning should not be better than heretofore. That reason is the unfortunate restriction, at present, of educational advantages generally through lack of public resources * * * * The arrangements for making the teaching good and practical are being matured as fast as it is reasonable to expect. But the number of schools has been reduced, so that facilities for easy attendance in country districts are less; the number of years during which children may attend the schools at public expense has been reduced; but there is no compulsion, so that the attendance is casual and limited. This must be altered, or the advantages of the better methods will be lost to Jamaica because of the comparatively small number of children getting the full benefit of them."

222. I have thought it useful to include the whole of the foregoing rather lengthy summary in this Report in view of the very great importance which must be attached, in the economy of this Colony, to the aims and attempts therein recorded. I have already dealt with kindred educational efforts in reporting on the Agricultural Department.

Expenditure.

223. The total amounts expended on education in 1901-1902 and 1900-1901, respectively, were as below:—

For Elementary Education.	1901–02	1900–01
Grants to Elementary School Teachers	42,936	42,482
Building Grants	179	375
Administration Inspectors	4,819	5,222
Government Training College for Women Teachers ...	1,204	1,204
Grants to Training Colleges	2,431	2,660
Agricultural Courses for Teachers...	258	95
Board of Education and Printing	140	115
Total	51,967	52,153

For Secondary Education.	1901–02	1901–01
Annuities to Industrial Schools	5,244	5,244
Jamaica College	1,050	1,300
Scholarships	1,166	1,107
Secondary School, Montego Bay	200	200
Total	7,660	7,851

224. This summary shows that the School Tax provides, as mentioned above, for about one-fourth of the amount of grants to schools, and about one-fifth of the total amount spent for elementary education.

225. I wish to mention a very promising movement that has been taking shape in the course of the year, dependent entirely on the voluntary effort and gratuitous public spirit of those who have been active in it. At the suggestion of the Senior Sub-Inspector of Schools, and in co-operation with school managers and teachers, public educational meetings have been held in several localities in Manchester. One purpose has been to impress upon parents the duty and the great importance of sending their children to school regularly and punctually until the limit of school age is reached. For the children above school age plans have been set forth for continuing their education under the supervision and guidance of teachers, and such aid as can be given by ministers of religion and their wives and others interested in the educational welfare of the people. As the outcome of this movement, which has just begun, improvement classes have been organised at five centres, some for the boys and young men and others for the girls and young women—the latter receiving practical instruction in domestic economy. These classes are arranged for a six months' course. Educational committees have been appointed in the several school districts to make general arrangements for the improvement

classes and to act as Voluntary School Attendance Committees to secure a more regular attendance of the children in the schools. Some parents among those who are in highest repute in the community have chosen to act with managers and teachers as the Educational Committee in their district, and are taking part in the work with earnest and intelligent interest. The formation of book-clubs, in small groups of four or six among the young men and young women, has been begun, and it is expected that this feature of the work will be of special value and will be an important auxiliary to the school libraries existing in the same districts.

Training of Elementary School Teachers.

Shortwood College.

226. Sufficient reference has, perhaps been made already to the Training Colleges and the Manual Training School. With regard to Shortwood Training College for Female Elementary School Teachers, which is managed by a Board of Governors appointed by the Governor, and which receives a grant of £1,200 a year, it may be mentioned that there were thirty students in training during the year, all of whom presented themselves for the Cambridge Local Examination. Twenty-three passed, three with Honours.

Examination of Teachers.

227. The usual examination of Training Colleges and teachers was held in December, 1901, with results as shown below:—

College.	Presented.	Passed.	Honours.	First Class.	Second Class.	Third Class.
First year students—						
Mico students, Jamaica ...	24	21	6	6	7	2
Mico students, Antigua ...	8	5	1	1	2	1
Shortwood	12	12	1	1	2	8
Bethlehem	7	6	—	4	2	—
St. Josephs	4	4	—	—	—	4
Second year students—						
Mico students, Jamaica ...	3	2	—	—	1	1
Mico students, Antigua ...	3	3	1	2	—	—
Shortwood	10	7	1	1	2	3
Bethlehem	5	4	—	1	3	—
St. Josephs	2	2	—	—	1	1
Third year students—						
Mico, Jamaica students ...	30	25	8	7	7	3
Shortwood	8	4	—	1	2	1
Bethlehem	5	4	—	1	3	—
St. Josephs	—	—	—	—	—	—
Total	121	99	18	25	32	24
Teachers	13	6	—	—	1	5
Teachers for permanent registration.	11	4	—	—	—	4

228. On these results the Superintending Inspector of Schools makes the following observations:—

"The percentage of passes amongst students has again slightly fallen from 85·4 to 81·8. The worst results were shown in the second year, the students in which for some reasons have not been quite up to the average standard from the time they were admitted. The number of teachers presented and the percentage of passes show also a decrease. The results of the examination of teachers for permanent registration are still unsatisfactory, and I fear they will continue to be so. Self-training, even in elementary branches of knowledge, is by many in Jamaica considered an impossibility, and consequently is often not attempted. Modern text books are prepared with such immense care that no possible difficulty on the part of the learner shall be over-looked that the instruction to be derived from them is far better and easier than nine-tenths of the oral instruction available in Jamaica, and the great aim of all teachers should be to make their pupils fond of reading and capable of pursuing their studies by themselves. Some of the best work in England is done by solitary students, but when a student in Jamaica is called upon to reach a certain standard of attainment to qualify himself for a professional career, whether as land surveyor, teacher or what not, the reply often received is, 'It is impossible; there is no one in my neighbourhod who can teach me.'"

Pupil Teachers.

229. The following are the results of the examination of pupil teachers held in July, 1901:—

Year.	Pupil Teachers.					Volunteer Candidates.				
	1.	2.	3.	4.	Total.	1.	2.	3.	4.	Total.
Presented	117	70	57	75	319	304	94	5	134	597
Passed	22	44	31	51	148	49	37	16	67	169
Per cent. ...	19	63	54	68	46	16	39	25	50	28

230. "These results," the Superintending Inspector of Schools observes, "can not be called satisfactory, and indicate the need for far more careful preparation of the candidates for examination. No teacher in the Island should send up a candidate, as some did on this occasion, who cannot even transcribe a headline for a writing copy correctly."

Revision of Code.

231. During the year the Education Code was revised and amended in certain respects affecting the allotments of grants. The revised Code only came into force on the 1st May last, one month after the termination of the year under review. It may be well, however, to indicate briefly the effect of the most important modifications.

232. Under the old Code (in force during the whole of the year 1901-1902) a school with an average attendance of over 80 and under 150 could have one additional woman teacher (or, in a very few exceptional cases, two). The additional woman teacher's salary (*i.e.*, the grant available for paying it) was fixed at £20 a year. Many additional women teachers are highly qualified, registered, and even in some cases certificated teachers, others were novices with no training and slight qualification, but the salary was uniform for all. Under the new Code the amount available for the payment of assistants will vary with the size of the school, from £6 for a school of 80 to £48 for a school of 150. Managers are left free to make the best arrangements they can for staffing their schools with the means at their disposal, *e.g.*, with an average of 80 it will be hardly possible in most cases to do more than secure a pupil teacher (the special grants for whom are abolished) with an average of 120, and a grant under Article 114 of £30, either a superior assistant at £30 or a less highly qualified assistant at £24 and a pupil teacher at £6 may be employed, whilst the £48 available to a school with an average of 150 may be laid out in a number of different ways according to the special circumstances of the school. Managers of the larger schools with a considerable sum at their disposal will be able to secure, and pay well for, the services of highly qualified assistants; managers with less will have to be satisfied with assistants of lower qualifications or may even in some instances find it expedient to spend the whole of the sum at their disposal in providing assistance during those months of the year only during which the attendance is highest. In all cases they will go into the teaching market and secure the best that can be got for their money. On the other hand the Government will be paying a definite sum for the teaching of each additional scholar, a plan which is logical, and makes something like reliable estimates for the first time possible. The "unrecognised assistants" who have been allowed during the past year or two will cease to form a separate class. There will be no limitation to the staff that may be sanctioned by the Department so long as it can be provided with the grant available, but each member of it must have some qualifications.

233. In order, however, that managers may lay out their money to the best advantage they must clearly know how much is at their disposal. Hitherto the grant for each school year has been determined *at the end* of it, and if this system had

continued the management would have had nothing definite to offer to an assistant or pupil teacher. It is clear that a manager would secure a better assistant if he could offer him a fixed and definite salary for the year of £30 than if it were anything between £15 and £45, not to be determined until the end of the year. The further change has, therefore, been made of making the grant for a year dependent on the results of the examination at the beginning of the year so that each manager will see clearly a year ahead at all events, and can make fixed and definite arrangements with the staff for that year. The new Articles necessitate the revision of the financial arrangements with the staff at each inspection.

234. Another change in the Code affects the teachers' special grants on certificates. These grants have hitherto been nothing when the marks were under 42, £5 for marks from 42 to 55, and £10 for marks over 55. The anomaly therefore existed that a teacher who raised the marks of his school from 42 to 55 gained nothing in his special grant, whilst a rise from 41 to 42 marks or from 55 to 56 meant a gain of £5 to the teacher. The special grant now rises in exact proportion to the number of marks above 40, so that every gain of one mark has a definite value.

(B.) Secondary Education.

Table X.

235. A table is appended showing the number of scholars in the Secondary and other endowed schools of the Island and the results obtained in the Cambridge Local Examinations during the year.

236. The work of the Endowed Secondary Schools throughout the Island is tested annually under the Cambridge Local Examination scheme.

Creditable record for the Year.

237. The results of the examination held in December, 1901, were generally satisfactory, and very creditable in the case of the Jamaica High School, Wolmers' School for Girls, and the Schools of the Munro and Dickenson Trust at Potsdam and Hampton. Mr. R. W. Dodd, of the Potsdam School, was awarded the Jamaica Scholarship as the result of this examination. He achieved the highest record for Jamaica in distinctions in eight subjects, namely, Religious knowledge, Greek, English, Latin, French, German, Mathematics, and Applied Mathematics. The prize of £12 offered by the Syndicate at Cambridge for the best senior boy was also awarded to Mr. Dodd.

High School &c.

238. University College, attached to the Jamaica High School, continues to provide facilities for local study for degrees in Arts and Science at the London University. Provision is also offered at this Institution for the practical training of scholars in agricultural science at the Government Botanic Garden and Agricultural Experiment Station adjoining the school premises. The Government Agricultural Lecturer, Mr. Buttenshaw, continued to give instruction to the boys of the High School and to give lectures at University College open to other students.

Jamaica College.

239. The name "Jamaica High School and University College" has been changed to "Jamaica College" with a view to marking the unity of management of the Institution and of the work done by it, and its identity of character with other institutions doing similar work in the West Indies.

240. Scholars at Wolmers' Girls School were presented for the examinations of the Royal Drawing Society. In Division II. four candidates were presented for Honours, of whom three gained Honours and the fourth passed. Thirty-six entered for the Pass Division, of whom 25 passed. In Division I. 97 entered and 75 passed, 39 with Honours. One candidate for the History group of the Cambridge Senior Local Examination gained a First Class Certificate and distinction in English History and for Languages and Mathematics a full Honours Certificate. Another student gained a First Class in the Language group and a Second Class for Mathematics, and a distinction in Arithmetic. The same girl had already gained Honours in the Cambridge Senior Local, and on the joint results has gained a full Honours Certificate in the higher local examination.

241. A new scheme has been adopted for the Titchfield School, (Port Antonio) which provides separate governing bodies for the management of the Trust property and of the school.

242. Arrangements are being made with a view to providing for manual and agricultural instruction at a school at Alley, in Lower Clarendon, connected with the Vere Trust.

243. The results in the examinations of the University of London during the year have been as follows: three candidates sat for the Matriculation Examination in June, one passed in the First Division. Two sat for the Intermediate Examination in Arts in July, one, who entered for Honours, was recommended for a pass. Two candidates entered for the Matriculation in January, both passed in the First Division.

Secondary School, Montego Bay.

244. The scholars numbered 34 as against 29 in the previous year. The increase is attributable to a reduction of the fees.

245. In addition to the above-mentioned schools and colleges there are the Mico, Shortwood, St. Josephs' and Bethlehem Training Colleges for Teachers which are aided by Government grants; the Manual Training School, Kingston; and numerous private schools, many of them furnishing a fair basis of education. A list of these schools is contained in the Blue Book return on **Education.**

(C.) Industrial and Reformatory Schools.

Stony Hill Reformatory.

246. The Government Reformatory at Stony Hill for Boys and Girls is administered in combination with an Industrial School for Boys. The numbers, admissions during the year, &c., were as follows:—

—	1st August, 1901.	Admitted.	Discharged.	Dead.	31st March, 1902.
Reformatory boys	100	17	20	1	96
Industrial school boys ...	49	7	12	1	43
	149	24	32	2	139
Reformatory girls	15	6	1	—	20
Total	164	30	33	2	159

247. The boys are employed under qualified tradesmen in carpentering, smiths' work, tailoring, masons' work, bricklaying, cooking and baking, and in garden and field cultivation. The girls wash all the clothing and bedding of the Institution, make clothing, and clean their own premises. The boys did work valued at £1,013 0*s.* 6*d.*, of which £373 3*s.* 2*d.* was paid for in cash by customers for their labour and produce, and the balance, £639 17*s.* 4*d.*, was the value of repairs and other work done for the Institution and of produce consumed there. The girls did work valued at £189 1*s.* 4*d.*, earning £1 8*s.* 3*d.* in cash.

248. Special attention has been paid to agricultural work. Experiments have been carried out under the direction of the Board of Agriculture. The coffee produced has been carefully cured and 35 barrels shipped to England (with one barrel of cocoa) realised (after the close of the year) £64 19*s.* 4*d.*, which must be added to the earnings of the Institution already recorded.

249. The following summary shows the principal particulars regarding the other Industrial Schools of the Colony during the last financial year as compared with the preceding year:—

—	Hope.	Shortwood.	Alpha Cottage.		Belmont.
	Under control of				
—	Government, with Board of visitors (advisory).	Government, with Board of visitors (advisory).	Roman Catholic Church.		Church of England.
Inmates:—	Boys.	Girls.	Boys.	Girls.	Girls.
31st March, 1901...	40	30	38	33	10
31st March, 1902...	39	29	33	26	13
Health	Good	Fairly good	Excellent		No special Report.

250. The usual routine work at the several institutions has been maintained during the year, the boys for the most part being employed in field work and other outdoor labour, the girls being engaged in cooking, sewing, and laundry work.

251. Alpha Cottage again obtained a First Class at the annual inspection of the schools, and the Inspector of Schools who examined at Hope reported that on the whole the work of the school had struck him more favourably than it had done for some years past and that he hoped for further improvement.

V.—GOVERNMENT INSTITUTIONS.

(A.) Hospitals.

(1.) *Public Hospital, Kingston.*

252. The Public Medical and Hospital Service of the Island is under the direction of Deputy Surgeon-General (retired) C. B. Mosse, C.B., C.M.G., Superintending Medical Officer.

253. The principal Government Medical Institution is the Public Hospital at Kingston. The Medical Staff consists of a Senior Medical Officer and two Resident Officers, with two Supernumerary Medical officers attached for duty, who are available for outside duty in cases of emergency. The number of the cases treated (3,729) in this hospital during the year

1901-1902 was the highest recorded. The daily average number of beds occupied was 207 against 201 during the preceding year; 4,255 applications for admission were refused; 7,929 persons were assisted as out-patients, an increase of nearly 2,000 over last year. There were 241 deaths, an average of 6·46 per cent. of the cases as against 258, an average of 8·21, in the previous year. This death-rate, the lowest recorded for many years, must be considered as extremely satisfactory when it is borne in mind that a great number of cases are admitted in an almost moribund condition and others suffering from advanced disease. Seventy per cent. of the deaths occurred within 72 hours of admission.

Principal diseases treated.

254. Malarial fever contributed the greatest number of cases, 226, with 18 deaths. There were 70 cases of tuberculosis, with 32 deaths, and 28 of enteric fever, with 12 deaths. 2,789 patients were discharged as cured; 347 as relieved; 156 as not relieved; and 196 remained in the hospital at the close of the year.

255. There were 1,107 operations performed, attended by a mortality of 16, or 1·44 per cent. The excellence of the nursing and sanitary arrangements is attested by these figures and by the entire absence of hospital disease.

256. The Superintending Medical Officer is well satisfied with the record and results of the year, which I consider deserves appreciative public acknowledgment. The buildings and accommodation of the female wards may not be in all respects so good as might be desired, but the devotion and ability of the staff supply compensation for such deficiencies, and the result is a very well-conducted and valuable Public Institution administered at a low rate of expenditure.

257. The average cost of each patient was at the rate of £36 4*s*. 9*d*. per annum, or 1*s*. 11¾*d*. per diem. The average cost of each case was £2 0*s*. 3*d*. These figures show an economy over the cost of last year. The total expenditure, not including repairs to buildings, was £7,501 12*s*. 8*d*. against £7,479 17*s*. 1*d*., although the number of in-patients rose from 3,142 to 3,739, and of out-patients from 5,935 to 7,929.

(2.) *Maternity Hospital, Kingston.*

258. The Victoria Jubilee Lying-in Hospital is conducted by a matron, with assistants and pupil-nurses attached for training. The Medical Officer is also surgeon to the General Penitentiary.

259. The admissions during the year numbered 785, the highest since the hospital was opened, and 302 more than last year. This increased demand on the Institution severely taxed its capacity and the energies of the staff. There were, however, only seven deaths among the patients—four of these were ad-

mitted in a dying condition. Ninety-nine operations were performed. Eight pupil-nurses completed the course of training and 12 entered. The nett total expenditure was actually less than last year, the average cost per inmate was at the rate of £27 18*s.* 5*d.* per annum against £39 18*s.* 4*d.*, and the average total cost of each case £1 3*s.* 2*d.* against £1 18*s.* 10*d.*

260. This is in all respects an admirably conducted hospital, most creditable to the Matron and her assistants, and to the Medical Officer. The demands on its accommodation during the year were excessive; such over-pressure must tend to diminish its importance as a training institution for nurses for the benefit of the whole Island, and it has become necessary to place more restrictions on admissions. Whilst valuable aid is rendered to many respectable mothers, it is unfortunate that so much of the demand arises from among the lowest and loosest order of young women and girls of Kingston, and that a large proportion of the fortuitous progeny so carefully ushered into the world are born with impaired constitutions and enjoy little chance of proper nurture after they leave the hospital.

(3.) *Public General Hospitals.*

261. In addition to the Public Hospital at Kingston, there are 19 Public General Hospitals distributed over the Island under charge of the District Medical Officers in which, during the year 1901-1902 10,842 persons were treated, classified as below. The figures for the last year are also shown for comparison:—

—	1901–02.	1900–01.
Ordinary cases (free)	4,146	3,132
Indian immigrants	5,798	8,357
Paupers	154	8,257
Paying patients	162	135
Constables	576	553
Prisoners	6	—
Total	10,842	12,115

262. There were 273 deaths in these hospitals, a rate of 2½ per cent. 1,177 operations were performed, attended by two deaths, a mortality rate of ·17 per cent. Out-door patients were treated as below:—

Ordinary cases (free)	13,341
Indian immigrants	1,439
Constables	1,931
Prisoners	2,785
Parochial midwifery cases...	86
	19,582

Principal diseases treated.

263. The most prevalent diseases treated in these hospitals were malarial fevers (4,530 cases), skin disease (1,303), digestive (472), rheumatic (369), respiratory (299), and syphilitic (265). The diminution in the proportion of Indian immigrant cases to the large number to which attention was called in the last year's Blue Book Report is noticeable. It is to be hoped that this may indicate better acclimatisation of the latest batches of immigrants. The most frequented hospitals were those at Annatto Bay (2,135 admissions), Lionel Town (1,786), Port Antonio (1,308), Port Maria (929), Spanish Town (830), Hordley (592), and Buff Bay (543).

The high numbers in all of these (except perhaps Spanish Town) were greatly swelled by Indian immigrants.

264. The value of the work done by these hospitals in relieving suffering and in checking the spread of disease is very great, and would be far greater were cases sent in to them in earlier stages of illness. The treatment in them of skin diseases and ulcers, to which West Indian populations are very subject, and which yield readily to early attention but which if neglected, cripple the patient, is, I think, showing a marked impression on the prevalence of these affections.

265. The total nett expenditure on these 19 hospitals (not including the maintenance of the buildings or the salaries of the District Medical Officers who supervise and practise in them) was £7,930. A dispensary is also maintained at Glengoffe, the nett cost of which during the year was £86. From personal inspection of most of them I am able to bear witness to the general excellence of the administration of these institutions by the officers immediately responsible and their effectual supervision by the Superintending Medical Officer.

(B.) Asylums.

(1.) *Lunatic Asylum.*

266. Staff—one Medical Superintendent and two Resident Medical Officers.

267. There were 868 patients in the Lunatic Asylum at the beginning of the year, 863 at its close,—423 males and 440 females. 99 males and 83 females were admitted during the year, making 1,050 patients under treatment, or 31 more than last year. 109 patients were discharged and 78 died. The net expenditure on the institution was £14,213, the daily average number of patients 863, the average annual cost of each patient £16 9*s.* 5*d.* and the average daily cost 10·83*d.*, the same as during the last two years. A course of lectures was delivered

during the year by the Junior Resident Medical Officer to the attendants and nurses on the care and treatment of the insane, which proved both popular and beneficial.

Principal Causes of Death.

268. A large proportion of the deaths was due to pulmonary diseases which are in part attributed by the medical staff to the crowded state of some of the wards. The necessity for financial economy has hitherto made it impossible to occupy the new buildings, the construction of which was almost completed three years ago, but arrangements have now been made for equipping and utilising one of the new wards so as to relieve the existing pressure on the male quarters of the Asylum.

(2.) *Lepers' Home.*

269. The Medical Superintendent of the Lepers' Home at Spanish Town is also surgeon to the Spanish Town Public Hospital.

270. The excellent record of this Institution has been well maintained during the year. The Medical Superintendent reports well of the conduct of the patients and acknowledges the continued kindness and assistance of visitors and clergy. The school has been efficiently conducted, and the cultivation of the land taken in a few years ago continues to be of interest and profit to the inmates.

271. The number of admissions has been smaller than in any year since the Home was opened in 1879. Nine were registered, including two re-admissions, none of them recent cases. The Medical Attendant reports that leprosy is certainly becoming rarer in Jamaica, and is of opinion that, if it were added to the schedule of diseases to be compulsorily notified, the District Medical Officers could in their several districts prescribe such simple sanitary measures as would in a short time completely eradicate the disease from the Island. I am taking steps to pursue this suggestion. The death-rate was 11·4 per cent. of the total. Of 14 deaths from leprosy, 5 were accelerated by chronic kidney disease and 4 by chronic diarrhœa.

Intercurrent Diseases.

272. Certain intercurrent diseases specially manifested, viz., neuritis, inflammation of the eye and nose, dyspepsia, diarrhœa and kidney disease, Dr. Neish reports to be specially incidental to leprosy. He has no doubt that anaesthetic leprosy is a specific peripheral neuritis; the diseases of the eye and nose are set up by an invasion of the tissues of those organs by the *lepra* bacillus. The diseases of digestion he reports to be due partly to the very liberal scale of diet, partly to ulceration

of the intestines by the disease. Chronic inflammation of the kidneys he attributes occasionally to the invasion of the kidney by leprosy, but more commonly to trophic changes in the organ as a symptom of neuritis—it being especially marked in cases of anaesthetic leprosy.

(C.) Poor Houses and Poor Relief.

Administration of Poor Law.

273. Poor relief in this Island is administered by the various Parochial Boards under the general control of a Board of Supervision. It is based on the principle that any destitute person unable to work and earn the means of subsistence is entitled to relief. The giving of relief is in the hands of the Parochial Boards with a right of appeal, in cases of refusal of or of inadequate relief, to the Board of Supervision.

274. Tables XI. and XII. annexed furnish particulars of the numbers of persons maintained or relieved out of the Poor Rates and of the amount expended for these purposes in the year under review.

Lunatics, &c.

275. The statistics as to numbers of and expenditure on registered poor discriminate between relief given in the parishes to the ordinary outdoor and indoor poor and relief afforded outside of the parishes in Government Institutions for Industrial School children and lunatics. The former class of relief is in the hands of Parochial Boards and responds to good administration. The latter is practically beyond the control of Parochial Boards, seeing that all Industrial School children and lunatics, with very few exceptions, are committed, under the separate laws applicable, to these Institutions at the instance and through the instrumentality of persons other than Parochial Boards or their officers although the pauper funds of the parish bear the cost.

276. The total number of indoor and outdoor poor at the end of 1901-1902, viz., 4,998, shows an increase of 305 over that at the beginning of the year. This represents an increase in the percentage of paupers to the population of 0·02. If there be added the Industrial School children and lunatics the increases are reduced to 279 and 0·01 respectively.

Increases of Pauperism.

277. From the Report of the Board of Supervision it would appear that the chief increases are in the following six parishes, viz., Kingston (96), Trelawny (34), St. James (28), Hanover (57), St. Elizabeth (28), and Manchester (25), and that the chief causes of these increases are alleged to be the following—(1)

want of work, (2) inability of friends or relatives to continue aid formerly given, (3) the low prices of produce, (4) the want of a Poor House in Manchester, and (5) the general depression in the Island.

278. The Report, however, goes on to state—"It is satisfactory to note that there are five parishes, viz., Portland, St. Mary, St. Ann, Westmoreland, and St. Catherine, where the number per 1,000 of population remains stationary or is reduced." In St. Mary and St. Catherine there are actual decreases of 7 and 2 respectively.

Expenditure.

279. The expenditure in the parishes was £25,259, as compared with £26,260 in the previous year. In connection with this apparent anomaly of a decrease in expenditure as compared with an increase in numbers it is to be remembered that the statements of numbers are based on those of the last day of the year under review and are not an average for the year, possibly also some retrenchment in the allowances in some of the parishes may have been affected. The total charge per head of population for all kinds of relief remains the same, viz., 1*s.* 1*d.*

280. The table giving details in respect of the several parishes shows considerable differences in the ratio of paupers and expenditure to population. The ratio of paupers to population varies from 1 in 39 in Kingston to 1 in 275 in St. Mary. The number runs up to over 200 in also St. Elizabeth and St. Ann. These three parishes are all parishes where a good Poor House has been made use of either recently or in the past not alone to afford a thorough and generous relief to those within its shelter but to act as a proper test to weed out improper applicants, although it is true that in one of those parishes the use of this test was pushed too far. In the charge per head of population these parishes also stand out among the lowest, *i.e.*, St. Elizabeth, 7*d.*; St. Ann, 8*d.*; and St. Mary, 10*d.*; but it is also to be noted that other three parishes, viz., Westmoreland, Clarendon, and Manchester, where the ratio in numbers is respectively 1 in 178, 1 in 191, and 1 in 115, have charges per head of population of 9*d.*, 9*d.*, and 10*d.* respectively.

281. In Kingston the large amount of pauperism still remains a serious problem, although of late years the rate of increase has been checked, with indeed in one recent year a reversal to a decrease, and it is to be hoped that a maximum has now been reached.

In Kingston the percentage of paupers to population and the charge per head of population stand at 2·56 and 3*s.* 5*d.*, while the mean rates for the remaining or country parishes are 0·64 and 11*d.* respectively.

(D.) Savings Bank.

Diminution of the Balance at Deposit.

282. The Government Savings Bank had at credit of depositors on the 31st March, 1902, £424,648 6*s.* 2*d.*, and held on account of this liability £420,847 10*s.* 7*d.* in investments and £3,798 15*s.* 7*d.* in cash. The balance of deposits had diminished during the year by £26,219, being the amount by which the total withdrawals, £232,983, exceeded the deposits, £206,764.

283. The following table shows the division of these transactions between official and private accounts and the comparative figures of the four preceding years:—

Year.	Number of Deposit as Accounts.	Deposits, including interest.		Withdrawals.	
		Government.	Ordinary.	Government.	Ordinary.
		£	£	£	£
1897–98	30,660	45,026	183,759	34,023	195,753
1898–99	31,870	47,084	189,480	29,345	183,344
1899–1900	32,880	34,302	195,141	59,921	194,744
1900–01	33,659	42,420	177,964	40,041	198,135
1901–02	34,537	44,519	162,245	49,769	183,213

284. The total number of depositors shows a continuance of its steady increase, but the total amount deposited during the year on ordinary accounts shows, as it did in 1900-1901, a decrease compared with the figures of the previous twelve months. This decrease in the year under review is £15,719, upwards of 8 per cent., whilst the withdrawals exceed the deposits by £20,968. The resulting diminution in the volume of depositors' balances was distributed pretty generally throughout the Island, as the following table shows:—

Parish.	Deposits.	Withdrawals.	Gain.	Loss.
	£	£	£	£
Kingston	87,878	93,017	—	5,139
St. Andrew	944	796	148	—
St. Thomas	4,353	5,758	—	1,405
Portland	10,036	12,507	—	2,471
St. Mary	7,975	9,242	—	1,267
St. Ann	6,515	6,233	282	—
Trelawny	3,826	4,189	—	363
St. James	10,461	11,955	—	1,494
Hanover	3,744	3,620	124	—
Westmoreland	4,684	8,780	—	4,096
St. Elizabeth...	2,994	5,899	—	2,905
Manchester	6,100	8,045	—	1,945
Clarendon	4,932	5,423	—	489
St. Catherine	7,502	7,750	52	—

285. These reductions in accumulated savings doubtless reflect the continuance of economic depression, but it is satisfactory to note at least that the amount of the withdrawals on ordinary account was less by £14,922 than in the previous year.

286. The Savings Bank is directly profitable to the Colonial Government, the excess of interest on investments over interest paid to depositors and all costs of management amounted in the year under review to £3,406, the income and expenditure being as shown below:—

Income.	£	s.	d.	Expenditure.	£	s.	d.
Interest on Investments	16,365	15	6	Management ...	2,816	16	2
				Interest on Deposits	10,143	0	0
				Profit	3,405	18	11
	16,365	15	6		16,365	15	6

VI.—CRIME, POLICE, AND PRISONS.

Police Statistics.

287. No special feature or exceptional condition is disclosed by the Criminal statistics of the year. The number of persons apprehended or summoned before the magistrates by the police was 27,399, comparing with 25,661 in 1900-1901 and 26,184 in the previous year. The total number of convictions in the Circuit Courts was 128, comparing with 134 in 1900-1901, and in the Resident Magistrates' Courts 4,166, comparing with 4,618. The summary convictions before magistrates in Petty Sessions were 12,519 against 11,339 the previous year. Of the summary convictions 1,904 were for offences against the person (1,878 the previous year), 621, compared with 548, for offences against property other than prædial larceny, and the remainder for other offences, principally disorderly conduct, obscene and abusive language, cruelty to animals, and offences against Highway Laws.

288. Of the convictions in the Circuit Courts and Resident Magistrates' Courts 276 were for offences against the person (85 less than last year), 1,137 for prædial larceny (52 more than last year), 1,299 for other offences against property, comparing with 1,415 and 1,382 against 1,690 for other offences.

Absence of Serious Crime.

289. There is no general prevalence of, or propensity to, serious crime in the Island. On the other hand, there are certain persistent sources of trouble in the community, especially,—

"*Habitual Criminals.*"

(1.) A class of habitual and incorrigible criminals who pass in and out of the prisons and live by theft. There were in 1901-1902 1,244 re-convictions; of these 534 were second convictions, 279 third convictions, and 431 convictions for the fourth time or more.

290. There were in this year 1,493 habitual criminals under police surveillance; 1,056 of them were sent to the Penitentiary during the year and 870 were discharged from the Penitentiary. Of this class, however, only 125 were under obligation to report themselves to the police. The Inspector-General considers that if the law providing for police supervision in this method were more generally put into force by the Judges and the Resident Magistrate there would be a substantial decrease in crime. Criminals have a great objection to being compelled to report themselves periodically at a police-station. Those who were under this obligation gave the police little or no trouble during the year, and a sentence of two years' imprisonment with three or four years' police supervision would probably have a better effect on a criminal than three or four years without supervision and would be cheaper to the community.

Prædial Larceny.

(2.) The inveterate propensity to prædial larceny. There was a small increase in the number of convictions for this offence, due probably to increased vigilance and activity on the part of the police and the district constables, but there seems to have been, on the whole, a decrease in its prevalence during the year, though not in all districts. It appears, however, evident that, where the activity of the police has been supported by resolute administration of the law on the part of the Resident Magistrates, much has been done to abate the evil which, apart from these influences, tends to fluctuate inversely with the prosperity of the country and is less heard of in favourable seasons. It appears to have been most prevalent in the Parish of Manchester, where continued depression has been reported, owing to the low price of coffee.

Rowdyism.

(3.) An element of silly brutishness, exhibited in disorderly conduct, in the propensity to the use of violent, abusive, and filthy language, especially marked in Kingston but prevalent

all over the Island, and in cruelty and callousness in dealing with animals of all sorts. No less than 7,117 cases in the Courts were for disorderly behaviour or bad language. On the other hand, objectionable as are these propensities, it may be a question whether their prevalence justifies so large a tax on the time of the Courts and the police as is entailed by the number of summonses applied for on the most trifling provocation. It may be noted that intemperance in drink has little or nothing to do with the matter. Intoxication is rare, only 37 persons were summoned during the year for being "drunk and disorderly."

Police Force.

291. The allowed strength of the police during the year was 775—17 officers, 137 sub-officers, and 621 constables; at the close of the year the force was 26 below its authorised strength. The district constabulary have been well reported of in certain parishes. The Inspector-General states it would have been quite impossible for the heavy duties of the police to have been carried out without their assistance. He considers that an addition to the numbers of the regular force is requisite to enable it to meet the demands upon its services. It is unquestionable that these demands are increasing, and that the determination of the Inspector-General and his officers that the law shall be enforced to the best of their ability is continually finding wider occupation. For example, not only was the number of police cases augmented this year, as stated above, but, in carrying out the general patrol and other services performed, the constabulary travelled 720,445 miles in 1901-1902 against 671,845 in 1900-1901.

Prisons.

292. The prisons of the Island are under the supervision of the Inspector-General of Police. These consist of the General Penitentiary for prisoners whose term of sentence is one year or more, and the St. Catherine District Prison for short term prisoners and persons awaiting trial, and certain local lock-ups for sentences of fourteen days or less.

General Penitentiary.

293. The daily average number of prisoners in the General Penitentiary was 663 against 695 for the previous year. There were 596 prisoners in custody there on the 31st March, 1902, against 637 on the 31st March, 1901.

294. The committals to the General Penitentiary during the year were 1,259, 60 more than in 1900-1901; to the St. Catherine District Prison (for short term prisoners and prisoners awaiting trial) 2,825 against 2,569 in the previous year. 1,003 persons were committed to local lock-ups for terms of imprisonment of 14 days and under.

St. Catherine's Prison.

295. The daily average of prisoners in the St. Catherine District Prison was 527 against 491 the previous year; the number in custody on the 31st March was 514 against 596. Altogether there were 1,110 prisoners at the close of the year against 1,233 at the beginning.

296. The deaths in the General Penitentiary were 30 against 25. The deaths in the St. Catherine District Prison were 36; in the previous year 22. There were no executions of capital punishment. The sanitary state of the prisons was satisfactory.

Expenditure and Earnings.—Employment of Prisoners.

297. The gross expenditure for these prisons during the year was £18,422, and the cash earnings of the produce of the labour of the prisoners £4,341, leaving a net cost of £14,081 or £11 16*s.* 8*d.* per prisoner per annum (on the average daily number). The total estimated value of labour not paid for in money was £8,943. This labour was employed in progressing with the new buildings at the St. Catherine District Prison, where there were erected during the year a kitchen with scullery, bake-house and stores, a work-shed and stores, quarters for two principal warders, alterations at the old Spanish Town Gaol to provide for accommodation for constables, office for the Superintendent and staff, and store rooms.

298. Prisoners from the General Penitentiary were employed in making extensive improvements at the Customs premises in Kingston, draining the yard, raising its level and the floor of the rum store, and making a sea-wall to the foreshore. About 1,600 cubic yards of metal, marl, broken bricks, gravel, sand, and other materials used in this work were supplied by the Penitentiary. Female prisoners did the washing not only of the prison but of the Public Hospital and Lunatic Asylum.

299. The prisoners were otherwise employed as carpenters, coopers, tin-smiths, wheelwrights, masons, shoemakers, tailors, blacksmiths, mat-makers, brick-makers, upholsterers, painters, printers, bakers, cooks, quarriers, lime-burners, and stone-breakers. At St. Catherine's Prison they were also employed in cultivating land, the value of the produce raised being £200. Arrangements have been made for purchasing 86 acres of land adjoining the prison, on which this form of employment will be largely extended.

VII.—VITAL STATISTICS, &c.

(A.) Population.

300. The population of the Colony on the 31st March, 1902, is estimated to have been 770,242. No census of the population was taken in the year 1901 owing to the need for economy, and the foregoing estimate of numbers has been arrived at by adding to the number of the population as estimated on the 31st March, 1901, the difference, 14,512, between the births and deaths registered during the year. The figure for the earlier date had been arrived at by a similar process founded on the results of the Census of 1891, and, it may be added, was framed without regard to the number of 8,785 persons who the Registrar-General in his Report for 1900-1901 stated had arrived in the Island in excess of the recorded departures during ten years' period. If account is taken of these the present population may be estimated in round numbers, at close upon 780,000.

Increase.

301. The natural increase of 14,512 in the year 1901-1902 represents on this basis a rate of 19·0 per 1,000 persons living. In the ten years ending 1900-1901 the mean rate of such increase was 17·0 per 1,000. The mean population on the 30th September, 1901, is estimated by the Registrar-General at 763,545, and this is the number on which the birth, death, and marriage rates for the year are calculated.

Births, Deaths, and Marriages.

302. The following table compares the births, deaths, and marriages in 1901-1902 and 1900-1901. The rates per thousand are given in italics:—

Year.	Births.	Deaths.	Marriages.
1900–1901	26,869 *35·7*	16,243 *21·6*	3,221 *4·2*
1901–1902	31,268 *41·0*	16,756 *21·9*	3,202 *4·2*

303. There thus appears, as compared with the preceding year, an increase in births of 4,399 in number and 5·3 in the rate per 1,000, and an increase in deaths of 0·3 in the rate per 1,000. The latter figure is so small that the death-rate may be regarded as stationary. In the marriages there is a small actual decrease

of 19 in number, which leaves the rate practically unchanged at 4·1 per 1,000. The previous year, however, showed a decrease as compared with that preceding it of 546 marriages in number and 0·8 in the rate per 1,000. If the prevailing depression was accountable for the decrease in 1900-1901 the figures above given would show that it had at least proved practically to be no worse in 1901-1902, and an examination of the quarterly returns of marriages shows that, whereas in the December quarter of the year 1900-1901 the number was 50 less than in the corresponding quarter of the year before, in the March quarter of 1901-1902 the number had advanced to within 6 of that in the same quarter of 1900-1901. It is doubtful, however, whether in the case of the majority of marriages in Jamaica increasing prosperity is so large a factor in the increase of marriage as it is in some other countries.

Illegitimacy.

304. The percentage of illegitimate births in the year now under review was 64·0. This is a higher percentage than any in the preceding ten years, which, beginning at 60·6 in 1891-92 and remaining at about that figure for the next four years, have since 1896-1897 shown an almost continuous increase. During the last four years of depression in the Island, therefore, although there is to be traced to some extent the customary falling-off in the marriage rate which might be expected under such circumstances, there has not only been no corresponding falling off in the number of births but there has been an increase proportionately greater in those of illegitimate parentage. These results are more clearly shown in the following table in respect of the five years ended 1900-1901 and the single year 1901-1902:—

—	Yearly Mean for five years ended				1901–02	
	1895–96.		1900–01.			
	Number.	Rate per 1,000.	Number.	Rate per 1,000.	Number.	Rate per 1,000.
		Per cent.		Per cent.		Per cent.
Births	25,745	38·4	28,257	38·8	31,268	41·0
Deaths	14,670	21·9	16,034	22·1	16,756	21·9
Marriages ...	3,472	5·1	3,207	4·4	3,202	4·2
Illegitimate births	15,613	*60·6	17,705	*62·3	—	*64·0

*Of total births.

Illiteracy.

305. The percentage of illiterate persons among those married during the year under review was 44·00, in the preceding year it was 44·6, while in 1899-1900 it was 46·40, thus showing, although not very markedly, perhaps, the continuous decrease to be expected with the advance of education. The bridegrooms show the greater amount of literacy.

Death Rate.

306. The death rate, 21·9 per 1,000, does not in 1901-1902 vary much from the mean of the two preceding five-year periods. During the ten years the minimum rate was 20·9 in 1892-1893, and the maximum rate 23·0 in 1897-1898.

Cayman Islands Statistics.

307. In the Dependency of the Cayman Islands the births, deaths, and marriages were respectively 194, 44, and 24, which give respectively rates of 33·3, 7·5, and 4·1 per 1,000 of population.

308. In the matter of legitimate births these Islands are far ahead of Jamaica. Their percentage of illegitimate births stands at about one-seventh of that prevailing in this Island.

(B.) General Health.

309. The reports of the Medical Officer on the general health of the Island present nothing new or remarkable. There was no epidemic disease. A few cases of small-pox were imported, but these were promptly and effectually isolated and the disease stamped out before it had time to spread. The most prevalent forms of illness were malarial fever, chiefly of a benign type, pulmonary and rheumatic affections, digestive disorders, and skin complaints. There is nothing to be added to what has been written year after year as to the continuing causes of these diseases in the careless and insanitary habits of the majority of the population The infantile death rate maintains its high level directly owing to bad nutrition Milk is needed, and the people have not learnt either the need nor how to supply it. This is work for the Agricultural Society.

310. In this Island, as in most other West Indian Colonies, there is practically no characteristic general danger of health except marlarial fever, and this in Jamaica is not realised as a sufficiently serious matter to stimulate much practical interest in the new methods that are being devised for its extinction by attacks on the malarial mosquito.

311. The dangerous infectious diseases that continually afflict temperate countries—small-pox, diphtheria, typhoid, scarlet fever, measles, whooping-cough, bronchitis, influenza—are comparatively rare or are experienced only mildly. Yellow fever has for long been practically unknown and extinct except when old burial grounds and filth deposits have been disturbed at Up Park Camp and Port Royal. On the other hand the general neglect of hygiene, in housing, ventilation, clothing, food, water, and cleanliness of surroundings is such that in any less naturally favourable climate diseases would infallibly decimate the population. Dirt, ignorance, indolence, and incontinence are, it cannot be too often repeated, the chief sources of ill-health in Jamaica. For cleanly, intelligent, healthily occupied persons it offers, conversely, exceedingly healthy conditions.

(C.) Climate.

(1) *Rainfall;* (2) *Temperature;* (3) *Direction and Force of Wind.*

Variety of Climate.

312. Jamaica being a mountainous Island, with numerous ranges of hills rising in the extreme eastern portion to 7,423 feet in the Blue Mountain Peak, and averaging 2,000 to 3,000 feet in the cenral and western portions, has a considerable variety of climate. The temperature of course decreases everywhere with the elevation in Jamaica; this decrease has been found to be at much the same rate as in other countries, namely, about one degree for every 300 feet.

Rainfall.

313. As regards the rainfall, the Island is divided in respect of the amount of fall into four divisions and in respect of seasons of fall into two. In all four divisions the May and October rains, or "seasons" as they are locally termed, are strongly marked. In the north-eastern and northern divisions which, roughly, embrace the northern half of the Island, extending, however, a little round to the south in the mountainous east and stretching not quite the whole of the Island's length to the west, there are in addition winter rains in December, January, and February. In the remainder of the Island, consisting of the west central and southern divisions, in addition to the usual "seasons" above referred to, there are as a rule summer rains in July and August. At times in the drier months of the year there are isolated localities where no rain falls, but at the majority of places there is never a month without some rain. Kingston, the chief town, is one of the driest places, and Port Antonio, only about 30 miles distant in a straight line but with

the Blue Mountain Range intervening, is one of the wettest, as far as actual fall goes. Visitors to the latter place, however, owing chiefly to the manner in which the rain falls there, do not experience the inconvenience from the showers that might, from the record, be expected.

314. In amount of fall the north-eastern division stands first with isolated districts sparsely settled where the total exceeds 200 inches. In such districts we have a good example of the effect of the vapour laden trade winds infringing on high mountain ranges.

315. The west central region comes next in elevation, coolness, and rainfall. The northern is largely an elevated undulating table-land of limestone ridges and valleys; the southern division contains the principal plains in the Island. The two last-mentioned divisions are comparatively dry.

Wind.

316. The prevailing winds are N.E. on the north side and S.E. on the south side of the Island; the trade winds being in each case partially deflected by the influence of the land into true sea breezes while in the centre of the Island and at considerable elevations the wind maintains the generally easterly direction of the trade wind.

Temperature.

317. The north central and southern divisions are the driest and possess a real tropical temperature in the plains, especially those on the southern sea-board. Although Jamaica is between 17° and 18° north latitude, the temperature over two-thirds of its area, owing to elevation, is, except in the middle of the day, say from July to September, soft and pleasant, and shows little variation throughout the year. It is said to resemble that of Southern California.

318. The average Island rainfall for the past three decades, 1870-1879, 1880-1889, and 1890-1899, is recorded at 67·41, 66·54, and 76·15 inches respectively. In 1901-1902 the average rainfall for the whole Island was 80·96 inches, as shown in the table below, which also gives the figures for each division as compared with those for the previous year:—

Divisions	1901.	1900.
	Inches.	Inches.
North Eastern ...	107·88	96·91
Northern	64·18	50·67
West Central ...	87·31	79·84
Southern	64·50	51·15
The Island ...	80·96	69·65

319. The rainfall for May, 1901, was below the average, but the belated "seasons" fell in June, in which month the deficiency was more than made up. The October "seasons" also did not fall in their usual volume in most parts of the Island, but the balance again was redressed in the following months. The autumn, speaking generally, was a rainy one. The total fall for the Island for the year was about 7 per cent. above the average. There was very continuous rainfall and a total considerably above the average in the latter half of the year in St. Mary's and the adjacent Northside parishes.

320. The following figures showing the Island rainfall for the past 36 years, which have been extracted from the Weather Report for December, 1901, are of interest. In the first year, 1866, there were about 50 rainfall relations, and in the last, 1901, about 138, so that the results for the different years are not strictly comparable, but for most practical purposes they may be regarded as showing correctly the variations in the fall of rain during the years mentioned:—

Year.	Amount.	Year.	Amount.
	Inches.		Inches.
1866	53·65	1884	56·90
1867	64·47	1885	59·86
1868	67·74	1886	90·61
1869	55·37	1887	70·66
1870	89·43	1888	72·11
1871	50·09	1889	74·15
1872	45·18	1890	64·42
1873	63·06	1891	84·70
1874	68·94	1892	72·98
1875	52·54	1893	86·49
1876	71·35	1894	75·39
1877	68·40	1895	71·62
1878	76·42	1896	68·61
1879	88·84	1897	77·59
1880	55·44	1898	73·84
1881	68·60	1899	85·82
1882	57·87	1900	69·65
1883	59·26	1901	80·96

321. At the close of the year there was issued by Mr. Maxwell Hall, the Government Meteorologist, an interesting Weather Report dealing with temperatures at Kingston and the connection between the frequency of sun spots, the mean maximum temperature and the rainfall in Jamaica.

322. In this report it was shown that a satisfactory formula for arriving at the mean temperature of any place in Jamaica is the following:—

$$\frac{M + m + 7\text{ a.m.} + 3\text{ p.m.} - 2^{\circ}}{4}.$$

When M represents the maximum temperature m is the minimum temperature, and 7 a.m. and 3 p.m. mean the 7 a.m. and 3 p.m. temperatures. If this formula is applied to the 18 years, 1881-1898, the mean temperature is shown to be 78°·8, varying from 75°·7 in February to 81°·6 in July. From the above-mentioned report I may quote the following figures:—The mean maximum temperature at Kingston is 87°·5, varying from 85°·6 in February and March to 89°·5 in July and August. The mean minimum temperature is 70°·8, varying from 67°·0 in January and February to 73°·5 in September.

323. The close of the financial year under review marked the severance of the connection of Mr. Maxwell Hall, M.A., F.R.A.S., F.R.Met. Soc., with what there remained of the Weather Service Establishment, which he established in the year 1880. Owing to the necessity for economy, this service had been partially cut down three years previously, and for the same reason, in the year under report, it was decided that the compilation of the existing Weather Report should be undertaken without further expense by the Island Chemist's Department. In effecting this change the Government expressed its recognition of Mr. Hall's valuable services in the cause of meteorology in Jamaica, a recognition which had also been accorded by his fellow-workers in the scientific world in Great Britain and the United States of America.

VIII.—POSTAL AND TELEGRAPH SERVICES.

Receipts and Expenditure.

324. The following tables show the revenue and expenditure for postal and telegraph services in each of the three years ended 31st March, 1900, 1901, and 1902 (shillings and pence omitted):—

Revenue.

Year	Postages.			Commission on Money Orders.	Commission on Postal Orders.	Miscellaneous.	Total Postal Revenue.	Telegraph Revenue.	Grand Total.
	Packet.	Inland.	Total.						
	£	£	£	£	£	£	£	£	£
1899–1900	3,649	16,476	20,125	379	634	157	21,297	5,630	26,927
1900–1901	3,755	17,369	21,124	384	617	87	22,212	4,715	26,927
1901–1902	4,383	17,954	22,336	446	615	113	23,510	5,010	28,520

Expenditure.

Year.	Salaries.		Mail Conveyance.			Services.	Total Postal Expenditure.	Telegraph Expenditure.*	Grand Total.
	Head Office.	District Offices.	Inland.	Ocean.	Proportion of Royal Mail Contract with Imperial Government.				
	£	£	£	£	£	£	£	£	£
1899–1900	5,485	2,995	9,827	2,419	5,140	2,986	28,582	8,721	37,573
1900–1901	5,915	2,956	8,511	2,508	5,140	3,360	28,390	8,592	36,982
1901–1902	5,668	2,951	8,055	2,258	2,177	4,409	25,517	8,398	33,915

* Includes expenditure on maintenance of telegraph lines by the Public Works Department.

The Postal Revenue shows an increase of £1,298 over that of 1900-1901; the Telegraph Revenue an increase of £296. The totals include the value of official telegrams sent, but not that of official postage services, which the Postmaster-General estimates at £2,500 a year.

325. The receipts from packet postages increased by £628; those from Inland postages by £585. The total receipts from packet postages (at 1*d.* per half-ounce for British and Colonial letters) amounted to £4,389 as against £4,832 in 1898-1899, the last year of the 2½*d.* rate. The loss incurred by the change of rate is thus within measurable distance of being made up. The increase in postal receipts stimulated by the improvement of communications with Great Britain and America reflects an improvement in business.

Correspondence.

326. The total number of postcards and letters estimated to have passed through the Post Office in the year was 5,424,814, as against 5,239,083 during the preceding year. The number of registered articles of mail matter included in the total was 236,921 as against 211,184. There was practically no loss or miscarriage of such articles.

Foreign Mails.

327. The total number of foreign mails made up during the year was 1,606, the number received 2,205, showing a total increase of 591 on the number despatched and received during 1900-1901.

328. The direct fortnightly mail service between Kingston (Jamaica) and Bristol (England), which was begun on the 16th of February, 1901, has been carried out during the year with, as a rule, commendable punctuality, and, together with the service of the Royal Mail Steam Packet Company, which has also performed its contract in a satisfactory manner, has given the Colony weekly postal communication outwards and inwards.

329. The steamers of the United Fruit Company, certain of which are subsidised as mail steamers by the United States Government, as well as those of the Atlas Line (now absorbed in the Hamburg American Company's fleet), have as usual been made use of for the exchange of mails between the United States of America and Jamaica, and with the United Kingdom *viâ* the United States, America.

330. Messrs. Pickford and Black's steamers, subsidised by the Government of Canada, have continued the monthly mail service between Jamaica, Turks Islands, Bermuda, and Halifax.

Mail Subsidies.

331. For the conveyance of ocean mails this Colony paid during the year—

	£	s.	d.
Contribution to subsidy, Royal Mail Steam Packet Company.	2,177	6	8
Proportion of postage to Imperial Post Office.	1,300	0	0
Transit dues paid to other countries	156	16	2
Gratuities for mails by non-contract vessels.	801	4	1
Total ...	£4,435	6	11

The annual contribution to be paid by this Government in respect of the Royal Mail Steam Packet Company's subsidy during the continuance of the existing contract has not yet been assessed by His Majesty's Government. Under the former contract this contribution was £5,140 per annum, but in consideration of the diminution in the amount of correspondence to be carried by the Royal Mail Steam Packet Company in consequence of the competition of the Direct Imperial Line, it will now be substantially less. A further abatement of £500 a year is to be made upon the amount that would be payable on such assessment, in consideration of the alteration of the route of the steamers since the present contract was made. The Royal Mail Company's steamer now touches at Trinidad on its journeys between Barbados and Jamaica each way, and is accordingly timed to reach the Island later and to leave it earlier than under the schedule of the original contract. On the other hand, some part of the subsidy of £20,000 a year payable to the Direct Line must be regarded as in respect of postal services, more especially having regard to the reduction effected by its establishment in the corresponding payment to the Royal Mail Steam Packet Company and in the amount paid for letters sent by the United States, America, which in the previous year was £1,046 2*s.* 4*d.* The diversion to the Direct Line of letters formerly sent by this route saved £245, notwithstanding a presumable increase in the number of letters, the final destination of which was in the United States or Canada.

Inland Mails.

332. The Inland conveyance of mails has been carried on at a cost of £7,447, as against £7,681 last year, including the payment of £2,700 to the Railway Department for transport. Much of the Inland mail carriage is effected by the Public Works Department which, having depôts and mule stables in all the parishes, has been able within recent years to take over at a

considerable saving much of the services formerly performed by contract. The coastal steamer of the Royal Mail Steam Packet Company is also employed for conveying mail matter.

333. The mail coaches earned during the year £218 for passenger fares and £574 for the carriage of parcels; the amount of the passenger fares, less 10 per cent., is paid to the contractors for their services.

334. At the end of the year, there were 153 District Post Offices, as against 147 at the beginning. The policy of transferring District Post Offices to railway stations and appointing the station agents to be District Postmasters is being carried out wherever possible.

Money Orders.

335. The total number of money orders drawn on other countries during the year was 12,740, against 11,431 in the previous year; the amount, however, decreased from £32,216 to £30,098. The orders drawn by other countries on Jamaica were 4,001 for £10,327, against 3,498 for £9,366 in 1900-1901.

Postal Orders.

336. The face value of the postal orders sold for internal remittances was £30,356 against £30,339 in the previous year, and the number was also almost unchanged.

Nett Decrease in Expenditure.

337. This year shows altogether a nett decrease of £2,873 in the expenditure on postal services, which is accounted for by the reduction of the mail subsidy to the Royal Mail Steam Packet Company.

Telegraphs.

338. The Telegraph Department dealt with 91,898 messages against 85,052 in the previous year, and earned £296 more. The working expenses of the Department were £55 less. The total cost, including the maintenance of lines by the Public Works Department, was £8,398, the total receipts, £5,010, showing a loss of £3,387 as the nett cost of the services of this Department.

Parcel Post.

339. The parcel post showed a continued development. The parcels received from abroad numbered 14,138, those despatched 5,216—a total increase of 1,810 on last year. Customs duties to the amount of £2,716 were received on inward parcels. Notwithstanding the notification on the address forms, many senders of parcels still appear unable to resist the temptation

to endeavour to defraud the revenue, either by understating values or by sending dutiable articles undeclared through the ordinary post. The Department on the whole shows a healthy advance in the services and economy of all its branches.

IX.—PUBLIC WORKS.

Works.

340. No special Public Works of great magnitude or importance were carried on for the Government during the year. Expenditure from Loan Funds for public buildings was still kept in suspense owing to shortness of funds, but the buildings at St. Catherine District Prison were proceeded with at a cost of £769, the labour being supplied by the inmates. Extensive improvements were also made in the Customs yard and its foreshore by prison labour, as recorded in my report on the Prison Departments. A new laboratory for the Island Chemist was built at Hope and was ocupied by the Chemist before the close of the year. A portion of the old boiling house at Hope Gardens was altered so as to provide quarters for apprentices in agriculture. Expenditure of £632 was also incurred in providing a system of lights for Kingston Harbour. Other works were generally of the character of maintenance.

Roads.

341. The maintenance of main roads was in some parishes somewhat expensive, especially in Portland, St. Mary's, and St. Ann's, owing to the heavy and continuous rainfall of the autumn months. The average cost per mile for maintenance was £24 3*s.* 2*d.*, or £2 12*s.* 8*d.* per mile more than last year. The highest rate per mile was £58 3*s.* 10*d.* for St. Mary, the lowest £14 8*s.* 11*d.* for St. Elizabeth. The cost of making good extraordinary damages caused by floods in the parishes of St. Andrew, St. Thomas, Portland, St. Mary, and St. Catherine was £5,564.

342. The roads in St. Mary's parish suffered particularly throughout the year from frequent and heavy rain and floods. At the close of the year they were not in good condition, and special attention and expenditure has since been devoted to them. The rainfall between the 1st of September, 1900, and the 31st of January, 1901, was equal to the ordinary year's average. During this period of 153 days it rained at Richmond on 114. At the same time the traffic on these roads was unprecedentedly heavy, the shipments of bananas from the parish showing an increase of 36 per cent. and of cocoanuts of 42 per cent. on those of the previous year.

Vere Irrigation Scheme.

343. The Director of Public Works was engaged during the year in supervising the execution of the Vere Irrigation Works for the Vere Irrigation Commissioners. The scheme for these works comprises the head works or dam and sluice on the Milk River at St. Jago, in Lower Clarendon, to divert the water of the river into the main canal which runs in a south-easterly direction across the plain of Vere, and is intended to carry about 6,000 cubic yards of water per hour. Between St. Jago and the crossing of the Rio Minho at Dry River Estate, the canal will be carried over nine gullies by aqueducts, consisting of steel troughing carried on abutments and piers of cement concrete. At Dry River it will be carried under the Rio Minho by a steel syphon 650 feet long and 2 feet 6 inches in diameter, and thence will continue, crossing four more gullies by means of aqueducts to Raymond's Estate, discharging into an impounding reservoir to be created there by the erection of a dam across the valley of the Raymond's Gully. The total length of the main canal will be 16 miles 7 chains, and that of the aqueducts about 2,000 feet.

344. The reservoir at Raymond's, which, in addition to the canal water collects a large amount of surplus drainage, is calculated to hold about 4,610,000 cubic yards, equivalent to about a month's supply at the rate of 5,000 cubic yards per hour or to the amount required for irrigating 5,000 acres at one cubic yard per hour, which is approximately the amount required in the irrigation of sugar cultivation on the estates to be supplied. Distribution channels for the supply of water to the estates west of the Rio Minho will be taken from the main canal, and another one for the estates east of the river will commence at Raymond's dam, branching off in several directions when the supplies are needed.

345. The carrying capacity of the canal is calculated at 6,000 cubic yards of water per hour. Guarantees have been given for the purchase of 4,825 cubic yards, of which 1,405 cubic yards are on the west side of the Rio Minho, and 3,420 cubic yards on the east side.

346. The works on the main canal, the head works at St. Jago, and the dam at Raymond's were let out by contract and were commenced in October. Owing to the unsettled state of the weather from October to the end of December, the progress on the works was considerably delayed. At the close of the year the head works at St. Jago were nearing completion, and considerable progress had been made on the earthwork of the main canal, and the syphon under the Rio Minho had been laid.

347. The dam at Raymond's was nearly half completed at the close of the year. It consists of a solid concrete wall, 575 feet long, 35 feet deep, and 24 feet broad in its widest part.

348. The completion of this undertaking will, it is hoped, render the splendid sugar estates of Vere independent of the capricious rainfall which frequently fails in that district.

X.—RAILWAY.

Traffic Department.

349. The traffic returns of the railway for the year show, compared with those of 1900-1901, increases and decreases under the following classes of receipts:

—	Increase.	Decrease.
	£	£
Goods, Cattle	5,895	—
Passengers	393	—
Prince's Wharf Dues	—	633
Miscellaneous	2,002	—

Goods Traffic.

350. The total bulk of goods carried increased from 88,540 tons to 100,764 tons; the principal increases being in coffee, 801 tons; sugar; rum, 468 tons; grass; hay, 1,005 tons; and bananas, 12,211 tons.

There were decreases of 1,619 tons in the carriage of oranges, 539 in firewood, and 1,186 in general merchandise.

The earnings from the carriage of bananas increased by £7,039, from coffee by £831, and from dyewoods (other than logwood) £623. The falling off in receipts from oranges was £2,101, and from general merchandise £1,299.

Passenger Traffic.

351. The number of passengers carried increased from 281,408 in 1900-1901 to 291,178 in the year under review, the increases being—

	£
First class tickets	5,387
Third class tickets	2,356
Season tickets	2,027

The increase in the first class travelling reflects the development of the tourist traffic. It will be noticed that the increase on the third class traffic (357,412 to 359,768) was scarcely noticeable. This reflects, doubtless, the continued scarcity of money

during most of the year, and may be expected to improve with improved prosperity, though travelling by railway is not in this Island so popular as an amusement or convenience as it is in some countries.

Wharf Receipts.

352. The decrease in the receipts from Prince's Wharf is due to the transfer of the receipts for shunting bananas to the credit of the Account of Goods Receipts. The rate for shunting was also reduced by two-thirds, a concession which left no less than £1,877 in the pockets of the shippers as compared with what they would have paid under the old rate.

Expenditure.

353. The expenditure under the head of Traffic and Prince's Wharf was reduced from £18,486 to £16,551 for the year.

Way and Works.

354. The total expenditure on Way and Works charged to the Annual Account in 1901-1902 was £28,168, against £31,921 in 1900-1901, a decrease of £3,753. The cost per mile of track was £153 against £173.

The total spent on Way and Works, including expenditure charged to the account of the Railway Improvement Loan, was £47,242.

Re-sleepering.

355. The re-sleepering of the track with hardwood ties in the place of creosoted pine or cypress ties has been actively proceeded with, 84,342 hardwood sleepers having been laid in the 12 months. All these sleepers were native hardwood, mostly bullet tree; the payment for them was kept in the Island and they will last many years longer than the imported sleepers.

Track.

356. The general condition of the track has been greatly improved during the year both by work done at the charge of Loan Account and by more efficient maintenance. Slips have given less trouble than in former years. One bridge, over Bower's Gully, has been replaced by a stronger structure. The tunnels have received all necessary attention, and there are at present no indications to warrant any apprehension of further serious trouble with them. Native hardwood poles are being substituted for pitch pine in all repairs and renewals of the telegraph line.

Wharves.

357. The total expenditure on wharves, charged to Maintenance, was £494, including £390 spent on the reconstruction of the wharf at Montego Bay, for the shipping of bananas, &c. £213 was spent on wharves from Loan Funds, including £150 for the Port Antonio Wharf. Extensive repairs of Prince's Wharf, to be charged to Loan Fund, were put in hand about the end of the year.

Compensation.

358. £229 was paid for compensation, three-quarters of this amount being for stock killed on the line.

Loan Expenditure on Way and Works.

359. The total expenditure on Way and Works charged to Loan Account was £29,111, the principal items being—

	£
Strengthening line	1,933
Replacing rusted rails	2,167
Ballasting	982
Fencing, gates, &c.	1,854
New sidings	1,097

Locomotive Department.

360. A large amount of efficient work was done in this Department during the year, both in improving the workshops and in repairing and bringing into sound condition the locomotives and rolling stock already on the railway. The workshops are now in a creditable and efficient state so far as their situation and equipment permits. The locomotive power has been greatly bettered by the economical use of existing stock and materials, and great reductions have been made in the consumption of oil, waste, and other running stores.

This has been effected by careful instruction to the drivers and firemen on the part of the Locomotive Superintendent.

New Rolling Stock.

361. Three new English engines, built by Messrs. Kitson and Company, of Leeds, to designs by Mr. Elliott Cooper, were imported and erected during the year. Two American passenger cars and 24 freight cars were added to the rolling stock. At the close of the year there were 42 passenger cars and 298

freight cars available for traffic, and other freight cars were under order or in course of construction. The locomotive power was sufficient to deal with the demands on it.

362. The condition of the railway and its rolling stock and the economy of its maintenance and administration, as well as the amount of the service rendered by it to public traffic, have improved during the year in a marked and most satisfactory manner. There is still room for improvement in the facilities offered for traffic, in punctuality of trains, and some other respects. These defects may, it is hoped, be remedied as the demand for railway service increases and becomes more remunerative. At present convenience has to be sacrificed to economy, and many of the deficiencies are due to the necessity for running mixed freight and passenger trains. Unfortunately, owing to steep grades and sharp curves on the western section of the railway no heavy traffic over that section can ever be carried at cheap rates without some loss.

XI.—MILITARY.

Imperial Forces.

363. The strength of the Imperial troops in the Colony on the 31st March was 1,866 of all ranks. During the year the detachment of the Leinster Regiment stationed at Newcastle was replaced by a detachment of the Lancashire Fusiliers.

The amount expended by the Imperial Government for the Regular Forces was £127,500.

Militia.

Local Forces.

364. The strength of the Militia at the close of the year was 763, of which number 169 were artillery and 589 infantry, while the remaining 5 belonged to the permanent staff.

Training.

365. The annual training was carried out this year under conditions different from those which have hitherto obtained. It has been usual for the artillery to proceed for 12 days to Port Royal, and for the infantry to be encamped for a similar period at Up Park Camp, which lies on the outskirts of Kingston.

This year, however, while the artillery proceeded to Port Royal in order that they might go through their course of instruction on the heavy guns there, the infantry and a battery of artillery were sent down with the Imperial troops to a distant part of the Island, where field manœuvres and field firing were carried out with marked success. The training was of great benefit to the troops which took part in it. All arrangements were carried out as if the forces were on active service, and the surrounding country which had been specially selected with this view lent itself to extensive operations of an instructive character. The Report of the Officer Commanding the Troops on the work done by the Militia and on their general efficiency was on the whole highly favourable, and testified to the increasing usefulness of the Colonial Forces.

XII.—GENERAL OBSERVATIONS.

Period of Depression.

366. For six years, including the year upon which I have reported in this despatch, the Island of Jamaica has been suffering from agricultural and commercial depression, and the public finances have been embarrassed accordingly. There has been very heavy retrenchment in public expenditure, and the limit has been reached in this direction, beyond which economy could not go without either a general reduction of the salaries of all established public servants or a withdrawal of public services upon the maintenance of which the community urgently insists—Education, Judiciary, Police, Medical Service, &c. At the same time the failure of the Jamaica Railway Company and the provision of a subsidy of £20,000 to the Direct Line have imposed new and heavy burdens on the Treasury, which have had to be met by taxation at a time when the country was ill able to bear it.

Improved Prospects.

Two years ago, however, in reporting on the Blue Book for 1899-1900 I expressed my belief from observation of what was being done in the country, that, with favourable seasons, the general condition of affairs must soon improve; and in introducing the Estimates of Revenue and Expenditure for the year now current I stated my conviction that in the matter of public finance the Government had climbed to the top of the hill, and

that henceforth we should have a much easier road to travel. This expectation, criticised as too sanguine at the time, has been fully justified. The exports of Island produce, since the 31st of March last, have continued to show an increasing excess over the exports of the same period in 1901. The Revenue shows corresponding elasticity, and I am under no apprehension that a very substantial surplus will not be realised.

British Fruit Trade.

367. Were it not for the as yet undispelled cloud of the Foreign Bounties, the prospects of the sugar industry in those districts that are suited for it would be thoroughly sound in Jamaica. The fruit industry is making rapid strides, and we have reason for confidence that the markets of the United Kingdom will before long come into appreciable rivalry with that of the United States in their demand for our bananas and perhaps also our citrus fruit. Since the close of the year Messrs. Elders, Fyffes and Company, who conduct the fruit business associated with the Direct Line, have made arrangements with the United Fruit Company to load their steamers. It is too early to criticise the effects of this arrangement but there can be no doubt that it immensely enhances the probability of the banana trade with the United Kingdom being efficiently handled and the market there established. It may be regrettable that an English organisation cannot manage the fruit business as well as an American Trust, but the circumstance is hardly astonishing seeing that the Jamaica fruit export has been almost entirely built up by the energy and capacity of the predecessors of the United Fruit Company.

The Direct Line.

368. I have already (paragraph 114) referred to the institution of the Direct West India mail service as a feature of special interest in the history of the year, and have dealt with the extent to which it has prepared the way for the establishment of an important fruit trade with England; but the services which this enterprise has rendered to Jamaica in return for the yearly subsidy of £20,000 are very far from being confined to what it has effected in regard to the fruit trade.

369. The Direct steamers considerably reduced the passenger rates between Jamaica and England. Formerly the first class cabin rates by the Royal Mail Line were from £25 to £40 single and from £40 to £55 return. They have been cut down to £18 and £25 single and £32 to £40 return. The rates for children have also been very greatly reduced and this has enabled parents to have their children out to them during their holidays instead of being separated from them for many years as was formerly

the rule. The direct money value of these reductions is indicated by the fact that 1,218 passengers were carried by this Line outwards and 1,282 homewards. Many of these were Jamaicans who thus profited directly by this subsidy, the rest were visitors who spent money in the Island. This competition has also caused the Royal Mail Company to reduce their charges to their passengers.

370. The outward rates for freight, of which upwards of 1,100 tons a month on an average have been carried, have been greatly reduced, to the advantage of importers, and during the latter part of the year the Company, with the object of assisting the sugar industry, has been carrying sugar to England without charge. Unfortunately, the condition of the English market has not encouraged many planters to avail themselves of this advantage, the United States market being as a rule so much more favourable as to countervail the saving on freight, but several exporters have profited largely by the liberality offered, one to the amount of over £600.

371. The Direct Line has also established a weekly coastal service round the Island (though this is not required by their contract) which, with the weekly coastal steamer of the Royal Mail Steam Packet Company gives a service round the Island in each direction every week. The rates of coastal freight have been much reduced and every port in the Island has benefited.

372. Sir Alfred Jones, K.C.M.G., and those associated with him in the firm of Elder, Dempster and Company and its connection, have also during the year under review taken over the management of the two principal hotels on the south side of the Island—Myrtle Bank and Constant Spring—and have in the improvement, equipment, and advertisement of these hotels spent nearly £20,000.

373. The Direct Line and the improvement of these hotels attracted to the Island in the spring of 1902 an unprecedented influx of English visitors, whilst the improved hotel accommodation contributed to encourage the influx of American visitors. The American tourist traffic has been effectively promoted by the United Fruit Company who have a fine hotel at Port Antonio, and whose frequent steamers offer attractive facilities to visitors, and there is every reason confidently to expect that the enterprises of the Direct Line in this connection will be of increasing yearly profit to the Colony. Last spring the total influx of visitors was much greater than it has ever been before (if the year of the Jamaica Exhibition be left out of account, as to which I cannot speak). The numbers, I am assured, exceeded three thousand. The majority, no doubt, came from the United States and did not make any very long stay, but the English visitors brought by the Direct Line and the Royal Mail Steam Packet Company and accommodated in Messrs. Elder, Dempster Company's hotels must have spent a large amount in the Island.

374. I regard it as beyond question that, taking into account the fruit trade, the reduction of passenger fares, the reduction of ocean and coastal freights, the rehabilitation of the two hotels, and the introduction of visitors, the Direct Line has in trade and money brought into the Island and, in the savings of commercial and private expenses it has made possible, directly repaid much more than the amount of the subsidy granted it. Indirectly for improving mail facilities, shortening the voyage to England, and for promoting a better knowledge of the Island and its possibilities it can claim a large additional credit, and although it does not, as yet, directly bring back to the Treasury a revenue equivalent to the subsidy, it has demonstrably conduced even in this first year to increasing the Customs Duties and Harbour Dues and Postal Revenues and other receipts besides enabling more than £2,500 to be saved on the mail subsidy of the Royal Mail Steam Packet Company.

375. It is right to give so much credit to the institution of the Direct Line for the improved promise of our circumstances, although comparatively little of the actual improvement as yet realised can be attributed to that enterprise. The bulk of it has been due to the increased demand for fruit in the United States and to the great amount of planting that has been done to supply it.

It is much to be desired that a like energy may be developed in the planting of chocolate and the improvement of our common coffee, but to bring this about will be a long and difficult task.

376. The year has had in some respects more than usual of characteristics interesting and even diverting to an observant resident involved in the affairs of the Island. He has been the amused spectator of a discovery of Jamaica, if not of the West Indies generally, on the part of some sections of British journalism and the British newspaper public. Jamaica has been the subject of more than the usual number of "Impressions" and criticisms mostly somewhat ill-informed, superficial, and devoid of originality. The increasing frequency of visitors that we look for will in time, we hope, disabuse the American and British public of the idea that we live under the shade of Mont Pelée and Morne Garou, and are overwhelmed with volcanic ashes and seethed in boiling springs; that our negro population is in a chronic state of suppressed rebellion; and our commercial and planting classes clamouring for annexation to the United States or to Canada. All these myths come out to us as news from the Mother Country or the American continent. They are the outcome of the ingenuity of audacious local journalists and cable correspondents who know their *clientèle*, but they appear in foreign journals before they appear in our own. Our visitors often express astonishment at the ignorant self-complacency of the creole, but the creole has before him the constant spectacle of gross ignorance and gullibility on the part of his British and American cousins in regard to geogra-

phical and social facts of which every Jamaica school boy is cognisant.

377. I have observed that, as a people, we have a habit of being rather sorry for ourselves. We have not the cheerfulness of the Barbadian. On the other hand our depression makes us mumpish and melancholy rather than vicious and violent. We overdo our talk of depression, we overdo our talk of the extravagances of the Government, of the superfluity of our public officials. Our visitors take for public gospel what we promulgate for private consumption.

I trust that this Report may be held to show that the prospects of the Island are sound enough, and that however costly the establishment of Government may appear, it is for the most part doing good work for that cost, and work that is fully demanded by the community, however much they may groan about having to pay for it.

I have, &c.,

SYDNEY OLIVER,

Administering the Government.

TABLE I.

General Revenue of the Government for the year 1901–02 as compared with the previous year 1900–01.

TURKS AND CAICOS ISLANDS.

(For Report for 1901, *see* No. 363.)

GOVERNOR SIR A. W. L. HEMMING to MR. CHAMBERLAIN.

King's House, Jamaica,

July 6, 1903.

SIR,

I HAVE the honour to transmit herewith a copy of the Blue Book of the Turks and Caicos Islands for the year 1902, and a copy of the Commissioner's report thereon for the same period.

I have, &c.,

AUGUSTUS W. L. HEMMING,

Governor.

---

875 Wt 21109 8/1903 D & S 5 15345

REPORT ON THE BLUE BOOK OF THE TURKS AND CAICOS ISLANDS FOR THE YEAR 1902.

FINANCIAL.

The Revenue for the year 1902 amounted to £8,693 7*s.*, and the Expenditure to £8,006 9*s.* 11*d.*, leaving an available balance of £686 17*s.* 1*d.* to be added to Surplus Funds.

2. The Import duties yielded £3,824, the largest amount collected from this source since the present Tariff Ordinance came into force in 1885. Compared with former years, the receipts were £277 in excess of the Import duties of the year 1901, and £490 in excess of the average of the five previous years.

3. The Royalty on salt exported amounted to £2,416, which is less by £100 than the revenue from this source collected in 1901, and compared with the previous five years, less by some £250. This is due to a slight decrease in the quantity of salt shipped to the United States of America, the demand for salt being temporarily slack during the year.

4. The following statement shows the several sources of Revenue and the amounts collected in 1902, compared with the year 1901, and the average annual amount for the previous five years:—

Revenue.

—	1902.			1901.			Annual average, five years 1896 to 1900.
	£	*s.*	*d.*	£	*s.*	*d.*	£
Import Duties	3,824	17	5	3,557	9	3	3,334
Royalty on Salt exported ...	2,416	1	5	2,517	16	4	2,683
Port Dues	751	19	9	774	13	8	844
Licences and Internal Revenue	247	16	4	222	13	2	267
Payments for Specific Services	397	1	11	432	18	1	428
Post Office	492	13	4	868	18	7	732
Revenue from Government Property.	221	17	8	474	16	6	216
Interest	269	1	5	126	15	4	202
Miscellaneous Receipts ...	71	17	9	54	0	5	21
Total	8,693	7	0	9,030	1	4	8,727

5. The decrease in the receipts of the Post Office is due to the decrease of sales during the year of postage stamps to

stamp collectors. This was anticipated, as the old issue of postage stamps had been completely sold out, and the present issue was brought into use over two years ago.

6. The following comparative statements show the annual Expenditure of the Dependency for the years 1901 and 1902, and the annual average for the five years 1896 to 1900:—

Expenditure.

—	1902.			1901.			Annual Average, five years 1896 to 1900.
	£	s.	d.	£	s.	d.	£

Invested Funds—			
Government	7,947	11	4
Savings Bank	1,263	18	7
	£12,786	15	5

10. No change was made in taxation during the year. The Customs Tariff has remained unaltered since it came into force in 1885.

11. The currency is composed of British gold and silver coins. The gold of the United States of America is also legal tender at a discount of 1½ per cent. American silver dollars, half and quarter dollars, are in circulation at 4*s.* the dollar. The amount of gold in circulation is small, and there is no legal limit to the tender of silver. To meet the convenience of the public in this matter, an Ordinance was passed last year authorising the Government to issue currency notes of 5*s.*, 10*s.*, £1, and £3. Notes of the value of 10*s.* and £1 are now being prepared, and will be issued during the current year.

TRADE, AGRICULTURE, AND INDUSTRIES.

12. The value of the Imports during the year 1902 was declared at £32,291, an increase of £1,474 on the value of the Imports of the year 1901, and of £3,120 on the average of the previous five years.

13. The value of the Exports during the year was declared at £32,553, a decrease of £7,595 on the year 1901, but compared with the average value of the exports of the previous five years, less only by some £600.

14. The total value of the Imports and the Countries from which imported during the years 1897 to 1902, may be seen from the following table:—

Year.	Value of Imports from									Total Value of Imports.		
	United Kingdom.			British Colonies.			Foreign Countries.					
	£	s.	d.	£	s.	d.	£	s.	d.	£	s.	d.
1897 ...	3,478	7	10	4,443	10	8	25,317	4	1	33,239	2	7
1898 ...	3,305	9	1	3,155	13	6	20,605	13	5	27,066	16	0
1899 ...	2,684	18	2	3,289	3	6	19,733	9	7	25,707	11	3
1900 ...	3,385	1	11	3,939	10	4	22,239	10	1	29,564	2	4
1901 ...	3,110	15	6	4,092	2	1	23,614	5	11	30,817	3	6
Annual Average	3,192	18	6	3,784	0	0	22,302	0	7	29,278	19	1
1902 ...	3,463	3	0	5,792	19	0	23,035	9	0	32,291	11	0

15. The principal articles imported from the United Kingdom included condensed milk to the value of £109; rice, £118; spirits, £400; hats, £112; cotton and woollen goods, £1,600; and millinery, £106.

16. Of the Imports from the British Colonies, goods to the value of £2,743 came from Jamaica, and of £2,577 from Canada,—£5,320 out of a total of £9,792.

17. Respecting the Foreign Countries, the value of Imports from the United States amounted to £21,536 out of the total value of £23,035. Practically speaking, the food supply of these Islands comes from the United States. A few of the chief articles of Import which follow, picked out from the general Imports, show the relative trade of Canada and the United States with this Colony as regards food supply:—

Articles.	Value of imports from	
	Canada.	United States.
	£	£
Bread and Biscuit	121	310
Butter	178	547
Cheese	32	229
Flour	186	1,853

Hay	266	17
Lard	21	946
Meats	19	3,186
Rice	7	566
and an additional article,—		
Boots	under 1	948

18. Being alive to the extent to which the United States market supplies the British Colonies in the West Indies, the President and Assistant Secretary of the Canadian Manufacturers' Association visited the several Colonies last year with a view, if possible, to bringing about closer connection with the Canadian market. The report of the Representatives of the Association is interesting, but with respect to these Islands foreshadows no likely increase of trade with Canada. It is not easy to see how any marked and permanent change can be brought about in this respect unless a greatly improved market be afforded by Canada for the staple product of these Islands. The Representatives, in writing of the Turks and Caicos Islands, truly say "This market is very small." Last year there was a

slight increase of trade between the two places compared with the previous year, but whether this increase has come to stay or is a thing of the moment is problematical. The value of the Imports from Canada increased from £1,341 in 1901 to £2,577 in 1902, and the Exports to Canada from £3,987 to £4,384. Compared with the average of the previous ten years, while the Imports of last year are £1,000 above the average, the Exports to Canada are still some £800 below.

19. The total value of Exports from the Dependency, and the Countries to which the produce of the Dependency was shipped during the years 1897-1902, may be seen on reference to the following table:—

Year.	Value of Exports, Produce and Manufacture, of Turks and Caicos Islands, to—			Total Value of Exports.
	United Kingdom	British Colonies.	Foreign Countries.	
	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1897 ...	—	11,374 6 0	29,790 18 1	43,303 15 5
1898 ...	—	6,608 11 9	16,930 5 7	24,810 12 4
1899 ...	—	4,650 8 1	26,871 4 10	31,909 19 2
1900 ...	291 4 0	7,384 1 1	25,714 10 7	34 584 1 0
1901 ...	—	12,290 0 6	27,461 9 1	40,148 17 1
Annual Average	58 4 9	8,461 9 5	25,353 15 7	34,951 5 0
1902 ...	2,307 5 4	5,637 9 2	24,010 4 6	32,553 5 9

20. The Exports to the United Kingdom, declared at a value of £2,307, were entirely made up of Sisal grass (fibre). Previous to 1902, fibre for the home market was sent to either Halifax or New York for shipment to England, and no entry was made here for Export to the Home Country. Last year shipments were made direct by the steamers of the Royal Mail Steam Packet Company, which now call periodically at West Caicos for the fibre. This accounts for the strikingly large increase of Exports to the United Kingdom during last year compared with previous years.

Of the Exports to the British Colonies, produce of these Islands, valued at £518, was shipped to Jamaica, and £4,384 to Canada.

Of the Exports to Foreign Countries, produce to the value of £21,655 went to the United States.

21. The following table shows the several articles of Export, produce and manufacture of the Colony, during the year 1901 and 1902:—

—	1901.				1902.			
	Quantities.	Value.			Quantities.	Value.		
	lbs.	£	s.	d.		£	s.	d.
Cotton ...	2,250	14	1	8	—	—

Turtle Shell ...	1,019	937	0	0	538	547	0	0
		39,751	9	7		31,954	19	0

22. Of the Exports reference need only be made to the three principal articles of produce of the Dependency, namely, salt, Sisal grass (fibre), and sponge.

23. The salt exported during the year showed a decrease of 70,000 bushels compared with the previous year, from 1,726,245 bushels, valued at £22,782, exported in 1901, to 1,656,730 bushels, valued at £22,196, in 1902, as may be seen from the following comparative table, which gives the several markets and the quantity and value of salt shipped to each during the years 1901 and 1902:—

—	1901.		1902.	
	Bushels.	Value.	Bushels.	Value.
		£		£
Bermuda	190	2	5,209	66
Canada	203,765	3,334	214,526	3,760
Cuba	2,176	27	—	—
Hayti	5,388	67	37,204	465
Jamaica	59,254	745	40.933	518
St. Domingo	10,710	133	10,367	129
St. Pierre	45,957	733	94,359	1,562
South America	50	under £1	5,595	93
United States	1,398 755	17,737	1,248,537	15,600

24. The price, six cents a bushel for "coarse" salt, and eight cents for "fishery" salt, agreed upon a few years ago between the salt proprietors here and the salt dealers in the United States, was maintained throughout the year, and ruled for all sales effected.

25. The year was a favourable one for the salt raker, and the bulk of his salt was sent to the United States as usual, but owing to the difficulty, temporary there is reason to believe, of disposing of a full supply of salt in that market, the shipments to the United States fell short of those of the previous year by 150,000 bushels. Fortunately, as may be seen from the above table, trade increased with St. Pierre and Hayti, which afforded a welcome outlet for some 80,000 additional bushels of salt.

26. The market of the United States of America has ever been the principal market for the Turks Islands' salt. A hasty review, therefore, of the position to which imported salt has been relegated on that market, by reason of the increased production within recent years of United States domestic salt, is not without interest in considering the salt industry of these Islands.

27. It may be instructive to quote a few figures to show the enormous increase that has taken place in the production of salt in the United States between the years 1881 and 1901.

28. Twenty-one years ago the annual production of domestic salt in the United States was estimated at 620,000 tons. In 1891 this production increased to 998,800 tons, and continued to increase annually, when in 1901 it reached the figure of 2,056,600 tons.

29. An examination of the figures respecting the annual consumption of salt in the United States compared with the quantity imported, shows that in 1881, 983,000 tons were consumed, of which 384,000 tons were imported. Ten years later the estimated consumption increased to 1,166,600 tons, and the importations decreased to 169,400 tons. In the next ten years, *i.e.*, in 1901, the annual consumption had still further increased to 2,194,000 tons, and the importations decreased to 144,100 tons.

30. These figures illustrate that while imported salt formed 39 per cent. of the total consumption of salt in the United States in 1881, it formed only 6 per cent. in 1901.

31. One further set of figures is of yet greater interest to these Islands, and illustrates the position Turks Islands' salt, compared with other imported salt, has maintained on the United States market during the period under consideration.

32. Of the salt imported into the United States in 1881, 36,700 tons, or 9 per cent. of the total quantity imported, was Turks Islands' salt. In 1901 the salt imported from the Turks Islands into the United States amounted to 46,600 tons, or 32 per cent. of the total quantity imported.

33. With the enormous increase in the production of United States domestic salt within recent years, the difficulties in the way of foreign salt holding a place on the American market are not far to seek. Domestic production and competition have within the 21 years referred to, reduced the importation of salt into the United States by nearly two-thirds, while the annual consumption has increased more than two-fold. Were it not for the excellent preserving properties of the Turks Islands' salt, a salt the use of which for pickling purposes was at one time in years past made compulsory by law in at least one of the States of America, the staple industry of these Islands would have long ere this been in a far more disturbed state than to-day. As long, however, as the quality of the salt be maintained, and as long as the "Packer" safeguards his interests by the use of Turks Islands' salt, so long will there be a demand for the staple product of these Islands.

34. The salt is produced from sea water by solar evaporation, and for the purposes for which it is manufactured has proved its value, and continues to maintain its reputation.

35. The fibre industry carried on on the two plantations of East Caicos, with about 2,000 acres, and West Caicos, with about 1,700 acres under cultivation, continues to make headway. During last year 498,334 pounds, valued at £7,100, were shipped, compared with 461,183 pounds, valued at £6,551, exported in 1901.

The fibre was shipped to

London, 164,000 lbs., valued at £2,307.

Canada, 44,609 lbs., valued at £624.

United States, 289,725 lbs., valued at £4,169.

The prices obtained for the fibre throughout the year were steady and profitable.

36. The sponge industry does not show up well for the year. The declared value of the sponge exported amounted to only £1,961, compared with £9,277 in 1901. The value of the sponge exported in 1901 was exceptional, about two-thirds of it being the gatherings taken from the Caicos Banks by spongers from the Bahamas. The raid made by these spongers in 1901 denuded the Banks somewhat, and accounts for the export of less sponge last year. The three sponge depôts continue to do business on a small scale.

37. The following table gives a comparative statement of the Shipping, inwards and outwards, during the years 1901 and 1902:—

Steamers.

Nationality.	1901.				1902.			
	Inwards.		Outwards.		Inwards.		Outwards.

Haytian	9	164	6	140	18	417	18	417
Dominican	23	340	25	348	25	464	24	450
United States	35	23,077	40	25,478	20	15,435	18	13,668
Total	251	40,085	248	41,615	254	38,148	255	37,615

LEGISLATION.

38. There were five Ordinances passed during the year, the principal Ordinances being No. 4, to provide for the detention and treatment of Lunatics, and No. 5, to provide for the issue of Government Paper Currency.

39. The Lunatics Ordinance was passed to place the procedure with regard to lunatics on a legal basis, and provide for their being sent when necessary to the Lunatic Asylum in Jamaica for care and treatment.

40. The issue of notes, under the Government Paper Currency Ordinance, will supply a want long felt here. There being no Bank in the Dependency, and the circulation of gold being small, money transactions are invariably and inconveniently made in silver.

EDUCATION.

41. At an annual expenditure of £600, the Government provides, through the medium of a Board of Education, for the wants of primary education throughout the Dependency. At the six schools thus maintained by the Government, the average number of pupils on the books during last year was 653, with an average attendance of 435, compared with 548 and 302 respectively, for the previous year. The improvement in the attendance is due to the coming into force, during 1902,of the Education Ordinance, 1901. Under this Ordinance education is made compulsory at the three principal Settlements, and although the Ordinance did not come into force until toward the middle of the year, its effect has been marked, and cannot be better illustrated than by the following table:—

—	To 31st December, 1901, Ordinance not in force.	To 31st December, 1902, Ordinance in force.
Average on books...	333	390
Average attendance	187	306
Percentage of attendance ...	56	78

GOVERNMENT INSTITUTIONS.

42. There are no hospitals, asylums, or reformatories in the Dependency. In case of need, a suitable building in an isolated position is provided for the treatment of infectious diseases, which, happily, are of rare occurrence. The building has not been required for the past eight years, and then only for treatment of two patients landed from a vessel in the harbour.

43. The Government Savings Bank had standing to the credit of 201 depositors on the 31st December, 1902, the sum of £1,418, an increase of £231 on the previous year. The Assets and Liabilities of the Bank at the end of last year were as follows:—

Liabilities.	£ s. d.	Assets.	£ s. d.
Due Depositors, including Interest.	1,418 2 9	Invested in Jamaica Government Debentures.	200 0 0
Assets in excess of Liabilities.	19 12 11	In Jamaica Savings Bank.	1,063 18 7
		Cash in Public Chest	173 17 1
	£1,437 15 8		£1,437 15 8

JUDICIAL STATISTICS.

44. The Police of the Dependency, consisting of a corporal, six constables and 12 district constables, was maintained at a cost of £485.

45. There were 10 persons committed to prison during the year, giving a daily average in prison of $1\frac{5}{8}$, compared with $1\frac{1}{2}$ for the previous year.

46. The following table shows the number of offences, apprehensions, convictions and acquittals in the Courts of the Dependency for the years 1898 to 1902:—

—	1898.	1899.	1900.	1901.	1902.
Offences reported to Police ...	195	176	131	69	135

VITAL STATISTICS.

47. According to the Census of 1901 the population of these Islands was composed of—

—	Males.	Females.	Total.
Black	1,686	1,896	3,582
Coloured	572	791	1,363
White	150	192	342
Total	2,408	2,879	5,287

48. There were 206 births and 127 deaths registered last year, compared with 209 births and 125 deaths, the annual average for the previous five years. The births and deaths last year were at the rate of 38 and 24 respectively per 1,000 of the population.

49. The public health was good. There were no contagious or infectious cases of a serious nature throughout the year.

50. The Turks Islands are low-lying, of coral and sand formation, and although the climate is somewhat relaxing, they are healthy, and, practically speaking, free from malaria.

51. The following table gives the monthly averages of the meteorological readings for the year, and the actual rainfall recorded for each month, at the United States Weather Bureau Station at Grand Turk, height above mean sea level, 11·3 feet:—

Month.	Mean.				Actual Rainfall recorded.
	Barometer 7.30 a.m.	Air Temperature.		Wind Force. Miles per hour.	
		Max.	Min.		
January ...	30·08	79	65	11	3·68
February ...	30·03	82	67	9	·60
March	30·05	83	70	11	1·08
April	30·02	86	73	11	·67
May	29·98	87	72	10	2·17
June	29·96	88	76	12	1·48
July	30·07	90	76	12	1·54
August	30·04	91	73	11	1·80
September ...	29·99	91	77	11	·21
October ...	29·95	90	75	8	3·93
November ...	29·94	84	72	9	3·99
December ...	30·00	82	72	10	6·30

Total rainfall for the year, 27·45 inches.

POSTAL, TELEGRAPH, AND TELEPHONE.

52. The Islands are fortunate in the Postal and Cable services which they possess.

53. By the subsidised steamer of Messrs. Pickford and Black, which leaves Halifax on the 15th of each month and is due to arrive here on the 23rd, a regular service is maintained between Canada, Bermuda, Turks Islands, and Jamaica. On the return voyage, the steamer leaves Jamaica about the 27th of the month and is due to arrive at Halifax from 10 to 11 days later.

54. The steamers of the Clyde Line, which sail from New York every alternate Wednesday for ports in Santo Domingo, call at Grand Turk on the following Monday on their way, and afford a direct means of communication with the United States.

55. In addition to these services a new mail service, giving direct communication from England, was established towards the end of the year through the good offices of Messrs. Elder, Dempster, & Co., who readily agreed to carry the Turks Islands' mails from England by the fortnightly steamers of the Imperial Direct West India Mail, and to drop them at Grand Turk as the steamers pass on their way to Jamaica. By this service, the mails from the Mother Country are now received here on the eleventh day out from England.

56. There are no local telegraphs or telephones. The cable of the Direct West India Cable Company connects this dependency with the world's cable system. The Company supply a news' bulletin daily, for which they receive payment at the rate of £120 a year. The cable rate to England is 3*s*. each word.

DOUGLAS YOUNG,

Commissioner,

Turks and Caicos Islands.

Grand Turk,

4th June, 1903.

COLONIAL REPORTS—ANNUAL.

No. 414.

JAMAICA.

REPORT FOR 1902-3

(For Report for 1901-1902, *see* No. 373.)

Presented to both Houses of Parliament by Command of His Majesty.
March, 1904.

No. 414.

JAMAICA.

(For Report for 1901–2, *see* No. 373.)

GOVERNOR SIR A. W. L. HEMMING to MR. LYTTELTON.

King's House,
Jamaica,
23rd December, 1903.

SIR,

IN accordance with standing instructions, I have the honour to forward herewith my Report on the Statistics of the Colony to be found in the Blue Book and Annual Departmental Reports for the year 1902-3.

2. The delay, which I regret, in the completion of this Report, has been due to the pressure of work on the Staff of the Colonial Secretary's Office, consequent on the hurricane of the night of the 11th August last.

I have, &c.,

AUGUSTUS W. L. HEMMING,
Governor.

---

875 Wt 22378 3/04 D & S 5 16855

REPORT ON THE BLUE BOOK OF JAMAICA FOR THE YEAR 1902-3.

I.—FINANCIAL.

(A.) General Revenue and Expenditure.

Annexed (Tables I. and II.) are returns of the General Revenue and Expenditure of the Government for the year of Report (1902-3), compared with those of the preceding year (1901-2).

General Revenue Account. Revenue and Expenditure.

2. On the 1st April, 1902, there was a deficit on General Revenue Account of £103,164. The total amount brought to account as General Revenue during the ensuing twelve months was £856,514, and as Expenditure, £788,847, showing a surplus of £67,667 for the year, and reducing the outstanding deficit to £35,497 at the close of the period.

Tax Revenue.

3. Of the total receipts, the sum of £594,410 was the proceeds of taxation, as compared with £535,791 drawn from corresponding sources in the previous year. There was thus an increase of £58,619, or 10·9 per cent. in the yield of taxation. This improvement was due, for the most part, to the development of trade, and the greater consumption of commodities paying import and excise duties, but in some degree also, to the better collection and the recovery of arrears of direct taxes, and the increase would have been greater had there not been a certain reduction of taxation on lands.

Improved Yield of Taxes.

4. The following may be specially noted as having yielded increased amounts:—

	£
Import Duties	37,047
Harbour and Light Dues	1,297
Licences	2,334
Excise Duties on Rum	14,582
Education Tax	2,482

These items account for £57,742 of the total increase of £58,619.

5. The increases under the first four heads clearly reflect the improvement in the Island fruit trade. The total yield of import duties was £381,952. In last year's Report, it was stated that the Collector-General considered that in a year of average prosperity the existing Customs tariff should yield not less than £360,000. The amount received in 1902-3 in excess of this shows that the period of depression from which the Island had been suffering had passed away. The estimate of receipts for the year, viz., £350,000, which had been framed in accordance with the less promising conditions prevailing at the time, was exceeded by £31,952, and the amount received in the previous year by £37,047.

6. Customs Duties again produced about two-thirds of the total tax revenue. The most noticeable fluctuations in the yield of taxes from commodities liable to specific duties were:—

Decreases.

	£
Beef and Pork (wet, salted, £1,042 and £1,319)	2,361
Corn and corn meal (£424 and £751)	1,175
Mackerel	433
Matches	275

Increases.

Spirituous liquors	4,848
Fish (salted and pickled)	3,994
Kerosene oil	1,527
Soap	1,188
Butter and milk (£389 and £792)...	1,181
Biscuits and rice (£684 and £491)...	1,175
Flour	868

There were also increases in the collection of *ad valorem* duties (which are at the rate of 16⅔ per cent.) amounting to the sum of £25,133, chiefly in regard to textiles and other manufactured goods.

Licences.

7. More than half the increase of £2,334, under this head, is due to spirit licences, the greater portion of the remainder being in respect of Agricultural Produce Dealers' Licences, the one pointing to increased prosperity, and the other to the increased activity in agriculture which produced it.

Rum Duties.

8. The increase of £14,584 (16 per cent.) in rum duties is a marked sign of the increased spending power of the community during the year which ended on the 31st March, 1903. It need not, I think, be viewed with alarm by temperance reformers, seeing that, speaking generally, the vast majority of the population of this Island is remarkably sober, and excessive drinking is not a habit of the population. The loss in revenue under this heading, which takes place during crop time by the consumption of undutied rum, to which reference was made last year, no doubt still continues, although the Collector-General inclines to the opinion that part of the increased receipts was due to greater care being exercised by estates managers and distillers to prevent this.

Match Duty.

9. As anticipated in last year's Report, the yield of the excise duty on matches (6*d*. per gross of boxes of fifty sticks) was substantially increased, viz., from £583 to £1,127 in the year 1902-3. With import duty on this article amounting to £162, a decrease of £275, the total revenue gained from matches amounted to £1,289. The revenue from import duties on matches in 1886-7 was £3,215, so that it is clear that the single match factory working in the Island still enjoys a considerable amount of protection at the expense of General Revenue and the consumers of matches.

Soap Duty.

10. The excise duty on soap yielded £268, a small decrease of £30 as compared with the previous year. The total revenue from this article amounted to £11,471, the import duty accounting for the difference.

Tobacco Duty.

11. This excise duty was imposed at a time when increased revenue was necessary, but lies only on the more luxurious form of cigar making, the common native-made pipe tobacco being still exempt from taxation. The duty this year yielded the sum of £2,075, an increase of £400.

Stamp Duties.

12. The net yield of stamp duties (£24,478) showed an increase of £1,311. The principal increases were under Insurance Licences (£2,050), Legacy Duty (£1,818), and Succession Duty (£928), whilst there was a decrease (£5,066) in Probate Duty. Insurance licences appear for the first time, as the

result of a new tax imposed by Law 15 of 1902. The revenue in question was the product of two years' licences. The fluctuations in the Death Duties, above detailed, showed a net decrease of £2,320, but in the previous year there was an abnormal receipt of nearly £5,000 from one estate alone. The figures point to an increase in the number of small estates, and are an indication of the greater diffusion of property among the community.

Decrease of Direct Taxation.

13. The special additional property tax imposed under Law 9 of 1901, which was commented upon at some length in the Report preceding this, was remitted, and taxation on land thereby reduced by about £7,000. So soon as it was seen that the prospects of the General Revenue of the Island were improving, more rigorous collection of the remaining direct taxes resulted in an increase of £5,616 in the yield of the Holding Tax alone, and the nett decrease in the receipts from land taxes (exclusive of quit rents) thus amounted to only £2,152. The increased stringency in the collection of direct taxes, which the greater prosperity of the Island both justified and rendered more effectual, is also reflected in an increase of £713 in Quit Rents (1*d.* per acre), as in the increase in the yield of the Education Tax, mentioned above. The total amount received from taxes on lands for General Revenue was £38,314 (the ancient impost of the Quit Rents contributing £7,298); land taxes contributed, therefore, this year 6·4 per cent. of the total General Tax Revenue, as against 7·4 per cent. last year.

Other General Revenue.

14. The revenue from sources other than taxation amounted to £262,104, an increase of £35,514 over that of the year before, if the special transfers (£12,456) of accumulated funds made in that year be excluded. Chief among the increases are the following:—

	£
Fines and forfeitures, &c....	2,328
Irrigation receipts...	765
Post Office and telegraphs (£2,936 and £1,106)	4,042
Railway	24,091
Miscellaneous	2,506

The receipts of the railway amounted to £142,305, being an increase of £24,091 over those of the preceding year. The improvement in gross revenue was thus 20 per cent., while, as will be noticed later, the increase in expenditure amounted to only 3 per cent. This is a very satisfactory record, and reflects the great increase, economically handled, in fruit traffic.

General Expenditure.

15. The General Expenditure of the year amounted to £788,846, as against £751,700 in the previous year, an increase of £37,146. The principal increases are the following, which amount in all to £38,954:—

	£
Charges of Debt	27,744
Public Works Department	1,016
Medical	1,032
Constabulary and Prisons...	1,183
Education	1,174
Military	1,192
Telegraphic communication	1,000
Direct Steamship Subsidy	1,667
Miscellaneous	1,089
Public Works and Buildings	1,857

The chief decreases are in the Government Printing Office (£2,910), and the expenses of Real Property Valuation (£1,481).

Charges of Debt.

16. No new public loans were authorised during the year, but the remainder—£44,000—of the loan—£110,000—authorised for the equipment of the Jamaica Railway, was borrowed and brought to account. The increases, which appear under the head of Charges of Debt, are nearly all in respect of increased payments, in reduction, either immediate or prospective, of existing debt. These increases are:—£15,275 in respect of Sinking Funds, £16,709 in respect of the final repayment of the Imperial Loan obtained in aid of the deficit in General Revenue—a repayment which had not been contemplated, but which the improvement in the finances rendered possible, with the consent of the Lords of the Treasury—and £1,445 under annuities in respect of the Imperial Loans for the Jamaica Railway, a portion of which latter increase is also to be regarded as in reduction of debt. There is also a small increase of £27 for miscellaneous expenditure. As against these increases, there are to be set decreases of £1,019 under the head of Current Interest, £205 for arrears of interest on Railway 3½ per cent. Inscribed Stock, £3,157 in respect of interest on unissued Railway Stock (the amount in the previous year including arrears), £179 in respect of ordinary management,

and the omission of an item of £1,151 for the expenses of issue of the Railway Stock which was wanted in the previous year and now disappears. These charges resulted in the nett increase of £27,744, already alluded to.

Other Increases.

17. The increase of £1,000 in the cost of telegraphic communication is owing to one quarter's subsidy standing over from 1901-2 having been paid within the financial year 1902-3.

The increase in the Direct Steamship Subsidy is owing to the circumstance that a full year's subsidy (£20,000) was brought to account. The increase under Miscellaneous is due to the purchase of the property known as Gordon Town, with a view of saving rents. That under Public Works and Buildings is due to the last payment (£2,558) to complete the purchase money of the old Mico Buildings, which was, in fact, a reduction of a debt not appearing on the Balance Sheet of the Colony.

General Results.

18. The general results of the year may be considered to have been satisfactory. The total General Revenue was £856,514, or, omitting a special transfer of Savings Bank balances unclaimed, but still liable to some demand, £854,672. As the revenue of the preceding year, similarly treated by the omission of transfers, was £762,381, the increase in the year under review was £92,291. The excess over the estimate was £88,210. The total General Expenditure amounted to £788,847, or £37,146 more than in the year before. If the special payment of £16,709 to the Imperial Government, in reduction of the deficit loan, be deducted, the excess of the Expenditure of 1902-3 over that of 1901-2 will be found to have been £20,437. If payments on account of debt charges be entirely deducted, it will be seen that the expenditure of 1902-3 was £6,845 more than that of 1901-2, this being largely composed of expenditure on account of Public Works and the Railway, reflecting the increased activity in trade generally prevalent. The expenditure in excess of the estimate was £17,517. If Debt Charges, where the estimate was exceeded by £16,154—an amount slightly less than the special repayment alluded to—be omitted, the nett excess over the estimate was only £363, and if an excess of £1,104 on account of Pensions be taken into consideration, this being an item not under control, it will be seen that the remaining expenditure of the Government was £741 less than the estimate. This result has been attained by a continuance of a rigid watchfulness of the expenditure, and a determination to incur no expense which could be avoided without injury to the public

service. Summarising the position at the close of the year in relation to the Estimates, we have the following:—

Estimate.

	£
Revenue	768,304*
Expenditure	771,330
Deficit	£3,026

Actual.

	£
Revenue	856,514
Expenditure	788,847
Surplus	£67,667

As already stated, this surplus went to reduce the deficit on General Revenue account. It must also be remembered that if the special repayment to the Imperial Government in excess of the amount that we were called on to pay in reduction of the deficit loan had not been made, the surplus would have been increased by the sum of £16,709. The Government has thus been able to improve the financial position during the year by reducing liabilities, current and capital, by the sum of £84,376, not taking into account the ordinary payments into Sinking Funds, or similar payments aiming at the amortisation of the Public Debt, and also not taking into account two special payments (£4,573 in all) in the purchase and the completion of purchase of two properties which will cause a saving in future annual payments.

(B.) The Public Debt.

19. An exhaustive examination of the composition of the Public Debt of the Colony was made by the Acting Governor in his Report on the Blue Book of 1901-2, and the subject need not therefore again be treated here. The debt was increased during the year under review by the drawing from the Imperial Treasury of the sum of £44,000, which was the remainder of the total amount of £198,000 authorised to be borrowed for the equipment of the Jamaica Railway. With this exception there was no increase of debt.

* Including Savings Bank Balances (£1,842) not shown in Printed Estimates.

Current Liabilities and Assets.

20. The statement of current liabilities and assets at the close of the year 1902-03 is as follows:—

Assets.	£	Liabilities.	£
Investments on account of Deposits at Interest ...	420,850	Deposits at Interest (Widows and Orphans Funds and Government Savings Bank).	579,311
Investments on account of Trust Funds...	22,634	Trust Funds	26,092
Investments on account of sundry Deposits not at interest.	86,645	Sundry Deposits not at interest, invested	97,546
Planters' Notes	10,463	Sundry Deposits not at interest, uninvested	30,506
Loans to Crown Agents	19,000	Deposits for Loan Works	39,418
Advances to Parishes	63,846	Imperial Sugar Loan	10,000
General advances	17,343	Parochial Road Reserve Fund	8,296
Loans to Sugar Planters	13,333	Suspense account for Sinking Funds	400
Defaulters' Account	202	Parochial Exchequer	38,526
Stores...	23,352	Immigration Exchequer...	1,061
Remittances in transit	44,000		
Cash	73,991		
Balance Liabilities	35,497		
	£831,156		£831,156

As compared with the beginning of the year this shows a reduction in the nett liabilities of £67,667.

At the close of the year 1898-99 the balance of liabilities over assets on current account was £153,723, so that in four years the deficit in General Revenue account had been reduced by the sum of £118,226.

Funded Debt.

21. Outside of the floating liabilities mentioned in the foregoing statement, the Funded Public Debt proper at the 31st March, 1903, was £3,357,706. On the same date in 1902 it was £3,343,958. But as there was added during the year new debt amounting to £44,000 on account of the Railway, which would have made a total of £3,387,958, the Colony has been able to reduce its liabilities on account of funded debt by the sum of £30,252.

As already stated, the total outstanding debt at 31st March, 1903, was £3,357,706, but if the Sinking Funds be deducted, £235,735, the net liability of the Colony on this account is £3,121,971.

The composition of the above £3,357,706 is as under:—

	£	£
Total Railway Debt (to which there is still to be added £44,100)	2,424,922	
		2,424,922
Bridges and Roads	403,320	
Rio Cobre Irrigation Works ...	75,076	
Public Buildings	89,700	
Hotels	63,475	
Kingston improvements	224,360	
Coolie Immigration, Telegraphs, and all Consolidated Debts ...	276,853	
		932,784
Total outstanding		3,357,706
Add for new Railway Debt		44,100
Total incurred		£3,401,806

Railway Debt.

22. The present position of the Railway Debt, shown in more detail in the section of this report relating to the Railway, may be thus summarised. A total sum of £2,527,278 has been incurred, chiefly at 4 per cent. and 3½ per cent., the interest on

which is £91,221, and the Sinking Funds amount to £30,851, throwing a total charge on the revenue of the island of £122,072. To meet this there was in 1902-3 a surplus railway revenue over expenditure of £61,964. The present outstanding debt on account of the Railway is, as stated in the foregoing paragraph, £2,424,922, or, if the £44,100 yet to be added is included, £2,469,022.

Guaranteed Debt.

23. The amount of debt guaranteed by General Revenue but secured primarily on special revenues is shown as follows at 31st March, 1903:—

—	Original Loan.	Amount now outstanding.
	£	£
Kingston General Commissioners ...	377,100	341,229
Vere Irrigation Commissioners ...	30,000	30,000
Total	407,100	371,229

Parochial Debt.

24. The amounts borrowed by the Parochial Boards have been obtained from the Public Treasury and are therefore amounts repayable to and not by the General Revenue, and will be referred to under the head of Local Finance. They amounted to £63,846 at the close of the year, as against £73,023 at the beginning, a reduction of £9,177.

Loan Expenditure.

25. The amount of expenditure charged during the year against Public General Loan Funds was as follows:—

Railway.

	£	s.	d.
Jamaica Railway—			
Interest	90	0	0
Equipment	27,892	13	6
Public Works.			
Public Buildings—			
Laws 6 of 1893 and 40 of 1894...	3,466	14	3
Bridges—			
Laws 7 of 1881 and 1 of 1891 ...	46	18	9
Parochial Main Roads—			
Law 17 of 1890	4,502	9	1
Total	£35,998,	15	7

The amounts remaining unexpended out of Loan moneys at the 31st March, 1903, were as under—

	£
Railway Interest	336
Railway Equipment	10,017
Bridges	2,662
Public Buildings*	23,219
Portland Bridges	544
Parochial Main Roads	2,618
Mountain Roads	22
	£39,418

(C.) Local Finance.

26. The revenues and expenditure of the local Administrative Bodies during the year were as shown below:—

—	Revenue.	Expenditure.	Surplus.	Deficit.
Kingston—	£	£	£	£
General Commissioners..	36,767	34,7[illegible]4	2,063	—
Mayor and Council General Fund.	26,063	25,548	515	—
Road Fund	5,205	5,022	183	—
Other Parochial Boards—				
General Funds	66,710	62,087	4,623	—
Road Funds	41,759	38,607	4,152	—
Total	176,504	165,968	10,536	—

27. During the year fresh advances from the Treasury were made to Parochial Boards, amounting to £1,374; and repayments were made by the Boards, amounting to £10,551. Their combined debt to the Treasury at the beginning of the year being £73,023, the debt remaining at the end was, as already stated, £63,846. On the other hand, the current balances to the credit of all Parochial Boards (including Kingston) in the Treasury at the same date amounted to £38,525, so that their total nett liabilities to General Revenue were £25,321. The balance at credit of the Kingston General Commissioners was £13,723.

28. The General Fund of each parish consists of the former Pauper Fund, Sanitary Fund, General Purposes Fund, and Surplus Fund, which were consolidated into one by Law 34 of 1900, under which one General Rate is levied. The Road Funds are still kept separate.

* Of the original loan for Public Buildings, £10,300 was transferred during 1902–3 to the credit of the Mountain Roads in order to avoid further borrowing.

Comparison with previous Year.

29. The following figures show the comparison between the Revenue and Expenditure of the Parochial Boards for the two years 1902-3 and 1901-2:—

Revenue.

—	1902–3.	1901–2.	Increase.
	£	£	£
Total General Funds	92,773	86,974	5,799
Total Road Funds	46,964	42,271	4,693

Expenditure.

—	1902–3.	1901–2.	Decrease.	Increase.
	£	£	£	£
Total General Funds ...	87,635	90,500	2,865	—
Total Road Funds	43,629	39,163	—	4,465

The decrease in expenditure from the General Funds shows signs of the more careful administration under the control of the Government which now prevails. The increase in expenditure on roads shows a response to the demands of the increased traffic consequent on increase of production.

(D.) Direct Taxation.

Summary of Work in Collection of Direct Taxes.

30. The following statement summarises the work of the Collector-General's Department in the collection of direct taxes during the past year. It also shows the liberality with which the right to remit taxes has been exercised by the Revenue Commissioner, both directly and at the instance of the Parochial Boards:—

1. Aproximate number of taxpayers on roll ... 172,211
2. Number paying voluntarily to the end of June ... 48,630
3. Number paying in instalments or moieties ... 20,689
4. Number of cases in which relief (total or partial) has been granted—
   (*a*) by Revenue Commissioner 13,386
   (*b*) on recommendation of Parochial Board... 11,349

5. Aggregate amount remitted—		
(*a*) by Revenue Commissioner		£6,793
(*b*) on recommendation of Parochial Board...		£11,507
6. Number of Assessment Notices issued		148,903
7. Number of taxpayers paid at 30th September (*i.e.*, those paying voluntarily, plus those responding to first process of assessment) ...		81,283
8. Number of levy writs issued, not including writs for Water Rates		67,667
9. Number paying to 31st December (*i.e.*, roughly the voluntary tax-payers, plus those responding to the first two processes, assessment and levy)		135,118
10. Number of summonses issued		30,691
11. Number paid on issue of summonses		19,763
12. Number of commitments applied for		1,236
13. Number paid on issue of commitments		915
14. Number sent to prison		36
15. Approximate number of taxpayers brought to account within the year		147,567
16. Approximate number of accounts outstanding at 31st March		18,074
17. Number of tax receipts issued		235,779
18. Number of other receipts and permits		49,803
19. Number of Spirit Licences granted	1902-3 ...	1,085
	1901-2 ...	1,117
20. Number of Trade Licences granted	1902-3 ...	4,221
	1901-2 ...	4,314

Recovery of Arrears.

31. During the year the Department was forced to seek the aid of the Courts in the collections of arrears, and by that means recovered a considerable amount of revenue which other processes had failed to bring in. Various causes, which have been indicated in previous Reports, and need not again be detailed, had led to a large accumulation of arrears, in the clearing off of which the energies of the Department had been for some time actively employed. Nothwithstanding this, the termination of the year 1901-2 left nearly 50,000 cases of arrears on hand. Relief, either partial or total, was recommended in all cases in which this could honestly be done, amounting in all to nearly 20,000 cases. This left some 30,000 cases in which the ordinary methods of tax collection had failed to be effective, and the alternatives left were either to invoke the provisions of Section 42 of the Tax Collection Law (32 of 1867) and take those cases into Court, or to leave the

taxes uncollected and thus allow an undue burden to fall on the shoulders of those who would otherwise pay. Resort was accordingly had to the Courts, but the foregoing summary shows that in doing so the Collectors exercised good judgment and discretion. Out of 30,691 persons summoned, commitments to prison were applied for in only 1,236 cases, while only 36 persons—or 0·1 per cent. of the number summoned—were actually sent to prison for not obeying the order of the Courts.

It may be remarked that the Bailiffs of the Department have come well out of the searching investigations that must have occurred by the issue of over 30,000 summonses to appear before the Courts, as it is a pleasure to be able to record that the result has shown that there can be no foundation for the suggestions of general corruption among this class of subordinates which have not infrequently been made.

Remarks on Existing Taxation.

32. A few remarks on the weight of taxation in Jamaica may, perhaps, not be out of place. From one of some interesting diagrams this year appended to the Report of the Collector-General it appears that the average per caput tax for the past decade was 17*s.* 7*d.*, while for the last five years the average has dropped to 16*s.* 8*d.*, thus showing that instead of an increased contribution per head for taxes there has been an appreciable diminution. It is true that the last year shows sudden and upward jumps, but it will be found that these occur under Customs and Excise Duties, in respect of which there was no increase in the rates, and these indicate increased spending power, and favourable seasons, with their consequent plentiful food crops, rendered it impossible to say that the increase in the former was owing to an increase in the compulsory payment of taxes on importations of food, which would render hard times still harder.

33. If a comparison of taxation be made with other British Colonies in the West Indies for the latest year for which all the returns are available (1901-2), the Collector-General points out that the figures are as follows:—

	Per Head.	
	s.	*d.*
Jamaica	17	1
Barbados	18	3
British Guiana	36	7
Trinidad	37	4

34. An analysis of the total taxation in Jamaica shows that 29·6 per cent. is derived from direct taxes and 70·4 per cent. from indirect taxes, the per caput rates for the former being

5*s.* 6*d.* and for the latter 13*s.* 1*d.*, a total of 18*s.* 7*d.* for the year 1902-3. With regard to departures from this average, the Collector-General states that from a careful scrutiny of all the figures he has arrived at the conclusion that 75 per cent. of the population, viz., those living in houses of £4 annual value and under, do not pay, in the shape of taxation of all kinds, more than 7*s.*, while the remaining 25 per cent., viz., those living in houses of over £4 annual value, pay over 45*s.* per head.

Of the direct taxes, lands and houses paid 64·1 per cent., or 19·0 per cent. of the total taxes.

Of the indirect taxes, Customs duties provided 77·7 per cent. and Excise duties 22·3 per cent., or 54·7 per cent. and 15·7 per cent. respectively of the total taxes.

35. Of the per caput rate of 7*s.* per head paid by the poorer classes above referred to, the Collector-General further estimates that in import duties these classes pay 4*s.* per head per annum, while the remaining 25 per cent. of the population contribute about 28*s.* per head per annum to Customs Revenue. In support of the statement that the method of raising this considerable portion of the total tax revenue lends itself to the convenience of the tax-payer, although this is often controverted by the assertion that the amount is contributed by necessaries, it may be further stated, that it is estimated by the Collector-General that 54·7 per cent. of the total tax revenue can be contributed by the purchaser of imported goods practically at such times as suit his pocket.

36. From the foregoing remarks I think it will be seen that the chief principles of an income tax, viz., the contribution by a tax-payer according to his means, is not so generally departed from in this Island as is not infrequently believed and asserted. But, as it appeared to the Government, as pointed out in last year's Report, that the total burden of the direct taxes on the poorest class of property holders was onerous, inasmuch as houses alone, and not land, bore practically the whole of the local expenditure other than that on roads, a re-adjustment of this kind of taxation was undertaken in the recent Session of the Legislative Council, to which reference will be made in the Report on the current year.

TRADE, AGRICULTURE AND INDUSTRIES.

(A.) Imports and Exports.

37. Annexed is a table, II., showing the values of the Imports and Exports in the last five years, as assessed by the Customs Department.

Increase of Exports.

38. The value of the Island produce and manufactures exported during the twelve months of 1902-3 was assessed at £2,224,116, as against £1,823,684, an increase of £400,432, or about 22 per cent., on the amount of last year's return. British and foreign products and manufactures to the value of £14,466 and £53,753 in coin or bullion were also exported, making a total of £2,292,335, compared with last year's total of £1,939,142, showing a net increase of £353,193, or 18·2 per cent.

Increase of Imports.

39. The value of Imports, excluding coin and bullion, was £1,951,192, an increase of £281,802 over last year's total of £1,669,390, which in turn was £46,858 over that of the preceding year. This increase of 1902-3 over 1901-2 represents an increase of 17 per cent. In addition, there was imported coin to the value of £39,692 (an increase of £957), which brings up the gross total of imports to the value of £1,990,884, as against last year's total of £1,699,525, an increase also of 17 per cent.

Export Trade.

40. The Exports of Island products show a very marked and satisfactory increase for the past year, and on the whole a continuous increase during the 5 years for which the figures are given. This year's total—£2,224,116—is 22 per cent. above the annual average of the period—£1,823,339. If this total be compared with that of 1897-8 (one year earlier than shown in the table) when the exports were only £1,377,826 in value, there will be seen an increase of £846,290, or 61 per cent. With regard to doubts which have been expressed as to the correctness of some of the values placed by the Customs Department on articles of export, it may be mentioned that these values are inclusive of all expenses, and represent the value on board and not in the field. This practice is based on the recommendation of a Committee appointed by the Imperial Government in June, 1891, to enquire into the methods of compilation of the import and export statistics in the Colonies. In any case, the same system is used from year to year, and the results are, therefore, a fair basis for comparison.

Excess of Exports.

41. The excess of exports over imports was this year £301,451, or £61,834 more than it was in the year before. As has been pointed out in previous Reports, this excess of exports over imports is principally needed to defray the charges on account of the large public debt and of other investments in the Island by persons abroad.

Principal Staples of Export.

42. Table III. gives the particulars of the exports this year and last of the ten leading products of the Island. Bananas again head the list with a value of £1,134,750, and they now yield more than one-half of the total value of exports for the year. If the value of other fresh fruit be added, namely:—

	£
Oranges	101,054
Grape fruit	9,189
Limes	502
Mangoes	605
Pineapples	2,932

we get a total of £1,249,032 as the value of perishable fruit exported, or 56 per cent. of the total exported produce of the Island.

Banana Trade (United States and Great Britain).

43. The banana trade showed an increase of a little over one-third in value, and a little under one-third in amount, and followed increases of like amount recorded in last year's Report. In the last five years the volume of this trade has increased 2½ times. The increase in the year under review amounted to £309,462 in value, or more than three-fourths of the total increase of Island Products, but it is re-assuring to note that although the total increase was so large, one-fourth of it arises from the increased export of other products, chief among which increases will be found those in the older staples, sugar and rum. It cannot be said that the expectations as to the export of bananas, somewhat freely held out on the establishment of the Imperial Direct Line of Steamers, have been altogether realised. That bananas can be safely carried to England in a marketable condition has been proved, and for this important result Messrs. Elder, Dempster & Co., and Messrs. Elders and Fyffes, the Fruit Company associated with them in the enterprise, are entitled to the credit. It had been expected, however, that immediate development, to the extent of a trade of at least one steamer per week from this Island to England, would have taken place at a comparatively early date, to be followed by an even greater expansion of the trade. This has

not yet taken place; but there has been a brisk demand from the United States for all the bananas available, and the absence of additional English competition has thus not been so much felt. It is to be noted that practically the whole of the increased volume of the banana trade has been with America, in vessels which, although receiving postal subsidies from the United States Government, receive no help from the revenues of this Island, and not with Great Britain by the vessels of the line subsidised by both the Colonial and Imperial Governments. These steamers are under contract to carry 20,000 bunches of bananas to England every fortnight, and this condition has been completely and regularly fulfilled. The following statement shows the total amounts and values of fresh fruit carried by the line during the year under review, and also by the Royal Mail Line:—

—	Direct Line.		Royal Mail.	
	Quantity.	Value.	Quantity.	Value.
		£		£
Bananas, bunches...	627,069	50,164	1,300	104
Oranges, number ...	2,804,717	2,874	1,437,352	1,473
Pines, dozen ...	2,464	677	871	239
Mangoes, packages	1,123	203	70	16
Fruit, other kinds...	—	3,003	—	1,886
Total	—	56,921	—	3,718

Although the English fruit trade is thus still in its infancy, it may be hoped that it will yet attain large proportions. It is only fair to mention that, as was pointed out in detail in last year's Report, the services which the Direct Line of steamers has rendered to Jamaica, in return for the yearly subsidy from the Island of £20,000 (half its total subsidy), are very far from being confined to what this enterprise has effected in regard to the fruit trade.

Oranges and Grape Fruit.

44. Oranges showed an increase of nearly one-fourth in amount, and a decrease in value of £1,726, the total value exported, however, being still of some considerable amount, viz., £101,054. The decrease in value with an increase in the volume of the trade bears out the remarks made in last year's Report as to the need for greater care in the handling of this trade, and restraint in the matter of the shipment of poor and immature fruit. The other product of the citrus family, known as the grape fruit, which finds much favour in the American market, showed an increase in value of £1,517, or about one-fifth.

Dependence on Fruit Precarious.

45. Last year it was pointed out that however valuable the development of the fruit trade might be, it could hardly be regarded as quite satisfactory that the Island should only have been saved from a decline in the value of its exports by the increase in the production of bananas, the most perishable and precarious of its staples. These remarks have been regrettably emphasised, at the time of writing, by the devastation effected by the cyclone of the 11th August, 1903, the most destructive storm experienced since the year 1880, when the fruit trade was in its infancy. The year under review, however, was fortunately exempt from any such disaster.

Sugar and Rum.

46. Sugar and rum between them accounted for an increase of £63,113, the value of the sugar being £167,663, and that of the rum being £156,581, a total of £324,244. If both these products of the sugar industry be considered, their total will be found to come second in the list of native exports, but even so their value (if the direct value of the product exported be alone taken into account) is not more than one-fourth of that of bananas, and about one-seventh of the total value of the products of the Island.

Imperial Grant.

47. While there is little, if any, profit left for the proprietor at the recent low prices of sugar, the manufacture gives employment to considerable numbers of people, and it was with the view, among others, of preventing the sudden cessation of this large employment of labour that there was made during the year an Imperial Grant in aid of the Sugar Industry in the West Indies, of which the share allotted to this Colony was £10,000. The best occupation of this amount seemed to be to use it, with other moneys advanced from the Island Treasury to finance those sugar estates which, without the aid of advances, would have been compelled to go out of cultivation. In this way, too, it was possible to conserve the corpus of the Imperial Grant so as to be able to use it if necessary as an insurance fund from which to meet any possible losses in the transactions. Every care, however, was taken to avoid any chance of loss arising, and none is expected. The final employment of this grant on its return by the planters to the Island Treasury was a matter for consideration during the current year. Through the generosity of the Imperial Parliament sugar estates in this Island have thus been kept alive, but even such help would probably not have been sufficient to bring about this result, considering the precarious state of the industry, had there not also been for the hope of

a more stable condition of affairs which was excited by the Brussels Convention, and the consequent effect of the long looked for abolition of sugar bounties in Europe to come into force on the 1st September, 1903. During the many years of weary longing for this result sugar estates in great number have in this Island gone under, and it is earnestly to be hoped that a revival of this ancient industry will now take place.

Other Increases.

48. The chief of the other increases shown in this year's returns are as follows:—Cocoanuts (£6,085), ginger (£9,257), honey (£4,235), pimento (£12,709), and cattle (£5,856). The increase in the value of cocoanuts is not proportionate to the increase in the number exported, the former being a tenth and the latter not far short of one-half. The increase in ginger is gratifying; with proper tilth of land, and greater care in the preparation of this root, there is reasonable expectation of further satisfactory increase of this export, which bears a special reputation in the markets of the world. The increase in the export of honey is to be welcomed, this being peculiarly a product by which the small settler can appreciably add to his income without much expense of time or money. The Bee-keepers' Association, recently formed here, has done good work for this industry. The increase in the quantity of pimento exported showed a much larger increase than did its value, owing to the prevalence of the poorer prices, usual with a large crop, the demand being somewhat limited, and the Jamaica crop ruling the market.

The increase in the number of cattle exported took place chiefly with the neighbouring Island of Cuba. The export trade is very fitful. It, of course, does not in any sense form a measure of the value of the cattle-breeding industry, the chief mart for which is local.

There was an increase in the amount of coffee exported, but the prices obtained were low. The coffee markets are overstocked, and Jamaica has to fight against the enormous production of Brazil. Salvation of this industry, so far as small settlers' coffee or coffee of the peasantry is concerned, is only to be looked for in improvement in the cultivation of the plant and in the curing of the berry. The Blue Mountain coffee, grown at considerable altitude, is a product of a special class, and always finds a more or less satisfactory market at prices which cannot be reached by lowland coffees. It is to be hoped that the efforts being made to impress on the small settlers the need for better curing and grading will have a beneficial effect, though improvement can only be gradual. There were also increases in the value of turtle (not, however, captured round this Island), £1,557, lignum vitæ, £1,544, goat skins, £3,709, and butterwood, £1,341, logwood extract, £7,219, and a nett

increase in respect of tobacco of £4,515, cigars and cigarettes being increased by £5,686 and £1,066 respectively, and leaf tobacco showing a decrease of £2,237. Other minor increases occurred in the value of horses and mules, £942, annatto, £524, and pineapples, £571, the quantities exported in each of the last two cases showing, however, a decrease.

Decrease in Cocoa, Limejuice, and Logwood.

49. Outside of the decrease in value (not amount) of coffee just alluded to, the only important decrease in articles exported was in cocoa, where a decrease of 8,491 cwt. in amount and £18,639 in value took place. This is regrettable, but it is stated to have been largely caused by drought. The industry is a promising one, and there seems no reason why its growth should not be of steadily increasing value. There was a decrease in value of £5,323 in the lime-juice exported. There was also a decrease in value of £6,689 in logwood exported, but this was more than counterbalanced by the increase in value of the logwood extract manufactured in and exported from this Island, already referred to.

Relative Importance of Principal Exports.

50. The following statement shows the relative proportions of the chief exports of Island produce during the last five years:—

—	1898–99.	1899–1900	1900–01.	1901–02.	1902–03.
Fruit	41·4	45·0	45·2	54·9	59·3
Sugar	9·8	10·8	9·5	7·5	7·6
Rum	6·1	7·2	8·8	6·8	7·0
Coffee	10·5	7·8	9·1	8·3	5·9
Dyewoods	8·8	4·8	6·2	6·6	5·1
Pimento	8·3	9·7	6·4	4·3	4·1
Other products ...	15·1	14·7	14·8	11·6	11·0

Imports.

51. Analysis of the imports into the classes prescribed for the Board of Trade Returns, shows that:—

In Class I. (live animals, food, drink, narcotics) there was an increase of £45,018 during the year;

In Class II. (raw materials) an increase of £34,869;

In Class III. (manufactured articles) an increase of £201,915—a total increase of £281,802.

52. The chief increases in Class I. are the following, viz., ale, beer, and porter, £15,394 (one-third of the whole), bread and biscuit, £4,870, butter, £2,249, cheese, £1,537, fish, £4,734, flour, £9,064, condensed milk, £5,163, sheep, £1,030, whisky, £1,124, and wines, £1,368. Many of these articles are luxuries, and even the others (taking into account that the good seasons of last year produced a plentiful supply of local food-stuffs) may also be said to show the increased purchasing power of the community, voluntarily exerted. Wheaten flour, as stated in last year's Report, stands here on the boundary line between necessity and luxury. The increase in importation is small, because of the abundance of home-grown food. The butter, milk, and cheese imports all point to directions in which the Island should be more self-sufficing.

53. The increase in Class II. is due to the large importations of coal, and indicates the growing importance of Kingston as a coaling port, as well as to the increased traffic on the railway.

54. The increase in Class III. is made up of the following classes of manufactures, viz.:—Textile, £96,163, metal, £16,759, other, £88,993. Chief among the textiles are apparel, £12,607, cotton piece goods, £53,615, haberdashery and millinery, £9,881, and woollens, £9,600. The chief increase in metal goods is in agricultural implements, £6,094. The chief increase in other manufactured goods is in boots and shoes, £12,954. The increased import of textiles and foot gear reflects the improved prosperity of the Island.

Destination and Sources of Exports and Imports.

55. The subjoined tables show the proportions in which the exports and imports of the year were divided between their several destinations and sources:—

Destination of Exports.	1898–99.	1899–1900	1900–01.	1901–02	1902–03.
United Kingdom	20·6	19·2	18·8	21·1	19·1
United States	59·1	63·6	63·8	65·6	68·1
Canada	1·4	1·6	1·8	1·6	2·3
Other countries	18·9	15·6	15·6	11·7	10·5

Survey of Imports.	1898–99.	1899–1900	1900–01.	1901–02.	1902–03.
United Kingdom	44·7	47·2	45·2	46·8	50·1
United States	45·1	43·0	43·4	43·3	40·3
Canada	7·1	7·1	8·6	7·0	6·9
Other countries	3·1	2·7	2·8	2·9	2·7

The export trade with Britain and with countries, exclusive of the United States and Canada, shows a relative decline of 2 per cent. and 1·2 per cent. respectively; that with the United States a relative increase of 2·5 per cent., and that with Canada a relative increase of 0·7 per cent. There were, however, positive increases in all these directions, namely:—

	£
To Great Britain...	26,735
„ United States	287,450
„ Canada	21,872

The trade in imports from the United Kingdom shows a relative increase of 3·3 per cent., and a positive increase of £201,452, the imports from the United States a positive increase of £66,742, and those from Canada of £20,171. The relative increase in these from the United Kingdom is owing to the increased consumption of textiles, and it may, perhaps, be partly accounted for by the impetus given to British trade by the establishment of the Direct Line of fruit steamers. In order to avoid sending out their steamers comparatively empty, the company considerably reduced the existing rates of freight. In addition to this, considerable efforts were made, and made with some success by Bristol merchants, to revive, in connection with the Direct Line Steamers, the ancient profitable trade between that port and Jamaica.

56. A review of the whole trade shows that Great Britain takes one-fifth of our exports, with no sign of any very great change in the last five years, and sends us one-half of our imports, the tendency apparently being to an increase in this respect. On the other hand, the United States take over two-thirds of our exports, with promise of increase, and send us two-fifths of our imports, or a somewhat smaller proportion than a few years ago.

(B.) Shipping.

Increase of Trade.

57. The returns of shipping for the year show 237 sailing vessels reported, against 242 in 1901-02, a decrease of 5 in numbers and 3,495 in tonnage.

In steam vessels an increase is shown of 106 in numbers, (from 928 to 1,034), and 125,659 in tonnage.

Three steamers fewer arrived at Kingston, while 92 more entered at Port Antonio, and 17 more at other ports of the Island, a fact which goes to demonstrate increased activity in the fruit trade.

Nationality of Tonnage.

58. The number of British steamships entering the ports of the Island total 271 of 400,077 tons, as against 308 of 437,290 tons in the previous year, a decrease of 37 in ships and 37,213 in tonnage. Foreign shipping showed an increase of 143 steam ships, with a nett increase of 162,872 tons, as follows:—

—	Ships.	Tons.
Norwegian	79	119,413
German	40	62,611
Cuban	18	2,968
American...	4	23,792 less
Russian	3	2,020
Danish	—	619
	144	163,839
Less Brazilian	1	967
	143	162,872

Nationalty and Destination of Tonnage.

The recent transfer of the (British) Atlas Line of Steamships to the (German) Hamburg-American Line continues to operate as a cause of the increase of German entries.

59. It is to be noted that the French surtax on goods arriving in France from one country *viâ* another country, although it promotes direct intercourse with France, does not in all cases produce that result in French bottoms, the original object aimed at. As regards Jamaica, direct intercourse with Havre is gained by ships of the Royal Mail (British) and Hamburg-American (German) Lines coaling there first on their homeward trips. It may be added that, as regards the port of Kingston alone, British vessels, compared with all foreign, represented ·413 in steam and ·84 in sail.

Work of Marine Board.

60. I may here submit a brief review of the operations of the Marine Board. Five enquiries were held by the Board into the conduct of pilots; pilots' licenses generally were renewed at the beginning of the calendar year; eight master and two engineer certificates were issued; two enquiries were held into the conduct of masters; 19 casualties and two wrecks formed the subject of investigation; and 144 vessels were examined and granted sea-going certificates for varying periods.

61. The Wigham continuous burning lamps in the harbour of Kingston and its approaches were advertised as Official Lights on the 1st January, 1903, and have proved to be of much service to the shipping community, by allowing safe egress and ingress at all hours of the night. (These lights were unaffected by the hurricane of the 12th August, 1903.)

(C.) Land Grants, Surveys and Crown Lands.

Surveys.

62. The Surveyor General reports that 277½ lineal miles of survey work have been done in the year. This work included the opening and defining of the lines of forfeited lands, the laying out of roads to and through the Crown Lands, and the allotment of lands to small settlers purchasing under the scheme for the sale of Crown Lands. He makes special reference to the savanna lands in one of the dry districts of St. Elizabeth. About 220 years ago these lands (as was the case with most of the lands then or subsequently granted) were patented in large blocks. They were, however, never settled by the Patentees, and in course of time were squatted on until a great part of the district was well settled; but out of some 13,000 acres, occupied now by some 500 families, taxes were paid on less than 2,000 acres, and only a few persons possessed titles, the majority of the occupiers holding only by possession or tradition. To correct this state of affairs it was decided to survey the whole district and grant titles and diagrams to old settlers, including within lines defined on earth their houses, tanks, cultivations and fruit trees, and to effect sales on easy terms to squatters of less than 12 years possession. About 5,000 acres have now been dealt with in this way, leaving 8,000 acres yet to be dealt with. The surplus land is available for purchase by fresh settlers. Other surveys consisted of lands sold to the Maroons of Moore Town and Accompong Town, who had trespassed outside their boundaries. After some trouble arrangements were made to sell to the individual Maroons the lands they had thus taken up.

Grants of Land to Settlers.

63. The sale of lands to small settlers continues to progress. During the year 558 applications have been received for 3,974 acres; and 354 lots, aggregating 3,428 acres, have been surveyed and allotted to applicants. From 1st January, 1897, to 31st March, 1903, 2,312 applications have been received covering 20,482½ acres of which 1889 applications have been satisfied, covering 20,088½ acres. The total amount paid to 31st March, 1903, by settlers on account of purchase of land is £9,570. Out of the total 20,088 acres, 687 acres have reverted to the Crown by failure of the purchasers to pay their instalments, of which, however, 315 acres have already been resold to fresh pur-

chasers. Most of the lands taken back are situated in the White Limestone Districts, where low prices have affected the principal product, coffee, or in places where access is tedious and difficult owing to the lack of roads. Roads have been made at Cambrook in St. Elizabeth (1 mile) and at Millbank in Portland (2 miles), and it is contemplated in pursuance of promises already made to construct other roads. In future new sales will only be made in districts where roads already exist. On the whole the result of settling lands on the instalment system during the last six years has so far proved not unsatisfactory, and having in view many unsatisfactory results attendant on the letting of lands, hereafter referred to, the Surveyor General is of opinion that it is desirable to do away as much as possible with the rental of lands to small praedial tenants as soon as practicable.

Leases and Rents.

64. The total amount of rent received from lessees and tenants was £2,041. 32 leases have been effected at a yearly rental of £187. Leases of lots of land in the North West of Kingston have recently expired and the lands are being sold to the late lessees on the system of purchase by instalments. In the case of the praedial tenancies, the Surveyor General reports it has not been found possible to collect all the rent. In many cases no rent is paid and there is nothing to levy on. The cultivation is of the most transient nature and is shifted about from year to year, while frequently the tenant himself shifts from one place to another, leaving arrears of rent behind him. Sometimes he not only pays no rent but maintains an adverse possession of the land when notified to leave, and not only is the rent lost but money has to be spent in ejecting him. Whatever the cause may be, the letting of lands with such results is very discouraging, and the establishment of homestead cultivation instead of that of the "firestick" referred to in last year's report is much to be desired. This will never be attained until ownership is vested in the settlers. It has been sometimes observed that tenants who are very desirous of renting lands from large proprietors with the usual wasteful results are careful to conserve their own freehold lands either in wood or for planting in permanent crops. The Surveyor-General states that the experience gained with the Government lands by the substitution of selling for letting is satisfactory enough to suggest that if the system could be generally adopted improvement might be expected in the character of the people and in the nature of the crops raised.

Expenditure and Revenue.

65. The expenditure of the Department amounted to £2,634 (including £200 for construction of roads), and the receipts came to £4,163 or £1,529 more than the expenditure, the year

just closed being the most satisfactory financially since the formation of the Department. The financial transactions of the Department since the beginning of the year 1896-97, when the Crown Lands scheme was initiated, may be thus summarised:—

	£	£
Revenue:—		
Sales	9,570	
Rents	11,442	
Miscellaneous	216	
		21,228
Expenditure:—		
Upkeep of the Department ...	16,308	
Construction of Roads	2,101	
		18,409
Nett Surplus		£2,819

Forfeiture of Lands.

66. During the year two "Notifications" covering together 19,126 acres have been advertised, while 4,845 acres advertised in previous notifications have been forfeited to the Crown. The Surveyor General reports that there are many parcels of unrepresented land yet to be proceeded against for forfeiture. The owners of these lands either cannot be found or do not pay taxes on them. He states that the shortage on the tax-paid area of the Island as compared with the calculated area is nearly 500,000 acres, and that unless some more effective procedure is devised for dealing with lands in default, they will remain unproductive so far as the revenue is concerned. As the law stands, with the utmost expedition, the time occupied in the forfeiture of a parcel of land is nine months, and when there are numbers of parcels to be dealt with, many of them complicated and requiring careful survey work, cases frequently remain on hand for six or seven years, with forfeiture proceedings pending during all the time. The Surveyor General is therefore of opinion that while the law may have been suited to the more ancient times of large properties, it should be amended to suit modern circumstances, and that means of making more surveys are required. In this latter view there has already been approved by the Legislature at the close of the year the placing on the permanent staff of the Department of one of the two assistant surveying officers of the Department, an arrangement which takes effect from the 1st of the current year.

(D.) Mines, Manufactures and Fisheries.

67. Under this usual head in Blue Book Reports there is not in Jamaica much of importance to report on, with the exception of sugar factories and rum distilleries, which are elsewhere touched on in connection with the cultivation of the sugar cane and the export of its products. There are no mines in Jamaica, and the local supply of fish does not meet the demand in the Island.

Minor Factories.

68. Besides factories for the preparation in bulk of the above articles and also coffee and cocoa, there are manufactures to a small extent of the following articles:—Logwood extract, leather, cigars and cigarettes, cocoanut oil, soap, ale, ice and matches.

Sugar and Rum.

69. The sugar estates all combine the manufacture of sugar and of rum. In sugar, the planters have had to contend against the bounties of Europe, but have had temporarily the benefit of the American market, with its countervailing duties on bountied sugar. Jamaica has also the advantage of possessing soils in some parts peculiarly suited to the growth of the cane, and it has been shown that by the exercise of care and skill the cultivation of the cane can be effected at less cost than in any other part of the British West Indies.

70. In the manufacture of the sugar on many of the estates there is still much to be desired. On the other hand in the value of the rum produced on such estates they have a valuable asset, which in many cases more than counterbalances the defects in the ancient methods of manufacture of the sugar. In each of these branches of the industry the Government Analytical and Agricultural Chemist has pointed out that there is still in the majority of cases room for improvement. As an aid in this latter direction, it may be mentioned that the employment of a chemist specially qualified and experienced in the study of fermentation has been approved, and his arrival in the Colony is expected in the course of the current year in time for the next crop.

(E.) Agriculture and Agricultural Services.

71. An account of the old agriculture of the Island was given in the report on last year's Blue Book. This consisted of the agriculture of (1) the sugar industry, with the largely subsidiary industry of pen-keeping; (2) the coffee industry; and (3) the provision ground.

Board of Agriculture.

72. The Board of Agriculture, of which Mr. Sidney Olivier, the Colonial Secretary, is the Chairman, co-ordinates and controls the work of the following agencies in agricultural matters now at work in this Island, viz.:—

(1.) The Agricultural Society.

(2.) The Department of Public Gardens and Plantations.

(3.) The Department of the Island and Agricultural Chemist.

(4.) The Education Department (on its agricultural side only).

The Colony also received assistance, during the year under review, from the Imperial Department of Agriculture in the West Indies, which provided the services of an Agricultural Lecturer, subordinate to the Commissioner of the Department. In addition to the Colonial Secretary, the Board consists of the Imperial Commissioner (who, however, being seldom in Jamaica, can but rarely take part in its proceedings), the Director of Public Gardens and Plantations, the Analytical and Agricultural Chemist (all of the foregoing being ex-officio members), and of four members (including the Archbishop of the West Indies, who is Chairman of the Jamaica Schools Commission) nominated by the Governor, and two others appointed by him on the nomination of the Agricultural Society.

Work of the Board.

73. The Board of Agriculture continued its work on the lines indicated in the Report of last year. It directed the experiments in progress at the Hope Experimental Station and local agricultural experiments. It considered and advised on the educational work in agriculture for students at the Government Laboratory and for Elementary School Teachers, Training College students, apprentices, and industrial school boys, at Hope Gardens. It arranged for the work of Mr. Buttenshaw, the Agricultural Lecturer of the Imperial Department of Agriculture in the West Indies, and also directed the work of the two Travelling Instructors of the Jamaica Department of Gardens and Plantations, as well as the agricultural work on the St. Catherine Prison Farm, referred to in the Report on Police and Prisons, and generally advised the Government on questions lying within the scope of its Departments.

Agricultural Experiment Work.

74. The general scheme of the Board for Experiment Stations may be summarised as follows:—

1. To provide opportunities for the study of the staple crops of the Island, the conditions under which they are grown, the results obtained by different methods of cultivation, manuring, and by the introduction of new varieties, the economic value of such methods or varieties, the diseases and pests attacking them, the methods of preparing the products for the market, and the management of farm animals.

2. To diffuse information on all such matters by publication of leaflets and bulletins, by instruction in scientific agriculture to students at the Government Laboratory, to boys at Secondary Schools or from Elementary and Industrial Schools, apprentices at

Hope Gardens, students in the Teachers' Training Colleges, and Elementary School teachers, and generally by conferences amongst planters and pen-keepers.

Experiment Station at Hope.

75. This Station is now worked by a Committee of the Board, consisting of the Director of Public Gardens and Plantations and the Government Chemist, and is under the immediate superintendence of one of the Superintendents of the former Department. The following articles have been under cultivation and experiment during the year, viz.:—Bananas, cassavas, citrus plants, cocoa, coffee, cotton, date-palms, grape vines, mangoes, nutmegs, avocado pears, pines, sugar-cane, sweet potatoes, tobacco, vanilla, and yams. Of these 17 products, special reference may be made to the following eight:—

Bananas.

76. Experiments are being continued in the attempt to make the plants seed. The large bananas, so much appreciated in the United States, do not meet with such universal favour in the United Kingdom, where the smaller variety from the Canaries, to which people are more accustomed, still retains many adherents. It may be possible to develop a banana with the carrying quality of the former and the flavour of the latter. The latter, which in this Island goes by the name of the Chinese banana, has also the recommendation that it is a tree of short and stout growth, and is, therefore, less liable to damage by storm than is the taller variety. The resisting power of the Chinese banana on the occasion of the recent disastrous cyclone was very marked; on these bananas alone were to be seen well-developed bunches remaining after the hurricane. The disadvantages of the variety are its slowness of growth and its inferiority in ratooning and the consequent smaller yield of bunches per acre of cultivation within a given period.

Cassavas.

77. A collection of cuttings of Columbian varieties of cassava was purchased from Mr. Robert Thomson, and these, together with about 30 Jamaica varieties, formed the subject of careful experiment and analysis by the Chemist. There seems promise of development in the cultivation of this plant.

Cocoa.

78. Experiments are being made with the view of observing the effects of wide and close planting, permanent shade, temporary shade, and no shade at all. A most important discovery

was made during the year, viz., that of a method of budding cocoa by which the best strains can be selected and propagated. Hitherto there has been constant variation in the quality of seedling cocoa, rendering it difficult to ensure uniformity in the produce of a plantation.

Cotton.

79. A small area, a chain and a half, was planted out in cotton in November, 1902, and the first bolls were picked on the 25th February, 1903. Half a chain was planted in Egyptian cotton at the end of January, and this has made excellent growth. The question of the re-establishment of the cotton industry in Jamaica would seem to be one entirely of the cost of the labour required, as there is no question that many parts of Jamaica are particularly suitable to its growth.

Pines.

80. The work of cross-fertilising pines was continued during the year at Hope, the soil of which, the Government Chemist states, is of maximum fertility for pines. 2,195 plants have been thus raised, but an improved fruit has not yet been obtained out of even this large number.

Sugar.

81. During December a Report was issued by the Government Chemist on analyses of 100 varieties of canes grown at Hope, and of canes grown by two members of the Board.

Tobacco.

82. The cultivation of this was continued successfully, and the report of a Cuban expert as to the curing was very satisfactory. He said it could not have been better done by Cubans. There has now been established a practical school in this industry, working at scarcely any expense to the Government.

Vanilla.

83. The experiments in vanilla-growing have continued. In the annual report of the Board it is stated that the Board is informed by a Seychelles planter that the prospects of development of a vanilla industry in Jamaica are distinctly promising.

Local Manurial Experiments.

84. The manurial experiments referred to in my last year's Report were continued, and the analytical results have been published in detail by the Chemist. Pines, sugar canes,

bananas, and coffee in various parts of the Island have formed the subjects of these experiments, and the results have proved valuable.

Agricultural Educational Work.

85. The Lecturer provided by the Imperial Department of Agriculture gave courses of lectures at the Training Colleges, and also to teachers at various centres in the country, as well as valuable assistance in the course of Agricultural Training for Elementary School Teachers.

Elementary Schools.

86. The progress in introducing the teaching of agricultural principles into Elementary Schools is more satisfactory, as more teachers have had the advantage of practical training at Hope Gardens.

Training at Hope Experiment Station.

87. The instruction of the following classes of students was carried out as before, viz.:—

(1.) Industrial scholars, apprentices, and other students.

(2.) Students at Training Colleges.

(3.) Elementary School teachers.

Of this latter class, 80 this year attended a Course of Agricultural Training at the Mico College, as well as the Hope Experiment Station, in July and August. Their daily programme consisted of practical work at Hope, and of attendance at lectures by the Imperial Agricultural Lecturer on Elementary Physics and Chemistry, Animal Life, Plant Life and Growth, and Soils. On three afternoons a week lectures were also given to them by the Government Chemist and planters, and other qualified persons, on the fertility of the soil, the preparation of produce for market, bee-keeping, cultivation of pineapples and citrus, dairying, grape vines, co-operation of the farm, and recent changes in the Education Code. The Chairman of the Board and the Archbishop also delivered to them lectures of general interest. Evening classes in manual work were also held for these teachers in Kingston at the Board School. It was a month of strenuous work for them, the value of which will undoubtedly appear subsequently; the courses will be held in January in future, as being cooler for the outdoor work.

Training of Agricultural Students at Hope.

88. The scheme for the training of agricultural students at Hope, where the Government Laboratory is now situated,

referred to in last year's Report, was elaborated during the year now under review. It embraces:—

A. Regular students of the following descriptions:—
(1) Chemical; (2) Sugar Chemists; (3) Agricultural Chemists; and (4) Agriculturists; and

B. Occasional students of the following classes:—
(1) Sugar Planters and Estate Book-keepers; and (2) General Agriculturists.

Classes are held in Agriculture, Chemistry, and Agricultural Chemistry, Botany, the Crops of Jamaica, Practical Work, Elementary Physics, Agricultural Book-keeping, Mensuration, Economic Entomology, and Sugar Production. These subjects are distributed amongst the Government Analytical and Agricultural Chemist, who is the originator of the present scheme and under whose superintendence it is being carried out, and his Senior Assistant, the Imperial Lecturer in Agriculture, the Director of Public Gardens and Plantations, and the Superintendent of the Hope Experiment Station. Visits to estates to study the practical cultivation of cane, coffee, cocoa, tobacco, citrus fruits, and the management of cattle and pastures will be arranged, and no student will receive the full Agricultural Diploma of the Board without a year's residence on an estate or property. The scheme is in its infancy, but is a valuable one. Five students attended the lectures during the year. The pupils of the Jamaica College made use of the Laboratory twice a week, and two girls from Wolmers School attended the lectures.

Botanic and Ornamental Gardens.

89. The work of the Department of Public Gardens and Plantations, other than that devoted to the Hope Experiment Station and the work of the travelling Instructors, is indicated in the following notes:—

90. At Hope, 25½ acres of ornamental grounds were maintained with plant houses, orchids, ferns, and other delicate plants. At the nursery, the stock of plants available at the close of the year numbered 200,000, including cocoa, kola, nutmegs, camphor, cloves, cinnamon, and ornamental plants. There were distributed 103,128 plants—87,100 economic, and 15,028 ornamental. A plantation of the jippi-jappa plant was established in order to avoid any risk of the supply of this grass being exhausted through the increasing demand for the hats made from it, which has created, or rather, considerably enlarged, this local industry.

91. The Herbarium was maintained and added to.

92. Castleton Gardens were maintained, and a guide to this popular resort of tourists and others was prepared. The Hill

Gardens at Belle Vue (Cinchona) were maintained at no cost to the Government, under an arrangement made whereby the orange trees at Resource and the gardens at Belle Vue were to receive the necessary attention in return for the use by the attendant of the remaining lands at Resource.

93. The Parade Garden and King's House Garden have been maintained.

Travelling Instructors and Agricultural Society.

94. Two of the former Superintendents of Government Gardens are now Travelling Instructors under the direction of the Board of Agriculture. Twelve out of the thirteen agricultural parishes of the Island received visits of instruction from one or both of these officers. In the various districts of St. Ann, Manchester, Hanover, and Westmoreland, the visits were specially numerous. The peasantry are every year making more use of the instruction thus offered them. The Agricultural Society has also three local resident instructors who are doing good work. The Society's scheme of prizes for small holdings was carried out in Trelawny, St. Ann, St. Mary, and Manchester. New branches of the society were started by the Travelling Instructors.

Agricultural Chemical Work at the Laboratory.

95. The chemical analyses in the service of agriculture made at the Government Laboratory during the year numbered 320, as under—

Soils	74
Fertilisers	11
Feeding stuffs	12
Cassava	20
Food-products	10
Sugar	17
Rum	12
Canes	120
Cane Juices	27
Diseased plants	13
Injurious insects	4

In addition to these and the Police work performed, elsewhere referred to, the Government Analytical and Agricultural Chemist also made 13 analyses of waters, 2 of volcanic dust (not produced in Jamaica), 3 of lubricating oils, 1 of ambergris and 10 of other subjects. His Department also fumigated 226 imported plants.

96. From the above it will be seen that the work of the staff was largely devoted to soil analysis, the general conclusion from which is that the chief needs of our cultivated lands are not fertilisers but rather irrigation in the districts of small rainfall and a better standard of cultivation and farming all round. The outcome of the investigation justifies confidence on the part of the agriculturists of the Island in the high quality of its soils and the enormous reserves of fertility that good cultivation has to draw upon. A good deal of work on cassava was carried on during the year, and the Chemist points out that certain districts unsuited to other crops may find a welcome staple in cassava. There should be a considerable future for this article in the Island both for dietetic use and for the starch derived from it. American energy has already grasped the fact of the value of cassava, and with the aid of plants from this Island has established large cultivations.

Sugar.

97. The Laboratory is not made use of by the sugar industry for testing sugar to the degree it should be in the interest of the estates. Accurate polariscope tests in precise agreement with those in America can now be guaranteed at the Laboratory, a set of ten standard quartz plates having now been obtained. The analysis of the 102 varieties of sugar cane disclosed the fact that 60 of them, including nearly all the named sorts obtained from foreign sources in past years, were worthless and are to be discarded.

Minerals.

98. A few samples of genuine copper ore were examined, but proved to be of low grade. With regard to the anxiety on the part of the public as to glittering particles of pyrites or mica, Mr. Cousins points out that there is much gold to be got out of Jamaica, but that it must be won by the plough and the fork and find a transmutation from good produce well handled.

Ambergris.

99. One sample of ambergris from the Cayman Islands was received, and the Chemist points out that large finds of this pathological product of the whale would mean a fortune.

Fumigation of Plants.

100. The safeguard to the Island's industries effected by fumigation of imported plants was continued under the direction of the Chemist by the Customs and Postal Officers at the point of delivery.

Removal of Laboratory.

101. The removal of the Laboratory to its new quarters at Hope was effected at the beginning of the year. The new building is cool, fairly free from dust, and has more than ten times the working accommodation of the old building in the same cubical content. A system of lighting by Acetylene gas has been successfully installed.

Production of Rum.

102. The appointment of the Fermentation Chemist, elsewhere referred to, was approved during the year, and his arrival is awaited to start investigations in aid of the rum distillation industry.

General Position.

103. The working of all these agencies and the activity induced by them have already told in the cause of agriculture in this Island, and will tell more and more in years to come. In the words of last year's report, "a few favourable years will immensely strengthen the progress of agricultural improvement by demonstrating its pecuniary value."

(F.) IMMIGRATION AND NATIVE LABOUR.

104. There were no Indian immigrants introduced during the year.

105. Time-expired immigrants, to the number of 964 statute adults (1,125 souls), were returned to India, 664½ direct, and 299½ *viâ* Demerara. These immigrants took away with them, as the result of their savings in this Island, a total amount of £12,650 in Treasury Bills, in addition to gold coin and jewellery of an estimated value of £4,000. The grand total represents an average of over £17 per statute adult. In many instances the individual remittance exceeded £100, in some cases it approached £300, while one amounted to £381.

106. Three passports were granted to coolies to enable them to leave this Colony, two for Trinidad, and one for British Honduras.

107. The births among indentured immigrants numbered 53, a rate of 4·51 per cent., against 3·50 in the previous year. The death-rate was 3·40, against 4·17, and is expected to still further decrease now that all the coolies have become acclimatised.

108. The average rate of wage earned is slightly in excess of that fixed by Law. The amount in the Government Savings Bank at the credit of East Indian immigrants at the close of the (calendar) year was £22,087, as against £25,951, a decrease of £3,864. It will be observed that this decrease does

not amount to one-third of the amount taken away by the return coolies, so that it is evident that they possess other places of deposit for their savings than the Government Institution. Those still in the Island also remitted to their relatives in India the sum of £172. The relations between them and their employers continued to be satisfactory. From a return furnished to the Protector of Immigrants by the Collector-General, it appears that East Indian immigrants in Jamaica own property to the value of £35,929, consisting of 6,069 acres, that they pay taxes on 601 head of live stock, and that they possess 346 trade licences, and 103 spirit licences.

109. There were no murders among the East Indian population during the year, and very few cases of serious crime. The total number undergoing imprisonment at the close of the year was 15, or 1·26 per 1,000.

Local Labour Bureau System.

110. The necessity for the continuation of immigrant labour on properties in certain districts was proved during the year by the result of an earnest and serious attempt to use the services of the Immigration Department as a Labour Bureau for native labourers, to meet the increasing need of labour in the large fruit-growing parishes. The following extract from the Annual Report of the Protector relates the history of this attempt:—

"The arrangements were intrusted to this Department, and the Clerks of Courts, Clerks of Parochial Boards, and Inspectors of Poor throughout the Island were requested to act as labour agents. Arrangements were made with the Steamship Companies for the conveyance of labourers at greatly lowered rates, and their railway fares were reduced by one-half. The names of planters requiring labour and the terms offered were obtained and published in the newspapers for general information.

"With the exception of the parishes of St. James and Clarendon, however, but few applications were made to the Labour Agents in the matter, although there is no doubt that as a result of the Government's action in publishing the names of employers in need of labour, there was a considerable influx of transient labour into the fruit-growing parishes, which partly met the demand for the time being.

"At Montego Bay about 140 labourers listed their names for employment, but when arrangements were made for their transportation only 62 eventually embarked by steamer for St. Mary, where they were employed on banana plantations. The cost of their conveyance was advanced by their employers, and the labourers agreed to refund half the amount by weekly deductions from their wages.

"It cannot be said that the experiment proved a success, as many of the labourers did no work at all, while the majority left after a couple of days, in some instances decamping with tools which had been supplied to them. Hardly any stayed longer than a week or two (it was stated that they demanded to be paid higher wages than local hands, as they had come from a distance). The result was that the employers were out of pocket by their venture, and others have been discouraged from attempting a similar experiment. Another shipment was, however, made to St. Thomas with but little better results.

"The difficulty, as regards native labour, lies in the fact that the planter must have continuous labour on which he knows that he can rely. The native labourer will not bind himself to work by contract in his native land, and hence the necessity for the importation of the indentured East Indian coolie."

111. I may add that there are on the Statute Book provisions by which native labourers who are willing to bind themselves by indenture may secure all the advantages offered to those coming from India, but these provisions have never been availed of. This is not stated in any way as a matter of reproach, but as a matter of fact, as it is not to be expected that where, as happens here, the labourer can do better by working for himself he will contract to work year in and year out for other employers of labour. It, at the same time, however, disproves the truth of the notion that there is generally any unmet desire for employment, except, perhaps, in some districts where the labourers are very averse to leave their homes.

III—LEGISLATION.

112. Table IV. is a Schedule of the Laws, 33 in number, of the Session of 1902, assented to by the Governor or Acting Governor, or reserved for the signification of His Majesty's pleasure.

113. Of these, the following may be considered to deserve special notice:—

FISCAL.

Law 2.—The Savings Bank Unclaimed Deposit Law.

Law 5.—A law to repeal the Tax on Commercial Travellers.

Law 10.—A law to amend the Tobacco Duty Law.

Law 15.—A law to amend the Stamp Duty Laws.

Law 16.—The Property Tax Law.

Law 19.—A law to continue for one year certain increased taxation on lands in aid of General Revenue.

114. The first law is referred to in the section dealing with the Savings Bank; it transfers to General Revenue certain unclaimed deposits, subject to the establishment of claims thereto within three years.

115. The title of the second explains the object of the law. It was a law not in aid, but for the lessening, of General Revenue. It was found that the amount received from the taxation imposed on commercial travellers was not sufficient to outweigh the trouble and irritation caused by this tax, which was consequently repealed.

116. The amendment of the Tobacco Duty Law was made in order to place less burdensome restrictions on the trade, and to make a reduction in the Duty on cigars of a low grade.

117. Among the amendments to the Stamp Duties Laws which it was considered desirable to make in the third of the above-mentioned laws was one requiring every Insurance Company transacting business in the Colony to take out a licence at a cost of £25. The amending law also contains provision that United Kingdom solicitors shall not pay more for a certificate to practise in Jamaica than Jamaica solicitors have to pay if admitted to practise in the United Kingdom. The object of this is to enable Jamaica to get the benefit of the Colonial Solicitors' Act.

118. The Property Tax Law was not assented to by the Governor, for the reason already stated in last year's Blue Book Report, viz., that the returns of valuation were not completed early enough to allow legislation on their basis to be brought to perfection. In consequence, the law to continue for one year certain increased taxation on lands in aid of General Revenue was passed, pending the re-adjustment of taxation involved in the proposed new Property Tax Law. It was not, however, found necessary to re-enact the provisions of the earlier law, imposing an increased tax on various kinds of cultivation.

Valuation of Property.

119. A short but, in the conditions prevailing in Jamaica, a somewhat important addition was made to the Valuation Law of 1901, whereby an ingiving, to which all the provisions of the principal law apply, is required from every person in the possession or occupation of (1) any moveable inhabited dwelling house or other building not built into or permanently attached to the soil; or (2) any inhabited dwelling house or other building built into or permanently attached to the soil when the land, upon which the same is erected, is rented or leased by the person in possession of such house or building, and the person who owns the soil claims no right to or interest in such house or building, and makes no ingiving in respect

thereof. Had it not been for this amendment a considerable amount of property would have remained untaxed, for although there does not exist formally, nor is there by law established any Feu system such as exists in Scotland, there have grown in practice some portions of such a system, such as are referred to in the above-mentioned amending provisions, which rendered it necessary to make the alterations in question.

EMIGRATION.

120. Law 23 of 1902.—The Emigrants Protection Law, 1902. The reason for this law is explained in its preamble, viz., that it is considered desirable to regulate the emigration of persons to certain foreign countries, and to provide a fund for the purpose of relieving persons emigrating from this Island to such countries, in the event of such persons falling into distress, and, also, in certain cases, to provide for their return to Jamaica. The law, while it contained some amending provisions, was largely a Consolidating Law, and repealed the existing laws on the subject passed in the years 1893, 1894, and 1899. The probability, in the near future, of the resumption of work on the Panama Canal renders this subject of importance, as in such an event it is undoubted that there will be again a great demand for Jamaica labourers on the Isthmus.

CENTRAL FACTORIES.

121. Law 31.—The Central Factories Law. This law was promoted with the object of encouraging the establishment of central factories for the manufacture, preparation, or curing of any of the products of the Island, although the immediate object aimed at was the establishment of central factories for the manufacture of sugar, in view of the proposed early abolition of the Sugar Bounties. The law provided for the possible guaranteeing out of General Revenue of the capital (with interest) represented by the Debentures of a Company or of the interest alone; in the former case, the maximum interest guaranteed being 3½ per cent., and in the latter, 5 per cent. per annum. The proposal that the capital of any Company should be guaranteed was not approved by the Secretary of State, who also required that the rate of interest to be guaranteed should not in any case exceed any rate higher than that which the Government Inscribed Stock bears in the London market; this rate may be taken to be 3½ per cent. On the understanding that these amendments would be made in a law to be passed in the succeeding Session, and that their terms would be adhered to in any scheme which might in the meantime be approved by the Governor in Privy Council, the Secretary of State did not advise His Majesty to disallow the law. The changes in question caused some disappointment to promoters of certain schemes which had been under contemplation,

but the terms of the law (even as subsequently amended on these points) remain as an encouragement to capitalists who believe in a future for the sugar industry in Jamaica, and are at the same time willing to be sure of temporarily receiving only the moderate rate of interest in question.

MISCELLANEOUS.

122. Of miscellaneous measures the following may be mentioned:—

Law 8.—The Cruelty to Animals Law. This law repealed two existing laws on the subject, and re-enacted some of their provisions with additions and improvements so as more effectually to provide for the prevention of cruelty to animals. local Society having this object has since been formed and is now actively at work.

Law 12.—A law to consolidate and amend the laws relating to vagrancy—embodies in it what are considered by the Police to be some very useful provisions having as their aim the prevention of vagrancy.

Law 17.—The Country Fires Law. This law enacts provisions for the prevention of fires, through negligence, on cultivated lands and the getting out of control of "bush fires," which in the past have laid bare large areas in addition to the lands desired to be cleared by burning.

Law 21.—The Street Traffic Regulation Law. This is a useful little law which gives the Inspector-General of Police power whenever a street is likely to be thronged or obstructed to do all that is necessary to prevent a congestion of the traffic, and to provide for the safety and convenience of the public.

Law 24.—A law to regulate the business of Pawnbroking—modelled on the Act in force in the United Kingdom, and repealing the old Jamaica law passed over fifty years ago, sets forth in considerable detail the manner in which this business must be conducted.

Law 29.—The Rum Duty Laws Amendment Law—in one of its sections—provides for the reduction of the minimum penalty, and, in default of immediate payment, for imprisonment with hard labour in cases of possession of rum non-duty-paid, or distilled at any other place than a licensed distillery, and in the other section enlarges the powers of search for non-duty-paid rum.

Law 32.—The Vere Irrigation Additional Powers Law was passed, as it was considered desirable to enlarge the powers of the Vere Irrigation Commission in regard to the taking and using of lands for the purposes of the Vere Irrigation Works, which are expected to prove of much benefit to the district when in full operation. The Commission was also, *inter alia*,

given power to alter or regulate the course of any non-navigable river or stream.

Law 33.—The Industrial and Provident Societies Law. This is a somewhat lengthy law, based on the British Act, passed to encourage Industrial and Provident Societies in Jamaica, and to provide for their regulation, and it had the advantage of being revised, before introduction into the Legislative Council, by the Registrar of Friendly Societies in London.

IV.—EDUCATION.

123. (A.) ELEMENTARY SCHOOLS.

Year.	Schools on Annual Grant List.	Schools Inspected.	Scholars on Books.	Average Attendance from Monthly Returns.	Percentage in Average Attendance of number on Books.	First Class Schools	Second Class Schools.	Third Class Schools.	Total Payments to Elementary Schools and Teachers.
									£
1898–99	893	876	97,091	54,041	59·23	176	397	267	51,561
1899–00	746	776	98,598	51,470	62·08	187	357	219	47,240
1900–01	735	717	88,625	47,441	58·99	202	329	183	42,482
1901–02	728	726	84,799	46,110	61·51	189	341	183	42,936
1902–03	717	709	84,652	52,083	64·31	173	341	181	43,738

Number of Schools and Attendance.

124. The foregoing table shows a continuance in the reduction of the number of Elementary Schools entitled to annual grants, in pursuance of the policy of closing, or amalgamating with others, inefficient or superfluous schools. This policy was chiefly carried out in the year 1899-1900, when a reduction in the number of schools amounting to 147 was effected. In the

last three years of the period shown above there has been continued an average reduction of say 10 schools per annum, spread equally over the period. The number of scholars on the books, however, in 1902-03 is very slightly under the number in 1901-02, but the Superintending Inspector of Schools states that he thinks this is due to the more regular removal of the names of absentees from the Attendance Register, as required by the Code. In any case it would appear that the continuous decrease which has recently been observed has now been practically checked.

Increase in Average Attendance.

125. While probable improvement in the matter of numbers on the books may thus perhaps only be hinted at, improvement in the matter of average attendance is shown to have already occurred. The increase under this latter head has been 13 per cent. in the year, the increase in population being only about 2 per cent. for the same period. The number (52,083) in 1902-03 is shown to be greater than that in 1899-1900, when the schools were 29 more in number. It is only 2,000 short of the figure in 1899-1900, when there were 176 more schools. This is satisfactory and shows that the adverse tendency as regards mere numbers of the operations resulting from the recommendations of the Education Commission no longer exists. The improvements in the education effected at the same time of course remain, and will now reach, it is to be hoped, an increasing number of children.

Decrease in First Class Schools.

126. The falling off in the number of first-class schools is to be regretted, but the Superintending Inspector of Schools explains that the changes in the curriculum introduced two or three years ago imposed a harder task upon teachers than would have been involved in keeping along the old lines, and that some have failed to rise to the occasion. On the other hand, he reports that many teachers have welcomed the changes and thrown themselves into their work with increased energy, and that there is no doubt that in their schools, including the majority of the first-class schools, education is in a more satisfactory condition than it has ever been before,

Comparison of Jamaica Educational Results.

127. The following figures give the percentage of population on the School Registers and in average attendance at intervals of five years since 1881 and for the last two or three years, which

the Superintending Inspector of Schools, in view of certain recent criticism, has thought it desirable to give.

—	Percentage of Total Population.	
	On Registers.	In Average attendance.
1881	8·4	4·6
1886	10·0	5·6
1891	12·5	7·0
1896	14·4	8·6
1900	11·9	7·0
1901	11·2	6·9
1902	11·0	7·1

In considering these figures, it must be remembered that it was only in 1892 that there was passed the Elementary Education Law, which fixed an age limit of 14 for all Elementary Schools to come into force gradually, and that it is only in the last year or two that the age limits, still further reduced by the raising of the minimum from five years to six years, have been fully in force.

128. In addition to the foregoing figures, the Superintending Inspector of Schools in his last Report also gives some interesting figures relating to school attendance in other countries, from which comparison can be made with the results attained in Jamaica. These places consist chiefly of the States of the Union having a mixed population, with the addition as a standard of Massachusetts, as a representative of the older and more highly civilised States, and of some of the other West Indian Islands and Mauritius. I reproduce these figures below, together with the comments on them made by the Superintending Inspector of Schools.

State or Colony.	Average number of days the schools were kept.	Average number of days' schooling given for every child between 5 and 18 years.	Average number of days attended by each pupil enrolled.
Jamaica	175	40	109
Massachusetts	189	104·7	145·7
New Hampshire ...	135·3	71	99·1
Virginia	119	38·6	67·5
North Carolina	70·8	21·9	36·6
South Carolina	88·4	35·8	63·2
Alabama	78·3	35·7	61·9

State or Colony.	Average number of days the schools were kept.	Average number of days' schooling given for every child between 5 and 18 years.	Average number of days attended by each pupil enrolled.
Mississippi	105·1	37·9	58·8
Louisiana	120	37·3	89·5
Leeward Islands ...	165	42·5	72
Barbados	170	40	98
Mauritius	180	19	114
Grenada	170	44	83
Trinidad...	170	38	98

"If all the children included in the age limits recommended by the Education Commission in 1898 attended regularly every day school was open, the figure in the second column would be for Jamaica 75.

"These figures are certainly not calculated to encourage any feeling of boastfulness on our part, but it may prevent our being unduly depressed and discouraged to note that in this matter of school attendance we have been more successful than any of the old Southern Slave States, and do not compare unfavourably with our sister colonies under like conditions. We are all alike striving to attain better and still better results, and it would not appear that Jamaica is falling behind.

"Rapid increases in the Jamaica figures could no doubt be attained by the introduction of compulsion, in the gradual manner recommended by the majority of the members of the last Education Commission, or even by its partial enforcement in certain selected areas, but this result would be attended by such automatic increases in the school grants as to render it impossible for the present for this Government to adopt such recommendations without an increase of taxation.

"In the meantime we are compelled to be satisfied with such moderate increase as is shown to be now taking place, with its attendant additional charge on the public revenues, the latter of which in the year ended 31st March, 1903, was £802 more than in the preceding year, and in the current year is expected to still further increase."

Amalgamation.

129. With regard to amalgamation, the Superintending Inspector of Schools makes the following interesting remarks:—

"The results of amalgamation generally, so far as it is possible to determine, are much the same as stated in my last

Report. There is, on the whole, a considerable falling off in attendance, combined with a distinct improvement in efficiency. There is no doubt that the people like to have their own private denominational school, and are less ready to send out their children to an undenominational school managed by the Board. Strange as it may appear, small private schools spring up and flourish in the close neighbourhood of Government Schools, the teachers of which, sometimes, but not always, quite uneducated and inefficient, often collect their scanty fees in kind. The parents think they are showing their superiority to others by sending their children to 'private schools,' and fancy that they get more personal attention, which may sometimes be correct. In one case, in which the daughter of a minister of religion has a private elementary school, people who can afford to pay a small fee have no doubt some good reason for preferring it to the public school, and if the private schools were generally of this class there could be no serious objection to them. They have all the advantage, from the point of view of securing scholars, that they are not restricted by the age limits and other conditions of the Code. For the most part, however, the results at such schools are very unsatisfactory, though it is possible that in a few instances they may do some good, in giving a little education to boys and girls who have passed the age limit without availing themselves of the education provided by the public schools. As illustrating the objection of the people to send their children to any but their own denominational school, I may cite the case of two schools, at no great distance from Kingston, which were amalgamated with the full consent and co-operation of their Managers, two or three years ago. One was a first-class school with over 100 in average attendance, but held in a building which was in very bad order and quite unsuitable. The other was a second-class school of some 50 in average attendance, but held in a good substantial building capable of holding 200 children or more. With the full agreement of the Managers, the amalgamation was effected in the good building, and the school placed under an undenominational Board. So far, practically none of the children who formerly attended the better school of the two have attended the amalgamated school, but a few of them walk past the latter to a school of their own denomination, four miles distant. It seems clear that the mass of the people do not value education as such, but send their children to school with the idea of supporting their own particular sect, regardless of the quality of the teaching they receive. This is the more remarkable as sectarian teaching in the day schools is most unusual, and the people themselves, by the admission of many of their ministers, for the most part know little, and care less, about the real difference between their respective sects, even, I have been assured, in some cases between Protestantism and Roman Catholicism. The name is

to them merely a flag under which they fight. This unfortunate state of affairs is one of the greatest hindrances to educational progress."

130. In this matter, however, opinion among the more intelligent classes appears to be changing, and it is probably only a matter of time for the changed ideas to permeate the masses of the population. It is not likely that there will, in the near future, be any increased demand for such increased liberality of thought, as it is probable that the limit of good to be effected by closing and amalgamation of schools has now practically been reached, as was pointed out in last year's Report.

Results of Year under New Code.

131. The greater part of the new Code came into force on May 1st, 1902, and the remainder on January 1st, 1903. The Superintending Inspector of Schools in reporting on the year 1902-3, states that it is too early as yet to make any definite report as to many of its results, but adds that while there are advantages and disadvantages attaching to these as to all changes, there is no reason to suppose that the former do not in this case greatly outweigh the latter, and that it will probably not be possible for another year to estimate at all accurately their general effect. Attention in the reports of the District Inspectors of Schools is drawn to the following, among other weak points:—The frequent change of teacher, especially in the smaller schools; the removal of such a large proportion of children from school before they attain the limit of age, which is justly referred to as reducing the importance of the cry, in certain quarters, for an extension of the present age limit; the weakness of reading (though this does not seem universal), attributed to the want of greater facilities for reading in the shape of a sufficient number of school libraries; while organisation, and the state of many Admission Registers, are also adversely commented upon. On the other hand, it is gratifying to note that general improvement is reported in the teaching of Elementary Science, mainly Agricultural, as well as, in most districts, in Drawing and Manual Occupations. These are advances which, it is to be hoped, will bear valuable fruit in the future when the pupils in respect of whom the remarks apply become effective workers in the Island commonwealth.

The number of School gardens, for which a grant, under Article 112, is claimed, and the aggregate amount of grant under that Article, continue to increase, although the total figures still remain inconsiderable. The grants so paid in 1902-3 amounted to £77 12*s.*, as against £32 in 1899-1900.

Improvement Classes and Book Clubs.

132. The Improvement Classes, for continuing the education of children over school age, organised by the Senior Inspector

in the parish of Manchester (referred to in the last Report), have continued in operation, together with some others in other localities. Several book clubs, with the same end in view, are also successfully operated, but this movement is still in its infancy, and it is to be hoped that the valuable seed now being sown will in time bear fruit over the whole Island.

Expenditure.

133. The total amounts expended on Education in 1902-3 and 1901-2 respectively were as below:—

For Elementary Education.	1902–03	1901–02.
	£	£
Grants to Elementary School Teachers	43,738	42,936
Building Grants	265	179
Administration Inspection	4,813	4,819
Government Training College for Women Teachers ...	1,204	1,204
Grants to other Training Colleges	2,544	2,431
Agricultural Courses for Teachers	256	258
Board of Education and Printing	164	140
Total	£52,984	51,967

For Secondary Education.	1902–03.	1901–02.
Jamaica College	1,250	1,050
Scholarships	1,215	1,166
Secondary School, Montego Bay	200	200
Annuities to Endowed Schools (in consideration of the corpus of each endowment having been handed over to General Revenue).	5,244	5,244
Total	£7,909	7,660

Training of Elementary School Teachers.

Shortwood College.

134. This is a Training College for female Elementary School Teachers. It is managed by a mixed Board of Governors, which receives a grant of £1,200 a year from the Government, the buildings being owned by the Government. The 32 students in training were all presented for examination by the Education Department at the December Examination in 1902. Of these, 26 passed (three in Honours) and six failed. There is a Practising School in connection with the College, in which the students teach regularly. During the year the Lady Principal, who is also Principal of the Shortwood Industrial

School, visited the Industrial Schools in the Southern States of North America, and on her return made a report, which has been published.

Proposals have been adopted by which, in addition to the regular students of the Training College, certain students are admitted under special regulations to perform a large part of the domestic work of the Institution, the remuneration for which is to be retained by the authorities, in lieu of the entrance fee chargeable to ordinary students. At the end of the year there were eight such students, and 30 regular students, in addition to two paying students.

Examination of Teachers.

135. The usual examination of Training Colleges and teachers was held in December, 1902, with results shown as below:—

College.	Presented.	Passed.	Honours.	First Class.	Second Class.	Third Class.
First year students—						
Mico students, Jamaica ...	42	39	8	7	5	19
Mico students, Antigua ...	2	2	—	—	1	1
Shortwood	12	10	1	3	2	4
Bethlehem	10	10	2	3	—	5
St. Joseph's	1	1	—	—	—	1
Second year students—						
Mico students, Jamaica ...	20	18	8	4	6	—
Mico students, Antigua ...	5	5	2	3	—	—
Shortwood	13	11	—	2	5	4
Bethlehem	6	4	—	1	3	—
St. Joseph's	4	2	—	—	—	2
Third year students—						
Mico students, Jamaica ...	—	—	—	—	—	—
Shortwood	7	5	2	2	—	1
Bethlehem	4	4	—	1	2	1
St. Joseph's	1	1	—	—	—	1
Total	127	112	23	26	24	39
Teachers	9	3	—	1	2	—
Teachers for permanent registration.	17	8	—	1	1	6

136. On these results the Superintending Inspector of Schools makes the following observations:—

"The percentage of passes amongst students has risen from 81·8 last year and 85·7 the year before to 82·2. The number of teachers taking the Certificate Examination and the percentage of passes both show a decrease, whilst the reverse is the case with the Registration Examination.

"I may observe that, generally speaking, the Inspectors report improvement in the amount and character of the work done, and are of opinion that the teachers now leaving the Training Colleges are better equipped for their work than ever before.

"The Manual Training Classes at the Board School (Kingston) and the Mico have been successfully continued, and there are now four centres in the country, at Porus, Mandeville, Falmouth and Port Antonio, at each of which Teachers' Classes will probably be formed with assistance promised by the Government."

Pupil Teachers.

The following are the results of the examination of Pupil teachers held in July, 1902:—

Year.	Pupil Teachers.					Volunteer Candidates.				
	1.	2.	3.	4.	Total.	1.	2.	3.	4.	Total.
Presented	117	42	63	40	262	295	118	69	128	610
Passed	62	34	49	27	172	152	66	34	59	311
Per cent. ...	53	81	78	67	66	52	56	49	46	51

137. The total presented amounted to 872, the total who passed was 483, a percentage of 55. All that can be said with regard to the results is that they show improvement on those of the preceding year.

Board of Education and Revision of Code.

138. The Board of Education has recommended a few further changes in the Code, most of which met with the approval of the Governor in Privy Council, and came into operation in the last month of the year. Amongst these may be mentioned the following:—Provision has been made by Article 38*a* for the settlement of doubts or disputes as to payment of grants, and by Article 113*a* for a grant for the upkeep of tools and materials in schools where advanced manual training is taught, while the scale of marks (Article 28) has been revised in order to raise the marks for Drawing and Manual Occupations. In view of the fact that instruction in these last two subjects has now been given for some years in the Training Colleges, and has been available for teachers at the Manual Training School in Kingston, the Board of Education has considered that the time has come when the requirements of the Code in these subjects should be more strictly enforced, and, at its instance, the Superintending Inspector of Schools has issued a Circular, setting forth in what directions persevering work is now

expected. In addition to Kingston, advanced manual training work is now taught in rooms specially fitted up for the purpose at Port Antonio, Falmouth, Mandeville, and Porus.

139. Three new "Government" Elementary Schools have been recommended for, and have received the approval of, the Governor in Privy Council. The Board has also recommended the closing of four schools and the transforming of two existing schools into Government Schools, while it advised against the proposed amalgamation of two other schools. All of these recommendations have been duly approved by the Governor. The Board also advised the retention on the Annual Grant List of eight schools submitted for its consideration. In five of these cases I approved of the recommendation of the Board, but I considered it necessary to strike the other three off the list.

Manual Training School, Kingston.

140. This school, which consists of a department for boys and an infant department, has continued to do useful work. The Head Master also conducts classes for teachers in drawing and wood-work, and a wood-work class for scholars from other schools in Kingston. The Mistress of the infant school also trains teachers in kindergarten work.

Secondary School, Montego Bay.

141. The average number of boys on the books continued to increase, being for the three terms 38, as compared with 34 for the previous year. The report of the examiner, one of the Inspectors of Schools, was considered satisfactory. A good school library was purchased during the year.

Other Schools.

142. In addition to the above-mentioned schools and, in the preceding section, Training Colleges, there are numerous private schools, many of them furnishing a fair basis of education. A list of these is contained in the Blue Book.

Scholarships.

143. The Scholarships provided by Law No. 23 of 1901, viz., one of £200, one of £60, and six of £10 (three for boys and three for girls), have all been awarded on the results of the Cambridge Local Examination held in December, 1902. The former, which was founded by Sir A. Musgrave, over twenty years ago, under the name of the Jamaica Scholarship, and which is the chief prize in the Jamaica scholastic world, was on this occasion won for the first time by a girl, Miss G. C. Pearman. There are also fourteen £10 Scholarships, provided for pupils in Elementary Schools, thirteen of which were awarded during the course of the year.

(B.) Secondary Education.

144. A table (No. V.) is appended showing the number of scholars in the Secondary and other Endowed Schools of the Island, which are under the regulation of the Jamaica Schools Commission, and the results obtained at the Cambridge Local Examination during the year.

145. The work of these schools is tested annually under the Cambridge Local Examination Scheme. Altogether 155 students sat for the examination in December, 1902, and 128 passed, 44 in Honours. This record is creditable, and particularly so in the cases of the Jamaica College, Wolmer's School for boys and girls, and the Schools of the Munro and Dickenson Trust at Potsdam and Hampton.

146. The Jamaica College continues to provide facilities for local study for Degrees in Arts and Science at the London University, and for the practical training of scholars in Agricultural Science at the Government Botanic Garden and Agricultural Experiment Station adjoining the College premises. Mr. J. H. Roberts, M.A. of Oxford, and B.Sc. of the Welsh University, has been appointed Second Master. Mr. Roberts takes a Class in Science in the Government Teaching Laboratory, attended by Government Laboratory Agricultural Students and the members of some of the Classes in the College. This class is opened to students from other schools in the neighbourhood and was attended by two girls from Wolmer's School. Mr. Roberts also takes classes in a laboratory in the College fitted up mainly for the teaching of Physics. The College has also secured an Assistant Master, which now permits of the instruction of pupils in instrumental music (piano and violin).

147. Of six senior candidates for the Cambridge Local Examination, three were placed in the First Class, one in the Third, and the other two satisfied the Examiners. Of 15 junior candidates, 14 passed, one in the First, and three in the Second Division of the First Class, two in the Second, and four in the Third Class Honours, whilst four satisfied the Examiners. Of ten preliminary candidates, only five passed, one in the First and two in the Third Class in Honours, and two others satisfied the Examiners. One boy obtained five marks of distinction, and 11 more were gained by other boys in the College.

148. At Wolmer's School for Girls two candidates entered for the Cambridge Higher Local Examination in June, 1902, one took Languages, English Literature, History, and obtained a full Honours Certificate. A gratuity was awarded to her by the University of Cambridge. The other candidate took the groups Languages, English Literature, and History, and obtained a Pass Certificate. Candidates were presented for

Divisions I., II., and IV. of the Royal Drawing Society's Examinations, and obtained "a good result," as the Society's remark upon the work.

149. The Titchfield School aims at providing education of a "commercial" rather than of a "classical" character, its curriculum including Manual and Agricultural Training, Shorthand, and Typewriting.

The Manual Training is a special feature of the school. This branch was opened in the early part of the year under a trained instructor, and about 24 pupils received instruction with very satisfactory results.

150. The results of the Examination of the University of London during the year have been as follows:—Four candidates sat for the Matriculation Examination held in June, 1902; one passed next to the tenth in the original Honours List, and two in the First Division; one of the latter was a private student, and the other two who passed were scholars from the Jamaica College. One candidate sat for the Intermediate Examination in Arts in July, 1902, but did not pass.

Secondary School, Montego Bay.

151. The scholars numbered 37, as against 34 in the previous year.

152. In addition to the above-mentioned schools and colleges, there are the Mico, Shortwood, St. Joseph's, and Bethlehem Training Colleges for Teachers, which are aided by Government grants, the Manual Training School, Kingston, and numerous private schools, many of them furnishing a fair basis of education. A list of these schools is contained in the Blue Book return on Education.

(C.) Industrial and Reformatory Schools.

Stony Hill Reformatory for Boys and Girls and Industrial School for Boys.

153. The numbers, admissions during the year, &c., were as follows:—

—	Number on 1st April, 1902.	Number of Admissions.	Number of Discharges.	Number of Deaths.	Number on 31st March, 1903.
Reformatory boys	96	27	25	—	98
Industrial school boys ...	43	5	14	—	34
Total boys ...	139	32	39	—	132
Reformatory girls	20	3	2	—	21
Grand total ...	159	35	41	—	153

All the girls and the majority of the boys were between the ages of 12 and 16 years, 21 of the latter being between nine and twelve years and one (Industrial School) boy being under nine years of age.

154. The boys are employed under qualified tradesmen in carpentering, smiths' work, tailoring, masons' work, bricklaying, cooking and baking, and in garden and field cultivation. The girls wash all the clothing and bedding of the Institution, make clothing and clean their own premises. Owing to the decreasing number of boys, the assistant carpenter's services were dispensed with in the early part of the year, as also those of the assistant schoolmaster.

Two lads, one of whom had served six years in the Industrial School and the other had gained a Trades Scholarship, were apprenticed during the year to the Institution and have been doing good work in the carpenter's shop. The boys did work valued at £1,046 14*s.* 11*d.*, of which £449 7*s.* 11*d.* was paid for in cash by customers for their labour and produce, and the balance £597 7*s.* was the value of repairs and other work done for the Institution and of produce consumed there. The girls did work valued at £208 9*s.* 4*d.*, earning £1 12*s.* 7*d.* in cash. The value of the total work done by both boys and girls was thus £1,255 4*s.* 3*d.*, of which £449 7*s.* 11*d.* was earned in cash, thus reducing the cost of the Institution, which was £2,862 0*s.* 1*d.*, to £2,412 12*s.* 2*d.* From this latter sum may also fairly be deducted £17 18*s.*, the value of the boys' labour outside of the Institution at King's House, leaving the nett cost at £2,394 14*s.* 2*d.* A sum of £541 7*s.* 4*d.* was charged to and received from parochial funds in respect of the cost of Industrial School children, but this of course does not reduce the cost of the Institution. The daily average number of inmates in the year was 155, in the preceding year it was 164. The gross cost was 12·01*d.* and 11·89*d.* per diem respectively, and the cost of diet was 3·01*d.* and 2·99*d.* per diem respectively. There were no deaths and no very serious cases of illness, and the sanitary condition of the Institution is reported to have been excellent.

155. As in the previous year, special attention was paid to the curing of coffee and cocoa, and their shipment to England, which had resulted in better prices being obtained than if the articles had been sold locally. Of the former 35 cwt. and of the latter 3 cwt. were shipped in the latter part of the year under review and equally satisfactory results are again expected.

Other Industrial Schools.

156. The following summary shows the principal particulars regarding the other Industrial Schools of the Colony during the last financial year, as compared with the preceding year.

Principal Particulars regarding Other Industrial Schools.

—	Hope.	Shortwood.		Alpha Cottage.		Belmont.
	Under control of					
—	Government, with Board of Visitors (advisory).	Government, with Board of Visitors (advisory).		Roman Catholic Church.		Church of England.
Inmates:—	Boys.	Girls.	Boys.	Boys.	Girls.	Girls.
31st March, 1902	39	29	—	33	26	13
31st March, 1903	34	29	3	37	29	13
Health	Good	Good		Good		No special Report.

157. The usual routine work at the several Institutions has been maintained during the year, the boys for the most part being employed in field work and other outdoor labour, the girls being engaged in cooking, sewing, jippi-jappa hat making, general servant work, and laundry work. At Hope an effort is now made to keep in touch with the discharged boys. Shortwood School for Girls was during the year also certified as an Industrial Schoool for boys under eight years of age, of which latter, as will be seen, there were three at the close of the year.

158. Good reports are given of Hope and Alpha Cottage Schools by the Inspectors of Schools who examined them, the latter schools gaining first-class marks. The girls at Belmont and Shortwood attend the Elementary Schools immediately adjoining or near to them.

V.—GOVERNMENT INSTITUTIONS.

(A.) Hospitals.

(1.) *Public Hospital, Kingston.*

159. The Public Medical and Hospital Service of the Island is under the direction of Deputy Surgeon-General (retired), C. B. Mosse, C.B., C.M.G., Superintending Medical Officer.

160. The principal Government Medical Institution is the Public Hospital at Kingston. The Medical Staff consists of a Senior Medical Officer and two Resident Officers, with two

Supernumerary Medical Officers attached for duty, who are available for outside duty in cases of emergency. The number of the cases treated (3,454) in this hospital during the year 1902-1903 was 275 less than in the year 1901-02, although the daily average number of beds in occupation was 208 as against 207. Applications for admission to the number of 3,588 had to be refused for want of room, 7,872 persons were assisted as out-patients, the cases being divided into 926 out-patients with tickets from the Inspector of Poor and 6,946 casualties. There were 225 deaths compared with 241 in the preceding year, giving a death rate of 6·51 per cent. as against 6·46 per cent. of the cases in 1901-02. This mortality rate shows a very favourable record, considering that 58 or one-fourth of the total deaths occurred within 72 hours after admission. There were performed 1,268 operations followed by 25 deaths, a death rate of only 1·1 per cent., which evidences the skill of the surgeons and the excellence of the nursing service. The cost of the Institution is shown hereafter.

Principal Diseases Treated.

161. The most noteworthy diseases treated were as under—

—	Cases.	Deaths.
Malarial Fever ...	507	18
Venereal Diseases ...	258	3
Tubercle	69	21
Enteric Fever... ...	46	13

It is noticeable that owing to the diminished rain-fall during the year the admissions for malarial fever were less than one-half the number received in the previous year. The freedom from disease contracted within the Institution testifies to the continance of the high sanitary standard which has hitherto been a special feature in its life, and the results gained in the Institution continue to deserve appreciative public acknowledgment.

(2.) *Maternity Hospital, Kingston.*

162. The Victoria Jubilee Lying-in Hospital is conducted by a matron with assistants and pupil-nurses attached for training. The Medical Officer is also Surgeon to the General Penitentiary.

163. The admissions during the year numbered 651 as against 785 in the previous year, which, however, was a record number, being 302 in excess of that for the preceding year. The resources of the hospital were frequently severely taxed, and the good sanitary repute of the Institution was upheld solely by the exercise of the most intelligent supervision and ceaseless attention on the part of the matron and her assistants. The small adult mortality, eleven, or only 1·6 per cent., was principally due

to Eclampsia in women received in a hopeless condition. There was no death from septic infection. 55 infants died. The gross expenditure was £1,201, the nett expenditure, after deducting receipts, being £963, the average daily number of inmates was 31 (including 11 pupil-nurses), the annual cost per inmate was £31 1*s.* 7*d.* and the average total cost of each case (including pupil-nurses) was £1 8*s.*

164. The nursing school, the "raison d'etre" of this Institution, continued its good work and the number of applicants was far in excess of the pupil accommodation. Many of the certificated nurses who have passed through the school have by meritorious work in different parts of the Island as midwives and general nurses given testimony to the excellent training they have received. In every way this is an admirably conducted hospital.

(3.) *Public General Hospitals.*

165. In addition to the Public Hospital at Kingston there are 19 Public General Hospitals in various districts of the Island under the charge of the District Medical Officers. During the year 1902-03, 9,131 persons classified as below were treated in these hospitals. The figures for the year before are also given for comparison.

—	1902–03.	1901–02.
Ordinary cases (free)	4,247	4,146
Indian immigrants	4,216	5,798
Paupers	44	154
Paying patients	173	162
Constables	446	576
Prisoners	5	6
Total	9,131	10,842

166. There were 275 deaths in these hospitals, a rate of 3·02 per cent. The operations performed numbered 1,771, in 25 of which death ensued. This shows a mortality rate of 1·4 per cent. The outdoor patients attended in the last two years was as below.

—	1902–03.	1901–02.
Constables	1,928	1,931
Prisoners	1,327	2,785
Paupers	16,460	13,341
Indentured immigrants	1,691	1,439
Parochial Midwifery cases (paid for from Parochial Funds).	93	86
Total	21,499	19,582

Principal Diseases Treated.

167. The most prevalent diseases treated in these hospitals were malarial fevers, 2,763 cases (1,787 less than the previous year); skin diseases, 1,027; diseases of the digestive system, 485; generative, 442; rheumatic, 399; respiratory, 315; diseases of cellular tissue, 298; and syphilis 275. As regards this last mentioned disease, it is satisfactory to note that although some very grave cases were treated in hospital the number of cases was decidedly less than in previous years and their condition on admission less severe. Enteric fever was responsible for 66 cases and 11 deaths, equal to a rate of 16·7 per cent.

168. It has not been found possible to permit the hospitals to resume full working strength, economy having had to be exercised in this as in other directions, and the medical officers have at times had to refuse applicants for admission lest the regulated numbers should be exceeded. It is well to mention, however, that in extreme or serious cases the medical officer is authorised to exceed the specified number. As usual the indentured Indian immigrants constituted a large proportion of the hospital admissions, but it is satisfactory to note that they were less by 1,582 or 27 per cent. than in the previous year. The most frequented hospitals were those at Annotto Bay (1,866), Port Antonio (1,180), Port Maria (1,001), Lionel Town (930), Spanish Town (652), and Buff Bay (561). The high numbers in all of these (except, perhaps, Spanish Town) were greatly swelled by Indian immigrants. Of late many cases of Ankylostomiasis have been encountered among the coolies, and it has been made clear that the disease has been introduced with the coolies from India. The coolies thus affected, unless submitted to active and early treatment, rapidly deteriorate in health and become unequal to agricultural labour.

169. As was stated in last year's report, the value of the work done by these hospitals in relieving suffering and in checking the spread of disease is very great, and would be far greater were cases sent in to them in earlier stages of illness. The treatment in them of skin diseases and ulcers, to which the West Indian peasantry are very subject, and which yield readily to early attention, but which if neglected cripple the patients, is in the opinion of old and experienced observers in Jamaica showing a marked impression on the prevalence of these affections. The general excellence of the administration of these Institutions bears testimony to the good work of the officers immediately responsible and their effectual supervision by the Superintending Medical Officer.

(B.) Asylums.

(1.) *Lunatic Asylum.*

170. The staff consists of one Medical Superintendent and two Assistant Medical Officers.

171. There were 863 patients in the Lunatic Asylum at the beginning of the year, and 959 at its close—475 males and 484 females. 118 males and 108 females were admitted during the year, making 1,089 patients under treatment, or 39 more than last year. 76 patients were discharged and 54 died. The nett expenditure on the Institution was £14,511, the daily average number of patients 915, the average annual cost of each patient was £15 17*s.* 3*d.*, and the average daily cost 10·43*d.* The increase in numbers is due only in part to increased admissions, largely to a diminished death rate and fewer recoveries. It was found possible during the year to give some relief to the overcrowded male ward by fitting up a small ward of the new buildings which had been awaiting completion.

(C.) Medical Department.

Cost.

174. The following table shows the expenditure on the various Medical Services and the nett cost to the Island (exclusive of the upkeep of buildings):—

Head of Service.	Gross Cost.	Amount of Dues paid into Treasury.	Nett Cost.
	£	£	£
Head Office	5,166	236	4,930
District and Supernumerary Medical Officers (salaries).	6,889	281	6,889
Public General Hospitals	8,050	—	7,769
Government Dispensary	138	157	19*
Attendance on Immigrants (Fees to Medical Officers).	390	—	390
Yaws Fees (to Medical Officers)	103	—	103
Vaccination Fees (to Medical Officers) ...	1,561	—	1,561
Drugs and Poisons Law	15	—	15
Quarantine	492	—	492
Central Board of Health	36	—	36
Medical Council...	—	—	—
Medical Officer, General Penitentiary ...	250	—	250
Health Officer, Port Royal	450	—	450
Lepers' Home	2,144	—	2,144
Public Hospital, Kingston	7,785	347	7,438
Lunatic Asylum	15,040	518	14,522
Maternity Hospital	1,201	237	964
Total	49,710	1,776	47,934

* The profit here shown is only apparent. To the cost there should be added £107 for drugs supplied, included in the Head Office; the nett cost is therefore £88.

175. It may be mentioned that the services, payment for which is included in the salaries of the District Medical Officers, include attendance on the constabulary and paupers in their Districts in addition to hospital work, if any, and, on occasion, advice to Parochial Boards. There were on the 31st March, 1903, 35 District Medical Officers, seven of whom had had more than 20 years' service, one of them even 25 years.

Miscellaneous Medical Services.

176. Tickets under the system for affording medical aid to poor persons not on the pauper rolls were issued to the number of 5,867 at 1*s.*, 3,043 at 2*s.*, and 14 at 3*s.*; of the two former, 5,864 and 2,868 were in Kingston. The number of Dispensary pupils at the Kingston Public Hospital at the close of the year was 14. Two general examinations under the Drugs and Poisons Law were held in Kingston, at which 37 candidates presented themselves and were granted licenses to dispense. There were 26,596 successful vaccinations during the year, 12,125 more than in the previous 12 months.

Quarantine.

177. The Proclamations declaring the several ports of the Republic of Brazil, certain portions of the Carribean coast of Costa Rica, Venezuela, and Colon to be infected places within the meaning of the Quarantine Law continued in force during the year. The quarantine methods hitherto pursued in this Island have at times been subjected to adverse criticism by the shipping community, but however desirable it might be to adopt the system in vogue in Great Britain, the Superintending Medical Officer considered that machinery does not exist in Jamaica for the conduct of quarantine on the latter system, nor do all the circumstances surrounding the majority of the inhabitants lend themselves to such a system. It is, however, in contemplation to hold a Conference of representatives from the different British West Indian Islands, in order to pave the way for an introduction of methods more uniform and, if possible, imposing less stringency on the commercial communities.

(2.) *Lepers' Home.*

172. The Medical Superintendent of the Lepers' Home is also Surgeon to the Spanish Town Public Hospital.

173. The number in the Home at the beginning of the year was 112, the admissions were 19 (three re-admissions), two were discharged, two absconded, and 17 died, leaving 110 at the end of the year. The Medical Superintendent reports that the records still continue to show a favourable decrease of leprosy

in Jamaica. The death-rate was 13 per cent.; the average longevity of leper life in the asylum of those who died was: Anæsthetic, 21 years, 2 months; Tubercular, 6 years, 9 months. Of the 17 deaths, 6 were accelerated by Bright's disease of the kidneys. The chief intercurrent diseases treated were ulcers and diseases of the digestive system. As was observed in last year's Report, the excellent record of this Institution has been well maintained during the year. The Medical Superintendent reports well of the conduct of the patients, and acknowledges the continued kindness and assistance of visitors and clergy. The cultivation of the land taken in a few years ago continues to be of interest and profit to the inmates.

(D.) Poor Houses and Poor Relief.

Administration of Poor Law.

178. Poor Relief in this Island is administered by the various Parochial Boards under the general control of a Board of Supervision. It is based on the principle that any destitute person unable to work and earn the means of subsistence is entitled to relief. The giving of relief is in the hands of the Parochial Boards, with a right of appeal, in cases of refusal of or inadequate relief, to the Board of Supervision.

179. Tables VII. and VIII. annexed furnish particulars of the number of persons maintained or relieved out of the Poor Rates, and of the same amount expended for maintenance of those purposes in the different parishes in the year under review, and, as regards the Island, in the last four years.

Lunatics and Industrial School Children.

180. It will be seen that the statistics as to numbers and expenditure discriminate between relief given in the parishes to the ordinary outdoor and indoor poor and relief afforded outside of the parishes in Industrial Schools and in the Lunatic Asylum, both of which are Government Institutions. The former class of relief is in the hands of Parochial Boards, and responds to good administration, while the latter is practically beyond the control of the Boards, being, with few exceptions, charges imposed upon the rates by the Magistracy, by whom committals to the Industrial Schools and the Lunatic Asylum are ordered under the laws dealing with the matter.

181. It is satisfactory to note that the number of indoor and outdoor poor at the end of 1902-3, which was 4,919, shows a decrease of 79, as compared with that at the beginning of the year. This represents a decrease in the percentage of paupers to the population of 0·01, but this is balanced by an increase of the same amount in the percentage of Industrial

School children and lunatics combined, so that the percentage of the total remains the same.

Decrease of Pauperism.

182. The decrease in the pauperism of the parishes occurs chiefly in the following, viz.:—St. Thomas (32), St. Mary (41), Trelawny (12), Hanover (52), Manchester (15), Clarendon (11), and St. Catherine (10); on the other hand, there are increases in Kingston (23), St. Andrew (21), Westmoreland (12), and St. Elizabeth (22), showing, as already stated, a net decrease of 79 in the year. The Board of Supervision express the hope that, with the return of further prosperity to the Island, the number may still further decrease, if not actually at least relatively to the population.

Expenditure.

183. The expenditure in the parishes was £25,742, practically the same as that (£25,259) in the previous year, the decrease in numbers, which represents the position at the close of the year, not yet affecting the result in expenditure. The total charge per head of population for all kinds of relief within and without the control of the Parochial Boards remains the same, viz., 1*s.* 1*d.*

184. The table giving details in respect of the several parishes shows, as usual, considerable differences in the ratio of paupers and expenditure to population. The percentage of paupers to population varies from 0·19 in St. Mary to 2·19 in Kingston. The former parish is, or was before the disastrous cyclone which, at the moment of writing, has just occurred, one of the greatest banana-producing parishes of the Island, and in addition possesses a well-regulated poorhouse.

(E.) Savings Bank.

Increase of the Balance at Deposit.

185. The Government Savings Bank had at credit of depositors on the 31st March, 1903, £435,833 12*s.* 1*d.*, and held on account of this liability £420,849 10*s.* 7*d.* in investments and £14,984 1*s.* 6*d.* in cash. The balance of deposits had increased during the year by £11,185 5*s.* 11*d.*, being the amount by which the total deposits (including interest), £222,433 10*s.* 11*d.*, had exceeded the withdrawals, £209,406 2*s.* 1*d.*, plus a sum of £1,842 2*s.* 11*d.* withdrawn from credit of old accounts and transferred to General Revenue, as hereinafter referred to.

186. The following table shows the divisions of these transactions between official and private accounts, and the comparative figures of the four preceding years:—

Year.	Number of Accounts.	Deposits, including Interest.		Withdrawals.	
		Government.	Ordinary.	Government.	Ordinary.
		£	£	£	£
1898–99 ...	31,870	47,084	189,480	29,345	183,344
1899–1900	32,880	34,303	195,141	59,9[illegible]	194,744
1900–01 ...	33,659	42,420	177,964	40,041	198,135
1901–02 ...	34,537	44,519	162,245	49,769	183,213
1902–03 ...	32,569	42,702	179,731	45,284	164,123

187. The total number of accounts shows a fall as compared with the previous year, and now stands at about the number shown in 1899-1900, but the total amount deposited on ordinary accounts shows an increase over the preceding year of £17,486, while the total amount, similarly withdrawn, shows a decrease of £19,090, thus showing, as compared with 1901-2, an increase of nett savings amounting to £36,576. The nett increase to ordinary depositors' accounts in the year under review, as shown by the excess of deposits over withdrawals, amounted to £15,608. As adverse circumstances manifest themselves by a decrease in ordinary deposits and an increase in ordinary withdrawals, the foregoing figures are satisfactory, and give indication of that tendency to returning prosperity which is disclosed by the other returns commented upon in this Report.

188. The disposition of the deposits and withdrawals among the various parishes is shown in the following table:—

Parish.	Deposits, including Interest.	With-drawals.	Gain.	Loss.
	£	£	£	£
Kingston	101,028	87,668	13,360	—
St. Andrew	845	892	—	47
St. Thomas	4,173	3,921	252	—
Portland	10,124	8,393	1,731	—
St. Mary	7,946	6,900	1,046	—
St. Ann	4,393	5,829	—	1,436
Trelawny	4,784	4,026	758	—
St. James	9,731	8,530	1,201	—
Hanover	2,974	6,708	—	3,734
Westmoreland	5,969	7,440	—	1 71
St. Elizabeth...	2,547	2,805	—	258
Manchester	7,308	6,055	1,253	—
Clarendon	6,277	7,010	—	733
St. Catherine	11,631	7,944	3,687	—
Total	179,770	164,121	23,288	7,679

Old Accounts.

189. Under the provisions of the Savings Bank Unclaimed Deposits Law No. 2 of 1902, a sum of £1,842 2*s.* 11*d.*, representing deposits on which no transactions had taken place within a period of 14 years, was transferred to the credit of General Revenue Account, to remain in the Public Treasury for three years, subject to duly substantiated claims, invited by advertisement in terms of the law. Should no such claims be received, the deposits, which mostly consist of amounts of a few shillings each, will become part of the assets of the Island. The names and amounts were first advertised towards the end of the year, and a large number of applications have since been received. The nett amount to be gained by General Revenue will, therefore, probably not be large, but the operations will have the effect of clearing the Savings Bank books of large numbers of "dead" accounts.

Source of Profit to Colonial Government.

190. The Savings Bank is directly profitable to the Colonial Government, the excess of interest on investments, £16,237, over interest paid to depositors, £9,877, and all costs of management, £2,703, amounting in the year under review to £3,657. The average amount so received for the 33 years of the Bank's existence has been over £1,000 per annum.

VI.—CRIME, POLICE, AND PRISONS.

Police Statistics.

191. The number of persons apprehended or summoned before the magistrates by the police was 28,223, comparing with 27,399 in 1901-2 and 25,661 in 1900-1. The total number of convictions in the Circuit Courts was 127, comparing with 128 in 1901-2, and in the Resident Magistrates' Courts, 3,801, comparing with 4,166; a total of 3,928, as against 4,294 in the Superior Courts. The summary convictions before magistrates in Petty Sessions were 12,669, against 12,319 in the previous year. Of the summary convictions, 2,373 were for offences against the person (1,904 the previous year), 519, compared with 621, for offences against property other than prædial larceny, and the remainder (9,777) for other offences, principally disorderly conduct, obscene and abusive language, cruelty to animals, trespass and offences against Highway Laws.

192. Of the convictions in the Circuit Courts and Resident Magistrates' Courts, 463 were for offences against the person, as against 276 in the previous year; 651 for prædial larcency, as against 1,137 the year before; 1,177 for other offences against property, comparing with 1,299; and 1,637, against 1,382, for other offences.

Serious Crime.

193. There were two convictions for murder, but in neither case was capital punishment carried out. In one of these cases the condemned man was sent to the Lunatic Asylum, and in the other the sentence was commuted to imprisonment for life. There was in addition one case of murder of an old man in Clarendon and one of infanticide in St. James' where the perpetrators were not discovered.

194. In the early part of the year a detachment of police under the command of the Inspector-General had to be despatched to St. James' on the occasion of the riots in the town of Montego Bay. These riots formed the subject of a special Commission which furnished the Government with an exhaustive report concerning them, including the conduct of the police, who received commendation for their action. Briefly, they may be stated to have been police riots in that they brought to a head a long standing feud of a rowdy element in the town and neighbourhood with the police, to which there may have been added a feeling of unrest caused by misapprehensions as to the effect of a proposed change in certain forms of direct taxation. In this matter the assistance of the Naval and Military Authorities was also invoked, and H.M.S. "Tribune" and a detachment of the West India Regiment were also despatched to Montego Bay, where their prompt arrival on the scene doubtless prevented a recurrence of disorder. The services of these branches of His Majesty's Forces duly received the thanks of the Secretary of State for the Colonies and of this Government. Forty-two persons were shortly after convicted in connection with these riots and sentenced to various terms of imprisonment.

195. A body of police had also to be sent to Portland to protect the Bailiff of the Resident Magistrate's Court, in ejecting certain parties from lands in the Buff Bay District, a duty which was performed without serious trouble.

Prædial Larceny.

196. It is satisfactory to note that as regards the crime of prædial larceny, which forms such a blot on the reputation of the people of Jamaica, the Inspectors of Police are able generally to report considerable improvement. As already stated, convictions fell from 1,137 in the previous year to 651 in the year

under review, a decrease of 486, while the decrease in arrests was 660. Various reasons are given for this, and the police officers in the several districts differ considerably in their opinion as to the cause. The better condition of the peasantry, increased severity on the part of the Resident Magistrates in punishing for the offence, greater activity on the part of the rural police, more plentiful employment on the estates, are among the various explanations offered. It is regrettable, however, that in St. Mary, where no one need steal through want, there is some increase in the number of cases—probably this is attributable to the fact that with bananas all round and about them more temptation is offered to the evil-disposed.

Vagrancy.

197. From the reports of several of the Inspectors of Police, it appears that the new Vagrancy Law, No. 12 of 1902, is working very well and has proved a most useful and beneficial measure, enabling the police to deal with a class of characters about whom there was formerly some difficulty. In consequence, the cases in the whole Island increased by 186 over the number in the previous year, the city of Kingston accounting for 119 of these. By the direction of the Secretary of State for the Colonies, a special report on the working of this Law is shortly to be made by the Inspector-General of Police.

Country Fires.

198. The provisions of another law passed in the year 1902, viz., the "Country Fires Law" No. 17 of 1902, are expected by the Inspector-General to prove of considerable benefit to the country, after the terms of the law have sunk well into the minds of the peasantry, in preventing the destruction of property by the careless use of "bush-fires."

Habitual Criminals.

199. There were 1,967 habitual criminals under police surveillance on the 31st March, 1903, being 24 more than on the 31st March, 1902. Of this class of persons, 807 were sent to the Penitentiary during the year under review and 787 were discharged from the Penitentiary. Those persons simply under surveillance are not compelled to report themselves to the police, who on the contrary have to search for them. There were in addition 129 other criminals, viz., 17 ticket of leave convicts and 112 habitual criminals under "supervision," who were compelled to report themselves periodically to the police, making a total of 2,096 criminals whom the police had specially to look after.

As stated in last year's Report, the Inspector-General is of opinion that an increase of police "supervision" with even a

decrease in the lengths of imprisonment would prove more effective in decreasing crime. The Inspector-General anticipates that Law 8 of 1903, which effects an amendment in the Obeah Law, should have a good effect in this direction, as it empowers Resident Magistrates to award police "supervision" in such cases.

Chemical Analysis in Police Cases.

200. The Government Analytical and Agricultural Chemist to whose agricultural work reference has already been made in the section of this report relating to agriculture, dealt with 125 samples submitted to him for analysis by the police. These came under the following heads:—

Human viscera	10
Substances for poison	29
Clotting for blood	7
Petroleum law	1
Counterfeit coins and apparatus	72
Beeswax	6

He also analysed 74 subjects for the Customs and two for the Post Office Department. He states that experience supports the view that opiates and rat poison are practically the only poisons sucessfully employed for felonious purposes in Jamaica. This opinion does not therefore support the view at one time held that in cases of Obeah poisoning vegetable poison obtained from little known plants of the country were freely made use of, unless indeed the explanation be that their evanescent character leaves no trace that can be detected at any interval after death. The conclusion drawn by the Chemist is, however, probably correct. With regard to counterfeit coins, he states that the most dangerous ones were made from South American dollars, with an addition of tin and silvered on the surface. A local industry, confined however entirely to Kingston, in adulterated bees-wax, the foreign substances being wheaten flour and corn-meal, flourished for a time during the year. With the aid of the police and the Chemist this has, it is hoped, been stamped out. The Island Chemist's Certificates Law of 1902 has saved time and money by rendering attendance of the Chemist unnecessary at preliminary examinations.

Strength of the Police Force.

201. The allowed strength of the regular constabulary during the year was again 775, 17 officers, 137 sub-officers and 621 constables; at the close of the year the force was 13 below this strength. In addition there were 812 district constables, giving in all an effective police establishment of 1,574 of all ranks.

The new district constables are again reported on satisfactorily by the Inspector-General, who has lately issued for their guidance a special Book of Rules and Regulations. Law 28 of 1903, exempting each district constable from the tax on one horse that is always available to and used by him in the performance of his public duties, will, it is expected, materially add to the work of this most useful auxiliary to the regular constabulary. The Inspector-General again urges the increase of the Police Force. His wishes in this direction have been partially met by the approval as from the beginning of the present financial year of an increase of eleven mounted policemen for Kingston, and the increase by fifty of the number of sub-officers and men in the country parishes, who are each granted a forage allowance in aid of the keep of a pony, which, when occasion requires, is used in the performance of police duty. The mobility and usefulness of the force are thus much increased, and I have since the beginning of the current year authorised a still further increase in this direction up to the full number (80) for which additional provision had been made in the estimates. The Inspector-General's proposals for further increase of the force will continue to receive my attention, but in this connection I may here state my conviction, one shared by others well able to judge, that the effect of the excellent conduct of the police on the occasion of the Montego Bay Riots above alluded to was alone equivalent to an increase of many men to the force, without the opportunity thus afforded to them of showing their worth in times of trouble. With increase of population and of activity in various branches of trade it is of course to be expected that the work of the police will increase, in instance of which it may be mentioned that in carrying out the general patrol and other services performed they travelled 767,269 miles in 1902-03, against 720,445 in 1901-02 and 671,848 in 1900-01.

Prisons.

202. The prisons of the Island are under the supervision of the Inspector-General of Police and Prisons. They consist of the General Penitentiary for prisoners whose term of sentence is one year or more, and the St. Catherine District Prison for short term prisoners and persons awaiting trial. Certain specified lock-ups are also prisons for the confinement of persons sentenced to terms of fourteen days or less.

Number of Prisoners.

203. The daily average number of prisoners in the General Penitentiary was 560, against 663 for the previous year. There were 528 prisoners in custody there on the 31st March, 1903, against 596 on the 31st March, 1902. The daily average of prisoners in the St. Catherine District Prison was 502, against

527 in the previous year; the number in custody there on the 31st March, 1903, was 539, against 514. Altogether there were 1,067 prisoners at the close of the year, against 1,110 at the beginning, a decrease of 43.

Number of Committals.

204. The committals to the General Penitentiary during the year were 946, as against 1,259 in 1901-2; to the St. Catherine District Prison, 2,518, against 2,825 in the previous year. There was thus a total decrease of 620 in the committals to these prisons as compared with the previous year. 1,076 persons were committed to local lock-ups for terms of imprisonment of 14 days and under, as against 1,003 in the previous year.

The grand total of committals in 1902-3 was therefore 4,540, or 547 less than in 1901-2.

Deaths.

205. The deaths in the General Penitentiary were 16, against 30, and in the St. Catherine District Prison, 18, against 36 in the previous year. There were no executions of capital punishment. The sanitary state of the prisons is reported to have been satisfactory.

Expenditure and Earnings.—Employment of Prisoners.

206. The gross expenditure and cash earnings, &c., were as under:—

—	General Penitentiary. Average Daily No.: 560.		St. Catherine District Prisons. Average Daily No.: 502.	
	£	s.	£	s.
Gross Expenditure	12,124	0	6,121	0
Cash Earnings	3,620	0	482	0
Nett Total Cost to General Revenue ...	8,504	0	5,639	0
Nett Cost per Prisoner per Annum	15	2	11	2
Total Estimated Value of Labour not Paid for	2,045	0	4,032	0

The prisoners were employed at both prisons as carpenters, coopers, tinsmiths, wheelwrights, masons, shoemakers, tailors, blacksmiths, matmakers, brickmakers, upholsterers, painters, printers, bakers, cooks, quarriers, lime-burners, and stone-breakers, and at the St. Catherine District Prison also in cultivating land, as specially referred to hereafter. Among the other work performed by labour not paid for, may be mentioned

the washing done by the General Penitentiary for the Kingston Public Hospital to the value of £495, and in the St. Catherine District Prison the completion by the prisoners of new offices and storehouses and of two cottages for European Warders, and the quarrying of stones for the Public Works Department to the value of £522.

Prison Farm.

207. A prison farm has been established at the St. Catherine District Prison on 60 acres of land purchased from St. Jago Park for the purpose.

208. The land was only acquired in September, 1902, and had to be cleared and laid out before planting. The following are the figures of the Balance Sheet at the 31st of March, 1903, extracted from the Prison Farm Ledger:—

—	Cr.			Dr.		
	£	s.	d.	£	s.	d.
Tools	—			29	17	7
Mules	—			32	11	0
Imprests	17	3	1	—		
Agricultural Supervision	—			17	3	1
General Revenue	37	4	1	—		
Public Buildings Loan...	1,823	12	3	—		
Capital	—			1,800	10	3
Profit and Loss	2	2	6	—		
Total	1,880	1	11	1,880	1	11

From this it will be seen that the operations at the farm showed a small balance of profit (£2 2*s.* 6*d.*) after paying all working expenses and interest on the capital spent. There were at the same date on the ground, crops estimated at the value of £125 and wood cut to the value of £105. The value of the crops was increasing daily, and there was a large amount of wood yet uncut on the property. In this account the value of the labour employed has been charged up at the rate of 3*d.* per day per labourer. Experiments are being made in the cultivation of cassava, corn, beans, onions, other vegetables, rice, and cotton, from which very useful results are anticipated. The farm has been under the general direction of the Board of Agriculture, to whose Chairman, the Colonial Secretary, belongs the principal credit for its establishment and successful inauguration. In submitting, in departmental course, a report on this farm, Mr. Olivier stated that the results appeared to the Inspector-General and himself to be extremely satisfactory, and to promise a success to this undertaking fully equal to the expectations in reliance upon which they had urged its inception.

VII.—VITAL STATISTICS.

(A.) Population.

209. The mean Island population for the year 1902-3, on which the marriage, birth, and death rates are calculated, is estimated by the Registrar-General at 778,102, and the population on the 31st March, 1903, at 785,434, a result obtained by taking the Census figures of 1891—639,491—and adding the subsequent annual natural increases. This increase for the year under review was 15,192, the largest on record. Males comprised 381,201 and females 404,233 persons. At the Census of April, 1891, the numbers were 305,948 and 333,543, so that the respective increases were 75,253 males and 70,690 females, thus tending, by the slight preponderance of males, to equalise the numbers of the sexes, the balance of which, the emigration to Colon, which covered the greater portion of the decade 1881-91, had disturbed by drawing away many thousands of men.

210. Returns of the labourers who left or arrived at Island ports show 3,257 departures and 3,212 arrivals, figures which almost balance, and consequently scarcely affect the results obtained by adding the natural excess for the year of births over deaths to form an estimate of the population. In the absence of a Census in 1901, steps have been taken to obtain from steamship agents monthly returns of inward and outward passengers. The particulars furnished will enable more accurate estimates of the increase of population to be obtained in future years.

Births, Deaths, and Marriages.

211. Marriages registered during the year numbered 3,601, an increase of 399 over the figures—3,202—for 1901-2. The respective proportions per 1,000 estimated population were 4·6 and 4·1. The average for the quinquennium ended 1902-3, was 4·46, for the previous quinquennium, 4·68. As might be expected, the years of least prosperity, taking the value of imports and exports as a criterion, were the years with the lowest proportion of marriages to population.

Births registered during the year numbered 30,605, giving a rate of 39·3 per 1,000, or slightly above the average for the decade.

Deaths registered were 15,413, or 19·8 per 1,000. This death-rate was the lightest during the decade.

212. Of the 30,605 births registered, 19,752, or 64·5 per cent., were illegitimate. Illegitimacy tends to increase and contributes greatly to the large infant mortality. Thus, while the proportion of deaths of all children under one year of age was 16·1 per cent., legitimates showed only 12·72 per cent., as compared with 18·10 per cent. for illegimates. Doubtless the fact

that persons of the comparatively well-to-do classes who are usually the more educated and careful get married, while comparatively poor and ignorant persons appear to prefer irregular sexual relations, largely accounts for this striking difference. A Commission is now enquiring into the working of the Marriage and Registration Laws, and the conditions leading to the prevalence of illegitimacy, and it is to be hoped the members will obtain data which will be helpful in the solution of this grave problem.

Cayman Islands.

213. It is pleasing, from the point of view of this Dependency, to contrast its conditions in the above-mentioned respect with those of Jamaica. Of 149 births in Grand Cayman, a rate of 29·4 per 1,000, 14·7 per cent. were illegitimate. There were 41 deaths, an annual rate of only 8·1. In the lesser Cayman Islands the total births were 36, only 3 being illegitimate, while the total number of deaths were 6. There were 46 marriages throughout the Cayman Islands, only one less in number than the deaths, which in proportion to the births—185—may be roughly reckoned as but 1 to 4.

(B.) General Health.

214. The death-rate for the year under review was 19·8 per 1,000, or 2·1 less than that of the previous year. This is a not unfavourable record, especially if it be borne in mind that the results giving the much higher rate, 26·1, for which the City of Kingston is responsible are included in the above rate for the Island.

215. No special prevalence of disease at any particular season has been reported, with the exception of a slight increase in malarial affections after rains, and the diseases encountered were generally of a mild type. As in previous years, the sick-rate was largely promoted by the improvident habits of the humbler classes, and the absence of attention to many of the simplest laws of hygiene. The Superintending Medical Officer expresses the hope that one effect of the recent change in taxation of property, which has afforded some relief to the small tenements, will be an improvement in the huts of the peasantry, with an increase of room space and ventilation, and a consequent improvement of their health. The most prevalent forms of disease were malarial fever, chiefly of a benign type; pulmonary and rheumatic affections, which in a climate such as this might be expected not to take much toll of the population; digestive disorders and skin complaints, which with greater attention to the laws of health may be expected in time to be reduced. The infantile death-rate maintains its high level, owing chiefly to bad nutrition, the people having learnt neither the need of milk nor the way to supply it. As was stated at greater length in last year's Report, there is

practically no characteristic general danger of health in Jamaica, except malarial fever, and even this is not regarded as a very serious matter. The following remarks may be reproduced:—"On the other hand, the general neglect of hygiene, in housing, ventilation, clothing, food, water, and cleanliness of surroundings, is such that in any less naturally favourable climate diseases would infallibly decimate the population. Dirt, ignorance, indolence, and incontinence are, it cannot be too often repeated, the chief sources of ill-health in Jamaica. For cleanly, intelligent, healthily-occupied persons it offers, conversely, exceedingly healthy conditions."

Small-pox.

216. Although, as stated, there was no general epidemic disease, there was in the latter part of the year under review an epidemic in Duan Vale, one of the out-lying districts of Trelawny. It was diagnosed here as modified small-pox of the ambulant variety, although several cases of chicken-pox were recognised at the same time and place. The segregation of all cases was thoroughly carried out both at an improvised isolation hospital and in some of the native huts where the disease first appeared. So thorough was the isolation, after the disease had been brought to notice, that it was confined to its original site, and was completely stamped out by the end of the year. Out of a total of 81 cases, 56 were returned as small-pox and 25 as chicken-pox, with three deaths among the former.

(C.) Climate.

217. Jamaica being a mountainous Island, with numerous ranges of hills rising in the extreme eastern portion to 7,423 feet in the Blue Mountain Peak, and averaging 2,000 to 3,000 feet in the central and western portions, has a considerable variety of climate. The temperature, of course, decreases everywhere with the elevation in Jamaica; this decrease has been found to be at much the same rate as in other countries, namely, about one degree for every 300 feet.

218. As regards the rainfall, the Island is divided in respect of the amount of fall into four divisions, and in respect of seasons of fall into two. In all four divisions the May and October rains, or "seasons" as they are locally termed, are strongly marked. In the north-eastern and northern divisions, which roughly embrace the northern half of the Island, extending, however, a little round to the south in the mountainous east and stretching not quite the whole of the Island's length to the west, there are, in addition, winter rains in December, January, and February. In the remainder of the Island, consisting of the west central and southern divisions, in addition to the usual "seasons" above referred to, there are, as a rule, summer rains in July and August. At times, in the drier months of the year, there are isolated localities where

no rain falls, but at the majority of places there is never a month without some rain. Kingston, the chief town, is one of the driest places, and Port Antonio, only about 30 miles distant, in a straight line, but with the Blue Mountain Range intervening, is one of the wettest, so far as actual fall goes. Visitors to the latter place, however, owing chiefly to the manner in which the rain falls there, do not experience the inconvenience from the showers that might, from the record, be expected.

In amount of fall the north-eastern division stands first, with isolated districts sparsely settled, where the total exceeds 200 inches. In such districts we have a good example of the effect of the vapour laden trade winds impinging on high mountain ranges.

The west central region comes next in elevation, coolness, and rainfall. The northern is largely an elevated undulating tableland of limestone ridges and valleys; the southern division contains the principal plains in the Island. The two last-mentioned divisions are comparatively dry.

219. The prevailing winds are N.E. on the north side and S.E. on the south side of the Island, the trade winds being in each partially deflected by the influence of the land into true sea breezes, while in the centre of the Island and at considerable elevations the wind maintains the generally easterly direction of the trade wind.

220. The north, central, and southern divisions are the driest and possess a real tropical temperature in the plains, especially those on the southern sea-board. Although Jamaica is between 17° and 18° North latitude, the temperature over two-thirds of its area, owing to elevation, is, except in the middle of the day during the summer months, say, from July to September, soft and pleasant, and shows little variation throughout the year. It is said to resemble that of Southern California.

221. The average Island rainfall for the past three decades 1870-79, 1880-89, and 1890-99 is recorded at 67·41, 66·54, and 76·15 inches respectively. In 1902 the average rainfall for the whole Island was 73·37 inches, as shown in the table below, which also gives the figures for each division as compared with those for the previous year:—

Divisions.	1901.	1902.
	Inches.	Inches.
North Eastern ...	107·88	95·97
Northern	64·18	58·75
West Central ...	87·31	89·75
Southern	64·50	94·14
The Island ...	80·96	73·37

222. The following figures, showing the Island rainfall for the past 37 years, which have been extracted from the Weather Report for December, 1902, are of interest. In the first year, 1866, there were about 50 rainfall relations, and in the last, 1902, 138, so that the results for the different years are not strictly comparable, but for most practical purposes they may be regarded as showing correctly the variations in the fall of rain during the years mentioned:—

Year.	Amount.	Year.	Amount.
	Inches.		Inches.
1866	53·65	1885	59·86
1867	64·47	1886	90·61
1868	67·74	1887	70·66
1869	55·37	1888	72·11
1870	89·43	1889	74·15
1871	50·09	1890	64·42
1872	45·18	1891	84·70
1873	63·06	1892	72·98
1874	68·94	1893	86·49
1875	52·54	1894	75·39
1876	71·35	1895	71·62
1877	68·40	1896	68·61
1878	76·42	1897	77·59
1879	88·84	1898	73·84
1880	55·44	1899	85·82
1881	68·60	1900	69·65
1882	57·87	1901	80·96
1883	59·26	1902	73·37
1884	56·90		

223. The mean maximum temperature at Kingston is 87°·5, varying from 85°·6 in February and March to 89°·5 in July and August. The mean minimum temperature is 70°·8, varying from 67° in January and February to 73°·5 in September. There being no observing station in Kingston since the abolition of the old Weather Service, later figures than those for the year 1898, which are incorporated in the foregoing results, are not available for Kingston.

VIII.—POSTAL AND TELEGRAPH SERVICES.

Receipts and Expenditure.

224. The following tables show the revenue and expenditure for postal and telegraph services in each of the three years ended 31st March, 1901, 1902, and 1903:—

Revenue.

Year.	Postages.			Commission on Money Orders.	Commission on Postal Orders.	Miscellaneous.	Total Postal Revenue.	Telegraph Revenue.	Grand Total.
	Packet.	Inland.	Total.						
	£	£	£	£	£	£	£	£	£
1900–01	3,755	17,369	21,124	384	617	87	22,212	4,715	26,927
1901–02	4,383	17,954	22,336	446	615	113	23,510	5,010	28,520
1902–03	4,408	21,826	26,234	539	698	112	27,583	5,522	33,105

Expenditure.

Year.	Salaries.		Mail Conveyance.			Services.	Total Postal Expenditure.	Telegraph Expenditure.*	Grand Total.
	Head Office.	District Offices.	Inland.	Ocean.	Proportion of Royal Mail Contract with Imperial Government.				
	£	£	£	£	£	£	£	£	£
1900–01 ...	5,915	2,956	8,511	2,508	5,140	3,360	28,390	8,592	36,982
1901–02 ...	5,668	2,951	8,055	2,258	2,177	4,409	25,517	8,398	33,915
1902–03 ...	5,638	2,968	8,254	2,618	2,525	4,559	26,562	8,932	35,494

* Includes expenditure on maintenance of telegraph lines by the Public Works Department.

225. The Postal Revenue shows an increase of £4,073 over that of 1901-2, the Telegraph Revenue an increase of £534. The totals include the value of official telegrams sent, but not that of official postage services, which the Postmaster-General estimates at £2,500 a year. For the first time the Post Office Revenue shows an excess over expenditure, consisting of £1,021, not taking into account the £2,500 just mentioned. Moreover, the expenditure included sums amounting to £1,764 in respect of Transit Rates and the West India Mail Contract, which were found to be in excess of the amounts due on a readjustment of the charges, and which were refunded by the Imperial Government. If the gross expenditure be reduced by this £1,764, the surplus of revenue over expenditure would appear as £2,785. If the telegraph transactions are included, there is shown a nett charge on the revenues of the Colony of £2,389. If the above refund of £1,764 be deducted, this would be reduced to £625. The receipts from Packet Postages increased by £25, while those from Inland Postages increased by £3,872. The receipts from the former, £4,408, at a penny rate, have not yet equalled the amount—£4,832—received in 1898-99, the last year of the 2½*d*. rate.

Correspondence.

226. The total number of postcards and letters estimated to have passed through the Post Office in the year was 5,579,893, as against 5,424,814 during the previous year. The number of registered articles of mail matter included in the total was 252,182, as against 236,921. There was practically no loss or miscarriage of such articles.

Foreign Mails.

227. The total number of foreign mails made up during the year was 1,617, the number received 2,083, showing an increase of 11 in the former and a decrease of 122 in the latter, as compared with the figures for 1901-2.

228. The two contract mail services with England have continued during the year, not, however, with the punctuality to which we had become accustomed.

229. The steamers of the Imperial Direct West India Mail Service failed to arrive on contract time on 14 occasions, and those of the Royal Mail Steam Packet Company on two. Under a revised time-table, the latter arrive here somewhat later and leave earlier than formerly, to allow of their call at Trinidad. The steamers of the United Fruit Company, certain of which are subsidised as mail steamers by the United States Government, as well as those of the Atlas branch of the Hamburg-American Company, have continued to be made use of for the

exchange of mails between the United States of America and Jamaica and with the United Kingdom *viâ* the former country, in addition to occasional use of steamers of Messrs. J. E. Kerr and Company, trading to New York.

230. Mails have also been sent direct to Mexico and Cuba by steamers going thither from the port of Kingston, and have continued to be exchanged between Jamaica and the Cayman Islands by schooners belonging to the latter place.

231. Messrs. Pickford and Black's steamers, subsidised by the Government of Canada, have continued the monthly mail service between Halifax, Bermuda, Turks Islands, and Jamaica.

Mail Subsidies.

232. For the conveyance of ocean mails this Colony paid during the year (pounds only):—

	£
1. Contribution to subsidy, Royal Mail Steam Packet Company.	2,525
2. Proportion of postage to Imperial Post Office.	1,400
3. Transit dues paid to other countries...	151
4. Gratuities for mails by non-contract vessels.	1,067
	£5,143

But the following amounts being refunded on final adjustment, viz.:—

	£	
In respect of (1)	364	
The whole of (2)	1,400	
		1,764
The nett cost for the year was ...		£3,379

233. The annual contribution to be paid by this Government in respect of the Royal Mail Steam Packet Company subsidy during the continuance of the existing contract has now been assessed by His Majesty's Government. It was formerly £5,140, in future it will be £2,100, and the £1,400 formerly paid for Transit Rates will now cease to appear as a charge against the Jamaica Post Office. The reduction is owing to the transfer of mail matter to the direct line steamers, in respect of which a subsidy of £20,000 per annum is paid by this Colony, none of which subsidy, however, is charged against the Post Office Vote.

Inland Mails.

234. The Inland conveyance of mails has been carried on at a cost of £8,254, as against £8,055 in the previous year. Much of the Inland mail carriage is effected by the Public Works Department, which has its own depôts and mule stables in all the parishes.

235. The mail coaches earned during the year £295 for passenger fares, and £508 for the carriage of parcels, the latter sum, however, representing only receipts for three-quarters of the year, as in the last quarter payment was effected by stamps. Allowance being made for this, it is estimated that the amount would have been £677. The corresponding figures for the previous year were £218 and £574. The earnings on account of passenger fares are paid over to the contractors.

236. At the end of the year there were 156 District Post Offices, as against 153 at the beginning.

Money Orders.

237. The total number of money orders drawn on other countries during the year was 14,579 of the value of £32,983, against 12,740 of the value of £30,098 in the previous year. The orders drawn by other countries on Jamaica were 4,568, representing £10,951, as against 4,001 of the value of £10,326. The exchange was, therefore, against Jamaica by the sum of £22,032 in the year under review, as against £19,772 in the previous year. The commissions on money orders in 1902-3 amounting to £690 and the cost of remittances to £151, the profit to General Revenue amounted to £539, which is more than enough to meet the cost of the clerical labour involved.

238. A money order exchange between the Cayman Islands and Jamaica came into force during the year, and through it that Dependency is linked up in this respect with the rest of the world.

Postal Orders.

239. The face value of the postal orders sold for internal remittances was £34,128, against £30,356 in the previous year. The number issued increased from 192,420 to 218,540.

Telegraphs.

240. The Telegraph Department dealt with 101,712 messages, as against 91,898 in the previous year, and earned £512 more. The working expenses of the Department were £427 more. The total cost, including the maintenance of lines by the Public Works Department, was £8,932, the total receipts, £5,522, showing a loss of £3,410 as the nett cost of the services of this Department. In the previous year the amount was £3,387.

Parcel Post.

241. The parcel post, as usual, showed development, which this year amounted in parcels received to about 50 per cent. The number in 1902-3 was 21,195, of the value of £24,523, in 1901-2 the number was 14,138. Those despatched amounted to 5,404 of the value of £3,806. The difference between the values of the parcels received and those despatched (£20,717) is not far short of the excess of money orders sent away over those received. Probably the majority of parcels imported by parcel post are paid for by money orders. But it is also true that the excess in question existed before the existence of the parcel post system. There was a total increase of 7,245 in parcels. Customs duties to the amount of £3,492 were received on inward parcels, as against £2,716 in the previous year. The large growth of this business is attributed to the increased mail service with the United Kingdom, and to the triple scale of postage now in force. Generally the Postal and Telegraph services showed satisfactory development, that in the former being especially marked, the result, as well as a sign, of the general improvement in the condition of the Island during the year 1902-3.

IX.—PUBLIC WORKS.

Expenditure.

242. The total expenditure administered by the Public Works Department was £118,980, under the following heads:—

	£
1. Administration	13,713
2. Roads and bridges	54,722
3. Public buildings	13,649
4. Lighthouses	2,018
5. Telegraphs	1,135
6. Telephone lines (Law 10 of 1893) ...	58
7. Buoys and beacons for Marine Board ...	930
8. Carriage of Post Office mails	1,950
9. Work done for other Departments ...	4,146
10. Rio Cobre Irrigation Works	1,889
11. Spanish Town Water Works	448
12. Linstead Water Works	108
13. Vere Irrigation Works	24,214
Total ...	£118,980

Works.

243. With the exception of the continued construction of the Vere Irrigation Works, which, however, are not under the direct control of the Government, but are being constructed by a contractor, under the direction of the Public Works Department, for Commissioners appointed *ad hoc*, there were no special works (excluding road-work) of any great magnitude or importance in hand for the Government during the year. The Irrigation Works in question will be separately referred to. During the year, under the provisions of Law 6 of 1893, the enlargement of the St. Catherine District Prison was continued with the use of convict labour, the Carpenter's Workshop, Offices for the Superintendent and Quarters for European Warders being completed at a cost to the Public Works Department of £446, while the sum of £1,828 was spent in acquiring and developing lands for the Prison Farm, referred to elsewhere. The work for the lighting of Kingston Harbour and its approaches by Wigham continuous beacon lamps, was completed during the year. It was at last found possible to provide money for the removal of the wreck of the s.s. *Calvert*, which, for some 20 years had caused an obstruction in Port Antonio Harbour. The work was done by contract, and cost in all £894. A minimum depth of 30 feet of water has been obtained over the remains of the wreck, and the harbour facilities have thus been greatly increased. A storage reservoir at Hope Gardens, having a capacity of 330,000 gallons, was completed for the Board of Agriculture at a cost of £332. It is intended to provide water in times of drought for the Experiment Station. The A Ward of the new Female Lunatic Asylum was completed by the provision of a water supply and by its connection with the city sewers. For the Parochial Board of Trelawny, the work of adapting the old District Prison at Falmouth for use as a Poorhouse, was taken in hand. The total cost of maintenance of Public Buildings chargeable to General Revenue was £10,960, of which £4,042 was in respect of new works.

Maintenance of Roads and Bridges.

244. The expenditure on main roads and bridges was, for maintenance, £48,242, and on new works, £6,480, a total of £54,722. The total length of main roads was 1,916 miles (about one-half of which consists of what for some time were known as Parochial Main Roads), and the average cost per mile for maintenance was £23 11*s.* 11*d.*, or 16*s.* 3*d.* less than in the previous year. The highest rate per mile was, as usual, in the parish of St. Mary, where it was £49 11*s.*, and the lowest £14 15*s.* 7*d.* in Manchester. The roads in the parishes of Portland, St. Ann, St. James, and Westmoreland suffered at different periods of the year from the effect of heavy and

continuous rains, although there was no extraordinary flood damage. St. Mary was exceptionally favoured in regard to road-weather, although owing to the largely increasing cultivation of bananas, causing a corresponding increase of traffic, the road grants in this parish, as in some others, for the same reason, have had to be augmented.

New Roads and Bridges.

245. Under the provisions of Law 4 of 1898 and Law 17 of 1890, a considerable amount of re-construction and improvement was effected on several of the roads in St. Mary, on the Berwick Spring Road in Portland, and on the road from Jackson Town to Rio Bueno in Trelawny. The erection at Kupuis of a bridge over the Rio Minho, with its necessary approaches, to take the place of the bridge destroyed by flood at Savoy, near Chapelton, was put in hand and nearly completed. The total expenditure under these laws was £5,278. The reconstruction of the Parochial Road from Pear Tree Grove to Troja as a driving road, was commenced on gradients which will be safe and convenient to traffic. This road will be a great improvement and an important feeder to the railway.

Light Houses.

246. The Light Houses at Plumb Point, Morant Point, Folly Point and Negril Point were maintained in efficient order, a new stone building for the Superintendent's residence at Morant Point being erected at a cost of £261.

Work for the Post Office Department.

247. The Post Office Telegraph Lines, to the length of 695 miles, mostly single line, were maintained at a average cost of £1 11*s.* 4¾*d.* per mile, and the expenditure in the maintenance of 60 miles of private telephone lines, leased by the Postmaster for Jamaica under the provisions of Law 10 of 1893, amounted to £58 7*s.* For the Post Office Department the Public Works Department also worked 64 services of mail conveyance at a cost of £5,503 as against a former cost of £7,799, showing a saving by this arrangement of £2,296 per annum.

Rio Cobre Irrigation Works.

248. These works were maintained at a cost of £1,889, the earnings being £7,896 and the actual collections (swelled by arrearages) being £8,319. There are now 11,170 acres of cultivated land in St. Catherine under irrigation, an increase of nearly 2 per cent. over the previous year; the acreage is divided chiefly between bananas (6,500), guinea grass (3,000), and sugar

cane (800). During the last four months of the year, the severe drought necessitated the taking in the whole of the supply of the river. If the cost of maintenance (£1,889) be deducted from the earnings (£7,896) there is left £6,007, which almost meets the whole annual charges (£6,278) in respect of the capital expenditure (£120,076) on these works. If the Sinking Fund of one per cent. be deducted from these charges, it will be seen that there is an excess of revenue over expenditure of over £900 per annum.

Vere Irrigation Works.

249. The Director of Public Works continued to be engaged during the year in supervising the execution of the Vere Irrigation Works for the Vere Irrigation Commissioners, of which body the Colonial Secretary is Chairman and the former officer is a member. A general description of these works was given in the last annual report of this Government. At the close of the year 1902-1903 the work on the Main Canal (executed by contract) had been brought nearly to a conclusion, and water in small quantity had been let into the first section of the canal. The large dam and other works in connection with the Storage Reservoir at Raymonds were practically completed, but owing to the drought, there had been no opportunity of testing them or of impounding any storm water. Surveys for the distribution channels, which are to be constructed departmentally, were completed during the year, and considerable progress was made with the earthworks. The total expenditure, £24,214, was charged to the loan raised under the Vere Irrigation Law, 1897.

X.—RAILWAY.

Traffic Department.

250. The traffic returns of the Railway for the year show, compared with those of 1901-1902 increases and decreases under the following classes of receipts.

—	Increase.	Decrease.
	£	£
Goods and cattle	18,259	—
Passengers	5,405	—
Prince's wharf dues	806	—
Miscellaneous	—	503
Nett increase ...	£23,966	

Goods Traffic.

251. The total bulk of goods carried increased from 100,764 tons to 131,666 tons, the principal increases being in:—

	tons.
Bananas	15,544
Logwood	6,294
Oranges	3,432
General merchandise	5,249
Grass and hay	636
Pimento	376
Cocoanuts	329
Spars	240
Ginger	193

The only decreases were:—

700 tons in fire-wood.
715 „ „ other dyewoods.
136 „ „ coffee

The earnings from the carriage of bananas increased by £8,157, from oranges by £4,719, from general merchandise £3,455, and from logwood £2,005. There were decreases of £426 from coffee, and £373 from dyewoods other than logwood.

Passenger Traffic.

252. The number of passengers carried increased from 391,178 in 1901-1902, to 446,529 in the year under review, the increase being:—

Third class tickets	54,824
Season tickets	859
	55,683
Decrease (1st class)	332
	55,351

Wharf Receipts.

253. The Wharf receipts were as follows:—

	£
Prince's Wharf	6,168
Montego Bay Wharf	678
Port Antonio Wharf	89
	£6,935

Expenditure.

254. The expenditure showed the following increases and decreases as compared with the previous year.

—	Increase.	Decrease.
	£	£
Main way and works	2,273	—
Locomotive power	—	146
Carriages and Waggons	—	179
Traffic expenses...	251	—
General charges...	242	—
Taxes	—	7
Nett increase ...	£2,434	—

Way and Works.

255. The gross expenditure for way and works was £39,931, but £9,490 of this was transferred to loan account as representing the cost in excess of ordinary maintenance of new sleepers. For fencing and gates, ballasting, buildings and station yard, bridges and tunnels and other items the sum of £7,611 was charged to maintenance, although much of this expenditure was necessary to overtake and make good the dilapidations and defects of the way and works as taken over from the old railway company.

Loan Expenditure on Way and Works.

256. During the course of the year £44,000 was borrowed from the Imperial Treasury in completion of the total loan of £198,000 for interest and equipment authorised by law. The

total expenditure on way and works charged to Loan Account was £22,411, the items being:—

	£
Sleepers, in addition to number which would be required for ordinary maintenance	9,490
Strengthening line Kingston to Porus and Spanish Town to Bog Walk...	4,068
New sidings and yard improvements ...	3,747
Extensive repairs to wharves	2,472
Strengthening bridges	978
Renewing rusted rails	342
Additions to buildings	313
Additional retaining walls	293
New water mains and hydrants	280
Additional guard rails, training, &c. ...	428
Total	£22,411

Summary.

257. The total current revenue and expenditure for the year as shown in the books of the Treasurer is as below:—

	£
Revenue	142,305
Expenditure	80,341
Surplus	£61,964

In the year before, the surplus of revenue over expenditure was £40,254, so that the surplus increased in 1902-3 by the sum of £21,710. In comparison with the surplus of £61,964 in 1902-3, it may be pointed out that in the last complete year of the old railway company ending 31st March, 1900, the revenue was £116,347 and the expenditure £96,486 showing a surplus of £19,861. That the large increase of £42,103 in the surplus over expenditure has not been obtained by starving the up-keep of the line, as has been sometimes asserted, is shown by the facts that whereas in the last two years of the Company's existence an average sum of £5,212 was spent on sleepers, in the one year now under review the Government spent £19,244 on sleepers, of which £6,920 was charged to current revenue.

General condition.

258. The general condition of the line is now sound, and shows a conspicuous improvement in all respects on the state of things existing when it was taken over by Government.

Certain disadvantages and sources of weakness will, however, always remain. As regards the Locomotive Department, it may be mentioned that, notwithstanding the much larger quantity of rolling stock now to be maintained and the greatly increased traffic to be dealt with, the estimate for locomotive power is now about £6,000 less than the actual expenditure under the management of the railway Company.

Nett Annual Cost of the Railway.

259. The total amount invested by the Colonial Government in the railway expenditure provided by funded debt is:—

—	—			Interest.			Sinking Fund.			Crown Agents' Fees.		
	£	s.	Per Cent.	£	s.	d.	£	s.	d.	£	s.	d.
Old Railway Debt.	5,800	0	at 4½	261	0	0	58	0	0	—		
	774,278	10	„ 4	30,971	2	9	9,518	2	1	70	11	3
	8,000	0	„ 3½	280	0	0	80	0	0	—		
New Railway Debt.	1,493,400	0	„ 3½	52,269	0	0	14,934	0	0	—		
	198,000	0	„ 2¾	Annuity.			13,003	13	0	300	0	0
Total ...	2,479,478	10		121,374	17	10				370	11	3
Crown Agents' Fees ...				370	11	3						
				121,745	9	1						

The annual charge thrown on the revenue is, therefore, £121,745 9*s.* 1*d.*, but for the year under review it was £2,890 less, owing to the last portion of the £198,000 having been borrowed in the course of the year. As the surplus in 1902-3 was £61,958, the balance of £59,787 15*s.* 1*d.* was left as a nett charge to be defrayed by General Revenue, of which £32,148 15*s.* 1*d.* (the amount for Sinking Fund) may be regarded as an instalment of purchase money for the railway, leaving a nett loss between working profits and interest on capital of £24,749.

XI.—MILITARY.

260. The amount expended by the Imperial Government in 1902-3 for the Regular Forces in Jamaica was £122,400.

MILITIA.

261. The strength of the Jamaica Militia at the 31st March was 603, being 228 short of the Establishment; the allowed strength of the Artillery is 206, while their actual strength at the date mentioned was 148.

262. The allowed strength of the Infantry is 625, the actual strength at the 31st March was 455. The Artillery has for some years being advisedly kept down to 150 men, and the figures showing the actual strength do not therefore imply a lack of recruits. The difference between the actual and the allowed strength of the Infantry arises principally from the fact that during the year considerable attention was given to weeding out men of poor physique, and men whom it seemed impossible to train as marksmen. The men remaining in the corps are all physically fit, and the battalion is in this respect in a much more satisfactory condition than it was 12 months ago; recruiting will, however, have to be pushed vigorously in order to restore the numbers to what they ought to be. Special attention has been given throughout the year to musketry, with very satisfactory results. The number of parades for battalion drill has been halved, and each company now spends a full day every second month on the range, where they are put through musketry under the superintendence of the Adjutant and the company officers. I am satisfied that the change has been of advantage, and will continue to be of increasing advantage to the corps as a whole.

XII.—GENERAL OBSERVATIONS.

263. The year under review was, without doubt, one of much progress and advance.

The Island was beginning to recover, if not rapidly, at least surely and steadily, from the depression against which it had so long struggled, and this tendency towards prosperity was reflected in the increase which took place in the revenue.

264. The reduction which the Government were enabled to effect in the deficit gave promise that the ensuing year would have seen this entirely wiped out, and that the assets of the

Colony would be placed on a level with its liabilities. I had sincerely hoped that this would have been the case, and that I might have been able, on the termination of my administration, to hand over the Government to my successor free from the incubus of floating debt by which it had been so long hampered. But, unfortunately, the terrible cyclone of 11th August last, has, I fear, scattered this hope, and rendered its realization hardly possible.

265. I regret deeply that this Report, the last which it will be my duty to furnish, should be overshadowed by this sad visitation, and that my successor will not, in all probability, be able to give as good an account of the year 1903-4 as that which I am submitting for 1902-3.

266. I feel sure, however, that the effects will be but temporary, and that, unless another such calamity should occur, which is unlikely, the check to the growing prosperity of the Colony will soon be removed, and further and satisfactory progress be resumed.

267. And, although I may not be able to leave the fortunes of Jamaica in as bright a condition as I had hoped, I shall still have the satisfaction of knowing that I have succeeded in retreiving them.

A. W. L. HEMMING,

Governor.

King's House, Jamaica,

23rd December, 1903.

TABLE I.

TABLE V.

TABLE of LAWS passed at a SESSION of the LEGISLATIVE COUNCIL of JAMAICA, which began on the 4th FEBRUARY and adjourned *sine die* on the 4th NOVEMBER, 1902.

No.	Laws.
1	The Victoria Day Law, 1902.
2	The Savings Bank Unclaimed Deposits Law, 1902.
3	A Law to amend a Law to organize a Constabulary Force (No. 8 of 1867).
4	The Witnesses Expenses Amendment Law, 1902.
5	A Law to repeal the Tax on Commercial Travellers.
6	The Shipping Master's Fees Law, 1902.
7	The Island Chemist's Certificate Law, 1902.
8	The Cruelty to Animals Law, 1902.
9	A Law to allow and confirm certain expenditure incurred in the Financial year, 1900–01.
10	A Law to amend the Tobacco Duty Law, 1902.
11	The Rifle Club Gun Tax Relief Law, 1902.
12	A Law to consolidate and amend the Laws relating to vagrancy, 1902.
13	The Appropriation Law, 1902–03.
14	A Law to amend the Valuation Law (Law 22 of 1901).
15	A Law to amend the Stamp Duty Laws, 1868–1901.
16	The Property Tax Law, 1902.
17	The Country Fires Law, 1902.
18	The Main and Parochial Roads Laws, Amendment Law, 1902.
19	A Law to continue for one year certain increased taxation on lands in aid of General Revenue.
20	The Land Surveyor's Law, 1894, Amendment Law, 1902.
21	The Street Traffic Regulation Law, 1902.
22	A Law to amend Law 24 of 1879 entitled The Judicature Law, 1878.
23	The Emigrants' Protection Law, 1902.
24	A Law to regulate the Business of Pawnbroking.
25	A Law to supplement the Falmouth Water Works Transfer Law.
26	The Schools Commission Law of 1879, Amendment Law, 1902.
27	The Kingston Unoccupied House Rate Law, 1902.
28	The Kingston Police Laws, 1881–1887, Amendment Law, 1902.
29	The Rum Duty Laws, Amendment Law, 1902.
30	The Victoria Day Law, Amendment Law, 1902.
31	The Central Factories Law, 1902.
32	The Vere Irrigation Additional Powers Law, 1902.
33	The Industrial and Provident Societies Law, 1902.

JAMAICA.

(For Report for 1902-3, *see* No. 414.)

ACTING GOVERNOR OLIVIER to MR. LYTTELTON.

King's House,

3rd September, 1904.

SIR,

I HAVE the honour to submit my report on the statistical returns embodied in the Blue Book of the Government of Jamaica for the year 1903-4 as furnished in the reports of the heads of the several public departments.

The cyclone year.

2. Time in this island is still popularly reckoned by the almanack rather than by the calendar—our dates are epochs, not numerals; we cast back to Slavery, Emancipation, the Cholera, Rebellion, the Hurricane years, the Kingston Fire, the Exhibition; and the year 1903 gave us a new point of departure in what a more erudite generation has evidently settled to speak of as "The Cyclone" of August 11th, 1903. The public statistics of the year are chiefly remarkable for the reflection of this last-mentioned disaster, and my observations will, therefore, be principally addressed to the exposition of its effects.

3. I cannot do better than begin this report by quoting the following passages from Sir Augustus Hemming's despatch of the 20th August, 1903, giving an account of the storm.

"A warning had been given by the United States Weather Office at Washington, as far back as the 8th of August, that there was an atmospheric disturbance to the east of Barbados, and that it was moving towards the north-east. There was every reason, from the location of the disturbance and its apparent direction, to hope that it would pass north of Jamaica as similar storms have so frequently done during the past twenty years. Contrary to the expectation, however, it kept well to the southward, and on the afternoon of Monday the 10th August, there were unmistakeable signs here of unusual weather. Angry gusts of wind accompanied with rain came from the north-east, and during the night the wind veered to the north and began to blow with great strength. It was not, however, until the early hours of Tuesday the 11th that the wind attained hurricane force, and from 3.30 a.m. to 5 o'clock it blew

875 Wt 22378 12/04 D & S 5 19411

with great fury from the north, veering then rapidly to the west, the south, and finally the south-east: it set in with even greater violence from the latter quarter and continued for nearly two hours. The fall of rain* was not great, only about 3 inches, 75 parts having fallen in Kingston between Monday afternoon and noon on Tuesday the 11th, but it was sufficient, owing to the driving force of the wind, to add considerably to the damage."

4. The foregoing account relates to what took place in the neighbourhood of Kingston, which lies to the south of the course taken by the centre of the cyclone. It appears that the centre of the storm passed in a direct line from near Port Morant on the south coast of the east end of the island to near Montego Bay on the north coast of the west end, as shown in the sketch† map which accompanies this report. The centre of the storm formed a vortex around and towards which the wind blew with a spiro-circular motion, having a rotation contrary to that of the movement of the hands of a clock. The whole storm moved west by north with a uniform velocity of about 20 miles an hour. As it approached the island, therefore, the wind would begin to be felt from the north or north-east, and as it progressed the wind on the north of the centre veered through north, north-east, east, south-east to south, and on the south of the centre through north-west, west, south-west, south to south-east. The greatest force of the wind would be felt at a certain distance from the centre, where the horizontal vortical rush was strongest and where both motions—the direct forward motion and the rotary motion—coincided. This combination occurred to the north of the centre of the storm along the north-east coast of the island from Morant Point to North-East Point. From this point for some distance westward of Port Antonio the combined force was also terrific. It is stated, but I cannot say on what authority, to have been as high as 110 miles an hour. The sea and the wind did most damage on the north-eastern face of the island, and the town of Manchioneal, which received the full brunt of the hurricane, suffered more than any other place of like size. On the north side the edge and escarpment of the high table-land of St. Ann was the scene of much destruction of shallow-rooted pimento trees, but the force of the wind was less here than further east. On the south side the southerly and south-easterly blast which followed the passing of the centre of the storm did most damage. The north-westerly, westerly, and south-westerly action of the cyclone was greatly neutralised by the westerly progress of the whole disturbance, and the damage done by the wind to the south of the centre was nowhere very serious.

5. Sir A. Hemming's despatch continues:—

"It appears that the storm affected the entire Island with the exception of the lower parts of the Parish of Clarendon, the Parishes

* It is probable that the violence of the wind interfered considerably with the catchment of the rain gauges.

† Appendix I.

of Manchester and St. Elizabeth and the greater part of Westmoreland and Hanover: indeed, it may be stated that the south-western part of the Island and the extreme west practically escaped. The mischief wrought in the eastern and northern districts has, however, been enormous. The storm broke with extraordinary force on the town of Port Antonio, a rising place much frequented by American tourists, and the most important of our fruit ports. At this place great damage was done to public buildings and to private dwellings, and many of the inhabitants barely escaped with their lives from their falling houses, The same may be said, though in a somewhat less degree, of several of the other towns on the eastern and northern coasts, and some of the interior towns, situated at considerable elevations, were equally unfortunate.

"But the heaviest losses are those which occurred in the agricultural districts. The principal banana parishes* are those of St. Thomas, Portland and St. Mary, and it is not too much to say that in the whole of these three parishes there are not 10 acres of bananas left standing. The plantations have been practically swept bare, and these magnificent areas of cultivation which, on the 10th of August, were covered with fruit-bearing plants, now appear, I am informed, as though a fire had passed over them. †Parts of St. Catherine and St. Ann have suffered to the same extent, nor has the loss been confined to bananas. Cocoanuts, coffee, cocoa, and pimento have all suffered, although the loss in these cases is not so complete as in the case of the banana fields. In one respect the destruction of these other products is more serious. They can only be replaced after years of growth, while the banana will spring again and there will be a crop in about ten months' time. The loss of pimento is perhaps more of a permanent injury than that of any other produce, as the tree is a slow grower. It grows most abundantly on the grazing lands of St. Ann.

* * * * * * * * *

"You will easily gather from the reports enclosed that much suffering and distress have been caused to a large number of the people of the island. Many of those who were in circumstances of comparative affluence a few days ago, are now ruined; a great number have lost their all, while others have lost for years to come the source of their income. Large numbers of the peasantry are homeless, while not a few of the houses of the wealthier classes have been destroyed.

"The question of the measures which should be taken in these trying circumstances, has caused me and my advisers the greatest anxiety. It was first necessary to provide for the immediate relief of the destitute, and at the earliest possible moment I addressed a circular to the Custos and Chairman of the Parochial Board of each of the parishes affected, a copy of which I enclose.‡.

"I also caused the sum of £300§ to be placed at the disposal of the local authorities in each of these parishes for the relief of urgent cases, and a strong Central Committee has been formed in Kingston, with the Chief Justice as Chairman, to collect subscriptions and furnish money to the local Committees as may be required, and as they may be able. Further, I have sent the Acting Director of Public Works into the distressed districts with a view to determine what road work can best be undertaken to provide employment for the labouring classes. I am glad to say the opinion is unanimous that there is no immediate danger of starvation, owing to the large quantities of fallen fruit which is available for food, but when this

* St. Catherines should also be mentioned.—S. O.

† All the banana cultivations in these also were destroyed.—S. O.

‡ *See* Appendix II.

§ Viz :—£100 from General Revenue and £200 from the Parochial Funds. —S. O.

is finished, there may be want, and against this I trust the subscriptions which will be raised and the work which will be given to the able-bodied will be sufficient to provide. I may add that I am endeavouring to ensure that gifts of money shall not be made except in cases where a more desirable form of aid may not be practicable. It will be better to provide with foodstuffs any who are in actual need of food; and in cases where it may be proposed to assist in the re-erection of buildings, to give lumber and other materials rather than money."

Applications for a relief fund

6. On the 13th of August, Sir Augustus Hemming telegraphed to Mr. Chamberlain a brief report of the damage done by the hurricane, with a request that if he should see no objection he would ask the Lord Mayor to open a Mansion House Relief Fund.

Assistance rendered by West India Committee.

Local measure for relief.

Mr. Chamberlain demurred to taking this step, thinking it better while awaiting a report as to the adequacy of local measures of relief to confine himself to inviting the West India Committee to collect subscriptions from those more closely connected with the West Indies. The West India Committee immediately opened a subscription list, and spared no effort to arouse the sympathy of the public to the requirements of the situation. The Governor presided over a public meeting, held in Kingston on the 17th of August, for the purpose of organising a General Relief Committee for the island, to obtain subscriptions, and arrange the distribution of relief to sufferers. At this meeting a resolution was moved that the Lord Mayor of London should be asked to open a subscription list at the Mansion House, but considerable opposition having been manifested to the proposal it was withdrawn. The Central Committee, presided over by the Chief Justice, appointed an Executive Committee which sat, at first, daily, and a Ladies' Committee to deal with feminine requirements. The Kingston Charity Organisation Society co-operated with great goodwill and efficiency in this work. By the end of August subscriptions had been collected by the West India Committee in London amounting to £5,500, and generous contributions were early voted by the Legislatures of Trinidad, Barbados, British Guiana, Grenada, St. Vincent, St. Lucia, and Turks Islands. The total receipts finally accounted for by the Central Relief Committee amounted to £12,786. Of this £6,409 was collected by the West India Committee, £739 by other friends in Great Britain, £2,940 was remitted from other colonies, £406 from foreign countries, and £2,292 was collected in Jamaica. Local Relief Committees were formed by the Parochial Boards in the districts affected by the hurricane. The Central Relief Committee issued a notice in the following terms, which was placarded throughout the Colony.

"NOTICE.

"Persons in the country parts of the island who have suffered by the recent hurricane either in the shape of loss of dwelling houses, cultivation, or otherwise, are warned against leaving their

districts for Kingston in the hope of receiving money in Kingston from the Hurricane Relief Fund. No such relief can be given under any circumstances; sufferers in the country parts should make application to the local Committees, who will investigate all applications and will be prepared to grant relief according to the merits of the case.

"All applicants for relief must bear in mind that any relief is merely temporary, and to meet cases of urgent necessity. To provide for the future, all should at once plant ground provisions of rapid growth, such as sweet potatoes, corn, and peas. The relief fund is small, and people must provide food for themselves by immediately planting."

The local Relief Committees set to work to ascertain what might be considered to be the requirements of their several districts, both as to the immediate relief of destitute persons having no means of subsistence, and as to the restoration of houses destroyed by the cyclone.

7. Sir Augustus Hemming, in the despatch which I have quoted above, wrote further, as follows:—

"The most serious feature of the whole matter is to be found in the fact that a large proportion of the fruit planters must abandon cultivation unless they can obtain some assistance to enable them to continue it.

"Large numbers of them, I might almost say the majority of them, have their entire capital invested in fruit plantations, and a sudden cessation of income from the sale of fruit renders them unable either to pay the wages of the labourers required to clear up their devastated fields, or to employ the necessary labour to cultivate them. Thus not only will the planters themselves be impoverished, but the agricultural labourers, who depend on them for work, will be thrown out of employment. One result of this must be a large increase of crime,* and, possibly, if there should be any great amount of want, it may be a source of disorder. The public revenues will, undoubtedly, be greatly diminished, as, indeed, I fear they must be in any case, and the entire social system will be disorganised.

"In these circumstances, I am advised and am convinced that the best, if not the only remedy, is to be found in an arrangement by which advances of money will be made by the Government to the planter on the security of his crops, and such collateral security as he may be able to give. This would not only save the planter from ruin, but it would be putting him in a position to employ the necessary labour, give work to the agricultural labourer, and, indeed, save the fruit industry from practical extinction. Money would go into circulation, the trades would be benefited, the imports, from which so large a proportion of the revenue of the Colony is derived, would be maintained, and the effects of this calamity would thus be minimised.

"I find that this view is held with remarkable unanimity by all persons best qualified to judge.

"Accordingly, on the 15th instant, I sent you the telegram of which I annex a translation.†"

8. Sir Augustus Hemming's telegram had briefly set forth the arguments above quoted, and proposed to raise a loan of £250,000, or even £500,000, in instalments, as required, and

* See below, par. 165, &c.
† Not printed.

make temporary advances at the current rate of interest (six per cent.), and that, in order to enable the Government to raise such a loan on favourable terms, the Imperial Government should guarantee the interest and principal. In a further telegram he proposed that loans should be for a term not exceeding five years, and that advances to planters should be made at four and a-half per cent. instead of six per cent. He subsequently cabled that it was of essential importance that this application should be granted immediately, reporting that he regarded such a loan as the only possible means of saving the Colony from absolute ruin, and that this was the opinion of all qualified to judge.

9. Mr. Chamberlain replied that he was not satisfied as to the necessity for raising such a loan and that he was not prepared to sanction it, but that in very urgent cases where money could not be otherwise obtained and where security should be forthcoming, he would authorise temporary advances not to amount to more than £50,000 in all, at the current rate of interest, from the available balances of the Colonial Government. He pointed out that an Imperial guarantee could not be given without a special Act of Parliament. In reply Sir Augustus Hemming urged strongly a reconsideration of the matter, pointing out that the opinion of the Privy Council and of the Colony in its entirety was unanimous as to the urgent necessity for raising the loan applied for, adding that it was absolutely impossible that the Colonial Government should make temporary advances as their cash balances were fully required to meet current expenditure and the cost of necessary relief works, and that unless such an advance could be made large numbers would be unable to continue cultivation, whilst without wages the labourers would in a few weeks be in danger of destitution, and it might be difficult to maintain order.

10. I have summarised the correspondence with regard to the requirement of Government aid to planters somewhat fully, because it illustrates the dislocation of popular judgment which appears to be a characteristic result of the disturbance produced by a cyclone. The representation made by the Governor reflected (in a tempered form) the convictions as to the necessities of the situation which were pressed upon him with the utmost insistence in the newspapers and by respected spokesmen of all classes of the community. As the event proved, Mr. Chamberlain's diagnosis of the position was the sounder: the limit of £50,000 was, in fact, considerably in excess of the effective demand for public loans at 6 per cent. interest. The available balances of the Colonial Government in cash and bills of exchange amounted at the time of this correspondence to more than £190,000, and it was found to be a matter of little difficulty to make the loans which were in due course granted, to meet current expenditure and to carry out extensive relief works without borrowing. The drain proved

heavy, but the balances in cash and bills on the 31st of March last still amounted to £55,500. There was never at any time any sign of turbulence among the distressed population or the slightest difficulty in maintaining public order. In other respects, however, Sir A. Hemming's despatch gives an impression by no means exaggerated of the gravity of the results of the cyclone, and of the loss and distress it occasioned. Mr. Chamberlain adhering to the position he had taken up with regard to loans, the Governor asked that he might be authorised to arrange with the local Banks to make advances to cultivators on the security of their crops, with the guarantee of the Government up to the amount of £50,000, and Mr. Chamberlain consented to this being done if the Governor considered immediate action to be absolutely necessary. Negotiations were then opened with the Banks. In the meantime a bill was prepared for submission to the Legislative Council to enable the Government to make loans directly to planters.

Sir A. Hemming's visit to the east end of Jamaica.

11. On the 3rd of September, Sir Augustus Hemming, accompanied by the Inspector-General of Police and his Private Secretary, left Kingston by rail for Port Antonio with the object of visiting the parishes of Portland and St. Thomas-in-the-East. On the 6th of September, he reported the results of his observations to the Secretary of State in a despatch, which, I think, it will be of interest that I should here reproduce almost in full.

"I arrived at Port Antonio the same evening, and in driving up from the railway station to the hotel I saw marked evidences of the effects of the storm, though a good deal had already been done in the way of clearing up, and in the repair of houses. At the same time, ruins lay about on all sides, and the marks of the terrific force of the wind were plainly visible. The building used for the Titchfield Schools, a substantial erection, formerly the old barracks, was not only unroofed, but almost the whole of the upper storey had been blown off. The entire north-west end of the Court House, a handsome brick building, was blown out, and numberless other houses had sustained more or less damage. Nevertheless, the first accounts, which represented Port Antonio as being utterly destroyed, were undoubtedly greatly exaggerated.

"On Friday morning I met the Chairman and Members of the Parochial Board, and other gentlemen, at the Court House, and, after I had received and replied to an address, I presided over a meeting at which a lengthy discussion took place as to the necessities of the parish, and the best and most effectual means of providing relief. The general opinion appeared to be that, although there was no immediate fear of destitution or starvation, there was a great probability of severe want in from two to three months, as the opportunities of employing labour began to diminish; that many of the planters, especially those cultivating properties of (say) from 10 or 15 acres up to 100 or 150, would be quite unable to resuscitate their cultivations without the assistance of advances, that the present need of the people was particularly for material, such as lumber, zinc roofing, nails, &c., to enable them to put up their houses which had been blown down, and the necessity for the Government to institute relief works to afford employment for those who were unable to obtain it otherwise.

"I need hardly say that all these matters are receiving, and will continue to receive, the careful and anxious consideration of myself and my advisers.

"After the meeting was over, I started to drive along the coast through Manchioneal to Hector's River where I was to stay the night as the guest of the Custos, Commander Codrington Hall, R.N.

"The scene which was disclosed as we passed along almost baffles description. The whole aspect of the country has been changed. Instead of the usual luxuriant and abounding foliage, the appearance is now that of late autumn or winter in England. The trees which are standing are stripped of leaves and display little but bare branches. But the most saddening element is the wholesale destruction of the coco-nut trees. Before the hurricane, the whole coast line was thickly covered with these trees, which formed the staple source of the income of the proprietors in this district. Now it is a very moderate estimate to say that 75 per cent. have disappeared, some broken short off 6 or 7 feet from the ground, and others wholly uprooted. The loss is the greater because, unlike the banana, which will produce fruit again in 9 or 10 months, the cocoanut will not bear in less than from 5 to 10 years, according to locality and soil. I was assured that on one estate (Darlingford) near Manchioneal only 1,600 trees have been left standing out of some 30,000. And I can well believe it, from what I saw myself.

"This part of the island appears to have experienced the greatest fury and weight of the storm, and at Manchioneal there was added to the tempest a tidal wave, which washed some distance inland, and destroyed many buildings. All along the coast, for many miles, there is scarcely a house standing, and even those which have not been knocked flat were, almost without exception, unroofed. I was greatly struck with the cheerfulness and pluck of the people, who had set to work at once to do the best they could to restore their destroyed houses, or to construct some sort of shelter for themselves and their families. Although I stopped at several places en route and talked to the people, I heard no word of complaint or grumbling. They stated their losses and their requirements, which, almost universally, were zinc roofing and lumber, but they were contented with, and thankful for, assurances that aid should be given them as promptly as possible.

"At Manchioneal the devastation has been complete. The town, which was a thriving little place, may be said to have been practically 'wiped out,' though, looking to the way in which the people are setting to work I shall not be surprised, if sufficient materials can be afforded them, to find that in a short time it has been to a great extent restored.

"I remained the night at Hector's River, four miles beyond Manchioneal, with the Custos. He has himself suffered a good deal, but he has been indefatigable, ever since the catastrophe, in endeavouring to organise the best means of relief for the sufferers.

"On Saturday morning I started to drive to Bath, about 16 miles from Hector's River, but in the Parish of St. Thomas. The same scenes of destruction so far as cultivation was concerned, attended us along the road, but the damage to buildings, except in certain places, appeared to be less, and the further west we went the less seemed to be the ravages of the storm, though they were sufficiently serious and striking.

"At Bath I met a deputation of small settlers who desired to urge their claims to assistance in the way of advances to help them to replace their destroyed cultivations. Of course I could make them no promise, but I am convinced that if persons of their kind are to be helped, and I think their claims are very strong, the sum of £50,000 which you have sanctioned will very quickly be exhausted.

"From Bath I proceeded to Port Morant, where much damage had been done. The magnificent coconut grove at Bowden, belonging to the United Fruit Company and containing many thousand trees, has almost entirely disappeared. Many buildings, and also much cultivation, have been seriously injured. I was told that the people in this neighbourhood were hanging back from work, having got an impression from some mischievous person that 'the King had sent the Governor a lot of money for the people, and they were to have their share'! I desired my informant, the Wesleyan Minister, to make it known as widely as he could that there was no truth in the report, and that relief would not be given to those who were able to work and could get employment.

"The Government are inviting, by means of placards, all those who are in want of work to register their names at the police stations, with the view of ascertaining for what amount of labour relief works will have to be undertaken in various districts. The rate of wages to be given on these works will be moderate in amount—practically a 'subsistence wage.'

"Leaving Port Morant, I drove on here (Morant Bay), where I am staying with Mr. J. H. Phillips, Vice-Chairman of the Parochial Board. The damage done in the neighbourhood is comparatively slight, but few buildings having been injured, though bananas, coconuts, and other cultivations have suffered much.

"I have omitted to say that it was gratifying to notice, all along my route, how much had been already done towards clearing up the banana fields. The plants, which had been levelled by the storm, had in most cases been cut away, and the young suckers were springing up and showing signs of vigorous life. This has been much assisted by the copious rains which have fallen since the cyclone, and there is every prospect that, provided we are spared any further drawback or heavy weather, there will be, in from six to eight months' time, a very prolific and abundant crop.

"The difficulty will be, especially for the poorer classes, to tide over the time until the reaping of the new crop begins, when employment for labour will again become active. It is the task of providing for them during this period of suspense which will cause the Government much anxiety and perplexity."

Exaggerated published reports.

12. I need hardly observe that the reports which first reached England and the United States of America gave far more appalling descriptions of the results of the cyclone than the foregoing careful, though abundantly sympathetic, account of the Governor The earliest telegrams to the English press on the subject reported that the town of Port Antonio had been "completely wiped out," only six houses remaining erect, and that the roofs of the City of Kingston (where practically no damage was done) had been seen flying through the air "like kites." One of the most moving examples of these reports was the following, which appeared in the New York "World" of the 15th of August. It is really deserving of a more permanent record in British annals.

(Extract from "Daily Gleaner" of 27th August, 1903):—

"Kingston, Jamaica, August 14.—Fear of a plague has added to the terror of the survivors of the great hurricane on Tuesday. On every side lie the bodies of the victims of the storm, swollen by

torrential rains, which still continue. Vegetation that was levelled by the tornado is rotting with the rapidity peculiar to the tropics.

"It is impossible to do anything to avert this new disaster without supplies, and there are none here. The death rate is certain to reach appalling figures, for many of the survivors are wounded or ill, and practically all of them are destitute of clothing and food. Two-thirds of the inhabitants of Jamaica are without food, and the small supply which was not destroyed by the wind and rain will last only a few days at the most.

"At a meeting held at Port Antonio, it was decided, with the approval of the Governor, to appeal to the charity of the American public for aid to prevent general starvation. Foodstuffs, clothing, lumber, medicine, surgical supplies, and disinfectants are urgently needed, and every hour they are delayed adds to the horrors of the situation.

"NOTHING CAN BE DONE.

"Never in the history of the British occupation has there been such widespread destitution, suffering, and hunger. Thousands of victims of the hurricane are homeless, without food, clothing, or medical attendance. Those who have wandered from the interior points to the coast towns in expectation of receiving assistance, are crushed to find that nothing can be done to relieve their wants. There are few buildings left standing in the seaports, and the majority of these are without roofs.

"Judging from the meagre reports from this district, which show that twenty-five lives were lost in the great hurricane of Tuesday, the loss of life on the island will appal the world when all reports are in.

"A gale which blew all day at the rate of 110 miles an hour has added to the terror of the refugees."

13. I think that I have now sufficiently indicated the situation created by the cyclone, which so profoundly disturbed the course of affairs in the island during the year under review. I will return in due course to a survey of the developed results of that disaster as they came under my own observation, and of the measures of public policy arising thereout. I was not in Jamaica at the date of the hurricane, being then on leave of absence and under instructions to resume duty in the Colonial Office, but on the 10th September I returned to Jamaica as Colonial Secretary, Mr. Chamberlain having, at the request of the Colonial Government, done me the honour to accept my offer to return if it should be considered that I could be of any service under the conditions which had arisen.

I will, therefore, now proceed to deal with the statistics of the year in their customary order.

I.—FINANCIAL.

(A.) General Revenue and Expenditure.

14. The total amount brought to account as General Revenue of the Government during the year was £926,164, the total General Expenditure was £822,876, showing an excess of revenue over expenditure of £103,288. Particulars of the revenue and expenditure, in comparison with the Estimates and with the returns of last year, are given in the Appendix, Tables III. and IV.

15. The revenue accounts include the large item of £100,394, transferred from the credit of the Civil Service Widows and Orphans Pension Fund. By the operation of Law 32 of 1903, the affairs of the Civil Service Widows and Orphans Pension Association were wound up, and its assets transferred to the credit of General Revenue Account, which was previously chargeable annually with interest at the rate of 6 per cent. on the nominal amount of the accumulated fund. The Colonial Government took over the obligations of the fund in regard to the existing and future accruing pensions and will receive in aid of these the amount of the premiums paid by the associates in the form of monthly deductions at the rate of 2 per cent. from their salaries. The immediate effect of these transactions on the revenue and expenditure accounts of the year was to relieve the Treasury of a charge estimated at £5,900 for 1903-4, whilst adding to the revenue £4,184 derived from premiums. The Pension charge for the year was £4,054. This charge will increase in future years until it absorbs an amount expected to be approximately equivalent to the former interest charge together with the current annual premiums.

16. The writing off through general revenue account of the large liability representing the capital amount of the fund brought the balance of the surplus and deficit account of the Government to the credit side. The balance sheet, which on the 1st April, 1903, showed a deficit of £35,497, showed on the 31st March, 1904, a surplus of £67,791. Excluding from consideration the transfer of this Pension Fund, the ordinary revenue, notwithstanding the disaster of the year, exceeded the expenditure by £2,894.

Surplus of ordinary revenue over expenditure.

17. Excluding that transfer and the amount of the premiums received as above mentioned the total ordinary revenue for the year was £821,586, a falling off of £34,928 from the total of the previous year, but nevertheless £25,097 in excess of the estimate for the year, which had been framed with a cautious moderation as regarded the receipts to be looked for from indirect taxes, and which had allowed for the diminution by £14,100 of the receipts from taxation on lands and houses.

Satisfactory recent progress of the Colony and its finances.

18. As was shown in Sir Augustus Hemming's despatch of the 23rd of December last, reporting on the Blue Book for the year 1902-3, that year had been marked by a rapid, but steady improvement in the public revenue, due chiefly to the activity of the banana trade with America. In this connexion I am glad to be able to quote the following passage from my report on the year 1901-1902.

"Two years ago, *i.e.*, in 1900, in reporting on the Blue Book for 1899-1900, I expressed my belief, from observation of what was being done in the country, that, with favourable seasons, the general condition of affairs must soon improve, and in introducing the estimates of revenue and expenditure for the year 1902-03, I stated my conviction that in the matter of public finance the Government had climbed to the top of the hill, and that henceforth we should have a much easier road to travel. This expectation, criticised as too sanguine at the time, has been fully justified. The exports of island produce, since the 31st March, 1902, have continued to show an increasing excess over the exports of the same period, 1901. The revenue shows corresponding elasticity, and I am under no apprehension that a very substantial surplus will not be realised."

19. The revenue of the year 1902-1903 did, in fact, exceed that of the previous year by no less than £92,291; it exceeded the estimate for the year by £88,210, and exceeded the expenditure by £67,677, after providing for a special appropriation of £16,709 to repay the balance of an Imperial loan made in 1900 in aid of the deficit in the accounts of the Government. The full actual surplus on the transactions of that year was thus £84,385. During the summer of 1903 the banana trade continued active, the demand from the United States being strong and prices high. The Customs receipts for the first four months of the financial year exceeded those of the same four months of the preceding year by £14,444, the Internal Revenue by £4,213 (notwithstanding the reduction of the Property Taxes), and the Railway Revenue by £1,195. There is no reason to doubt that, had it not been for the occurrence of the cyclone, these advances would have been maintained in due proportion under the principal heads of revenue to the close of the year, and there would have been a surplus on the year's transactions substantially larger than that of the previous twelve months.

Temporary effects of cyclone upon revenue.

20. The hurricane destroyed, for the time being, practically all growing exportable produce in the districts which it ravaged. It immediately affected the traffic receipts of the railway, which yielded, in consequence, £15,467 less than in the previous year, and £13,161 less than the cautious estimate for the year. It similarly affected the shipping trade, so that Port and Harbour Dues yielded £1,608 less than in the year 1902-3, and £1,183 less than the estimate. The receipts grouped under the head of "Licences, Excise and Internal Revenue" were £30,373 less than in the previous year, notwithstanding that

in the first four months they had shown the considerable excess that I have mentioned. Their total amount was, however, only £770 less than the estimate for the year, owing, doubtless, to the large amount of money which had been put in circulation during the prosperous months before the hurricane. The figures of the Customs Revenue call for more particular comment. Their total exceeded that of the previous year by £17,041, of which excess, as I have above pointed out, £14,444 had been realised by the 31st of July. But the effects of the cyclone did not do more than arrest the increase in the yield of the Customs Duties. The native food supply was destroyed and there was a general demolition of houses. Foodstuffs, lumber, building materials, and other necessaries of life were imported in increased quantities, with the result that during the rest of the year the Customs Duties yielded slightly more than they had yielded in the corresponding, but far more prosperous period of the previous financial year. The amounts collected in the two years respectively on the undermentioned articles are very significant:—

Articles.	Duties collected.		Increase.
	1902–03.	1903–04.	
	£	£	£
Bread and biscuit	5,364	7,538	2,174
Butter and substitutes	6,777	7.435	658
Flour	64,873	84,224	19,351
Meal	1,970	4,311	2,341
Rice...	11,478	17,502	6,024
Lumber	—	—	2,218
Whisky	15,103	16,710	1,607

21. There was a decrease of £12,648 in the yield of *ad valorem* duties on unspecified goods (clothing, &c.), and of £3,894 in that on salt fish, the first luxury of the poor, a decrease of £1,527 on kerosine oil, also a prime popular luxury, and of £497 on soap.

22. I may observe that the consumption of rum in the island, although it was abated by the effects of the hurricane, did not show such a falling off as might have been expected. The consumption of whisky, as above noted, showed increase. The rum duty yielded £99,623, which was £7,469 less than was received in the previous year. The receipts from this source, however, showed an increasing tendency to fall off at the close of the year, and have, since the 31st March, continued to diminish very appreciably. The Postal Revenue, notwithstanding the check to the island's prosperity, exceeded that of the previous year by £488.

Effects on expenditure.

23. The total of general expenditure exceeded that of the previous year by £34,029, and the estimate for the year by £37,843. The returns show the results of the hurricane in the following items:—

Medical Department.—An increase of £2,450 over the previous year, and an excess of £1,244 over the estimate, very largely due to the pressure on hospital accommodation following the cyclone.

Public Works and Buildings.—An excess of £24,621 over the previous year, and £17,690 over estimate.

Railway.—An excess of £11,707 over the previous year, and £14,287 over estimate.

Cost of cyclone to General Revenue Account.

Special Hurricane Expenses.—Chiefly grants to Parochial Boards (£800) and to the Central Relief Committee (£250) for purposes of relief, £1,188 16s.

24. I estimate that the hurricane cost the General Revenue Account of the Colony, up to the 31st March last, not less than £113,000.* Had there been no such check the revenue would probably have been £70,000 more than it was, whilst the expenses directly entailed within the year exceeded £43,000. But for this occurrence the Government would have closed the year with a surplus balance of about £180,000. From this consideration, and from the financial statistics of the previous year, and of the period immediately preceding the cyclone the very sound and satisfactory position of the finance of the island under normal conditions will be recognised.

General soundness of the Colony's fiscal position.

25. Owing to steady increase and improvement of cultivation, the resources of the island are now such as may, I am convinced, be relied on in years of average good fortune to produce under the existing arrangements of taxation a revenue abundantly sufficient for the administrative requirements and yielding a satisfactory surplus. This surplus may be regarded as available either, as it has hitherto been used, for extinguishing floating debt and for fortifying the available Treasury balances, or for expenditure on productive public works, for which there are many favourable immediate openings. It may, and, in my opinion, should, also be taken advantage of to enable liberal amendments to be made on the present onerous Customs Tariff (which was enacted to last for seven years, from March, 1899). I shall return to these considerations later in the course of this despatch.

Yield of taxation.

26. Out of the total General Revenue of £926,164, £575,676 was derived from taxation. This is £18,734 less than the yield of taxation in the previous year. Import Duties produced £398,993 of the total, and the Excise Duty on rum consumed in the island £99,623. Other taxes only yielded

* This figure does not include the expenditure from the Parochial Road Reserved Fund and from Loan Funds which was applied to the prosecution of relief works.

£77,060. Sources of revenue other than taxation yielded £250,094. Capital amount transferred from Widows' and Orphans' Fund, £100,394.

Parochial finances.

27. The revenues of the Parochial Boards, including the Mayor and Council of Kingston, for the year, amounted to £128,894, against £139,737 collected in the previous year, a falling off of £10,843, which was almost equally divided between the General Funds and the Road Revenues of the Boards. The total expenditure of the Boards was £139,662, against £131,264 in the previous year. The expenditure of the Boards, both for poor relief and on roads, was swelled by the results of the hurricane, whilst the collections of their revenue suffered. Their expenditure for the year exceeded their income by £10,763. Of this total £5,247 is the net amount of repayment of debts owed by them to the Public Treasury. The debt of the Boards to the Treasury for various advances, chiefly for water supplies, markets and similar public undertakings was reduced during the year from £63,846 to £58,599.

The actual repayments amounted to £8,301, but the Parochial Board of Trelawny borrowed £2,300 (£1,600 for water works), and the Mayor and Council of Kingston £750 for street improvements.

Kingston General Commissioners.

28. The income of the Kingston General Commissioners during the year was £33,751, their expenditure £35,584.

Yield of direct taxes chiefly local.

29. The direct taxes for the year were well collected in all but the devastated parishes, and in these, up to the date of the cyclone, the collections were very satisfactory. The market revenues of the Parochial Boards suffered considerably from the destruction of provisions.

30. The distinction between different parishes in the returns of taxes collected and arrears accrued or carried forward reflects pretty closely the track of the hurricane. The Collector-General, reviewing a comparative statement of the collections and the arrears for the two years 1902-03 and 1903-04, points out that they show distinctly two things: (1) the success attending the initial attempt at fixing, under the Valuation Law, a better basis for the levying of taxes; and (2) the success of the resolute policy which has now for some years been followed by the Department, with a view to fairly collecting the taxes due from all persons not entitled to relief. The improving prosperity of the island, notwithstanding the temporary depression, is indicated by the fact that the numbers relieved from payment of taxes on the recommendation of the Parochial Boards diminished from 11,349 to 5,302 between the two years. Some part of this decrease was, however, no doubt due to the reduction of the number of taxpayers on the rolls, which arose from the operation of the Property Tax and Parish Rates Law, hereafter to be reported on, in making the owner of property responsible for the taxes on property, including the temporary holdings of tenants.

Public debt.

31. An examination and analysis of the Public Debt of the island was given in my report on the Blue Book of 1901-02, and applies with slight variations to the present situation. The total outstanding debt on the 31st March last was £3,755,968 10s., of which £3,345,992 was debt incurred for general purposes, and the balance, £409,976, local debt guaranteed by General Revenue. The investments required by the several Loans Laws for Sinking Funds for the repayment of debts were duly made from General Revenue during the year, at the close of which these funds amounted to £309,394.

II.—TRADE, AGRICULTURE AND INDUSTRIES.

(A.) Imports and Exports.

Imports.

32. The total value of the imports of the Colony for the year was £2,000,094. Those of the previous year were valued at £1,990,884. These totals included:—

—	Coal.	Coin and Bullion.
	£	£
1902–03	109,626	39,692
1903–04	105,920	10,572

Much of the coal is re-exported by steamers. The other imports, presumably for home consumption, were valued at £1,883,602. This is an increase of £42,036 on the previous year, and is well in advance of the average of the five years' period, the figures for which are given in Appendix No. V.

Increase in food-stuffs due to cyclone.

33. I have already pointed out that one effect of the hurricane was to promote a large increase in the importation of foodstuffs and other necessaries. The additional values of the more important of such articles imported were:—

Bread and biscuits	£4,278
Butter	1,741
Cheese	1,691
Flour	60,222
Meal	16,108
Rice	23,005
Milk	3,447
Whisky	1,745
Lumber	15,841
Cement	2,710
Shingles	3,351

There were decreases worth noting under the following heads:— *Decreases.*

Ale, beer and porter	£5,799
Corn	5,563
Salt beef	1,441
Salt fish	7,358
Textiles (clothing, &c.)	79,233
Boots and shoes	5,509
Furniture	1,703
Earthenware and china	1,401

34. The sources of the imports are indicated in the following table, showing the proportional percentages of the totals from each direction:— *Countries of origin.*

—	1903–04.	1902–03.
United Kingdom	47.0	50.1
United States of America ...	42.6	40.3
Canada	7.2	6.9
Other countries	3.2	2.7

It will be observed that there was a slight loss of ground on the part of the United Kingdom, and an equivalent advance on that of the United States. The supplies derived from the United States now almost equal those from the United Kingdom.

35. The exports of island produce fell from an estimated value in the previous year of £2,224,116 to £1,474,194, a decrease of more than one-third. The total is lower than that of any other year since the bad years 1896-97 and 1897-98, in which the values were £1,384,278 and £1,377,826 respectively. Table V. in the appendix shows the steady increase in the exports since that period. *Exports.* *Great falling off.*

36. The principal falling off occurred in the export of bananas, which dropped from 14,660,582 stems to 7,803,243 stems, and in estimated value from £1,134,750 to £585,243. These are the Collector-General's figures, but I doubt if the fall was really quite so great as appears in the statistics. The fruit exported before the hurricane was marketed during the months of high prices. From August onward the prices are always much lower. These values are assessed on an average price; but the exports of the first four and a-half months of the year would fetch more than the average, those for the winter months less. *Banana trade.*

Up to the end of July, 1903, the export of bananas was 6,274,425 stems, about a quarter of a million in excess of that of the same four months in 1902. In the month of August, 1903, 896,035 stems were exported, against 1,233,954 in August, 1902. From August, 1903, to the 31st March, 1904, 632,783 stems were exported, as compared with 5,147,178 stems in 1902-03. The fruit that escaped the hurricane was principally in the western parishes. The lowest rate of shipment was reached in February, 1904, in which month only 13,468 stems were exported, against 715,361 in the previous year. After February the trade began to revive. In March 56,908 stems were shipped, in April 54,190, in May 125,460, in June 273,396, in July 801,508, and in the week of this month corresponding with the week preceding the hurricane of last year's August the export had reached four-fifths of what it was in the corresponding week last year. In the last week of August this year the export has been 263,249 bunches, against 253,493 in the corresponding week of the year 1902.

Revival now established.

Cocoanuts.

37. The export of cocoanuts fell in number from 25,623,644 to 14,951,245, and in value from £67,902 to £49,890. This trade will be slower in recovering than that in bananas. It was lowest in the month of February, when the numbers were 153,672 nuts, against 2,386,380 in the previous year. Since then it has been increasing. On account of the scarcity of native provisions the local demand and price have risen, and this has possibly somewhat checked the exportation. With regard to this export it may be noted that the quantity shipped in 1903 was quite unprecedented. In the previous year less than 18,000,000 nuts were exported, and in the year preceding that less than 14,000,000; in 1899-1900 about 18,000,000, and in the previous year less than 12,000,000. A very great number of cocoanut trees was destroyed, and at the east end of the island, where there were extensive plantations, some of these were almost entirely swept away, but it is my impression, from personal observation, that the early estimates of the proportion of cocoanut trees destroyed in the whole island were excessive, owing to the overwhelming impression produced by the aspect of those plantations of the seaboard which received the full force of the blow. There is always an immense consumption of nuts in the island, and the reduction in the exportation, which represents the surplus, is therefore not a direct index of the proportion of trees destroyed. I think it quite possible that by the time the trees left alive have recovered and come into full bearing it may be found (if the price continues good) that the exportable supply will not have been reduced very much below the average of the period preceding the year 1902-03. There has been a large amount of replanting, showing that confidence is still felt in this staple.

Cocoa.

38. The exports of cocoa fell from 31,462 cwt. to 22,008 cwt., valued at £41,540, against £65,285. Some of the older cocoa

plantations suffered very considerable damage, which it will take several years to repair, but they are not destroyed, and in view of the large areas of young cocoa that are coming into bearing I should expect to see this export very quickly recover and pass beyond its average of recent preceding years.

39. The export of coffee fell off from 107,855 cwt. to 80,061 cwt., and in value from £130,775 to £112,085. The crop was partially destroyed, but practically no permanent damage was done to the plantations. *Coffee.*

40. Oranges fell from 98,589,575 to 82,630,540, which number was, however, in excess of that exported in 1901-02. The estimated value fell from £101,054 to £72,303, owing to low prices. This crop did not suffer appreciably from the hurricane. *Oranges.*

41. Pimento exported fell from 114,906 cwt. to 71,078 cwt., and in value from £91,997 to £68,847. Pimento is an article for which there is a limited demand. Jamaica is the sole source of supply. The average output is large enough to continuously depress the market. It will be observed that last year's short crop is estimated to have been very nearly as valuable as the previous year's crop, which exceeded it by more than sixty per cent. in quantity. The price was unduly inflated after the cyclone by exaggerated reports of the destruction of the pimento walks. As was the case in regard to cocoanut plantations many large pimento properties, especially in St. Ann's, where the edge of the limestone tableland caught the full force of the hurricane, showed extraordinary devastation, but the impression I received from travelling through the island during the autumn was that there was a very imposing number of pimento trees left standing in St. Ann's, and that outside St. Ann's the reduction was not at all serious, in short that there were probably on the whole quite enough bearing pimento trees left in the island to yield as large an average crop as it is economically advantageous should come on the market. The hurricane appeared to me to have done what the Dutch used to do for their spice crop when they controlled the market for cloves, pepper and cinnamon, and what has been done for the diamond market. This year's crop, although a good deal of the berry was knocked off the trees by a heavy storm in June, will, apparently, be a full average crop, if not more, and prices are now markedly depressed. It is quite possible that in a year unfavourable to the berry the diminished number of trees may within a certain period result in the crop falling undesirably short, but I should expect that there will, on the average, be substantial compensation in prices for some years to come for the loss in quantity. This circumstance will not, of course, remedy the loss of those individuals whose plantations have principally suffered. The penkeepers of Manchester and St. Elizabeth will gain at the expense of those of the north side. *Pimento.*

Sugar.

Short crop.

42. The sugar cane crop was short, owing to drought in the growing season. The export of sugar fell to 270,493 cwt., and the value to £121,722. These figures are among the lowest on record. The preceding year's figures were 406,455 cwt., valued at £167,663.

Rum.

Great decrease.

43. The export of rum fell from 1,927,150 gallons to 1,293,716, and the value from £156,581 to £97,029—also the lowest on record for a number of years.

Annatto.

44. The exports of annatto continue to decrease, owing to the control of the market by a Trust.

Minor products and fruits.

45. Beeswax holds its own. Honey shows an advance. The value of these two products together was £20,852, against £19,617 in the previous year. The value of horses and mules exported advanced by £800. Lancewood spars, kola nuts, lime juice, sheep's wool, walking sticks, tortoise shell, dried turtle, bitter wood and divi divi all show advances. There was a falling off in the shipments of grape fruit, limes, mangoes and pineapples, reflecting the effects of the hurricane. The value of ginger exported fell from £46,615 to £42,465. The export of logwood rose from 37,895 tons to 42,259 tons, and in value from £97,906 to £110,929. This export was stimulated by the hurricane, by the necessity both of cleaning pastures from fallen trees and of providing ready money for restorations. Logwood extract advanced from 6,874 packages to 9,511 packages, and in value from £33,633 to £47,609.

Logwood, &c.

46. There were decreases in the exportations of fustic, ebony and lignum vitæ.

Cattle and hides.

47. There was a remarkable drop in the exportations of cattle, from 1,245 head, valued at £8,406, to 183 head, valued at £947. Fewer hides, too, were exported. Goat skins shrunk from 94,968 lbs. to 87,085 lbs. Probably this was due to a fall in price, for the value shows a larger proportional drop.

Cotton.

48. Cotton figured for the first time for many years among the exports. In this year's statistics it would show an important advance, as there has been considerable planting.

Tobacco.

49. The export of tobacco leaf increased, but is still insignificant, the total valuation being only £582. The export of cigarettes and cigars diminished from a value of £20,204 to £18,985.

Destination of exports.

50. The exports of the year were consigned in the following proportions to the United Kingdom, the United States of America, Canada and other countries:—

—	1903–04.	1902–03.	1901–02.
United Kingdom	18.8	19.1	21.1
United States of America	59.4	68.1	65.6
Canada	5.4	2.3	1.6
Other countries	16.1	10.5	11.7

The apparent retrogression of the proportion going to the United States is owing to the interruption of the fruit export. The advance in the exportation to other countries is principally a matter of proportion only, owing to the same cause. The increase of exportations to Canada is in some degrees substantial. It is noteworthy that 108,425 cwt. of sugar went to Canada this year, against 88,844 cwt. to the United States of America, and 60,036 to the United Kingdom.

Percentage analyses of exports.

51. The proportional values of the several principal classes of exports is shown by the Collector-General, as follows:—

	Per cent.
Sugar	8.2
Rum	6.5
Coffee	7.6
Dyewoods	7.9
Fruit	45.3
Pimento	6.0
Other products	18.5

Last year fruit formed nearly sixty per cent. of the total export, and this proportion will, no doubt, progressively increase. Nearly ninety-six per cent. of the banana trade went to the United States of America, and the English trade in this fruit showed no comparative gain during the year. The export of oranges to the United Kingdom rose from 6,068,000 to 11,178,000, and reached about one-seventh of the total amount, a great advance in its proportion, which, in the previous year, was only about one-sixteenth.

Effect of cyclone on trade of Direct Line and British market.

52. Considerable positive advance in the fruit exports to England would, no doubt, have been shown had it not been for the cyclone, which caused the Direct Line steamers to run empty of bananas for many months, and diverted the other British fruit steamers from Jamaica to Costa Rica, between which country and the United Kingdom a substantial trade in bananas is now being built up by the joint enterprise of Messrs. Elders and Fyffes and the United Fruit Company. Costa Rica is Jamaica's most serious competitor in the supply of this trade.

(B.) Shipping.

53. The returns of shipping for the year show 255 sailing vessels reported, against 237 in 1902-03, an increase of 18. Of steam vessels 825 were reported, against 1,034, a decrease of 209. The decrease in tonnage was 84,563. In consequence of the depression of the fruit trade 22 steamers fewer than last year visited Kingston, 201 fewer Port Antonio, and 14 fewer

other ports. The variation was entirely in foreign shipping engaged in the fruit trade, of which the majority are Norwegian vessels.

54. This falling off in the shipping business, especially at Port Antonio, naturally threw a great many persons engaged at the ports out of employment, and contributed to the demand for relief work in Portland, as well as increasing the calls upon the Poor Fund for assistance to dependents whose supporters abandoned them in the search for subsistence elsewhere.

The Marine Board.

Decrease in trade.

55. The Marine Board, under the presidency of the Commodore on the station, continued its supervision of shipping. Twelve enquiries were held on the conduct of pilots, resulting in six being exonerated, two cautioned, three licences being suspended for nine months each and one licence being forfeited. Sixteen enquiries were held into casualties to vessels and the conduct of the masters in charge, and 126 vessels were examined and granted sea-going certificates for various periods.

56. As was mentioned in Sir Augustus Hemming's report on the Blue Book of last year, the Wigham lamps now used in the harbour of Kingston were unaffected by the hurricane. These lamps have, on the whole, proved very satisfactory, although they require careful watching and occasional attention to ensure their continuous and regular burning.

(C.) Surveys, Land Grants, Crown Lands.

57. The Surveyor-General reports that 390 linear miles of survey have been traced by his Department, an increase of 113 miles over the work of the previous year. The surveys included extensive work at Letitz Savannas in St. Elizabeth, the opening and defining of the lines of forfeited land, and the allotment of Crown lands to purchasers and to time-expired coolies. The surveys at Letitz were for the purpose of granting titles, subject to a nominal rent, and with option of purchase, to a large number of squatters who were in occupation of land forfeited to the Crown. During the year 640 applications were received for the purchase of 5,035 acres of Crown land, and 475 lots. covering 5,178 acres, have been surveyed and allotted. In this year the policy was initiated of offering grants of land to time-expired Indian immigrants in lieu of return passages to India. 695 acres of land have been so allotted to 60 adults and 67 children, at a cost of £160, in addition to the value of the land. Notifications for the forfeiture of ten properties, containing 4,358 acres for non-payment of taxes, have been advertised, and proceedings for forfeiture are pending. 9,234 acres advertised in previous notifications have been forfeited. The work of this Department is on the increase.

58. It is the desire of the Government to adhere to the policy of completing means of access to Crown lands already alienated to which roads have been promised before making roads elsewhere, and not to open Crown lands to settlement in remote and inaccessible districts so long as there are unalienated Crown lands fit for settlement to which roads have already been made or promised. The profitable character of banana cultivation may become a means of defeating the objects with which the scheme for the sale of Crown lands to small buyers, to be paid for by instalments, was instituted. Such lands are sold at £1 an acre, and it may very well pay a labourer to take up land at that price, payable by instalments, to cut down the woodland, to take off a few crops of bananas, and to abstain altogether from the permanent settlement which it was the object of the scheme to promote. The extension of the alienation of Crown lands under this system therefore requires careful and constant watching, and, in view of the present high value of lands suitable for banana cultivation and the probable increase in the general value of land as agriculture and population develop, the Government will have to consider before very long whether the minimum prices for Crown lands on the instalment system should not be fixed at a higher figure than £1 an acre, especially when rendered accessible to roads. One of the roads constructed by relief labour since the cyclone in East Portland will facilitate access to a large tract of valuable Crown land, in regard to which such questions as this may well arise. *Crown lands policy.*

(D.) Agriculture and Agricultural Services.

59. The agricultural progress of the island received a severe shock, but was in no sense permanently arrested by the cyclone. On the contrary, the necessity of redressing the effects of that disaster gave a stimulus to cultivation and planting, and there can be no doubt that during the autumn and winter many of the large planters and also the small settlers, particularly those who received loans from the Government, the application of which was enforced by supervision, did a great deal more forking and trenching than they would otherwise have done, whilst there has been a larger planting for next spring's crop than in any previous year. The physical action of a hurricane on the soil and vegetation appears to have itself a fertilising effect, and the succeeding season has been, on the whole, favourable to agriculture, although cold weather in the early spring has retarded crops. One result of the hurricane was the importation of a large amount of good seeds of peas and beans, which were widely distributed, also the distribution and planting of a great quantity of sweet potatoes of good quality. In fact, the stimulating results of the hurricane were markedly visible in the improved quality of the exhibits of peasant's produce at the recent agricultural shows in St. Andrew's parish and elsewhere. *Effects of cyclone.*

General progress maintained.

60. Steady progress is being continuously made in the diffusion of agricultural knowledge and improved practice among the peasantry. This is effected through the local branches of the Jamaica Agricultural Society, which are increasing in number and in strength of membership, through the local agricultural Instructors employed by the society, now four in number, and by the Travelling Instructors of the Government. The whole time of one of these is now devoted to instruction and part of the time of two others. After the hurricane, instructors were specially sent to the districts principally affected, to encourage the peasantry to plant quick-growing crops of provisions and to assist them in restoring the damage done to their permanent cultivation. The encouraging results attained in previous years under the scheme for the granting of prizes for the best kept small settlers' holdings in particular districts have been followed up and improved upon. It is now arranged that in whatever parish of the island prizes are to be offered under this scheme an instructor shall be stationed during the previous year, in order to encourage competition, and to give hints as to the improvements to be aimed at. Progress on these lines is slow, but the movement has taken hold. The suspicion which used to attach to the efforts of the Agricultural Society and the instructors, under the belief that it was a device for extorting increased taxation, is passing away, and the local agricultural shows now call forth exhibits of very markedly higher quality, in regard to curing and preparation, than they did a few years ago. There is also a discernible increase in the keeping of small stock, pigs and settlers' cattle.

Work of Government in agriculture. Experiment station.

61. The Board of Agriculture, under the chairmanship of the Colonial Secretary, continued to supervise the agricultural work of the Government. Considerable progress was made in developing the usefulness of the Agricultural Experiment Station at Hope Gardens. The more important work done was the propagation, for test purposes, of selected varieties of cassava, the experimental cultivation of cotton, the continued study of hybridised pineapples, the propagation and selection of seedling sugar canes, an experiment in the growing of sun-flower and canary seed, the selection of sweet potatoes, the curing of Havana tobacco, in which special instruction is given to the apprentices, and the cultivation of Sumatra tobacco—for wrappers of cigars—under cotton cloth, a method adopted from the United States. This experiment deserves special notice.

Sumatra tobacco.

62. The cigar-making industry of Jamaica is hampered by the cost of the Sumatra wrapper, which has to be imported, native tobacco not yielding a sufficiently fine and silky leaf. A quarter of an acre of ground, previously cultivated in Havana tobacco, and exhibiting two distinct kinds of soil, was covered with a tent of cheese cloth and planted with Sumatra tobacco. The plants grew equally well upon both soils, reaching a height of nine feet in seven weeks after planting. The results of the

experiment show that a very fine class of wrapper tobacco can be grown at a very remunerative cost, equal, if not superior, to that imported from America. The results of curing were unsatisfactory in flavour, owing to the climate at Hope being too dry. So delicate a leaf must be cured in a more humid atmosphere, and it may be advisable to transfer the next crop for curing to some other district of the island.

Budding of mangoes and cocoa.

63. A very important achievement of the Department during the year was the discovery of reliable methods for budding mangoes and cocoa. This ought to have important effects on trade in both these products, but especially in that in cocoa. It will now be possible to bud the more valuable but somewhat more delicate variety of cocoa, the criollo, upon the strong-growing stocks of the forastero or calabacillo.

Agricultural instruction.

64. A large amount of agricultural instruction and training is given in the institutions gathered at Hope. In the Government Laboratory instruction is given to young men of the middle class, after passing through secondary schools, in agricultural chemistry, the cultivation of the products grown at the Experiment Station, estates' book-keeping, farriery, &c. Twelve apprentices, including two in the laboratory, were also under instruction. The second-year students from the Mico Training College for Schoolmasters receive weekly instruction. Sixty-one elementary school teachers received a month's course of agricultural training at Hope Gardens, and the Mico Institution in January. The boys of the Hope Industrial School are also employed under instruction in the Gardens.

Damage to gardens.

65. The beautiful gardens at Hope, which form a pleasure ground for the public, as well as the centre of the economic agricultural and botanic work of the island were pitiably devastated by the hurricane, as were the older Botanic Gardens at Castleton and the Parade Gardens at Kingston. The restoration of the damage, so far as it was possible, was carried out with great judgment, efficiency and promptitude by the Department, and at Castleton Gardens, which were previously perhaps somewhat overstocked, the results of the damage would now hardly be noticeable to a stranger. Hope Gardens have suffered by the loss of many large trees, but in other respects they have resumed their accustomed aspect. The expenditure in excess of the estimates rendered necessary by the damage done was £460, but this does not represent the full amount that was spent in redressing the damage, nor, of course, the value of what was destroyed.

Cotton planting.

66. The attention which has been given to the revival of cotton growing in the West Indies was participated in by Jamaica. As I have mentioned, some cotton was exported last year, and more has been planted this year. There are thousands of acres of land in Jamaica, including some irrigable lands, which it has been demonstrated are admirably suited for the

easy cultivation of cotton. The reason why the planting of cotton has not been taken up in Jamaica, as it has been in Barbados and some of the other Lesser Antilles, is simply because banana planting and other investments here offer a still more promising return. Investments of capital in cotton growing, however, offer at least as good a promise in Jamaica as anywhere else in the West Indies, and I should expect that there will be very shortly a considerable development of cotton planting on such lands as I have referred to, which are not suitable for banana, chocolate or other established staples.

Cassava starch manufacture and cotton ginning.

67. For some time past the question of developing the cassava starch industry has been occupying attention. Owing to the enterprise of Mr. J. W. Middleton, a member of the Board of Agriculture, a small factory was experimentally started at Longville in Clarendon. The starch produced by this factory was of such excellent quality, and attracted such favourable attention amongst persons interested in this trade in England, that a company has been formed to manufacture on a large scale, and a stimulus to the cultivation of cassava, which must prove of great advantage to the small cultivators in the neighbourhood, may be expected to result. I may observe that if cotton ginneries should be established in suitable neighbourhoods, it is probable that a large supply of cotton might, in a few years' time, be obtainable from small cultivators An experiment is being made by the Board of Agriculture in this direction by placing one of the cotton gins presented to this island by the British Cotton Growing Association under the control of one of the local agricultural societies. A power gin, also presented by the Association, is being worked by Mr. Fursden, also a member of the Board of Agriculture, under the arrangement that he shall gin at a fixed rate all cotton sent to him.

Immigration Department.

Indian immigrants.

68. The Protector of Immigrants reports that no Indian immigrants were sent back to India during the year. On the 8th April the ship "Dahomey" arrived from Calcutta with 659 immigrants on board. Notwithstanding that there had been considerable sickness during the voyage, the immigrants generally presented a healthy appearance on their arrival, and seemed to be of fair physique. There has been a further and marked decrease in the death-rate of Indian immigrants during the year, the figures being 1.97 per cent., against 3.40 per cent. in 1902. More than one-third of the deaths were those of infants, while one-sixth were the result of accidents and violence.

Effects of cyclone on condition of coolies.

69. During the first four months of the year the wages earned by Indian immigrants were satisfactory, but since the cyclone their earnings have dropped considerably. The numerous coolies employed in the banana plantations are able to earn high wages in the congenial work of cutting, carrying, wrapping and

carting the fruit, but by the destruction of the crop they were reduced to the less remunerative tasks of hoeing and other cultivation. Their ability to work was also seriously affected by the considerable amount of sickness which prevailed among them, as among the labouring class generally, after the hurricane. The hospitals during part of the autumn were crowded with Indian immigrants far beyond their proper capacity, and it was found necessary in some cases to provide temporary accommodation.

70. The Indian immigrants whose dwellings were destroyed by the hurricane showed a more rapid capacity than the majority of creole labourers and peasants in rising to the needs of the situation in the repair of their houses, and a greater readiness to resume work. In these respects they gave a valuable example, and the alacrity and ingenuity with which, in some cases, they provided themselves and their families with shelter and cleared away the débris of the storm was most commendable. The Indian immigrants make valuable settlers, and it is to be hoped that the policy of granting them land in lieu of return passages will prove of permanent advantage to the island, besides saving the cost of the passages. The deposits in the Government Savings Bank to the credit of Indian immigrants increased by nearly £2,000 during the year to a total slightly exceeding £24,000. It is estimated that Indian immigrants own real property in the island to the value of about £30,000.

Native labour supply.

71. The experiment, which was initiated in the year 1902, of utilizing the Immigration Department as a Labour Intelligence Office for enabling labourers seeking employment to meet the demands of employers in other parishes was continued during the year under review. It has proved an entire failure. The labourers that have applied in most cases refused to accept work offered them, even though at the most liberal rates, and in one case they eventually left the estate employing them in debt for advances made, and took with them the tools supplied. The experience of planters in these cases has led them to discontinue applications to the Immigration Office for creole labour, and to increase their applications for Indian immigrants.

III.—LEGISLATION.

Laws of 1902.

72. Appendix VI. furnishes a schedule of the laws passed in the Session of the Legislative Council of the year 1903, and assented to within the period under review. Among these laws I may call attention to the following:—

Law 5 of 1903, "The Trustee Investment Securities Law, 1903." This law was passed in order to comply with the requirements prescribed by the Imperial Treasury to enable stock of the Colonial Government to rank under the Colonial Stock Act, 1900, as a security in which a trustee may invest trust moneys under the powers of the Trustee Act in 1893 of the Imperial Parliament.

Law 9, "A Law to amend the Deficit Loan (Imperial) Law, 1900," empowered the Governor, with the advice and consent of the Council, at any time when the state of the finances of the Colonial Government might admit of it, to pay off the balance outstanding of any loan raised under the provisions of Law 36 of 1900. This law was passed to permit the Colonial Government to repay out of its cash balances the outstanding balance of the loan of £20,000, borrowed in the year 1900 from the Imperial Government in aid of General Revenue. The Colonial Government is now free of debt to the Imperial Government on this account.

73. Law 15, "The Property Tax Law, 1903," and Law 16, "The Parish Rates Law, 1903."

In my report on the affairs of this Colony for the year 1901-02 [Cd. 788-43], paragraphs 14-23 and 199-268, I reported fully on the situation which led up to the passing of these two very important measures. There were previously in force six distinct taxes on houses and lands for purposes of General or Parochial Revenue, namely:—

Former taxes on real property.

(1) The Quit Rent, of one penny an acre on land (except where the tax had been redeemed). The amount of the quit rents had, up to April, 1901, been appropriated for the improvement and the repair, in special cases, of parochial roads. In 1901, in accordance with the recommendation of Sir David Barbour, this tax was transferred to the account of General Revenue. I may here observe that I think it will be recognised, when the position of the finances admits of it, that it will be expedient that a considerable appropriation should annually be made out of general revenue for the improvement and extension of roads in lieu of this source of income temporarily diverted from that purpose.

(2) The Holding Tax.—This was a direct tax on land assessed on the areas of holdings, but decreasing in its average rate per acre as the size of the holding increased.

(3) A Property Tax on the acreage of certain cultivated lands, payable to General Revenue.

(4) A similar Property Tax on the acreage of lands, graded according to their cultivation, payable to the Parochial Road Funds.

(5) The House Tax.—A rate assessed on the annual value of houses for the support of the poor and for other general purposes of the Parochial Boards.

(6) The Education Tax, which was a limited rate on houses ranging from 2*s.* to 12*s.*, in aid of the expenses of public education.

Single property tax for general revenue.

74. The Property Tax Law imposed, in all parishes except Kingston, a tax at the rate of 8*d.* on every ten pounds or fractional part of ten pounds of the gross value of property on the Valuation Roll, to be paid to General Revenue in lieu of the Quit Rents, the Holding Tax, the Property Tax, and the Education Tax, all of which were abolished. The effect of the law was to reduce the year's estimate of direct taxation on property for General Revenue from £40,400 to £28,370. Moreover, it allowed a rebate, estimated to amount to between £600 and £700, in the case of property including lands on which quit rents have been redeemed. The total estimated loss to General Revenue was thus about £12,700.

Parish rate for local revenue.

75. The Parish Rates Law was an equally important and far-reaching reform. It superseded the arrangements whereby the whole cost of poor relief, lunacy, local sanitation and other general purposes of the parishes had been defrayed by a rate on houses only, falling, in fact, most heavily, in proportion to value, on the houses of the poorest class, a system the unfortunate results of which had long been recognised, and which were set forth somewhat fully in my report for the year 1901-02. The new law distributed the burdens of local finance in these departments over the whole of the property standing in the Valuation Roll. For the purposes of both laws the value of any property in the possession of one and the same person in the same parish up to and not exceeding £40 in gross value is to be taken to be £40, except when such property does not include any house or does not exceed one-quarter of an acre in extent; in either of such cases, if the value of the property does not exceed £40, the value for the purposes of the law is to be taken as £20. The effect of this change, whilst it established a minimum basis for rating, was to transfer to land a charge which would vary in different parishes, according to the cost of local administration in those parishes. I have already pointed out that relief was given to land by the remission of £12,000 of taxation formerly going to General Revenue.

76. There was little opposition in the Legislative Council to either of these Bills, although in the previous Session there had been strong opposition to similar Bills then prepared, but in the event suspended on account of the incompleteness of the

Valuation Roll at the time, and a great deal of misapprehension and prejudice had been stirred up in opposition to them. There was, however, some opposition on these Bills, on behalf of landowners, to exposing their property to a new rate at the uncontrolled discretion of elected bodies, which would be dependent on the suffrages of the poorer voters, and which there was a disposition to regard as likely to act extravagantly and irresponsibly. As there was force in the demand put forward that some safeguard should be established, it was thought reasonable to meet the difficulty by providing that the Parish General Rate to be levied on any £10 of the value of any property after and in excess of the amount of £1,000 should not exceed in any case 1*s*. on every ten pounds of such value. The restriction would only affect those parishes in which the parish rate on a uniform basis would have to exceed 1*s*., and it was found that in such parishes the effect of restricting the rate on properties exceeding £1,000 in value to 1*s*. would only be to increase the rate on other property by about one halfpenny on the average.

Change of incidence.

77. I endeavoured to compute what would be the effect of the shifting of taxation brought about by these laws in regard to the distribution of burdens on proprietors of houses and lands. So far as I could judge the total taxation on land, both for General and for Local Revenue, would apparently be somewhat less than it was in the year 1901-1902, whilst that on houses would be reduced from an average of about £50,000 to somewhat less than £29,000 a year. I cannot say that these figures are conclusive, but it is unquestionable that the former payers of house tax receive a most substantial remission of taxation, whilst the taxation on land was increased beyond what it had been before April, 1901, but not beyond the limit of 1901-2.

Road rate.

78. The Parish Rates Law also enabled Parochial Boards to impose a road rate, not exceeding twopence on every £10 of the value of property, in aid of their road funds, to take the place of the former Property Tax, which was abolished.

79. These two laws, which had been prepared for by the valuation of property, on which I reported fully in 1902, complete a most important and valuable body of reform. Apart from the adjustment of taxation on a fair basis and the supersession of the much denounced House Tax, the simplification and saving of labour effected by both for the taxpayer and the Revenue Department are very great. At some future date it may be considered whether to transfer the assessment of the taxes to rental or annual values instead of resting it on gross values as at present. But on the whole it does not appear that there is much fault to be found with the operation of the present principle. The valuation will be periodically amended, and I have no doubt whatever that the next roll will be an improvement, in completeness and equity, upon the present one, in which I think there may be some properties relatively undervalued. The yield of the taxes may be expected to increase substantially at each valuation, whereas the anomalies and inconveniences of

the former system of taxes were bound to become more conspicuous and more irksome as the development of property in the island progressed, without any proportionate effect in increasing the revenue.

Satisfactory working of new taxes.

80. Reporting on the operation of these laws the Acting Collector-General, in the course of his very interesting report on the work of his Department for the year, observes that promise of success in the collection of the direct taxes at the opening of the year was marked, the peasantry in greater numbers flocking to pay, and expressing gratitude at the relief given them, while the larger proprietors in cases in which their obligations were increased, ungrudgingly accepted them, and freely took advantage of the concession allowing them to pay in quarterly instalments or by moieties.

Local effects of cyclone on yield of taxes.

81. The receipts from Property Tax amounted to £25,573, which was short of the estimate by £1,347, whilst the yield of the parish rate was £38,183, being short of the estimate by £3,482. The Collector-General attributes the failure to realise the estimates entirely to the serious check caused by the hurricane. The parochial returns bear out this impression, since the falling off is only serious in those parishes which suffered severely from the storm. In these it amounts to £3,974. In three others there were very small deficiencies on the estimates, whilst in four there were excesses. The largest deficiency was in St. Mary's Parish, viz., £1,130 on an estimate of £4,120. I should judge that, but for the hurricane, the estimates would have been exceeded in most parishes. The operation of the new laws may, therefore, discounting the effects of the hurricane, be regarded as so far entirely satisfactory.

82. Law 17, relieved vessels calling at the island solely for the purpose of effecting necessary repairs or of obtaining medical assistance, from liability to pay any harbour fees or light dues, and vessels calling only for orders or to obtain water, ships' stores or necessary provisions, from half the amount of such dues.

Law 19, "The Cruelty to Animals Law Amendment Law," besides making other small amendments in the existing law, prohibited the docking or nicking of the tails of horses.

Law 20, "The Parochial Loans Law, 1903," gave power to the Government to borrow money to lend to Parochial Boards for the execution of approved public works. Hitherto provision for such works has been made by advances from the Island Treasury, an arrangement productive of inconvenience at times when the Government has no real surplus to the credit of General Revenue or when its cash balances are subjected to such a heavy drain as has occurred this year. I have dealt with this consideration in my remarks on the balance sheet of the Colony.

Law 23, "The Bank Notes Law, 1903." This law prescribes, in accordance with the principle approved by the Imperial

Treasury for observation in Colonies whose banking laws are under the control of the Secretary of State, the conditions as to security under which bank notes may be issued by banks not already issuing notes in the island. The banks now issuing notes are the Colonial Bank, the security for whose notes is prescribed by the terms of their Charter, and the Bank of Nova Scotia, whose notes are secured by the provisions of the Canadian Banking Law.

83. Law 31, "The Produce Protection Law, 1903," was a somewhat important measure, to reinforce the protection of agriculturists against praedial larceny. Added to the Vagrancy Law of the previous year and the Praedial Larceny Law of 1901 it forms the outcome of the special attention which has been given during late years to the problem of repressing prædial larceny. It also embodied an important provision requiring any person packing any kind of agricultural produce to be designated by order of the Governor in Council for exportation in any closed package, and any person exporting such produce, to register a trade mark and to mark therewith every package of such produce packed or exported by him in a plain and conspicuous manner. This provision was the outcome of long discussion as to the best means of preventing the good repute of Jamaica fruit from being injured in foreign markets by the exportation of worthless stuff. It was deemed, in the first instance, advisable not to go further than the requirement of this law, which would ensure that the shippers of bad fruit would be identified in the market by their brand marks, whilst those whose marks established a good reputation would acquire a corresponding benefit.

Marking of fruit exports.

Widows' and Orphans' Pensions Law.

84. Law 32, "The Widows' and Orphans' Fund Law." This law, as above indicated, wound up the Civil Service Widows' and Orphans' Pension Fund, and transferred all its assets and liabilities to the account of the General Government. New tables, founded on a revision of mortality lists for Civil Servants in several principal Colonies, were adopted in the law to determine the rates of annuities.

85. Law 40, "The Stamp Duty Law, 1903," is a valuable consolidating law combining and re-enacting, with a few small modifications, the Stamp Duties previously in force.

Law 42 amended the Tariff by reducing the Import Duty on sugar from 1*d.* per lb. to 2*s.* per 100 lbs. This reduction of duty was directed by the Secretary of State to give effect to certain requirements of the Brussels Convention on sugar bounties.

The last-mentioned law and the two next mentioned were passed at a meeting of the Legislative Council, held in August, immediately after the occurrence of the cyclone.

86. Law 45 provided that the sum of £10,000 granted by the Imperial Parliament in aid of the sugar industry in Jamaica

should be transferred to the Board of Agriculture, and should be applied with the proceeds thereof, with the sanction of the Governor in Privy Council, in the establishment and maintenance of a Sugar Experiment Station, where experimental cane cultivation, experiments by a fermentation chemist, technical and scientific instruction and illustrations in connexion with the sugar industry and other cognate operations should be carried on. A scheme for the utilisation of this fund, by the extension of the Government Laboratory for the study of sugar problems, and the prosecution of cultural experiments, has been drawn up by the Board of Agriculture.

87. Law 46 empowered the Government to borrow a sum not exceeding £12,000 to defray the cost of improving Falmouth Harbour. It had been the intention of the Government to provide for the cost of this work out of General Revenue, but this law was introduced because it was feared that the results of the cyclone might make it impossible to do this. Up to the present date, however, the works have been carried on without borrowing, and I trust it may be possible to complete them without doing so.

88. Law 47, "The Hurricane Loans Law, 1903," and Law 48, "The Agricultural Loans Law Amendment Law," were introduced by me at a later sitting of the Council, held on the 15th day of September, their provisions having been duly settled by the Governor in Privy Council.

Hurricane Loans Law.

89. The chief provisions of the Hurricane Loans Law may be summarised as follows: It authorised the grant from the Treasury of loans to persons in possession of any land the cultivation on which had sustained damage by the hurricane. The interest chargeable on such loans to be at the ordinary local commercial rate of 6 per cent. per annum. It provided that the form of receipt (prescribed in the law) for the first instalment of the loan when signed by the borrower should confer on the Government (*a*) a preferential charge upon all crops grown on the land until repayment in full of the loan, interest and expenses incurred; (*b*) a charge upon the land subject (practically) to existing mortgages; (*c*) all the rights and powers conferred on lenders under the terms of the Agricultural Loans Law, 1887 (which gives a preferential lien on crops to such lenders) with the extension of such rights and powers to all crops until repayment in full; and (*d*) a power to sell the interest of the borrower in the land if default should be made in due repayment. The following covenants with the Government were declared to be implied on the part of the borrower, viz.: (*a*) With the money lent to restore, preserve and maintain cultivation on the land specified or to establish other approved cultivation in lieu thereof; (*b*) to repay the loan with 6 per cent. interest, and to pay all expenses incurred; and (*c*) to produce weekly or at such other intervals as may be required accounts showing the expenditure of the moneys advanced. In addition to this there were

declared to be implied in the prescribed receipt the following covenants, binding on the occupier of the land for the time being, viz.: (*a*) Out of the crops and proceeds to repay the loan with interest and expenses; (*b*) to allow inspection of the land and its cultivation; (*c*) to uphold and maintain in good order and condition the cultivation on the land charged, and to see that the security is not deteriorated in value; (*d*) whenever required, to furnish full information as to sales of produce and to dispose of the purchase money as directed, and to give information of any contracts for sale of such produce, so that the purchase money may be paid over to the Government, to be applied in payment of the expenses and interest and repayment of any instalment of the loan outstanding. Section 6 contains penal clauses carrying imprisonment, with or without hard labour, for any term not exceeding one year for borrowers convicted of false representation, misapplication of the advance, failure to comply with the provisions of the law or in the case of the occupier of any land charged, sale, conversion to his own use or destruction of any of the crops without proper consent.

Agricultural Loans Law.

90. The amendment of the Agricultural Loans Law, 1887, extended the duration of a lender's lien on crops from 12 to 18 months, to meet the requirement of the banana industry.

Appointment and proceedings of Hurricane Loan officers.

91. These two laws were assented to by the Governor on the 18th September, 1903. The Colonial Secretary and the Honourable L. J. Bertram (Auditor-General), and subsequently Mr. Robert Johnstone, Secretary of the Board of Supervision of Poor Relief, were appointed to be Hurricane Loan Officers, to carry out the purposes of the Loans Law. The Loan Officers appointed Mr. Thomas Kemp, previously an Inspector of Fruit of the United Fruit Company, to be the chief agent, and Mr. H. R. Latreille, of the Colonial Secretary's Office, to be their clerk. On the 23rd September a Government Notice was issued inviting all persons to whom the Hurricane Loan Officers might apply for advice or assistance to co-operate with them with a view to the efficient carrying out of the duties entrusted to them and of the public purposes of the law, and the Elected Members of the Legislative Council for the storm-stricken parishes were specially invited to give their assistance. These requests met with a full and ready response, and the work of the loan officers was much facilitated by such willing co-operation. Forms of application for loans were promptly distributed to the tax offices and police stations, and were printed for use in the daily newspapers.

92. Mr. Bertram and Mr. Kemp forthwith proceeded to St. Mary's parish, where the greatest demand for loans was expected, to make a beginning of dealing with applications and preliminary arrangements for inspecting the properties of the applicants and for issuing the instalments in which it was proposed the loans should be made. Mr. Johnstone made a tour of the eastern parishes, viz., St. Mary, Portland, St. Thomas,

St. Andrew and St. Catherine. A few days later I left Kingston for St. Mary, where I met Mr. Bertram and discussed with him and the gentlemen who had been assisting him the principles to be followed in dealing with the business in hand.

Applications mostly from small cultivators.

93. It had become evident, as soon as applications were invited, that the character of the business to be dealt with would probably be different from what had been contemplated when the first proposals were made for a Government loan. There were practically no applications from the larger planters. Contrary to what had been feared, it appeared that such planters had either reserve funds at their own command or enjoyed such good credit on account of the profitableness of their industry that they were able to obtain accommodation from banks or private sources, on terms as easy as those offered by the Government. On the other hand, great numbers of applications were received from cultivators of small holdings of land, having from one acre to one hundred acres in bananas. Practically the whole of the applications were for money to reinstate banana cultivation, though in many cases there was cultivation of other produce interspersed with the bananas, especially that of chocolate. Very few applications for loans were received from persons who had suffered damage of a more permanent character by the destruction of cocoanut or pimento trees. The great number of applications from small cultivators made it clear that a special form of organisation would be required to verify the circumstances of the applicants and to ensure that the conditions of the Loan Law were being observed. Mr. Bertram had accordingly with very great promptitude and energy called upon qualified gentlemen of position in different parts of the parish and had induced them to form themselves into local committees, each with a chairman. I may explain that the so-called parish of St. Mary has an area of 250 square miles, very hilly and with heavy and difficult roads. The members of these committees and of similar bodies that were formed in two districts of Portland devoted a great amount of gratuitous labour to carrying out the purposes of the Loan Law, and I have done my best to express to them the grateful appreciation by the Government of the services which they have thus rendered to the island. The valuable and laborious work done by Mr. Bertram has no doubt conduced to the recognition of that officer's meritorious public service, which has recently been accorded to him by His Majesty in conferring on him the distinction of a companionship in the Order of Saint Michael and Saint George.

94. All applications for loans were investigated and reported on by a member of one of the local committees, or where such local committee was not formed, as was the case in parishes other than St. Mary and Portland, either by one of the loan officers or by their chief agent, Mr. Kemp, or by an officer of the Inland Revenue Department, or by some gentleman of local knowledge specially invited so to assist.

95. After conferring with local advisers in St. Mary, I proceeded with Mr. Bertram to Port Antonio, where I conferred with the Elected Members of the Legislative Council for Portland and St. Thomas, Mr. Gideon, formerly Member for Portland, Mr. Johnstone and Mr. Cradwick, the Agricultural Instructor, who had been dividing with Mr. Johnstone the inspection of these parishes.

Principles adopted for grant of loans.

96. As the result of the scrutiny of the applications sent in, and of the consultations, the Loan Officers decided to administer the loans in accordance with regulations, the gist of which was as follows:—

(*a*) No loans to be granted where the area in cultivation was less than 5 acres, unless the applicant was unable to work himself on the land, and must employ assistance. It was considered that a cultivation not exceeding 5 acres could be maintained by the owner himself and his family, without depriving him of the opportunity of earning money wages outside, and that such a man would not need to employ paid labour.

(*b*) In no case should the amount lent exceed £3 per acre of cultivation.

(Many of the applications were found to be for less than this amount, which it was agreed would be sufficient to do all that was necessary for banana cultivation until the fields begin to yield.)

(*c*) The loans to be advanced in seven instalments, the first instalment to be one-quarter of the whole, payable on or before the 15th October, 1903, and the remainder six monthly instalments of one-eighth, the last falling in April, 1904.

(*d*) Interest at the rate of 6 per cent., to be payable on the 15th of May, 1904, on all instalments advanced up to that date.

(*e*) On the 15th May, 1905, one-half of the loan to be payable with interest in full to date. On the 15th June, 1905, one-quarter to be repayable, with interest in full to date. On the 15th July, 1905, the remaining quarter of the loan to be repayable, with interest in full to close account.

(*f*) The borrower to have the option of repaying the loan or any part of the loan, with interest to date, at any time within the periods named.

(*g*) The requirement that the loan should be repaid in full by the 15th July, 1905, to be adhered to, except in

special cases. It was recognised that for banana cultivation proceeding on sound lines and under ordinary conditions this period would be sufficient, but consideration was to be given to special circumstances or to the conditions of other cultivation and to any unforeseen accidents which might prevent repayment at the due date.

97. It was expected that the interest at the rate of 6 per cent. would cover all expenses, except special expenses, which might be entailed by the failure of any borrower to account satisfactorily at the proper dates. Any other expenses which are not covered by the interest charged to be distributed proportionally among the borrowers and claimed with the instalment of the loan repayable in May, June and July, 1905.

98. In view of the assistance which it was expected the Loan Officers would receive from gentlemen of local knowledge, they did not consider it probable that they would have to put into operation their powers of receiving the crops of borrowers, but if default should be made in the payment of interest or instalments when due, they would be compelled to assign all the produce of the borrower's land to nominated buyers, who would account for the proceeds to the Loan Officers.

99. The Loan Officers expected to be able, through the assistance of the local committees, or of the runners of the Collector-General's Department, to satisfy themselves that cultivation was being carried on during the period of the loan, and that it would not be necessary to require the production of pay bills except in the case of larger estates, which would probably be dealt with by the chief agent.

Procedure for administration of loans.

100. Full notification was published of the foregoing decisions, and work then proceeded actively on these lines. Mr. Bertram, with the assistance of Mr. Kemp and some from myself, dealt almost entirely with the applications from the parish of St. Mary, in which parish the loans made amounted to more than 70 per cent. of the total amount granted. On the grant of loans cheques payable at the parochial treasuries were made out by the Loan Officers' Clerk, signed by a Loan Officer, and sent with the form of receipt charging the land to the chairman of the local committee for the district or to the parochial treasurers. The cheques were issued to the applicant on personal application, and this process was repeated month by month, until the whole of the loans had been taken up. The personal knowledge of the members of the committees enabled the expenditure of the loans to be kept under observation. This was done elsewhere by Revenue Officers. As in one district of St. Mary, 247 loans were granted, in another 222, and in another 180, it will be recognised that the work of the committees was no sinecure.

101. In the course of the autumn I visited on more than one occasion the parishes in which this organisation was set up, and dealt by personal conference with such difficulties or questions as arose in the course of our proceedings. Mr. Johnstone was continuously of the greatest possible assistance to me, both in visiting districts and in directing all the office work and correspondence connected with the business, which, as a member of the Colonial Secretary's Office it was convenient that he should do.

Amount of business done.

102. The majority of the applications for loans were received and dealt with within a month of the passing of the law. Towards the end of October a preliminary notice was issued that all applications for loans must be sent in before the end of that month. The period was ultimately extended to the 31st of December. Since that date some applications have been granted as special cases to cultivators who had hoped to avoid borrowing, but had found their resources insufficient to resuscitate their cultivation without assistance. The number of applications received for loans was 2,983, of which 1,854 were from St. Mary's parish. The total number of loans granted was 1,477, the total amount, £36,245 10*s*. Of this amount £26,510 was allotted to 1,143 applicants in St. Mary's parish, £3,876 to 136 applicants in Portland, £3,163 to 99 applicants in St. Catherine's parish, £2,071 to 53 applicants in St. Thomas, and

---

NOTE.—The following letter addressed by a small proprietor to the Members of one of the local Committees deserves publication as a testimonial of appreciation of their services:—

"Hampstead, 15th April.

"To the Right Honourable J.P. and Committee of Hampstead,

"Honourable Gentlemen, I thank you kindly in the way that you have deal with me and the rest of people from since we meet. We and our wife's and our children life are spared. And when our cultivation would go to ruin: Through you that solicit for us, we get strength, and take courage, to clean and cultivate.—Every morning when we wake and look upon the cultivation, it speaks one word, Be of good courage.—To see how Prudently you had deal with us, so meekly, so gently and so lovingly. Every meeting I observe your face: it shines like the sun and full of joy, to meet me and the rest of people. Therefore I thank you kindly for your gratitude: your generosity and your hospitality: with the greatest Estimation.

"May it please Your Lordship: I humble beg, that you and the next gentleman, may give your compliments to the Governor and the Secretary of Jamaica: and of our good behaviour before your presence.

"With these few lines I shall resume to my former possession.

"Your Obedient

"Joseph Freeman.

"You are the leader and you lead us to the end. With a humble bow and thanks."

the remainder was distributed between 45 applicants in the parishes of St. Ann, St. Andrew, Clarendon, Trelawny and Hanover.

Expenses, &c.

103. The expenses incurred in this business up to the 31st March last amounted to £574, principally for travelling expenses of the Hurricane Loan Officers and their agent and for costs of monthly inspections by sub-agents. The total for salaries and clerical aid was £180. Had it not been for the gratuitous assistance rendered by the local committeemen these expenses would have been much higher. The amount due from borrowers for interest and expenses on the 15th of May last was £865, and it may be useful for me to complete this part of my report by recording that practically the whole of this amount was promptly paid, only £10 9*s.* 0*d.* due from three borrowers having still to be collected. A small charge was made this year for expenses, but the interest chargeable at the rate of 6 per cent. on repayment of the loans next year appears likely to be sufficient both to cover the expenses and the cost of the advances from the Treasury. By Law 4 of 1904 power was given to the Government by the Legislature to borrow for such time as might be necessary not more than £35,000, to cover the advances made by way of hurricane loans. The Treasury balances were sufficient to enable the advances to be made without previous borrowing, but the continued failure of revenue resulting from the hurricane will probably make it necessary to have recourse to this power during the course of the present financial year.

Question of banana insurance or other provision to meet a future emergency.

104. The situation reported as having arisen through the destruction of the banana crop and the representations made of the helpless position of the planters gave rise to a suggestion which was communicated by Mr. Chamberlain to the Colonial Government that a scheme should be established for insuring the banana crop by creating a fund under the direction of the Government, to be built up by the imposition of an export duty on fruit. The consideration of this question was referred to a strong local committee of planters and business men, who requested, after some consideration, that the reference to them might be enlarged, since it appeared to them that the situation out of which the proposal arose indicated that a wider scheme might be of advantage. The committee have now reported that they are unable to recommend any feasible scheme of insurance to be established under the direction of the Government, the main difficulty being that there are insuperable objections to the imposition of an export tax on bananas, which would appear the most effectual and equitable means of providing an insurance fund. I may say that, having regard to all the questions involved, I have never myself considered this proposal either feasible or desirable. An alternative proposal, for a compulsory acreage rate on land under cultivation (in case of the adoption of which all products of land would have to be regarded as insurable), has failed to commend itself to the committee.

Advocacy of establishment of agricultural bank.

105. The suggestion of an insurance scheme in the ordinary sense having come to nothing, the committee submitted proposals for the establishment of an Agricultural Loans Bank, both to enable planters who might suffer by a cyclone or other disaster to get immediate help on sufficiently easy terms to meet the difficulties of the moment, and to restore and continue their cultivation, and to provide continuously general banking facilities for the planting class. The committee suggest, and I am disposed to agree with them, that the experience gained by the Government in connection with the temporary arrangements established for making loans by Government since the cyclone may be regarded as encouraging a favourable consideration of a larger and more permanent scheme of the same character. The question is one which I am strongly of opinion deserves the careful consideration of the Government, and I have no doubt that Sir Alexander Swettenham will give his attention to it. The established machinery of the Government could not be relied on efficiently to create and administer any such scheme, but a Governor or Government Officer personally well qualified to direct and supervise its development would not, I think, find it an impossible task to build up an agricultural banking organisation on a sound basis. The small holdings of the peasantry are generally good security for loans, but great vigilance and continual pressure would no doubt be required to collect the income of the bank, and the success or failure of such an enterprise would largely depend upon the acumen and energy of the manager. The question of the advantages of agricultural banks has been considerably ventilated of late years in this island, and I think it cannot be questioned that a judicious extension of agricultural banking facilities might prove of very great value in the present state of Jamaica. The success and beneficial results of the mutual credit banks which have during recent years been established on the "Raffeisen" system in Germany and Central Europe are well known. In these, however, the management is entirely local and co-operative, and all the service is, I understand, unpaid. The safeguard of investment is the honesty and industry of the borrowers and the vigilance and interest of their neighbours. To establish banks on a similar co-operative credit system in Jamaica would require a large amount of persistent missionary effort, but if the lesson could be taught it would be one of the most valuable that the peasantry of this island could learn. The way towards it might be prepared by such means as are recommended by the committee.

106. With regard to the question of insurance I may observe that it would appear reasonable that a prudent planter engaged in an industry so remunerative under favourable circumstances as banana growing, and so easily destroyed by hurricane, should, out of his profits, lay by a certain reserve. Such a reserve may not suffice after a few years' accumulation to indemnify him for the loss of a crop, but it will put him in a

position at once to give that attention to the restoration of his plantation which is essential for an early recovery of his loss. He will then be in a better situation to obtain credit for any supplementary assistance which he may require. It has not been found possible to induce insurance companies doing business in the island to offer facilities for the insurance of banana crops on reasonable terms.

IV.—EDUCATION.

(A.) Elementary Schools.

107. The report of the Superintending Inspector of Schools, Mr. T. Capper, furnishes such an admirable survey of the more important features of the work of his Department during the year, and expresses views in which I so thoroughly concur, that I shall take the liberty of making considerable extracts and quotations from his report.

108. The following is an abstract of educational statistics of the year:—

Year.	Schools on Annual Grant list at end of year.	Schools inspected (some of them twice).	Scholars on books for varying school year.	Average attendance for varying school year.	Average attendance from monthly returns.	Percentage in average attendance of number on books.	First class schools.	Second class schools.	Third class schools.	Failure in marks.	Class not determined.	Total payments to elementary schools and teachers.
1903-04 ..	711	708	88,381	55,937	47,803	63·3	185	341	167	13	5	46,129
1902-03 ..	717	709	84,652	54,448	52,083	64·3	173	341	181	9	13	43,738

In this return there are two columns which have not been included in the tables printed in the Blue Book reports of recent years, namely, those showing the average numbers on the books and the average attendance for the varying school year, that is, the year to date of inspection on the results of which the grants for the following year are now computed in the case of each school.

Causes affecting school attendances.

109. In my report on the Colony for the year 1901-02 I referred to the causes, at that time passing away, which had previously diminished school attendance. I noted that want of money for clothing had, in some districts especially, had some

effect on the willingness of parents to send their children to school, but that this cause was, towards the end of the year, losing its force. During the first few months of 1902 the attendance improved, owing both to greater prosperity and to better weather. This improvement continued throughout the succeeding year, as recorded in Sir Augustus Hemming's last report, concurrently with the enhanced prosperity of the Colony, and the attendance showed a most encouraging vitality right up to the date of the cyclone.

110. Mr. Capper comments as follows:—

Diminution due to cyclone.

(*a*.) "It will be seen that whilst the average attendance for the varying school year, in many cases calculated before the cyclone took place, and always including the exceptionally high attendance during the months before the cyclone, on which the grants for the following school year are based, actually shows an increase, the average attendance from the monthly returns giving the actual average attendance at the schools throughout the financial year has fallen off by 8·2 per cent; whilst the average for the last 8 months of the financial year was as much as 12 per cent. less than for the corresponding months of the previous year. The main cause of this was, of course, the calamitous cyclone of 11th August, 1903, which destroyed many school buildings, and unroofed or otherwise seriously damaged a large proportion of the others in the districts affected by it; and at the same time was the cause of so much distress and privation amongst the people that it was extremely difficult for many, owing to the scarcity of food and clothing, to send their children to school. The parishes most affected were St. Catherine, St. Andrews, St. Thomas, Portland, St. Mary, and St. Ann; Trelawny, St. Elizabeth, Manchester, and Clarendon suffered in a less degree, whilst Westmoreland, Hanover, and St. James were practically untouched. In the first-named six parishes, the average attendance for February, 1904, was only 76½ per cent. of that in February, 1903, a falling off of 23½ per cent. A minor cause of the falling off of the average attendance of the whole island in the year was the unusual rainfall in the first months of 1904, which was especially marked in the western parishes. In any case, however, it might have been anticipated that the effect of the cyclone would be most acutely felt after the turn of the year, when many would have exhausted any little stores of provisions or money they might have possessed, and when the peasantry would in ordinary years have been expecting to gather in their crops.

Unsatisfactory aspect of school attendance returns.

(*b*.) "The great decrease in the average attendance at the schools, however it may be caused, is the more profoundly unsatisfactory inasmuch as there is a steady increase in the population, and in the number of children to be taught, the whole time. In view of these considerations, and the additional fact that where Government schools are established, as it is proposed to establish them, the old denominational stimulus to attendance at school will cease to act, the best educational opinion in the island is now practically unanimous in favour of the putting in force, at least locally and tentatively, of the compulsory clause of the Education Law, 1892. A clearer statement on this subject is included in a pamphlet to which I shall have occasion to refer later. The question has been for some years constantly under consideration by the Board of Education, and the pamphlet states the view of the Board, which is desirous of seeing compulsory attendance introduced in the manner set forth. The Department is also desirous of introducing it if the difficult question of ways and means can be met. The total expenditure on education has been strictly limited, and the problem has been, how a greatly increased number of children can be received in the schools

without a greatly increased expenditure. The only practical answer, *if the amount available is to remain fixed,** would seem to be to reduce the curriculum, and to give most of the children a shorter time in the schools, yet no one, least of all this Department, is willing to accept this answer. Better times are hoped for, and it is hoped that if compulsory attendance is introduced guardedly in a few districts, it may be found possible to extend the system gradually, and to raise the necessary revenue without too great and too sudden an increase in the burdens of the people.

(*c*.) "It should be observed that in consequence of the new arrangements made in the Code of 1902, the effect of the falling off in average attendance on the grants in aid will hardly be felt until a year or two after the cyclone. A school examined in August, 1904, will have been paid throughout its whole school year at a rate determined in August, 1903, on the high attendances of the previous year; and it will only be during the year following August, 1904, that the reduction in grants, due to the lowered attendance after the cyclone, will take effect. Thus a good deal of the falling off in grants will come in the financial year 1905-6.

Low expenditure on education in Jamaica.

(*d*.) "I feel it necessary, in view of the complaints that are so often made that we do not get value for what we pay for schools, to keep on drawing attention to the unfavourable financial conditions under which educational work is being carried on in Jamaica, as well as in the other West Indies, Cuba and Porto Rico excepted. If we spent as much per unit of the population as the Canton of Zurich in Switzerland, the cost of the Department would be £700,000 a year, or very nearly as much as our entire revenue, or the total cost of our Government. At the rate for the whole of Switzerland, it would be £450,000, at the English rate, £300,000, and even at the Irish rate it would be £200,000; and do not we need education as much as these countries do?† Other countries spend less than this, but in every civilised country the educational expenditure is several times as great *per unit of average attendance* as it is here, and considerably greater even in proportion to revenue. Our schools are kept in buildings which are often a disgrace to the district, the appliances, desks, &c., are antiquated, unsuitable, and hopelessly inadequate, and the teachers' salaries are in most cases quite insufficient to attract the class of men that we need. Taking all these things into account, the wonder is, not that we do not attain better results, but that we attain any results at all that are worth having. That we do attain such results there is abundance of evidence. According to the evidence given before the Education Commission, by those best qualified to judge, there has been a vast improvement in the intelligence and capability of boys in the last 20 to 30 years. Every effort is necessary on the part of all concerned to maintain the advance we have made, and to push forward as far and as fast as circumstances will permit, hoping that an era of prosperity may be in store for the island, in which it will be able to fulfil its obligations to those in whose hands its future destinies rest, the children.

Improvements in grade of schools and efforts of teachers.

(*e*.) "It is satisfactory, so far as it goes, to note that whilst the number of first class schools has increased by 12, and of second class by 2, there are 9 fewer third class schools than there were last year. Though progress in efficiency is slow, it is, on the whole, in spite of occasional setbacks, fairly steady, and a larger and larger proportion of teachers is found to take a genuine interest in their profession. This general improvement is remarked upon by all the inspectors.

Damage by cyclone.

(*f*.) "After the hurricane the Department immediately instituted enquiries to ascertain the extent of the damage suffered by schoolhouses in the districts most seriously affected, and gave notice that the ordinary monthly grant would be paid to all schools for the month of August (in any case, more or less, a holiday month), whether school operations could be carried on or not. When sufficient information had been received,

---

* *As to this see the observations following in paragraph* 116.

† *The Jamaica expenditure in* 1903–04 *was* £58,887. S.O.

the facts were laid before the Governor with the request that in view of the special circumstances a special grant might be made to secure the restoration of sufficient school accommodation in the affected districts. This request was favourably considered, and the Legislature was asked for, and granted, a vote of £3,000 for the purpose.

"Mr. Hicks, who was then acting as Superintending Inspector of Schools, was satisfied from personal observation and otherwise, that many, if not most, of the buildings destroyed were of defective construction, and in order to secure, as far as possible, that the buildings put up to replace those destroyed should be of a more satisfactory character, he requested the Acting Director of Public Works to prepare suggestions for the avoidance of errors in construction. This was very carefully done, and the suggestions were elucidated by a number of illustrative drawings. The Government authorised the publication of Mr. D'Aeth's valuable paper in the 'Gazette,' where it accordingly appeared on the 22nd October, 1903, and copies were sent to all managers of schools.

Occasion for establishing Government schools.

(*h.*) "There were certain districts in which amalgamation of existing schools had already been discussed, with general local approval, and where the buildings in which those schools were held had been destroyed by the cyclone, so that an exceptionally favourable opportunity was afforded for putting up Government buildings and establishing Government schools, as if such schools were not established, substantial grants would have been looked for for the repairs or restoration of previously existing buildings amounting in all to a sum approaching the cost of the new Government schoolhouses.

(*i.*) "The number of cases in which the erection of Government buildings and establishment of Government schools seems immediately and urgently necessary, is about seven, and it is hoped that after consultation with the Board of Education, and with its approval, the work can be at once put in hand. The Board is, I take it, committed by its unanimous approval of the scheme, mentioned in the next paragraph, for the continued substitution of Government for denominational schools; but so far as can be seen at present, this, even if approved and carried out by the Government, will take many years.

(*j.*) "A pamphlet was issued in January above the names of 12 ministers and clergymen, most of whom have been, or are now, managers of schools, and there is no doubt that the wide circulation of the pamphlet and the attention it has received will prove very helpful in many ways. The Archbishop of the West Indies has taken the leading part in drawing up what is called a 'statement of suggested changes,' and the island owes him its gratitude in so far as beneficial changes may be expedited by the action he has taken."

Pamphlet issued by educationalists.

111. It will be instructive to quote the introductory paragraphs of this pamphlet:—

"I. Various circumstances have precipitated the necessity for reviewing the whole of the Government arrangements for elementary education in Jamaica.

Dissatisfaction with present situation.

1. Among them is the growing sense of dissatisfaction on the part of managers arising from the following causes:—(1) The increasing difficulty of meeting all the requirements of the Code and the Department, including those which have reference to school accommodation and appliances: (2) The constant uncertainty in which they are kept as to their schools being retained permanently on the Government list: (3) Their feeling that while the Religious denominations and the managers of their schools have given, and are giving, much time, effort, and money to the work of education, there is little regard shown for that work in the preparing and carrying out, at uncertain times, and often, as they think, in ill-judged ways, plans for closing or combining schools; and they believe that, in many

instances, such plans can lead to no practical benefit to the children of the district: (4) That in many instances these changes directly tend to diminish educational efforts and results: (5) That as the system of education is now being worked, instead of the number of children receiving education increasing with the increase of population, and overtaking the deficiencies of the past, it is, at best, and during the most favourable periods of the year, stationary as regards the actual attendance, and relatively to population is constantly decreasing.

"2. The further factors increasing the demand for changes in the system are (1) an increasing conviction that the adoption of a plan of compulsory attendance is essential to any real efficiency or progress: and (2) the destruction by the cyclone of August 11th, 1903, of many schoolrooms which cannot wisely be rebuilt without some better understanding as to the future action of the Government and the position of the religious denominations in regard to elementary education.

"II. In seeking a remedy for our difficulties, it is inevitable that we consider how far it is possible to develop the present system into a truly 'national system of education.' In this attempt the following facts must be borne in mind:—

"1. That there are various sorts of national systems, the fact being that national systems must vary in accordance with national circumstances and requirements. Some national systems make large, various and definite provision for religious intruction; some make optional provision for it; some leave it out altogether. Moreover, some national systems are largely maintained out of central national funds; and some are maintained partly by grants from a central authority, but largely by the resources obtained through the levying of local rates.

"2. That any 'national' system for the island of Jamaica which involves the immediate or gradual extinction of the denominational schools, also involves (with or without increased efficiency) a considerable immediate, and gradually growing increase in the cost of education. Yet there is no indication that the religious denominations are able or willing to hand over their buildings to the Government for educational purposes, or that the Government is able or willing to make provision for the increased expenditure necessary for creating at the present time a universal system of board schools.

"III. That the practical problem appears to be, what can be done to make such feasible readjustments as will allay anxieties, simplify procedure, steadily increase the number in attendance at school, and the amount and the practical effectiveness of the education given, and at the same time test the power and the willingness of the people of the island to bear increased expenditure for elementary education.

"IV. It should be possible to devise plans whereby the present difficulties may be largely removed, and the dissatisfaction be allayed, and the educational arrangements unified in many particulars, and to do this by such methods as would not involve the destruction of results attained by past work, or do away with existing efforts without a provision for replacing them by something better."

112. The Superintending Inspector of Schools proceeds in his report:—

(*k.*) "The proposals which the pamphlet sets forth are being carefully examined, with a view to bringing them into practical shape, by a small committee appointed by the Board of Education.

Proposed common Catechism for religious teaching.

(*l.*) "It is proposed to introduce into the schools a short catechism to be agreed to by the several Anglican denominations, to be used in religious instruction in addition to the Scripture, &c., of Schedule A. and the provisions of Article 121 of the Code, with the intention of rendering possible a more uniform system of management. Even if a catechism is not introduced, there is no doubt the discussion about it will make it clearer than it has been that there is nothing in the Code to stand in the way of the co-operation of men of different religious views in the management of the schools, and it will, I think, make such co-operation more usual than it now is.

(*m.*) "Other proposals ask for alterations in the Code in respect of

(i.) Art. 29. b. ii. Under this article the owners of a building in which, by agreement, a Government school is held receive a rent at the rate of one shilling per annum per unit of average attendance. An 'adequate rent' is asked for and the term needs definition."

113. Correspondence has passed upon this question in which the view of the Government has been expressed to the effect that when a denominational school is taken over by the Government for conversion into a Government school, no rent properly so-called should be paid. If, however, the building taken over has been dedicated to or used for other purposes than that of elementary education consideration should be given to the interests of the denomination and the obligations of the trustees in regard to the maintenance for such purposes. In most cases it may be expected that the use of the building as a Government school will not interfere with its continued use for such other purposes. If it should be found to do so it will be necessary to consider whether any rent should be paid to the Denominational Trustees, in consideration of their loss of such uses of the building. But in so far as the transfer of occupancy is merely a transfer of the educational uses of the building from a denomination to the Government, the Government is not prepared to recognise any obligation to pay rent. The maintenance of such building for educational purposes would, however, become a charge on public funds, from which only partial contributions have hitherto been made towards such expenditure.

114. I resume my quotations from Mr. Capper:—

Payment of teachers.

(*n.*) "(ii.) Art. 94. It is proposed that all teachers should be paid direct from the Department. No practical method of making direct payments has yet been worked out. The proposal involves the question of the more direct control of the schools by the Government, not only by the suggested plan of grading the teachers for the purpose of allotting their salaries but by the appointment and payment of attendance officers.

Management.

(*o.*) "(iii.) Art. 7. The appointment is proposed of boards of management, one for each parish, consisting of the corresponding managers of the denominational schools within the parish, and of other persons to be appointed by the Governor. The Parochial Boards of Management to have the oversight and direction of the work of the Government schools in the parish, including the appointment and dismissal of teachers. Each Board to appoint a Committee for every Government school in the parish, and the corresponding manager of each school is to certify and forward the school returns to the Department. The powers proposed to be

placed in the hands of the Committee would seem to be little more than those of voluntary attendance officers. Each Board also to have the oversight of the denominational schools in the parish, including the right of visiting them.

(*p*.) "It is also suggested that arrangements should be made for the formation of Committees of Management of denominational schools. It seems doubtful whether legislation in this direction would be advisable or effective. Article 5 of the Code seems to cover the ground.

(*q*.) "In view of these suggestions, it is important not to lose sight of what has been done in the direction of carrying into effect the actual provisions of Article 5 of the Code. During the year not less than 120 letters have been sent out to managers whose schools have been insufficiently supervised, and there has been a good deal of correspondence besides. There can be no doubt that it is both for the interest of the school and for the great convenience and advantage of the corresponding manager that a small Committee, meeting regularly every three months, should, whenever possible, undertake the management of a denominational country school, or several such schools. The Code is not satisfied with a 'one-man' management, and it has in view the interests of the managers as well as those of the school and the teaching staff. Co-managers gladly assist a manager when he will make use of them, and it is always advantageous for a manager to secure the practical results that may be obtained by adopting the bye-laws for Government schools so far as they are suited to his purpose. It has sometimes happened that a manager has gone away from the island for a time without having arranged for the fulfilment of the requirements of Art. 7 of the Code, when it would not have been difficult to appoint co-managers or visitors to look after the school during his absence. If the school has a small Committee of Management, no difficulty arises even if the corresponding manager goes away at short notice. I have strongly to recommend the formation of such committees where they do not already exist.

Town schools.

(*r*.) "Another proposal in the pamphlet is that all schools in towns and some country schools in populous districts should be made Government schools. Constant work has been going on with this aim in view for years past; the amalgamations of schools recommended by the Board of Education in 1899 have been steadily proceeded with by the Department, and some other schools have been amalgamated also. There have been great difficulties to overcome, and the desired result has not yet been achieved in many towns; I doubt whether legislative action is desirable; men really interested in education in these towns will in time, it may reasonably be hoped, come to an agreement without it.

Management of new Government schools.

(*s*.) "It has been pointed out that the destruction of schoolhouses by the cyclone of August last is leading to the building of a few central Government schools. The result will be that before long there will be an increase in the number of Boards of Management, and it is an important point to consider how far the Boards of Management at present existing meet the purpose for which they were appointed. It has taken a long time for some of the Boards to settle to work and to pay the strict attention to the by-laws for Government schools that was desired by the Board of Education when it drew them up in free consultation with the Department. The initial difficulties are being gradually overcome, and I can say, without hesitation, that I have every hope that all the Boards will before long do the excellent work that is now being done by the best of them. The help that such Boards can and do give in the development of educational schemes and in solving problems which can only be answered by persons intimately acquainted with a district, is highly valued by the Department.

(*t*.) "Whether the proposed Parochial Boards, to supersede these and to take the place of others which may yet come into being before the necessary legislation can take effect, should be created or not, is a question

needing very careful thought. Whatever the decision is, it should be reached as soon as possible. Whilst the wider and more comprehensive scheme is under discussion, it seems scarcely worth while to attempt to proceed on former lines in some cases where there has been some prospect of success."

Comments on present Educational situation.

115. The pamphlet from which I have quoted, and the observations of the Superintending Inspector of Schools thereon bring into prominent relief a situation of considerable importance. There is, at the present time, something like a crisis in regard to educational questions, owing to the destruction of schools wrought by the hurricane. It is now twelve months since that event, and there are still a number of schools to replace which no effectual steps have been taken. Proper shelter and accommodation for children in bad weather are not furnished by the temporary buildings available. I consider it to be the duty of the Government to bring this state of things to an end, and to strengthen the hands of the Department for early and prompt measures for dealing with the situation. The delay has been due to various causes; partly owing to the fact that the requirements of immediate rebuilding were under-estimated, and the vote of £3,000 placed on the estimates will be quite insufficient to cover the cost of the repairs of denominational schools, and the provision of the seven Government Schools referred to by Mr. Capper, to say nothing of others not taken into account by him; partly to the fact that without a definite statement of the intended policy of the Government as to the probabilities of the conversion of denominational schools into Government schools, and the closing or amalgamation of denominational schools, it has not been possible for denominational managers to decide what expenditure they can incur on their own school buildings. This has been chiefly the case in regard to Church of England schools. The delay has been due to the inability of the Education Department and of the Board of Education to settle for the approval of the Government lists of the schools which it would be proposed—

(*a.*) To convert immediately into, and rebuild as, Government schools.

(*b.*) To close, amalgamate, or to convert into Government schools within the next five years.

(*c.*) To guarantee from interference for at least five years.

Moreover, Sir Augustus Hemming on relinquishing the Government was not willing to pledge the Government to any financial provision, and I have not felt at liberty during my temporary administration to propose the measures which I was disposed to think the situation would justify.

116. The matter of elementary education, and the question of the restoration of schools called, in my opinion, for early,

precise, and liberal handling by the Government, so that the position and the developments to be expected in the near future might be as clearly as possible defined and understood, and both the Government and the denomination enabled to understand what demands they may have to meet. There is, I think, much ground for the representations made in the pamphlet as to the unsatisfactory character of the present situation and outlook, and it is, I fear, indisputable that the voluntary and denominational interest in, and assistance to, school building and school maintenance is falling off, at any rate as compared with the increase of population. One of the principal causes for this has been the impression produced by the position taken by Mr. Chamberlain when Secretary of State for the Colonies, and impressed upon this Government in his despatch of the 23rd December, 1899, on the subject of elementary education. In view of the financial situation and the absolute necessity for economy, Mr. Chamberlain then directed that the amount expended in education out of Colonial Revenues should not exceed, if, indeed, it should reach, the sum of £60,000 per annum. If the closing of schools should prove insufficient for the purpose, it was to be considered whether the age of free education should not be further restricted, preferably by raising the age of admission. In order to ensure that the actual expenditure should not exceed the estimate, Mr. Chamberlain thought it would be advisable to insert in the code a provision to the effect that the grants promised should be subject to a *pro ratâ* reduction if the payment of them in full would entail such an excess.

117. The Island Government, whilst it has never considered it possible to announce so absolute a policy of restriction, seeing that if anything like the proper number of children even now attended school within the present very restricted age limits, to say nothing of the increase of population, they could not be taught without an increase of the present expenditure, has, nevertheless, during the whole period subsequent to Mr. Chamberlain's instructions on the subject abstained from any active encouragement of, or expression of sympathy with, the progressive educational aims of the voluntary and denominational educationalists. This is not, you will observe, Sir, a matter of what should be taught in the schools, or whether too much time is given to "the three Rs," and too little to manual training, and the rudiments of agricultural knowledge. It is simply a question of maintenance, attendance and staffing, for whatever course of instruction. The total education expenditure has, in fact, been kept within the limit of £60,000 up to the end of the year under review; but on the Estimates for the current year, by natural increase, far within the real requirements of the island for elementary education, the provision has reached £61,130, including £3,000 for building grants. There was, when I arrived in the Colony as Colonial Secretary, early in 1900, a bitter conviction on the part of not a few of the clergy and schoolmasters, expressed both in the press and in

the Legislative Council, that the Government was positively hostile to education, and desired to cripple it. I trust this impression does not now exist, but its effects, to some extent, remain, and though the attitude of those who had this impression now probably goes no further than the dissatisfaction that the Government has been forced to restrict educational progress by the limitations of its ways and means, yet the shortening of the school age and the closing and amalgamation of schools (processes which, as I pointed out in my Blue Book Reports in 1900 and 1902, are by no means necessarily or, in fact, detrimental to the net value of the education given) have tended to cause discouragement and lack of interest. This discouragement and lack of interest in the class which furnishes the managers is naturally communicated to their congregations, and the voluntary assistance or contributions of these towards school buildings have been thereby to some extent checked. If, therefore, education is not to fall back in this Island, as in proportion to the increase in population it would appear to be falling back, further expenditure by the Government appears likely in the future to be demanded, and the policy of announcing an absolute maximum for the Education Vote is rendered the more impracticable. Not more practicable, in my opinion, is the suggestion that schools should be staffed on the understanding that the vote for any one year should be an absolute maximum for that year, and that teachers' salaries should be limited to a dividend so prescribed. Such a rule would be a direct incentive to tacit compacts to discourage attendance in excess of the convenient numbers.

Further call for expenditure probable.

118. It will, therefore, I believe, become necessary before very long, as the writers of the pamphlet put it, "to test the power and willingness of the people of the island to bear increased expenditure for elementary education "whether this should be provided by maintaining the present high Customs Tariff beyond the present normal requirements, or whether by resort to new direct taxation."

119. I again resume quotations from Mr. Capper's report.

Sanitary instruction.

"Early in the financial year, a pamphlet was drawn up by the Honourable Dr. Johnston, at the request of the Board of Education, called 'Counsel to Parents,' laying down in very simple language, comprehensible by all, simple rules of diet and hygiene, at present little known and still less observed by the mass of the people. I corrected the proofs before leaving for England, and during my absence the pamphlet was printed and distributed by the Department. A copy was sent to each teacher, and several copies to every school manager, with the request that the pamphlet be placed in the hands of the most influential and intelligent people in their several neighbourhoods, so that the contents might be made known as widely as possible. Early this year (1904) the demand for the pamphlet was so great that the first edition was speedily exhausted, and Dr. Johnston has very kindly revised it and made some valuable additions, and a new edition will be shortly issued by the Island Medical Department and distributed as widely as possible. The island is very greatly indebted to Dr. Johnston for the time and trouble he has given to the matter.

(*v.*) "Revised Instructions to Inspectors have been issued during the year, and I have been gratified to observe that an increased interest is taken by many of the teachers in this and other publications of the Department. There are, however, I regret to say, a large number of teachers still who apparently never consult the Code or read the Annual Report, or Instructions to Inspectors. The result is, that the plainest regulations of the Code are violated, and applications are made which a moment's reference to the Code would shew to be hopelessly out of order and inadmissible. I hope that the number of teachers who show themselves to be inexcusably ignorant in such matters will continue to rapidly diminish. *Teachers' ignorance of Code.*

(*w.*) "Advanced manual training has been making steady progress in the centres mentioned in my last report, to which has been added Lucea, and in all the centres, classes for teachers have been held. *Manual training.*

"The year under review is the first in which grants have been paid for this subject, under Art. 113. The grants awarded amounted to £31 13*s.* 8*d.*

(*x.*) "The work of inspection and examination of elementary schools has proceeded as usual. On the whole, I think it may be said that the new system introduced in 1902 of paying the schools according to the results of the last inspection has worked well. Teachers have known exactly what their salaries for the year were going to be, and where the attendance, and consequently the work, has increased, they have been willing to bear the additional strain without extra remuneration, knowing that their reward would come in the following year.

(*y.*) "The total amounts expended through the Education Department in 1903-4 and 1902-3 were £58,887 and £55,393 respectively, and were distributed as follows:—

—	1902–03.	1903–04.
	£	£
Grants to elementary schools and teachers	43,738	46,129
Building grants	265	1,027
Administration and inspection	4,813	4,976
Government Training College (now under an undenominational Board).	1,204	1,204
Aid to Voluntary Training Colleges	2,544	2,544
Board of Education	127	249
Jamaica College	1,250	1,250
Scholarships	1,215	1,262
Secondary School, Montego Bay	200	198
Printing	37	48
	55,393	58,887

"The increase is mainly in grants in aid, owing to the largely increased average attendance during the different school years on which the grants were calculated, all being before the cyclone. There is also a considerable increase in building grants, due to the cyclone.

(*z.*) "*Practical Teaching in Agriculture and Horticulture.*—There is a continued increase in the number of attempts at practical field work, and the progress shown is, in my estimation, exceedingly creditable. The advance is not being measured by the amount of grants given, as the standard was as first, for obvious reasons, a very low one, and has had of necessity to be raised. The following are the figures:—

—	1900–01.	1901–02.	1902–03.	1903–04.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.
Kingston	8 7 0	15 0 0	17 19 0	20 7 4
St. Andrew	—	—	—	5 15 0
St. Thomas	—	—	—	7 4 9
Portland	—	—	3 5 0	2 5 0
St. Mary	—	6 0 0	8 10 0	8 15 7
St. James	—	—	—	7 6 0
Westmoreland	6 0 0	2 16 0	—	—
St. Elizabeth	—	—	7 14 0	10 16 2
Manchester	—	—	—	8 17 8
St. Catherine	21 5 0	23 16 0	40 4 0	34 4 7
	34 12 0	47 12 0	77 12 0	105 12 1

"The fourth course of lectures on agriculture was held in January, 1904, at the Mico College by T. J. Teversham, Esq. Sixty teachers were present, and afternoon addresses and lectures were delivered, as on former occasions, by the Archbishop and others, whilst a course of evening lessons in manual occupations was again conducted by Mr. Peet and Mr. Skyers. The benefit of these courses is being increasingly felt."

120. The progress which has been made in the development of the teaching of agricultural and elementary science, and of elementary agriculture, and in the institution of school gardens is too slow. In some of the districts the inspectors report that the number of school gardens is increasing rapidly now that the size required for earning the grant has been reduced. The development of this side of education in country schools as well as of manual training would be accelerated by increasing the marks allotted to them by the code.

121. The staff of the schools is still preposterously insufficient for satisfactory teaching. Most of the schools with an average attendance of from 60 to 80 are under-staffed, one man having under such circumstances to keep occupied five or six classes of boys and girls at the same time.

(C.) Industrial and Reformatory Schools.

Stony Hill Reformatory for Boys and Industrial School for Girls.

122. The report on the Government Industrial School for Boys and Reformatory for Boys and Girls at Stony Hill shows an increase during the year from 132 to 158 boys, and from 21 to 27 girls, the total number now in the institution being 185. The boys were engaged in carpentering, smiths' work, tailoring, masons' work and bricklayers' work, in the kitchen and bakery, and in field and garden cultivation.

123. The girls were employed in washing for the institution, making clothing and house-cleaning; they received some lessons in cooking and general housework.

The cost of the institution for the year was £2,934. There was reimbursed from parochial funds for the maintenance of industrial school children £550. Altogether £322 was received in cash for work done and for sales, making the net cost to General Revenue £2,062. The cost in the previous year was £1,870, the receipts from sales having been £451. The falling off in these receipts is due to the destruction of bananas and coffee by the cyclone. But for this disaster the saleable produce of the institution would have exceeded that of the previous year, and the net cost to the Government would have been less. Moreover, the work of repair entailed by the hurricane withdrew the labour of the boys from other employments producing a return in cash. The value of the work done by boys and girls during the year for which no money was received is estimated at £918 3s. 4d.

Effects of cyclone.

124. The buildings were considerably damaged by the hurricane. They stand in a gap of the hills at the north of the Liguanea Plain above Kingston, through which the southerly blast of the cyclone rushed as through the neck of a funnel. The boys' dormitories in the north barracks were unroofed, and some of the masonry walls so much cracked that they had to be rebuilt from the first floor. The girls' dormitories were also unroofed, and the schoolroom partly so. One room at the servants' quarters, the hospital kitchen, and the mortuary were unroofed. The hospital and dispenser's quarters were badly damaged; part of the blacksmith's shop, the cocoa and coffee drying-house, and several outbuildings were blown down. The board and iron fences were nearly all laid flat. The buildings and fences have now all been made good, and with the exception of some minor repairs and painting are all in fair order.

125. This is an excellently managed institution, and does credit to the ability and devotion of the Superintendent. The increasing number of girls in the reformatory will render necessary an extension of the area of the premises allotted to them.

126. Very little illness was caused as an immediate effect of the hurricane in August, but a good many cases occurred later, which were traceable indirectly to that cause.

V.—GOVERNMENT INSTITUTIONS.

(A.) Medical Department and Hospitals.

Establishment changes

127. The Superintending Medical Officer, Deputy Surgeon General (retired) C. B. Mosse, C.B., C.M.G., left Jamaica on leave of absence on the 4th of July, 1903. He did not return to the Colony, and has now retired from his office, which he assumed in June, 1876, and occupied, with a short interruption, continuously since that date. Dr. Mosse was an exceptionally admirable and valued public servant and most highly esteemed

and respected by the unofficial community. Dr. J. W. Plaxton, the Medical Superintendent of the Lunatic Asylum, was appointed to discharge the duties of Superintending Medical Officer during Dr. Mosse's absence, but in consequence of ill health he was relieved of the office on the 6th of October, when Colonel W. W. Kenny, R.A.M.C., F.R.C.S., I.M.B., assumed charge of the Department.

Dr. Plaxton succumbed to a tedious and painful illness on the 21st of January last, and by his death the medical service lost a most able, energetic and exemplary officer.

Vital statistics of Kingston.

128. Dr. Kenny reports that the vital statistics for Kingston for 1903-04 are not so favourable as those of the previous year, the death-rate, 29.7 per 1,000, being 2.64 higher. The birth-rate increased from 37.15 per 1,000 to 39.1. Infantile diseases, phthisis, and malarial fevers continue to account for the greater number of deaths. The death-rate from phthisis shows, however, some improvement. Whooping cough was very prevalent during the last nine months of the year, and 80 deaths from this cause are reported. Infantile diseases show the largest number of deaths during the year. It is a recurrent tale of these annual reports that this high mortality is principally due to parental neglect and ignorance, to improper food and insanitary surroundings.

Public health and hospitals.

129. The greatest number of deaths in Kingston occurred in September, October, and November. I do not think that any appreciable amount of mortality in the city can be attributed directly to the effects of the hurricane. These effects are, however, very clearly shown in the general death-rates of the island and in the returns of the public general hospitals, especially in those of the parishes specially visited by the cyclone. The admissions to hospitals as specified below:—

Pressure on hospitals after cyclone.

—	1902–03.	1903–04.
Constables	446	533
Poor persons	4,247	4,783
Paupers	44	702
Indian immigrants...	4,216	7,603
Paying patients	173	149
Prisoners	5	10
Second term coolies	—	35
Total	9,131	13,815

show an increase of more than 50 per cent. above the previous year. The greatest pressure in the months following the hurricane fell upon the hospitals of Annotto Bay, and Port Maria in St. Mary's parish, to which 5,201 patients were admitted

within the year, on Port Antonio and Buff Bay Hospitals, in Portland, which received 2,898, and Morant Bay and Hordley Hospitals, in St. Thomas, which received 983 patients. The number of deaths in hospitals was 355, equivalent to 2.57 per 1,000, a lower rate than that of the previous year, owing, no doubt, to the character of the special causes which brought the pressure upon the hospitals. Owing to the insufficiency of beds it was not, in all cases, possible to admit applicants, who would otherwise have had hospital treatment, but arrangements were quickly made to meet this difficulty, and the Superintending Medical Officer reports that at present the public general hospitals are able to meet all emergencies.

Equipment of hospitals.

130. The hospitals are all fairly well equipped as regards clothing, bedding, &c., and each has a good supply of instruments, quite equal to any call. Should others be required for special operations they can always be obtained from the Kingston Public Hospital on loan. 1,799 operations were performed, with a death-rate of 2.33 in such cases. Considering the gravity of many of these operations, carried out by the district medical officers in many instances without assistance, this result, as well as the practical absence of hospital diseases, speaks highly for the skill of the medical officers, the careful nursing of the staff, and the good sanitary condition maintained in these institutions.

Causes of admissions.

131. The greatest number of admissions were for cases of malarial fever, 5,183 in all, exceeding last year's number by 2,420. The majority of these admissions were in the autumn following the cyclone, and were, no doubt, due to exposure resulting therefrom. The rate of mortality did not increase, showing that the type of fever was the ordinary one. There was a considerable increase in admissions for disorders of the digestive system, caused, doubtless, by the inferior quality of the food which the people had to live on after the destruction of their crops, and also by bad water and exposure. The water of springs and streams was very generally corrupted by the masses of decayed leaves that were driven into them by the cyclone, which entirely stripped all the trees in its path. There was an increase of admissions for diseases of the nervous system and diseases of the respiratory system. Tubercular phthisis continues to show its usual high prevalence. It is, no doubt, largely propagated in ignorance of its infectious character by the crowding of families in small stuffy sleeping apartments.

Sickness among coolies.

132. The greater proportion of the increased resort to the hospitals was on the part of the indentured Indian immigrants. The hospitals most affected in this respect were Annotto Bay, Port Maria, Port Antonio, and Hordley. In one day at Annotto Bay there were 250 coolies under treatment, and it became necessary to increase the ordinary hospital accommodation by hiring a large wooden building from the United

Fruit Company, which, when fitted up, afforded shelter for over sixty patients. The hospital at Hordley was entirely destroyed, and to meet the emergency the sick were at first treated in Morant Bay Public Hospital. Subsequently tents were provided at Hordley, and remained in use pending the erection of a new hospital.

133. I consider that the medical department, the medical officers, and the staffs of the hospitals upon which special pressure fell deserve great praise for the devotion to duty which they exhibited under the stress of their increased labours, and for the energy with which they dealt with the extraordinary demands on the resources of their institutions. The number of out-patients treated at hospitals by the district medical officers was 28,689, an increase of 7,000, or about 33 per cent. on the number treated in the preceding year.

Birth and death rates.

134. The estimated population on which the birth and death-rates are based is 794,065, an increase of 15,867 over last year. There were 31,733 births and 19,671 deaths registered during the year. The birth-rate estimated on the mean population was 39.9 per 1,000, against 29.4 per 1,000 in the previous year. The death-rate was 24.7 per 1,000 against 19.8 in the previous year. This is significant. There were 1,033 more births and 4,267 more deaths than in the previous year. There was no more than but a very slight increase in the prevalence of actual disease. The general health of the island in the earlier months of the year was very good, and as the season was dry, there was very little illness, especially of malarial types. The rainfall at the time of the hurricane, the destruction of food, and the pollution of water caused a large increase in malarial fever, rheumatism, dysentery, and bowel complaints in the ravaged districts. This sickness began in September and continued until February, 1904. It was unquestionably the cause of the increased number of deaths, and of the increased death-rate. Outside of the hurricane-stricken districts the health of the island generally was very good.

Increased mortality.

Cost of medical services.

135. The amount voted by the Legislative Council for the services of the Medical Department of the year was £51,005 5s. 6d. The expenditure was £52,249 12s. 0d., an excess of £1,244 6s. 6d. This excess may be regarded as having been entirely due to the effects of the cyclone. The amount of £14,333 2s. 6d. was reimbursed in aid of the cost of the lunatic asylum by the Parochial Boards and by paying patients.

Kingston Public Hospital.

136. The total number of admissions to the Kingston Public Hospital was 3,165, against 2,280 in the previous year. The daily average number of inmates was 210; 240 deaths occurred during the year, giving a mortality rate of 6.5 per cent. The total number of operations performed was 1,233, and the deaths 22, giving a rate of 1.7 per cent. Malarial fever gave 576 admissions, mostly of intermittent cases, the greatest number

being in July, September, October, November and December. Out-patients numbering 26,440 received treatment.

Lunatic asylum.

137. There were 1,000 inmates of the lunatic asylum on the 31st of March, 1904, an increase of 41 from 959 at the beginning of the year. During the year 105 males and 31 females were admitted, 29 males and 31 females being readmissions. During the year seventy patients were discharged and 95 died. The mortality was exceptionally high, the death-rate amounting to 8.15 per cent., whereas last year it was below 5 per cent. Malarial fever of a mild type was prevalent.

The increase in the death-rate is attributed by the Medical Superintendent to the congested state of the asylum. Steps have been taken to relieve this by opening a second ward in the new buildings to accommodate 100 patients.

The Victoria Jubilee Maternity Hospital.

138. The Victoria Jubilee Maternity Hospital received 813 patients against 651 in the previous year. This is an admirably managed institution, but I am of opinion that the accommodation given by it must be more carefully restricted. The following are the numbers of patients admitted during the past ten years:—

1894-95	239
1895-96	217
1896-97	378
1897-98	444
1898-99	500
1899-00	581
1900-01	483
1901-02	785
1902-03	651
1903-04	813

The rate of increase shows that the hospital is coming to be regarded as a free nursing home available for all applicants. In the course of the year the increasing pressure upon the accommodation was brought forcibly to notice by undesirable occurrences, and directions were given with a view to restricting recourse to the hospital. The Medical Officer reports that the hospital was frequently overcrowded; that all the available beds were constantly occupied; and that almost always there was a number of patients lying on the floor of the wards. It has become the practice to bring patients to the hospital at the point of childbirth, when it is impossible to refuse them. Only 32 were turned away.

Lepers Home.

139. The Lepers Home at Spanish Town had 118 inmates on the 31st March, 1903, an increase of eight during the year. There were 36 admissions, 20 deaths, five discharges, and three

desertions. 66 of the patients were male, 52 female. There was a steady maintenance of the already excellent management of this institution. The growth of trees and the extension of cultivation by the inmates conduce to make the place increasingly pleasant and interesting.

(B.) Poor Relief.

Statistics of pauperism.

140. On the 31st of March, 1904, the total number of persons in receipt of out-door or in-door poor relief was 5,685, or 766 more than on the same date in 1903. The highest number previously reached in recent years was 4,998, on the 1st April, 1902, from which there has been subsequently a decline.

141. Increases have occurred in all parishes except Port Royal, St. Elizabeth, Manchester and St. Catherine. The largest increase is in Portland parish, 211, an addition of 105 per cent., the next in St. Anns', 217, or 84 per cent., the next in St. Thomas, 69, or 46 per cent. These figures show directly the influence of the effects of the cyclone. In St. Mary's parish the population had, no doubt, more savings and resources than in St. Ann and East Portland, but St. Mary's Parish can also claim the valuable advantage of having probably the best administered poor-house and poor relief system in the island, and this fact, no doubt, conduced more than anything else to the comparative limitation of the increase in that parish. There were only 197 persons in receipt of poor relief in St. Mary's at the close of the year, of whom 139 were in the poor-house. The average for the other parishes of the island, excluding Kingston and Port Royal, was 345. In most of the others the out-door paupers far exceeded in numbers the in-door paupers. The parish with the greatest number of paupers was Manchester, with 509. Manchester alone has no poor-house. It is one of the most prosperous parishes of the island, but so long as its Parochial Board adhere to their determination not to insist on the test afforded by a properly managed poor-house, the number of the ostensible paupers, and the cost of its poor relief will, no doubt, continue to be as they are at present—excessive.

The pauper expenditure of Portland was augmented by £1,045, that of St. Ann by £1,294, that of St. Mary by £557, that of Trelawny by £121, St. Catherine by £138, St. Andrew by £280, St. Thomas by £74 only.

Hurricane relief measures.

142. It may be convenient that I should resume here my account of the measures which were taken for the relief of the distress occasioned by the hurricane by the aid both of public and private funds. I have recorded the formation of the Central Relief Committee, and I send a copy of the final report of that Committee as Appendix VII. to this despatch. In pursuance of the suggestions made in the Governor's Circular of

the 14th of August, the Parochial Boards formed themselves with the addition of other persons of influence and acquaintance with the people into Relief Committees, dividing their members into Sub-Committees for special districts, to administer first the public and then the private funds allotted to them. The special appropriations of £100 from General Revenue and £200 from Parochial Funds in each parish were administered through these committees, and the boards in their capacity of Poor Law Authorities did not, as a rule, find it necessary at the time to issue any special directions with regard to the administration of parochial relief. As a consequence there was no marked increase at first in the numbers of legal poor, registered or temporary. An exception to this occurred in the parish of Saint Thomas, where from the first, the Parochial Board, with a most prudent judgment, decided to deal with all cases needing sustenance through the usual channels. This method ensured that all applications should be dealt with in the usual thorough manner through officers trained by rule and custom to this procedure. The result was that in only one district of St. Thomas, the Eastern or Bath district, was any such extra relief granted, and the total amount expended was not large.

See Appendix II.

143. Sir Augustus Hemming's second despatch, above quoted, on the effects of the hurricane, made special reference to the apparent distress which was brought to his notice in this district, yet the figures I have quoted above in this section show how economically in the result this pressure was dealt with when taken in hand from the first in a judicious manner.

(See par. 11).

144. There can be no question that the Parochial Boards and the subsidiary Relief Committees were, for the most part, genuinely anxious to avoid pauperising the population by giving indiscriminate relief where it was not wanted. The Governor, the Central Relief Committee, the Boards themselves and the press laid down the most unexceptionable principles in regard to the relief administration. Certain local Committees, and individuals did deal with the duties entrusted to them in a manner which appeared indiscreet. In more than one such case, however, their action was disapproved by the Boards or the Central Relief Committee, and they were in several cases relieved of their functions. The policy of the Boards themselves was not in all cases identical, but I do not desire to particularise the instances in which I think an indiscreetly liberal line was taken. The work of the Committees and the Boards, as ordinary almoners, became progressively more difficult. The impression went abroad and gained ground that money was being sent from England (from the King it was generally supposed) to recoup to everyone who had suffered by the hurricane the full damage that he or she had sustained. It was public money, and all taxpayers had a claim on it, no matter whether destitute or not. In one case it even

Desire of Boards and Committees to avoid injudicious relief.

appeared as though an important local Committee took this view, for they sent in to the Central Relief Committee estimates to cover the restoration of all houses destroyed as well as the current demands for the distribution of food and money generally. The action of this Committee was disavowed by the Parochial Board, who revised the applications and reduced them to reasonable principles. The notice which I have* above referred to as posted throughout the island by direction of the Central Committee did, I have been assured by the most prominent and responsible men in several parishes, an immense amount of harm. Though issued with the contrary intention, it served to confirm the impression that the people who had suffered from the hurricane were to wait, and they would be helped. A marked quality of mental stupor or paralysis is habitually caused by a cyclone, and this affection was naturally widespread among an ignorant population, whose whole food supply had been swept away, and their houses blown about their ears. But had it not been for the expectation of relief which was disseminated, the population would not, I believe, have relaxed to the extent that they did their personal efforts to restore their cultivations and to rebuild their houses. When in the month of September I travelled throughout the districts affected in connection with the organisation of the Hurricane Loan work, and in order to ascertain what relief works it might be necessary or advisable to open for able-bodied sufferers, the condition of things in the country appeared to me to be getting very serious. The demands upon the local Relief Committees were increasing, and whereas the original intention of the Committees had been to give doles of food and money only to the infirm or incapable, the meetings of some were becoming crowded with noisy throngs of able-bodied loafers loudly demanding as taxpayers their share of the Government money, and rendering it impossible to deal with or discriminate between the claims of more worthy applicants. I took the opportunity of my visits to confer with the Chairmen and such other members of the Parochial Boards as could meet me, and having enlisted their general concurrence I took the earliest possible opportunity of moving in the Central Relief Committee the following resolutions:—

Resumption by Parochial Boards of administration of relief to destitute persons.

1. That a further allotment be made of £4,000 out of the relief funds still at the disposal of the Committee to the several Parochial Committees, to be applied for house repairs only, in such proportions as it may appear that their respective requirements demand, and that Parochial Committees be requested to take care for the proper verification of the expenditure.
2. . . . . That no further allotments whatever be made for the purpose of hurricane relief in the form of food, but that the Parochial Boards be left to deal with all such requirements.

* § 6 pp. 6, 7.

3. That the Committee request His Excellency the Governor to move the Parochial Boards to take immediate steps where they have not already done so, to provide for dealing with all applications for hurricane relief through the inspectors of poor and their assistants.

4. That this Committee respectfully suggests that His Excellency should favourably consider giving an assurance to Parochial Boards of parishes specially affected by the hurricane, that if their funds should be unable to meet demands for special relief, His Excellency will recommend to the Legislature that some assistance be given from General Revenue in aid of their special expenditure for such relief.

5. That it is expedient that the Parochial Boards should carefully co-operate with the Department of Public Works in the distribution of relief work where such may be found necessary.

6. That the unallotted balance of the relief fund be held for assignment as may hereafter be determined from time to time for the redress of special cases of misfortune occasioned by the hurricane, or for the assistance of small cultivators; but that the appropriations for re-housing be now regarded as closed, and the local Committees so notified.

The resolutions were put to the Committee one by one, and in every case adopted.

145. From the date of the adoption of these resolutions the Parochial Boards, with some little delay in certain cases, placed the administration of relief under the control suggested. Thenceforth all direct outdoor relief was, with few exceptions, administered through the Poor Law Officers, special assistants being appointed where necessary. The work of the local committees, subsidiary to the Parochial Boards, was addressed to controlling the allotment of money in aid of house repairs, the principle generally adopted being that nothing should be paid until an Inspector was satisfied that substantial work had been done by the householder himself. A Sub-Committee of the Central Committee dealt with recommendations, previously checked by the Parochial Boards, for the relief of special cases of suffering, where individuals lost their means of living in consequence of the hurricane. A sum of £410 altogether was spent for the distribution of seeds and plants to small cultivators, the work being carried out through the local branches of the Jamaica Agricultural Society and by the Agricultural Instructors of the society and the Government, under the direction of Mr. James Barclay, the Secretary of the Jamaica Agricultural Society, who worked indefatigably in this connection.

Special cases.

146. The work of the Central Committee was attended to in a most public-spirited manner, and no pains were spared to ensure that the monies under their control should be well and fairly applied. From the report printed in the appendix it will be observed that only £287 was spent by them for the direct distribution of clothing and food stuffs, and £609 for building materials. A total amount of £10,290 from the relief fund was distributed through the Parochial Boards, principally for house restoration, as the distribution of other relief was transferred to the Poor Law system before appreciable inroads could be made on this fund. The number of houses reported as totally destroyed was 9,657, of which 2,913 were in St. Mary, 2,130 in Portland, 744 in St. Ann and 1,134 in St. Thomas. The number partially destroyed was 4,421. Assuming that £10,000 was distributed for house restoration, this gives a dividend of rather less than 15*s.* per house.

Injurious effect of creation of a relief fund.

147. Notwithstanding all the discretion exhibited by the committees I regret to say that I am convinced that whereas sums amounting to about £12,700 were distributed through them in charitable relief, the positive loss caused to the island by the expectation that money would be so distributed, and the resulting abstention of able-bodied men and women from restoring their damaged fields and gardens, rebuilding their houses and seeking paid employment, whose output would have hastened the return of prosperity, as well as by the sickness which the unnecessary delay in rebuilding houses conduced to, was largely in excess of that amount. It is unquestionable that many remained thus idle for weeks, if not months, in the expectation that they were to be helped, and that some deliberately abstained from touching their damaged grounds and houses for fear lest they should lessen their claims for compensation by improving their distressful appearance.

Relief works.

148. The complement of poor relief through the Boards and house relief through the Committees was the organisation of relief works for able-bodied men through the Public Works Department.

This had been prepared for by the tour of inspection taken by Mr. D'Aeth, then Acting Director of Public Works, immediately after the hurricane, and by the able reports furnished by him, in which he suggested the road works which it might be useful to undertake if relief employment should be called for. Mr. D'Aeth at the same time suggested that preliminary surveys should be made, so as to enable road work to be commenced to the best advantage in the districts in which it was most likely to be required. This suggestion was not acted on at the time, doubtless because it was felt that there was no certainty where relief works would be called for, but the absence of surveys for deviations and improvements which were later undertaken proved unfortunate, and led to a certain amount of misapplication of labour on the relief works. That is to say, work had to

be begun in some instances on a part of a road which was cut off from connection with other thoroughfares by portions which it was desirable to deviate and improve, but which could not be attacked without surveys, and in some instances the relief works have been closed before these improvements could be completed. Such instances were few, and I mention them only in order to say the worst that can be said with regard to the economy of the works and to point to the necessity of having such schemes thoroughly prepared for in future.

149. Relief works were not opened in any district until the Government was satisfied both that there was a pressing demand and that the work proposed would be useful. Fuller particulars of the arrangements will be found in the extracts from the report of the Director of Public Works,* which I shall quote when I come to deal with the work of his Department. The wages offered were two-thirds of the ordinary rate, and it may be interesting that I should quote from a special report furnished by Mr. D'Aeth his account of the manner in which this test operated.

"The attitude of the labouring classes in the operation of the Relief Works has been, as a rule, one of assumed independence at the outset of any work, declaring that they would never take work at the rates offered, and leaving in very large numbers after making enquiry as to the work. In the following weeks as they saw that their demands for higher pay were not met, and came finally to understand that the work was established, not because the Government desired to undertake it, but only to meet their own urgent necessity, they came back and eventually took the work, but, generally, with a good deal of discontent and grumbling, and with the expression, if not the idea, that the Government was taking advantage of them. This feeling was manifest chiefly in St. Mary. In the east end of Portland there was a better appreciation of the conditions and more contentment among the labourers."

Amount spent on relief works.

150. Up to the 31st March, 1904, there was expended on works paid at relief rates £22,493. Of this amount, £11,006 was spent on special relief works at the charge of General Revenue Account, £4,030 on new works already provided for on the estimates or by loan funds, and £7,457 on repairs of main roads. The greater part of these repairs was rendered necessary by hurricane damage, but some of it was work which would have been done under other circumstances at ordinary rates.

Continuance of relief works since 1st April.

151. When the estimates for the current year were submitted early in March it was expected that about £9,500 would be required from General Revenue for special relief works during the following summer. The demand for relief proved more enduring than was expected, and up to the 31st July £10,167 had been so spent, in addition to £2,963 disbursed at relief rates on ordinary main road works and about £600 on a new road chargeable to loan funds. After the end of July all special relief works were suspended except on three roads, one in the neighbourhood of Manchioneal, where distress is still prevalent, and two, one in Portland and one in St. Mary's parish, where

* *See* p. 82.

there is still a demand for relief work, and it is expedient to complete the works in hand, in order to reap the advantage of the improved communication. At the time I write this the administration of this form of relief may be regarded as having practically been brought to a close.

152. The road work done has been in all cases useful, and will tend to promote the prosperity of the districts concerned. Where the works have been left incomplete the labour on them has not been wasted, but will be brought into account when the works are finished, as they should be, by appropriations on the annual estimates. I consider that the works were conducted with the least possible disorganisation of labour and with but little ill effect upon those employed. Only in some instances, and these not important, can these works be regarded as having diverted labour from other productive employment. It might have been desirable that the labourers should have spent on their own fields part of the time they spent on relief works, but their fields would not support them, and the Government did not deem it politic to pay them for so working or to make loans to any but substantial cultivators.

(E.) Savings Bank.

153. The amount at credit of depositors in the Government Savings Bank on the 31st March, 1904, was £425,723. Of this amount £421,930 was invested in British and Colonial securities and the small balance was held by the Treasurer in cash. The liabilities to depositors had been reduced during the year by £10,061. The income of the bank from interest was £15,423, and a further amount of £1,109 was realised by conversion of investments, refund of Income Tax and small miscellaneous receipts, making altogether £16,532, or £295 more than the receipts of the previous year. Of this amount £10,031 was credited as interest to depositors' accounts, and £6,500 to the General Revenue Account of the Colony. The expenditure for the payment of the staff and other costs of the bank amounted to £2,761, showing a net profit of £3,739 to the Government.

Excess of withdrawals.

154. There was a net increase of withdrawals in Kingston during the year, amounting to £17,108, which the manager of the Savings Bank attributes to the effects of the depression of trade following the cyclone. In Portland there was a net increase of withdrawals, amounting to £2,144. In St. Mary a decrease of only £133. In St. Thomas the increase in withdrawals was exceeded by an increase in deposits. In St. Ann there was an increase of £235 in deposits and a decrease of £952 in withdrawals. In Trelawny there was a decrease of £626 in deposits and an increase of £1,436 in withdrawals. In St. Catherine a decrease of £1,325 in deposits and an increase of £1,558 in withdrawals.

155. These figures are rather remarkable. It will be observed that outside of Kingston the only parish in which the cyclone would appear to have caused a considerable run on the Savings Bank is Portland. The withdrawals in Trelawny were probably quite as much due to the shortness of the sugar crop; those in St. Catherine are not very heavy for so large a parish, and are hardly in proportion to the damage done there. The manager reports that in Portland considerable sums were withdrawn and subsequently re-deposited, and in St. Mary moneys borrowed by planters for cultivation were lodged in the Savings Bank and drawn as required.

Large amount of popular savings not deposited in Bank.

156. It would appear that there was at the time of the hurricane a considerable amount of money hoarded by the peasantry independently of the Savings Bank deposits. It became evident towards the close of the year that these resources were becoming exhausted, and the Savings Bank deposits began to be more freely drawn upon. This process has continued in a marked degree since the 31st March, and in the first quarter of the current year the withdrawals on ordinary accounts exceeded deposits by upwards of £16,000. This phase of the distress succeeding the cyclone has been accompanied by an increase of praedial larceny among the class who had no Savings Bank accounts or other reserves.

Withdrawals now increasing.

157. The transactions of the bank with parishes other than those which have suffered from the cyclone are indicative of increased prosperity, and as regards the whole of the accounts of ordinary depositors the balances left on the 31st March at credit of those accounts was actually only less by £736 than the total on the same date of the previous year. The drain on the bank had been, so far, deferred, but I fear that the current year's transactions will show a substantial depletion. It has already become necessary, since the 31st March last, for the Government to sell £27,000 worth of securities to meet the continuous* demand for withdrawals that is now being experienced.

VI.—CRIME, POLICE AND PRISONS.

Police statistics.

158. The number of persons apprehended or summoned before the Magistrates by the police is 768 more than in the preceding year, being 28,991 in 1903-04, as against 28,223 in 1902-03. The figures under this head seem to indicate a steady increase in the number of prosecutions for minor offences during recent years and continued activity on the part of the police.

159. The total number of convictions in the Circuit Courts was 107, as compared with 127 in 1902-03, 128 in 1901-02 and 134 in 1900-01. These figures point to a continued decrease in

* But this is partly due to the transfer of deposits to the Bank of Nova Scotia, which now offers higher interest than the Government Savings Bank.

the more serious forms of crime. There were only thirty-four convictions for offences against the person.

There were six cases of murder. Four of those accused were found guilty. Two suffered the death penalty.

160. The increase of offences against property, other than praedial larceny, dealt with in the Circuit Court, though small numerically, is proportionately large. This appears to be due to old offenders being sent on to the Circuit Court on account of its being considered that they could not be adequately punished by the Resident Magistrates.

161. The number of convictions in the Resident Magistrates' Courts was higher than it has been for more than eight years.

162. There was a decrease in the number of offences against the person and a very marked increase under the head of "Praedial Larceny," the figures being 651 for 1902-03 and 1,359 in 1903-04, more than double the former number.

163. There is nothing in the statistics of summary convictions to which I think it necessary to draw attention, except that there is a slight decrease in the numbers as compared with those of the two immediately preceding years.

Increase in sentences of whipping.

164. The number of persons punished in the Resident Magistrates' Courts by whipping during the year under report is comparatively large. It is 397, as against 116 during 1902-03, 186 in 1901-02, and 198 in 1900-01. The increase in this method of punishment is no doubt attributable to the increase in the number of convictions for praedial larceny during the year, and to the passing of sentences of whipping on second offenders.

Increase of prædial larceny.

Causes of fluctuation in such cases.

165. The returns of crimes and prisoners for the year are, on the whole, satisfactory, with the significant exception of large increases in cases of larceny and still larger in praedial larceny, in which the effects of the hurricane are very clearly discernible. With reference to praedial larceny Sir Augustus Hemming, in his Report for last year, called attention to the considerable improvement which had been manifested. He attributed it to the better condition of the peasantry, increased severity on the part of the Resident Magistrates in punishing for the offence, greater activity on the part of the rural police and more plentiful employment on the estates. He also observed that in the parish of Saint Mary, where subsistence was then plentiful, there had been some increase in the number of cases, probably owing to the fact that the abundance of bananas offered greater and more continuous temptation to pilferers. The returns of this year show that the severity on the part of the Resident Magistrates has not been relaxed, but rather increased by a more general resort to sentences of whipping; the activity on the part of the rural police has continued, and the temptation of abundant bananas has been entirely removed. The factors, therefore,

which, notwithstanding these enhanced preventives, have augmented so conspicuously the prevalence of praedial larceny, have doubtless been the great poverty created by the cyclone among the peasantry, and a diminution of employment on estates.

Material of praedial thieving class.

166. There is a considerable number of persons, many of them not fully able-bodied, who, in prosperous times, are either voluntarily supported by others or find easy means of picking up a living, but who, when the native food supply is destroyed, as it was last year, have practically no resource but to steal. It is a very difficult problem to devise an effectual means for checking the increase of praedial larceny which results under such conditions, more especially as a very large proportion of those convicted of this offence when they come into prison are found to be sick and weakly, and are adjudged by the Prison Medical Officer to be unfit for hard labour. There are, no doubt, many able-bodied persons among them, but for the rest the prison simply takes the place of a public workhouse, for admission to which individuals qualify by being too inexpert to steal without detection. In times of scarcity, fruits and nuts that in ordinary periods would be regarded almost as *res nullius* are recognised as valuable articles of private property, and the owners' rights are asserted, whilst at the same time the habitual parasite or pilferer of the class above described conceives his natural rights to be enhanced by the imminence of starvation and his excuse for asserting this right by the failure of his former imperfect means of earning his living.

167. At the same time it is at such periods as that through which we have recently been passing that the evil of this propensity is felt most bitterly by those who are plundered. After the cyclone great efforts were put forth by the Government, the officers of the Agricultural Society and its branches, and by the Relief Committees to induce the peasantry to plant quick-growing food crops, and large quantities of seeds and slips were distributed to all who would apply for them. It has been a peculiarly disheartening experience for those who did their best to provide for themselves in this manner to have their fields stripped of unripe produce by their predatory neighbours. Praedial larceny is a continual though fortunately not an effectually prevailing obstacle to the increase and improvement of peasant cultivation. It will be a wholesome result if the indignation created by its depredations under recent conditions strengthens popular feeling against it to an extent that will survive in more prosperous times.

Question of remedies.

168. The question of praedial larceny was, as you, Sir, are no doubt aware, very closely discussed and investigated in this island during the time of scarcity which prevailed in 1899-1900, without any valuable new conclusion being arrived at. The law was amended, but I think it must be plain to any reflecting person that no methods of criminal law can, under existing present conditions in this island, prevent epidemics of praedial

larceny in periods of scarcity. In periods of plenty it abates, and no longer attracts public notice. The class who then practise it are habitual thieves and vagrants, and can be dealt with by the criminal law. When praedial larceny increases in prevalence there is always an outcry for more flogging. It appears to me to require great credulity to believe either that greater resort to this punishment would counteract the evil or that it would be worth while to counteract it at the price to the community of the indulgence of this vindictive impulse. It is clear that the increased resort by the Magistrates to flogging in the case of second offenders is not checking it at the present time. Though floggings were being awarded nearly four times as frequently in the latter months of the year as in the year before, the tide of praedial larceny was still rising, and only the return of plenty will check it. My opinion is that the only general remedy for that part of such outbreaks as is a primitive substitute for poor relief (in-door or out-door) will be found in the firmer establishment and wider diffusion of property, of the sense of property rights and family obligations and of habits of industry and providence in the adolescent population. The habitual offenders are, as a rule, pretty well known to their neighbours, and their operations would be greatly restrained if public reprobation of them were more general and more effectually organised. Individually the Jamaica peasant objects to being robbed, but he does not object to other people being robbed strongly enough to combine with them to prevent it.

169. It is hard on the taxpayers that prison expenditure should be increased by this cause, and it would be very desirable to devise means of keeping offenders out of prison. I doubt, however, whether much would be really gained by diverting those of them who belong to the semi-pauper class to the poor houses, where there are no proper means of exacting any labour from them.

170. The Inspector-General of Police reports that the Vagrancy Law, which was passed as a result of the study of the question of praedial larceny in 1901, continues to work well. He suggests that its provisions should be enlarged so as to enable the police to abate the public nuisance and repress the abuses arising from Revivalist meetings and "Ninth Nights," or wakes. It is certainly time that these pious orgies should be abandoned by the population of this island.

Police establishment.

171. The police have efficiently carried out the duties which fell upon them during the year, without increase of staff. The total strength at the end of the year was as follows:—

Officers	18
Sub-officers	132
Men	637
District constables	804
Total	1,796

There was an unusual amount of sickness amongst the men stationed in the parishes of St. Thomas and St. Mary, and also, owing partly to insufficient barrack accommodation, in Kingston.

Prison statistics.
